Mr. POTTS. Mr. Speaker, people are wondering what is the cause of the present high prices. Their question is answered in the following editorial from the New York Sun of Monday, April 21, 1947.

YOU, MR. TRUMAN, YOU MADE PRICES WHAT THEY ARE TODAY

President Truman's assertion at his press conference this month that prices must come down if wages are not to go up is meaningless unless read against the background of what has happened since August 18, 1945, 4 days after VJ-day.

The Executive order issued just after the Japanese surrender was supposed to "promote a swift and orderly transition to a

peacetime economy" and to "assure the general stability of prices and costs."

But that Executive order, stripped of its official sounding language, was actually a political formula for higher wages, high farm prices, and an unchanging price level. Politically it made sense to call upon the Secretary of Agriculture and all other Federal agencies to support farm prices. Politically it made sense to instruct the OPA and other Federal agencies to hold the line generally on prices. For the purpose of getting votes it made sense to invite labor-union leaders to start a campaign for higher wages which should not be used by employers as a basis for higher prices.

But the economic nonsense of this Executive order made it impossible that reconversion to a peacetime economy should be either swift or orderly. It made it impossible that private enterprise could be free and independent.

In that Executive order Mr. Truman chose to ignore the fact that wage and salary payments amount to about 60 percent of the national income and are naturally reflected in the costs of production. Mr. Truman also chose to ignore the fact that food costs—to be supported by administration policy—make up the biggest part of the family budget.

In October 1945, 2 months after VJ-day, the Truman administration changed its mind and modified its policy slightly in the right direction by ruling that wage increases based on increases in the cost of living after January 1, 1941, could be taken into consideration in applications for price increases. But this modification, slight as it was, came too late.

Labor union leaders had already eagerly seized upon the invitation contained in the executive order of August. They presented demands for sharp increases in wages, coupled with the insistence that there be no rise in prices. They supplemented these demands with a demagogic ultimatum that they be allowed to "look at the books."

Then came the curious and unsavory incident of the "official" study purporting to show that the automobile industry could pay much higher wages without increasing prices. This report was released on November 1, 1945, just when the United Automobile Workers were concentrating their campaign upon General Motors. Two days after the General Motors strike was settled, Henry Wallace, then Secretary of Commerce in the Truman Cabinet, admitted that the study was not official and indulged in general in a lot of fancy double-talk to the effect that there never had been any intention that this should be taken so seriously.

It is not necessary to dwell on relatively ancient history, for Mr. Truman persists in his economic illiteracy. At the press conference this month, when he expressed his judgment about prices, he did not go into detail. He did admit that the administration which he heads is committed to support farm prices through this year and next. But he did not mention the fact—though it must be familiar to him—that nearly three-quarters of the increase in the cost of living in the past year has been the result of increases in food prices. Private enterprise—the President's whipping boy—can do little about high prices of foodstuffs as long as the Truman administration continues support of prices and farm subsidies and as long as heavy governmental buying for export keeps grain and other commodity prices sky-high.

Nor did Mr. Truman mention his stubborn opposition to tax reduction, which offers the one certain method to provide additional take-home pay and an increase in the standard of living of all Americans. He produced a 1948 budget far above previous peacetime levels and called it a "tight" one. He encourages all the Federal agencies to resist the rigorous reduction of Federal expenditures demanded by the times. He sees nothing incongruous in the presence on the Federal pay roll of thousands upon thousands of unnecessary employees feeding upon the bounty of the real producers of the Nation. These thousands could be in useful production.

Mr. Truman turns to the traditional whipping boy of the New Dealers—American business, which built the greatest Nation in the world. It is a bold strike of politics to attempt to make the public believe that business and business alone can correct all that is wrong in the current situation. It is a bold stroke of politics to pretend that business is free from all controls and curbs. But with the public, the new strategy of the Truman administration is likely to be correctly rated as politics and nothing more—dangerous politics, misleading politics, but politics, nonetheless.

American business, if only in its own selfish interests, will correct what lies within its power or duty to correct. But it cannot accept the responsibility for an economic policy which was invented by Mr. Truman himself 4 days after VJ-day. No, Mr. President, you made prices what they are today.

Too Much Gas Control

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Houston Post.

TOO MUCH GAS CONTROL

The Government has no more reason or right to dictate the use which shall or shall not be made of natural gas, or to say to whom gas may or may not be sold, than it has to restrict the markets for shoes or canned tomatoes or hair restorers.

But the Federal Power Commission has been assuming more and more control in such matters, through direct and indirect means, by stretching the provisions of a too-unspecific Federal law. It is time the Commission's encroachment upon free enterprise be curbed by Congressional action. Such action is sought in a bill recently introduced at Washington.

By the devious device of denying applications to sell gas in coal-producing regions for certain end uses, the commission has barred gas competition with coal fuel. For instance, it rejected the application of the Northern National Gas Co. for a certificate to provide gas for steam generation purposes at Boone, Iowa, flatly stating that gas thus used would displace a certain quantity of coal.

Under a "reasonable conditions" clause inserted in the Natural Gas Act in 1942, the FPC has issued certificates conditioned on the facilities' not being used to serve gas for steam generation purposes or to serve industrial plants. This roundabout way of controlling end use is resorted to quite freely by the Federal Power Commission, despite the Commission's admission of several years ago that Congress never gave it this authority.

The Commission has even made several moves toward controlling the production and gathering of gas—operations which are expressly excluded from FPC jurisdiction by the present law.

All these interferences and threatened interferences with the production, gathering, and marketing of gas have the industry in a state of uncertainty, fear, and jitters. The producer is reluctant to lay expensive pipe lines or to sign contracts to sell gas for fear the FPC will mess up his business. He already answers to his State regulatory body in most instances, which should be sufficient; but he cannot tell when the Federal arbiters may hold operations he considers local to be interstate.

This is not fair to the industry or to the consumer, who should not be denied a free choice of whatever fuel he wants to use. The law should be made clear and explicit, and insure that the jurisdiction of the FPC shall be limited strictly to the interstate transportation of natural gas for resale, with fair allocations of expense between the regulated and nonregulated phases of the business of natural-gas companies.

The bill introduced in the House of Representatives will accomplish those ends, amending the Natural Gas Act. It is endorsed by Governor Jester, Railroad Commissioner Ernest O. Thompson, and many other State officials, as well as the entire oil and gas industry, both majors and independents. It is a measure of vast importance to the great oil and gas producing State of Texas and should be enacted.

America Vetoes the United Nations

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein an editorial appearing in the American Friend, a publication in Richmond, Ind., which is both timely and constructive. I ask that all may read this editorial, which is as follows:

AMERICA VETOES THE UNITED NATIONS

The American power drive has begun. Beachheads are about to be established on the shores of the Mediterranean. The war has changed from the death grapple of men to the battle of dollars—and such dollars lead to war and yet another death struggle. The Colossus of the West takes over. Where next? How far? Those are questions with an ominous answer. Important also is the question, "Why?" What is the fundamental motivation that powers the American financial machine?

Of course, we must recognize the changing frontiers of national and international interests. No longer are the affairs of other nations an American concern merely because they are geographically near. What happens in a remote corner of the earth may have more importance than a disturbance in Cuba. But what happens in America as well is the business of other nations whose destinies are affected by American policies. The time is here for the cessation of unilateral action and an increasing attempt at united action through the United Nations, difficult as it may be.

This American power drive is also being fed by the fumes of petroleum in the Near East. Smelling these oil wells, we are following our noses into Arabian tents. To others we shall look like the proverbial camel. If other nations followed the same policy in the Caribbean, names other than "camel" would be used in denouncing them.

We could see this blustering foreign policy better if Russia should now bypass the United Nations in giving aid to a Communist government in Cuba with the announced purpose of blocking western capitalism.

Certainly communism is not the answer to human rights and needs. Nor is there a sound defense for Russian obstinacy in the United Nations and her undue insistence on the right of the veto, but if the hasty action of President Truman is followed out, America will also be using her veto. It will not be a veto on the Greek future, but on the United Nations itself.

In fact, America is about to launch a torpedo into the mid-ribs of the only organization that holds any promise of world cooperation. It is time to put our strength into cooperation rather than into disintegration.

We should give relief in food and clothing to Greece but the administration at Washington is not so enamored of the rights of free peoples, 2,000 miles away, or in any system of government, that they rush to a defense with dollars and munitions. Greece and Turkey are geographically strategic. They figure in the economic advantage of nations. Not only are they on the petroleum pipe lines, but they also lie at the gateway of Suez.

This policy may be in part the result of placing a military mind at the top of our foreign relations. General Marshall is among the most understanding persons of our military men, but a lifetime of training in the pyramidal thinking of army organization and functioning is not the preparation needed for a high diplomatic post. Armies are expected to receive orders and smash through to an objective. Foreign relations are on a delicate balance often, requiring a resilience of mind which authoritarian training can hardly create, either in Russia or America.

Either we shall find our answers through the United Nations or face the break-down of cooperation. That can only mean war, and who can say what war means in this atomic age?

The Late Honorable Fred Norman

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. WELCH. Mr. Speaker, I should like to add my tribute to the memory of Hon. Fred Norman. A keen mind, a sincere advocate and a good friend has left the scene.

One of the finest tributes I can pay to him is to request permission to insert in the CONGRESSIONAL RECORD at this point a statement made by Congressman Norman before the Subcommittee on Irrigation and Reclamation of the Committee on Public Lands when he was discussing H. R. 1886, since withdrawn. Mr. Norman said:

STATEMENT OF HON. FRED NORMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. NORMAN. Mr. Chairman, members of the Public Lands Committee, I appear before you as a friend of reclamation, realizing the need to modernize certain features of the reclamation laws, but out of duty I must strenuously oppose the rate-making provisions that have been injected into H. R. 1886. The power provisions of this bill are so loosely drawn that they do violence to the greatest resource that the Pacific Northwest possesses.

The power-rate sections of H. R. 1886 have just become apparent to the people of my district. Consequently, I have had numerous wires and communications from representatives of all the different groups in my district protesting against these provisions of H. R. 1886. These protests come from real reclamationists, from farmers, from industrialists, and from organized labor. Union officials advise me that they interpret this bill as a means of stopping industrial pay rolls and halting forever the disposition of dinner-pail energy. It strikes me the people of my district have been amazed at the one-sided support of H. R. 1886. The impression has been created that the working people, farmers, and industrialists have not had a day in court. I know that this is not the intent of this committee, but the suddenness of the situation has aroused suspicion, judging by the tenor of communications I have received.

I will endeavor at this time to give a brief factual discussion of the objectionable features of H. R. 1886. In so doing I do not wish to be understood as offering opposition to the modernizing features of this bill.

Unless there is a balance between industry and agriculture, the economy in the entire Columbia Basin will be injured. According to census reports covering the most prosperous sections of this country, it can be seen that for every 100 farm workers there must be at least 500 industrial and associated workers. If power rates are elevated to the extent that one interpretation of H. R. 1886 indicates, then the basic industries in my and adjoining districts will be so handicapped that eventual shut-down will result. When this happens the agricultural products of reclamation projects will lose their markets, and then the large reclamation projects can never pay out. Also the rate proposals in H. R. 1886 are not good business for the Federal Treasury.

The region that I represent is short of fuel sources. Consequently nature has been compensating by giving the region the greatest source of low-cost hydroenergy on the American continent. Whoever drafted the power provisions of H. R. 1886 cannot be familiar with the interrelations that exist in the Columbia Basin. The people in my district do not expect Texas or California oil to be delivered and sold to them as cheaply as it can in the coastal regions of Texas or California. The possession of the oil resource is their gain. In like measure, other sections should not endeavor to penalize the greatest resource that the Northwest possesses.

I am particularly referring to the appropriateness of the rate-making provisions appearing on pages 6 and 7 of H. R. 1886, which provisions are interwoven through the full provisions of this bill. According to the wording of this cited section, electric rates would be dependent on the cost of generating power by an alternate plant in the same area. The extent of the area is not defined, nor is the quantity or quality of the power interpreted. Obviously the large volumes of prime power available from Columbia cannot be placed on a competitive level with lower-grade dump or secondary power generated on smaller tributaries or less fortunate streams.

The Columbia, like the St. Lawrence, is in a class by itself, due to the height of its waterfalls, the large volumes of water carried and the constancy of its flows. H. R. 1886 does not state whether the alternative plant be steam generation from wood, oil, gas, or coal. The bill, as written, indicates a direct conflict between language on pages 6 and 7 and the other provisions of this bill, which set out that rates should be sufficient to cover cost and subsidy allocated to power.

The provisions of H. R. 1886 are in direct conflict with the Bonneville Act, which is independent of the reclamation laws. The evident intent of the provisions on pages 6 and 7 are to require power rates to be fixed at a higher level than economics justify and costs would indicate. The intent of these sections is to gear low-cost power to the cost of higher competitive generating sources in the less fortunate areas. Whoever drafted these provisions of H. R. 1886 apparently worked on the assumption that hydro-cost will in all instances be the lowest cost power. The cited provisions of H. R. 1886 are most confusing and indefinite.

These provisions of H. R. 1886 would certainly remove low-cost hydropower from the category of a natural resource. Also these provisions would retard development in regions where power costs are high, as well as regions where power costs are low. These provisions lose sight of what is actually needed to repay the entire reimbursible portions of the Federal investment in such projects.

The district that I represent has two of the largest basic aluminum plants on the American Continent. Columbia power and these plants provided the tools for victory. I interpret these rate provisions as a means of killing the aluminum industry and stopping the further development of electrochemical and electrometalurgical industries, which are so vital to national defense. While the world at large is uneasy, I cannot see why a rate provision should be injected into the organic law that would be deterrent to the development of critical materials which are so necessary in a defense program. Such a course is just as logical as a proposal to give away the secrets of the atomic bomb.

You will no doubt recall that in the early days of the late war, that the shortness of light metal production capacity in this country prompted high Government officials to make large donations to a competitive Canadian aluminum industry. The Shipshaw development in Canada, which was subsidized by the American taxpayer in 1942, is the principal beneficiary of the rate provisions of H. R. 1886.

The rate provisions of H. R. 1886 are unworkable. The Bonneville plant is partly in my district. The output from Bonneville is tied electrically to the same power grid as the output from the Grand Coulee plant. Bonneville, being a navigation project, cannot come under the provisions of H. R. 1886. When the output from these two plants are intermingled on a transmission line, I would like the sponsors of H. R. 1886 to tell us how the power delivered, say to the Alcoa or the Reynolds aluminum plant can be identified as to source. I would also like the sponsors of H. R. 1886 to advise Congress how it is possible to paint the kilowatts from these two plants with distinguishing colors, so that customers operating under power contracts can tell whether their power bill will be or will not be affected by H. R. 1886.

The attempt to devise such rate-making formulas is unrealistic, unworkable, and destructive to the economy of a large section of this country. These rate provisions in H. R. 1886 do not warrant serious consideration by Congress. Such a proposal, for the reasons that I have given, should never be allowed to see the light of day.

I thank you for the opportunity to discuss the matter.

The Vote on the Labor Bill

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the New York Times of April 19, 1947:

THE VOTE ON THE LABOR BILL

When the House of Representatives adopts a severely restrictive labor bill by the decisive margin of 3 to 1, with even a majority of the Democrats voting for it, it will not do for the leaders of the American trade-union movement to interpret this result merely as a plot of big business, a political trick, or a sudden case of jitters in Washington. They will fail to note a fact of great importance to them if they do not recognize that only a widespread powerful public sentiment could prompt the House to adopt so contentious a bill by such an immense majority.

The principal causes of this sentiment can be readily identified. One factor is a belief that, however praiseworthy its purpose, the existing Wagner Act has failed either to diminish industrial disputes or to protect adequately the rights of minority labor groups. Another factor is the unprecedented record of 116,000,000 man-days of work lost in 1946 at the very time when a great increase of peacetime production was so vital both as a restraint upon inflation and a stimulus to postwar reconstruction at home and abroad. Widespread dissatisfaction with the wage-price spiral has been another factor. As matters have worked out, it has been the best-paid unions—Mr. Reuther's automobile workers and Mr. Murray's steel workers among them—that have set the pace for additional wages increases; the inevitable result has been higher prices for the less strongly organized unions and for the great mass of unorganized people who live on fixed incomes or on wages that moved upward slowly. Each round of this continuing process—with Mr. Reuther and Mr. Murray regularly demanding new wage increases to enable their already favored groups of workers to catch up with price increases which their own action has so largely brought about—puts the great unorganized majority of workers at a further disadvantage.

The result of these various influences operating on American public opinion is the bill which the House has now passed by a vote of 308 to 107—a larger majority than practically any other measure of equal importance has received on the floor of the House since the early days of the New Deal. This bill is intended to curb the monopoly power which earlier Federal legislation had conferred on the trade-unions and which some unions have used recklessly.

The bill would repeal a substantial part of the Wagner Act and replace the National Labor Relations Act with a new Labor-Management Board. It would match the Wagner Act's list of unfair practices for employers with a list of unfair practices for employees. It would place a flat prohibition on the closed shop. It would sanction the union shop only in those cases where the employers have no objection and a majority of the employees vote for such a system. It would withdraw the protection of the Wagner Act from unions seeking to bargain on a Nation-wide basis. It would empower the Government to halt for 75 days, by the injunctive process, strikes which threaten the public health or safety, and give private employers the right also to apply for injunctions against unlawful concerted activities. It would ban jurisdictional strikes and secondary boycotts, bar Communists from union office, and establish union liability to penalties of the anti-trust law.

These are severe limitations on the present rights and privileges of union labor—some of them deservedly so, others of more doubtful wisdom, judged from the point of view of their impact on the legitimate interests of labor or by the standard of practicability of enforcement. The House bill now goes to the Senate, where Mr. TAFT's committee has completed work on a somewhat less drastic measure. The hope must be that out of the joint effort of the two Houses will come a bill as fair as it is firm, well devised to restore more even-handed conditions of collective bargaining and so conducive to that end that Mr. Truman will not confront Congress with the test of passing it over a Presidential veto.

South Dakota Public Forum Lists Six Suggestions for Fashioning an Affirmative American Foreign Policy

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. MUNDT. Mr. Speaker, under the guiding genius of Robert D. Lusk, editor-publisher of the Daily Plainsman, daily newspaper of Huron, S. Dak., an interesting experiment has recently been concluded. The contestants in a letter-writing contest on the general subject, America's Course in Today's World Crisis, were asked to participate in a public forum to determine how wide an area of agreement existed among them after they had concluded writing their contest letters. Some interesting suggestions evolved from that discussion forum.

Under leave granted me by the House, I am including herewith the six recommendations which grew out of this South Dakota forum. It will be noted that there was unanimous concurrence on the first five proposals and a divided opinion gave majority support to the sixth proposal.

Mr. Speaker, in the fashioning of a new and realistic foreign policy for America which would guide a program of positive affirmative action by America rather than a continuation of our prevailing policy of trying to create a patchwork foreign policy by tying together our various reactions to the movements of Russia or some other important power, it is my belief that it would be helpful and informative if many American communities would follow the example of Huron, S. Dak., and hold public forums to probe and formalize the thinking of their citizens on foreign policy. Bob Lusk, of Huron, deserves the plaudits of pundits for his initiative in setting up this American foreign-policy forum. The results of this forum and a short explanation of its origin follow:

A PEOPLE'S EXPRESSION

The Daily Plainsman herewith presents the results of an experiment in the determination of public opinion on a vital question and in the spread of freedom of speech through the press.

Immediately upon the promulgation by President Truman of what has been called the Truman doctrine, the Daily Plainsman invited its readers to write their reactions in brief letters on the subject, America's Course in Today's World Crises. To encourage widespread participation, the Daily Plainsman offered prizes of $100, $50, and $25 for the best letters.

The response was far beyond the most optimistic expectations of the editors, both in quantity and quality. The letters came from all over central South Dakota, and from as far away as Emporia, Kans. The names signed to the letters indicated to the editors that the contest had tapped in a voluntarily random method a pretty fair cross section of opinion in this midwestern area. A study of the letters revealed several common denominators of thinking. For instance, there was no evidence of isolationism, no hermitnation philosophy.

To obtain a clearer picture of what the public was thinking, the Plainsman decided to ask the contest participants to join in a discussion of the various points raised in the letters and on which there seemed to be some unanimity of thinking to determine whether full agreement actually could be reached on policy reduced to specific words and sentences. Twenty contestants sat down Sunday afternoon before a blackboard and proceeded step by step, word by word, and sentence by sentence to construct an area of agreement policy. Those who participated included men and women in ages from 18 to 70 years, veterans, students, businessmen, teachers, housewives, a minister, two machinists, and a retired farmer who termed himself a ditch digger.

The six points of policy which they developed are printed in properly numbered sequence.

LET US WORK THROUGH THE UNITED NATIONS IN SOLVING INTERNATIONAL PROBLEMS

Only if the United Nations fails should we act alone.

Let us not pit one nationalism against another nationalism.

But let us have world-wide atomic control immediately.

1. It is geographically, politically, and economically impossible to be an isolationist nation at this time. (Unanimous concurrence.)

2. Because in a democracy foreign policy rests upon public approval and support, the public must be fully and concurrently informed on all commitments, policies, and actions. It should be brought up to date at this time. Where consistent with security, advance information must be given. The withholding of information in the past has been unwise. (Unanimous concurrence.)

3. To implement our foreign policy we must have a strong and successful democracy at home. (Unanimous concurrence.)

4. The imposition of any political ideology upon a people without true consent of the majority presents a menace to world peace. (Unanimous concurrence.)

5. We favor the immediate (underlined) and effective world-wide control of atomic energy. (Unanimous concurrence.)

6. (a) America's first approach to the solution of world problems should be through the United Nations. (b) Only upon failure of the United Nations to act should the United States act unilaterally. (There was one dissent from the (a) portion of this statement and three others dissented from the (b) portion.)

News Letter of Hon. Estes Kefauver

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of a news letter from my distinguished colleague, Hon. ESTES KEFAUVER, member of the Ju-

diciary Committee of the House, who served as a member of the delegation representing our Government at the Inter-Parliamentary Union meeting recently held at Cairo, Egypt:

Over 100 years ago Thomas Jefferson wrote James Monroe from Paris to come there for a visit. He said, "It will make you adore your own country, its soil, its climate, its equality, liberty, laws, people, and manners. How little do my countrymen know what precious blessings they are in possession of and which no other people on earth enjoy."

Last week I returned with nine other congressional representatives from 10 days in the Middle East and Egypt. I understand how Jefferson felt about our country and why he urged his friend to join him. "On your return," Jefferson wrote, "add your testimony in order to satisfy our countrymen how much it is their interest to preserve uninfected by contagion their Government and manners to which they are indebted for these blessings."

And so on my return I want to tell you about these countries we visited—you can make your own comparison. And we can rejoice and be glad of our American way of life, liberty, and pursuit of happiness.

INTER-PARLIAMENTARY UNION MEETS

The Second World War swept away many international organizations whose aim was cooperation between nations. The Inter-Parliamentary Union was strong enough to survive. Last week it took up its task again. It held the first postwar meeting at Cairo. Four Senators and six Representatives from our Congress were elected to attend. I was among this number.

The Union is made up of representatives from legislative bodies, congresses, or national lawmakers of nations with representative governments. The purpose of the meeting is for mutual discussion and exchange of views on international problems. I have always felt that world security and peace depend on such interchange of ideas and understanding of facts. This is especially important at the congressional level.

At the Cairo conference these spokesmen gave their ideas as to how peace and security can best be secured. Reparations, disarmament, foreign trade, and codification of international law were other major matters considered by the Union.

The United States viewpoint was given careful attention by all delegates. The prestige of our country is high. Senator BARKLEY, chairman of our delegation, made an inspiring speech on America's aims and ambitions for peace and justice. It was acclaimed by every country represented.

I was appointed to serve on the disarmament committee and the committee for codification of international law. Every free nation expressed as their ambition stable world conditions for people to live in peace and plenty. It was a healthy and enheartening sign. Through the Inter-Parliamentary Union the UN will gain strong support from legislators of the nations present. They place their hopes in UN, but they look to America as a leader to map the way out of chaos and confusion. We cannot fail this faith.

GREECE AND PRESIDENT TRUMAN'S AID

What I saw and heard during brief visits in Greece and Turkey strengthen my faith in the wisdom of President Truman's program for aid to these countries. Our mission to Cairo was chiefly for the purpose of attending the Inter-Parliamentary Union. We felt, however, that it was of great importance to see as much as possible of conditions in Greece and Turkey. The Greek-Turkey aid program is one of vital concern to the United States.

We only saw a small section of Greece. It was not possible to do much more in a stay of a few days. We talked to many Government officials and to many of the people. We were able to make first-hand observations by contacting these two groups.

Greece is in a desperate condition. Her country is devastated. The guerrilla bands or Elas are said to be Communist led and supported. They make up about 10 percent of the population. Their strength is largely caused by the need of the people for the bare necessities of life. Food, clothing, and medical care are urgently needed. Help in rebuilding highways, bridges and railroads will go a long way toward making Greece self-sustaining. In my opinion, a chance to return to normal living conditions will wipe out Communist influence.

GREEK GOVERNMENT AT WORK

Prime Minister Maximos impressed me as being a most able man. He was called from retirement to serve his country. King Paul is starting a popular youth movement to help restore the country. Queen Fredrika is dynamic in her efforts to get medical care for her countrymen. This young couple impressed me more favorably than I had expected. They take practically no part in the political direction of Greece. Their friendliness and eagerness to serve their people has made them more popular than the late King George. The people and governmental officials in Greece want our technicians to supervise expenditure of funds made available to them.

I am convinced the people of Greece want to stand with the United States in an effort to make a stable and peaceful world. They can make a most valuable contribution toward this goal with the assistance planned. The prestige of America will be raised and at the same time the going will become harder for Communist expansion. If we withdraw I fear communism will be forced on Greece and other nations in that part of the world. This would mean the loss of the Dardanelle Straits and the eastern Mediterranean.

TURKEY'S PROBLEM

We visited Istambul and Ankara in Turkey. We conferred with Recep Peker, the prime minister and Hasan Saka, foreign minister. Turkey is continuing the development program begun by her former President Ataturk.

This country has a substantial middle class. A majority of the people can read and write. They participate in elections. Most of the farm land is owned by individual farmers. The Turk dislikes communism. There are practically none in the country and the party is outlawed.

Turkey has had five wars with Russia in the last 100 years. In order to protect herself against Soviet expansion, she maintains a standing army of about 800,000 men. The army is a terrible drain on a population of 17 million people. Their military equipment is out of date and their transportation facilities are poor. To modernize these would give the country a stronger military machine. It would also enable Turkey to demobilize many men for work in factories and farms.

Shrinking Air Power

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most timely article which appeared in the Washington Post of April 22, 1947, by Ernest Lindley entitled "Shrinking Air Power." Air power is essential to the security and defense of the United States.

On January 22, 1946, I said on the floor of the House of Representatives:

We have air supremacy everywhere in this world, and I think this air supremacy should be maintained at all costs. In other words, by maintaining air supremacy and by insisting upon it we can make the greatest contribution to the protection of American interests and the greatest contribution to the building of an organization which will preserve the peace of the future.

On April 10, 1947, I said on the floor of the House:

It is not too late to regain our strength and to retrieve the position we have lost. We must develop a powerful Army, continue to maintain the largest Navy in the world and insure air supremacy at all costs. Air supremacy by the United States in this day of guided missiles and atom bombs, will be one of the greatest guaranties in maintaining peace.

Mr. Lindley states "An independent study" of this problem "may be desirable."

On November 29, 1945, 16 months ago, I introduced a resolution providing for a select committee of 23 Members of the House to make a study of the foreign policy of the United States, both political and economic, and to investigate the Department of State. On January 3, 1947, I reintroduced my resolution, which was referred to the Rules Committee and given the number, House Resolution 28.

Such a committee as I have requested would study and report to the House on the question, How extensive should be our air strength to insure the security of the United States. The rapid rush of events emphasizes the great urgency for the adoption of House Resolution 28. The problem of our shrinking air power which Mr. Lindley discusses in the following article could well be brought to the attention of the House by a select committee to study foreign policy:

SHRINKING AIR POWER

(By Ernest Lindley)

DECLINING PRODUCTION PERILS DEFENSE

In probing for soft spots in the President's budget, Congress will find that in some areas the Budget Bureau has already cut too deep into the muscle, if not into the bone. It has already become evident that the President underestimated the funds needed for foreign economic aid. After the bill authorizing aid to Greece and Turkey will come a request for assistance in Korea beyond that already included in the budget. It probably won't be long before we are asked to take over part of the British financial load in Germany.

There are some places also in the national defense budget, which accounts for about one-third of the total budget, where the President may have cut too deep. One of these is aircraft procurement. Our first lines of defense—defense of ourselves and defense of world peace—now lie in the air. To keep these lines strong much more is necessary than well-trained units of suitable size in the Army Air Force and naval aviation. Adequate research and development are also needed. Among the essentials also is a sound aircraft production industry. The size of this industry cannot be more than a small fraction of what was needed during the recent war or would be needed if another war should come. But it must be

large enough to provide a base for rapid expansion.

With the loss of wartime business, this industry has been withering back toward its prewar dimensions. Last year about three-fourths of the major air-frame manufacturers lost money on current operations, although some managed to keep their books in the black by carrying back losses against wartime taxes. At present, the commercial air lines are being reequipped. But their needs are proving to be below earlier estimates and they will be largely met this year. The manufacturers do not yet see a large enough foreign demand to fill the hiatus which will come when United States-owned air lines have been reequipped. If they are to keep going, they must have enough orders from the Army and Navy.

Possibly there are too many aircraft manufacturers for peacetime. Possibly the national defense would not suffer if some of them went out of business or were merged. But there is a point beyond which such contraction would imperil the base of our air power.

The budget presented by the President contains approximately $700,000,000 for aircraft procurement for the Army and Navy combined. This may appear to be a substantial figure. Costs, however, have gone up here, as elsewhere. This sum is the equivalent of perhaps $350,000,000 to $450,000,000 in 1940. In addition, the newer types of planes are more expensive than the old, and the unit cost of producing a few planes is much greater than that of producing a large volume.

To keep our air defenses strong, new planes and equipment should continually be designed and manufactured. Enough money must be spent to preserve a sufficiently large corps of designers, engineers, and workers in the aircraft industry. If these cadres are allowed to shrink too much our air defenses will become like a hollow shell.

The Army and Navy should spend continuously on aircraft enough to assure that the aircraft industry is kept up to the minimum essential for national defense. Some estimates already have been made by the Army Air Forces and probably by the Navy. These are said to show that larger appropriations than are recommended in the President's budget will be needed, at least after this year. An independent study may be desirable, possibly by a special commission or board. The problem is there. Little attention is being paid to it. If it is ignored much longer we may find that it has solved itself at the expense of our safety and the peace of the world.

United States Foreign Service Academy

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Legislature of the State of Oregon:

Senate Joint Memorial 4

To the Honorable Senate and the House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the Senate and the House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas there is urgent need for the establishment of a Federal institution for the training of diplomats, economic advisers, and military attachés in the Foreign Service of the United States, to the end that the representatives abroad of the United States may be prepared to meet the responsibilities of their offices; and

Whereas the Honorable LOWELL STOCKMAN has introduced into the House of Representatives H. R. 1770, which provides for the establishment and maintenance of an academy for the instruction and training of students in the theory and practices of international and diplomatic relations, to be known as the United States Foreign Service Academy; and

Whereas the enactment of H. R. 1770 will meet this Nation's growing and obvious need for the training of personnel in its Foreign Service: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the house of representatives jointly concurring therein), That the Congress of the United States be and it hereby is memorialized to enact H. R. 1770, to the end that an academy may be established for the training of personnel in the Foreign Service of the United States; and be it further

Resolved, That the secretary of state of the State of Oregon be and he hereby is directed to send a copy of this memorial to the President of the United States, to the President and the Chief Clerk of the United States Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to each of the Senators and Representatives in Congress from the State of Oregon.

Adopted by senate March 11, 1947.
M. E. CORNETT,
President of Senate.
Concurred in by house March 19, 1947.
JOHN H. HALL,
Speaker of House.
Filed March 25, 1947.
ROBERT S. FARRELL, JR.,
Secretary of State.

STATE OF OREGON,
Office of the Secretary of State.

I, Robert S. Farrell, Jr., secretary of state of the State of Oregon, and custodian of the Seal of said State, do hereby certify:

That I have carefully compared the foregoing copy of Senate Joint Memorial No. 4 with the original thereof adopted by the Senate and concurred in by the House of Representatives of the Forty-fourth Legislative Assembly of the State of Oregon and filed in the office of the secretary of state of the State of Oregon March 25, 1947, and that the same is a full, true and complete transcript therefrom and of the whole thereof, together with all endorsements thereon.

In testimony whereof, I have hereunto set my hand and affixed hereto the seal of the State of Oregon.

Done at the capitol at Salem, Oreg., this 26th day of March, A. D. 1947.

[SEAL] ROBT. S. FARRELL, JR.,
Secretary of State.

Free-Trade Zone for Los Angeles Harbor

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. McDONOUGH. Mr. Speaker, the Los Angeles Board of Harbor Commissioners has conducted a survey to determine the best location and to draw up plans which will be used in preparation of an application for a free-trade zone for the Los Angeles-Long Beach harbor area.

To date only two free-trade zones have been established in the United States, one at New York and the other at New Orleans. San Francisco has applied for permission to establish a free-trade zone, and Los Angeles should soon be ready to file a formal application.

The cities of Los Angeles and Long Beach share harbor facilities which provide a gateway for the constant flow of raw and processed materials from South and Central America. This harbor is situated more than 300 miles closer to the source of these materials than any other major shipping port.

While not a new project in world trade, the foreign-trade zone is a recent introduction into the United States. The first free port under definite administration as such was established in Europe in 1888, and its success was such that zones increased in number until 43 free ports had been established prior to the recent war.

Proposals to establish free ports in the United States were made prior to the First World War, but no free-trade zone was opened until 1937 when New York City under authorization of an act of Congress passed in 1934 established the first foreign-trade zone in America on Staten Island.

The growth of this port was phenomenal. While only 11,000 tons of cargo were received in the zone in 1937, this tonnage more than trebled by 1938, and in 1941, 137,000 tons of cargo were received. The value of cargo soared from $1,170,000 in 1937 to $89,000,000 in 1941. Foreign export handled for reexport which amounted to only 742 tons with a value of $60,000 in 1937 reached a peak of 24,000 tons and $10,000,000 value in 1941. And customs payments in revenue to the United States Treasury jumped from $30,000 in 1937 to $2,868,000 in 1941.

The benefits which a foreign-trade zone will bring to business and industry in the Los Angeles area are unlimited. The small importer will be able to draw upon a stored reserve in the zone as sales permit, thus controlling payments of duties, since such payments will be made over a longer period of time. Manufacturers of parts which are assembled into a completed product with the addition of foreign-made parts for export out of the United States can be assembled within the free-trade zone, and the foreign-made parts do not pass through customs.

Savings also will accrue to the American importer on live-storage commodities where shrinkage or other losses occur since thorough checking within the zone will eliminate payment of duty on evaporation or leakage.

When a free-trade zone is established in the Los Angeles Harbor area, it will offer a special inducement to the countries of South and Central America to trade through the zone. Materials entering this country under quota can flow freely into the zone to be stored there until quota allowances are available. Through such stock-piling facilities the South American producer is aided in

marketing his goods and our manufacturers in Los Angeles will be given access to additional raw materials.

Los Angeles is now one of the leading industrial centers in the United States. A recent survey has reported that Los Angeles now is tied in sixth place with Pittsburgh, Pa., as an industrial city. A free-trade zone at Los Angeles Harbor will contribute materially to the expanding industry of Los Angeles and southern California, and through increased production in that area will benefit the entire Nation.

Sniping Attacks on Veterans' Administration Officials Are Unwarranted

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. VAN ZANDT. Mr. Speaker, it is beyond contradiction that the Veterans' Administration has a herculean task in administering the affairs of 18,000,000 veterans and millions of their dependents. Despite the necessity of decentralizing activities on a large scale and coordinating the work of far-flung regional and subregional offices, a remarkable job has been accomplished.

While it is only natural that the expansion of activities made necessary by World War II would add difficulty in administering veterans' problems in a flawless manner, viewed from every angle the Veterans' Administration has been quick to correct and improve procedures at every opportunity in rendering the manifold services of the Veterans' Administration.

It is regretted that there has been some undeserving criticism of many of the older employees of the Veterans' Administration and the derisive term "palace guard" has been used in describing a group of hard-working veterans who have followed a career in Government as employees of that particular agency of the Federal Government. Officials and members of organized veterandom, who have had the opportunity since the close of World War I to observe the service rendered by this so-called "palace guard," are quick to realize that the malicious and scurrilous attacks are without any foundation.

In view of the oft-repeated lament by Government officials of the dire need of attracting the highest type of personnel in Federal agencies, and retaining them for a useful career of public service, these unwarranted attacks on certain employees of the Veterans' Administration destroy such frenzied appeals, designed to attract capable and efficient Government personnel.

Members of Congress who have found it necessary to contact the Veterans' Administration over a score of years are keenly aware that the old-timers in this particular agency are not only willing and courteous in rendering service but their years of experience enable them to know all the answers and to function promptly and with a maximum degree of efficiency.

I am certain that all Members of Congress resent the sniping attacks on the personal integrity of Omar Clark, Harold W. Breining, Edward E. Odoms, and Harold V. Stirling. Such baseless criticism is not only undeserved but it is in poor taste and since personal in character it should be exposed for what it truly is—a ruthless distortion of facts.

The campaign to undermine confidence in reputable employees of the Veterans' Administration has aroused the ire of thousands of veteran friends of these maligned public servants, who have given years of faithful service in their respective positions.

The editorial from the April 10 issue of the National Tribune, Washington, D. C., is a timely exposé of the tactics being employed in disseminating propaganda designed to destroy the confidence of the veteran population in the Veterans' Administration and to create doubt in the mind of Gen. Omar N. Bradley that he has the undivided loyalty and support of top-ranking career men in the Veterans' Administration.

The editorial is as follows:

CREPE-HANGING COLUMNISTS

Whenever criticism of the Veterans' Administration or any of its officials is warranted, this veterans' spokesman yields to nobody in its ability to do the job. We believe we have demonstrated fully our capacity, but in every instance we have attempted to be fair, and our purpose has been constructive. It is regretted that not as much can be said for ex-Navy Commander Tyrrell Krum, a veteran of both World Wars, who has written a series of syndicated articles that are now appearing all over the country. Neither the agency that is set up to administer impartially all laws relating to veterans and their dependents nor the individuals at whom Krum is carelessly directing his attacks will admit it, but the sort of thing he is doing is harmful to the morale of the Administration and is damaging to the whole veteran cause. Its content is simple of duplication by irresponsible columnists and commentators, and great injury can result.

It is a mystery what Commander Krum is up to. He is a capable writer and has sufficient intelligence to write objectively. He knows too much not to express himself with a greater degree of accuracy, and the full facts are as available to him as to anybody else, but he has chosen instead to resort to reckless distortion and to treat with abandon the workings of the greatest of all governmental agencies. He uses phrases that attract the gullible and uninformed and are certain to lead many to believe that the Veterans Administration has gone to pot. His charges simply cannot be substantiated.

Not so long ago Krum intimated that former Administrator Frank Hines had been fired by President Truman. Everybody knows better. When he was brought up short, he only reluctantly and partially retracted his statement and then went on with his attacks. He said that the Hines regime ended in near scandal, when he knows it was absolutely free from taint. This does not make sense when it is common knowledge that the man, whose accelerated veterans' program designed to meet World War II needs was turned down, had befriended Krum and aided him. It is known, too, that he was a Hines admirer, and had sought and received from the General a photo subscribed "To my good friend." His present attitude is a strange demonstration of friendship. And now he is also violating Hines' successor by saying that General Bradley is tired and worn out.

The columnist's latest tirade is against what he terms the "palace guard," a group of faithful employes who have been with the Administration since its infancy. They include Omer Clark, formerly in charge of claims and now Bradley's right-hand man; Harold Breining, supervisor of the vast insurance division; Ed Odom, head of the legal service, and Harold Stirling, who manages the enormous GI educational program. Krum points to them and others as reasons for "what is wrong" with the administration of veterans' affairs, and says that they are Bradley's "internal opposition."

We have seen the Veterans' Administration function ever since it was organized. We have known all about its growing pains and saw it recover from one early scandal. The only serious troubles now result from rapid expansion of a huge machine. They are routine concerns only. They are not faults attributable to the shortcomings of individuals. But the Krum articles imply that the "palace guard" is underhandedly trying to prevent an honest service to veterans from going forward and that they are disloyal to their new chief. That is flagrantly untrue. We suspect that they are purposed to undermine public confidence in the agency by raising a ruckus which could easily destroy the reputations of decent, hard-working public servants whose service has been of a high order, and to damage the morale of the entire institution. If he intends only to indulge in sensation in order to fill the bread basket, he should look elsewhere, because his present criticisms are without basis in fact.

The Veterans' Administration is big business. Its budget exceeds $7,000,000,000. It has many thousands of employees and operates 61 regional offices, most of them divided into subregional and contact offices. It supports more than 125 hospitals and homes, servicing well over 100,000 sick and disabled, with more on the waiting lists. It has on its pension rolls 2,500,000 veterans and nearly a million dependents of veterans. It has in schools and colleges over 1,500,000 GI's. Almost a million more are training on the job and over 200,000 are studying vocations, and thousands more have had these advantages. It conducts a multibillion-dollar insurance business with about 6,000,000 policyholders. These are only a few of its varied activities, and it stands by to look after the interests of 18,000,000 veterans, to say nothing of millions more of dependents. Such an outfit deserves more than sabotage and the ill wishes of ranting and destructive columnists.

It would be folly to say that this huge organization does not have problems, that its wheels are always perfectly greased. It is an open secret that General Bradley would like to quit and go back to his beloved Army too, but to infer that he is weary of his job is to say that Bradley is a quitter, and that is far from true. When he first took over, the general spoke of radical changes and new ideas. He said he would make mistakes with his army of occupation, and he did. He will make more of them before he accomplishes the goal he has set to aid veterans. There will be endless delays and more administrative rough spots, and we shall fret about them, but the chore as a whole has been excellently done so far, and when we are critical, we shall not throw brickbats.

Two years ago, when Bradley came in, he said that the then key employees must prove themselves. To their regret some of the "new army" repeated that injunction too often and incurred the Bradley wrath, but the "palace guard" knuckled down and worked. Nearly all have either continued at their old places of responsibility or have been moved up to bigger jobs. That is proof enough for us that they enjoy the confidence of their new chief. It is mute witness to the

experience and knowledge they first possessed, and to their ability to adjust themselves to a new order which they have assisted in strengthening materially. It does not indicate any process of undermining disloyalty. Instead of malicious slander and unjust calumny, they deserve the praise of our whole people because the results of their labors reach out into almost every home in the land.

It appears that some critics alter their tunes with almost every change in the political wind, and that they have no scruples whatever about selling reputations down the river with lurid and emotional misrepresentation. Crape-hanging tactics like these can serve no good purpose, and are nationally a disservice to all veterans. We condemn wholeheartedly such thoughtlessness, and we recommend generous applications of a strong insecticide to kill it off. Morale lifting is the order of the day, not morale breaking.

Italians Fear Tito's Power After United States Troops Withdraw

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown in the Washington Sunday Star of April 20, 1947:

ITALIANS FEAR TITO'S POWER AFTER UNITED STATES TROOPS WITHDRAW — YUGOSLAV FRONTIER FORCES REPORTED STRENGTHENED, WITH ITALY'S OWN ARMY AND MILITARY POLICE UNABLE TO OFFER MUCH RESISTANCE

(By Constantine Brown)

ROME.—The pistol which Marshal Tito, of Yugoslavia, is pointing at Italy is still hidden, and the presence of American forces in Venezia Giula prevents him from uncovering it, but the Italian general staff, foreign military observers, and some members of the Italian Government feel certain that the threat from the East will become acute soon after Allied troops leave and are replaced by Italians.

Reports from the other side of the Yugoslavian frontier indicate that the Fourth Yugoslav Army, with headquarters at Ljubljana, recently has been strengthened by the addition of two divisions withdrawn from Macedonia. One of these divisions is said to be motorized.

Conservative estimates place the Yugoslav forces near the Italian border at between 65,000 and 75,000 men, provided with the most up-to-date equipment and supported by an adequate air force. In fact, any air force directed against Italy is adequate, since 50 percent of the 200 Italian airplanes are not airworthy and Italy does not possess sufficient gasoline for more than a few hours' flight by the others.

COMMUNISTS RESUME SABOTAGE

Of the seven available Italian Army divisions which are provided with a few armored cars of 1943 vintage, only four are in the north. But even if all were concentrated in that area they would be of little assistance for the defense of the area between the Po River and the Alps.

The men are poorly equipped, war weary and demoralized. The officers are disheartened and feel that whatever efforts they make will be useless. The fear that something may happen after the departure of the Allies is strengthened by the fact that the Communist Party is very active in northern Italy. Its work is not simply electoral.

Secret Communist organizations are reported to have resumed their sabotage campaign. The cells are ordering their men to come and take part in militant activities." The full extent of the understanding which may have been reached between Marshal Tito and Palmiro Togliatti, the Italian Communist leader, at their last meeting a few months ago is not known. But it is suspected there was some pretty definite planning between the two Moscow puppets in regard to correlating their efforts after ratification of the peace treaty and departure of the Allied forces from Italy.

MILITARY POLICE WEAKENED

The preparations of the Communist partisans in Italy are not hampered by the Government because the police forces are not altogether reliable. The famous carabinieri (military police) have been seriously weakened. Because it is a permanent military organization outside the control of the general staff, it was frowned upon by the Allied control authorities.

In spite of their comic-opera uniforms, the military police, whose organization has existed for more than half a century, are considered the toughest and most incorruptible police organization in the country. During the Mussolini regime they loyally did their duty of keeping law and order according to then-existing regulations. But they were never used by the Italian dictator for dirty political work, which always was entrusted to special black-shirt units.

Today the carabinieri continue to work honestly, but their number has been so reduced that they cannot be counted on to maintain order if internal disturbances occur.

CIVILIAN POLICE UNDEPENDABLE

The civilian police have been reorganized and recruited, particularly in the critical northern areas, to a large extent from the ranks of the partisans who were overwhelmingly under Communist influence. Many are former Fascists, who, in order to escape the purge, have joined the Communists.

The civilian police force is underpaid and lacks the tradition and pride of the carabinieri. In sensitive areas those who are not affiliated with any party are taken into camp by the Communists through bribes, such as special rations of food and clothing for the men and their families.

Since the Communist ministers have the reputation for being the most forceful and influential members of the cabinet, the men who have accepted police jobs, because it gives them a livelihood, see no reason why they should not accept the extras which come to them from the Communist cell leaders, and are willing to shut their eyes to anything which it is not desired that they see.

OFFICIALS ARE PARTY MEMBERS

Many top city and county officials in the industrial North are members of Togliatti's party either because they find such membership convenient or because they are convinced Communists. A number of industrialists, who doubt the ability of the West to stem the advance of the East, also have become members of the party, having decided to get on the bandwagon before it is too late.

Taken together, all these circumstances give much food for thought to the Italians, who do not want the most productive portion of the country to separate itself and fall behind the iron curtain. They agree that financial assistance alone will not save Italy. But they are convinced that an American policy indicating clearly to the Italian people the United States opposition to foreign aggression against Italy, regardless of the form it takes, would ward off the dangers which menace this country at this time.

Privileges Beget Responsibilities

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesaay, April 22, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, people are prone to seek and obtain privileges without realizing that privileges beget responsibilities. In the consideration of the Hartley labor bill, recently passed by the House, it was all too apparent that the heads of many of the labor unions have been enjoying privileges at the expense of the general public, and apparently are not willing to release any of those privileges for the common good. Most of all they seem determined that they will not agree to assume the responsibilities that necessarily must accompany the privileges which they enjoy. The general public is more vitally interested than either management or labor. Whenever the law grants a privilege to either management or labor, the one upon whom such privilege is conferred, or the recipients must, for the common good, assume a proportionate share of responsibilities. So I say, privileges beget responsibilities.

A very clear exposition by one of my constituents appears in the following letter which I just received from him today and which I quote for the benefit of my colleagues:

As a citizen sincerely interested in the welfare of this Nation, I am concerned about the labor situation.

During his lifetime I was an admirer and supporter of Franklin Roosevelt and I am aware of the great benefits he brought to the workingman. But the right to privilege must always be accompanied by the duties of responsibility. Management has learned and accepted this fact and it is apparent to thinking people that labor must learn and accept this fact also if this Nation is to remain great. There is too much at stake today to tolerate unnecessary domestic restlessness and strife.

The pendulum of labor's position has already swung dangerously far toward the side of excessive power and excessive abuse of this power. The true friend of labor, I think, should wish to impose the responsibilities upon labor justified by its present power before irresponsible labor leaders create a situation which should cause a too violent reactionary swing. In order to achieve a fair balance of privilege and responsibility between labor and management, I feel that legislation should be passed which will:

1. Outlaw industry-wide bargainng.
2. Outlaw the closed shop.
3. Outlaw the jurisdictional strike.
4. Outlaw secondary boycotts.
5. Open union records to the public.
6. Tax unions according to their gross assets.
7. Make union leaders responsible for any cases of violence incurred in labor disputes.
8. Provide blanket punishment for all members of a union group breaking specific labor laws.
9. Force unions to desist from any practice endangering the national health or safety as defined by the President for 30 days and thereafter as defined by the Supreme Court.

This Nation and the principles on which it was founded is greater than any one group, and we must realize this if we are to survive

in the international struggle already in full swing.

I shall lend my full and active support to any individual or party advocating reasonable labor curbs because I believe this is the single most important factor in stabilizing the domestic economy.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. KEATING. Mr. Speaker, I believe there is a growing sentiment among the Members of Congress, perhaps particularly those who are here for the first time, that their time ought not to be consumed in the consideration of the myriads of details involved in the administration of the affairs of the District of Columbia.

Problems of tremendous national and international importance press in upon us. Although the Committee on the District of Columbia does an outstanding job, yet in the final analysis the responsibility rests upon each one of us to pass upon the legislation affecting the District.

I have not heard the other side presented and, of course, should wish to retain an open mind until all the evidence is in. I must confess, however, that I was greatly impressed by the remarks made by our distinguished and thoughtful colleague, Hon. EDWARD J. DEVITT, of Minnesota, the other day before this body. I agree with the Washington Post editorial which says that his plea should not pass unapplauded.

Under leave to extend my remarks, I include this editorial:

TOWN COUNCIL

The eloquent plea for home rule for the District of Columbia delivered in the House last Monday by Representative DEVITT, of Minnesota, ought not to pass unapplauded. It appears that the dinner given new Members of the Eightieth Congress by the Washington Board of Trade was bread cast upon the waters. Mr. DEVITT, at least, acknowledged "it was there that I first learned of my importance as one of 531 members of the town council of the city of Washington." He appreciates the honor, but would like to be relieved of it. And in sober truth we cannot altogether blame him.

"When such matters as the Greco-Turkish loan cry out to the Congress for speedy solution, why should our time," Mr. DEVITT asks, rhetorically no doubt, "be taken up with determining the feasibility of constructing an underpass at Dupont Circle? When the great tasks of reducing taxes, balancing the budget, and paying off the national debt hold first place on our agenda, why should Members of this body spend hours of their time hearing testimony concerning a bill regulating the possession of firearms in the District of Columbia? We spent almost a full legislative day last month deciding that the milk cows of the Midwest would not properly function if the citizens of the District of Columbia operated on daylight-saving time."

It is easy to understand how statesmen with the affairs of nations on their shoulders should grow weary of local trivia. Nevertheless the puny problems of dependents are the price of an overlordship such as that which Congress imposes upon the District. These problems cannot in conscience be evaded so long as an unrepresentative rule over a disfranchised people is maintained. Fortunately Mr. DEVITT does not shrink from facing the only feasible solution. "This Congress," he says, "should grant the District of Columbia a charter providing for a legislative body of its own, which would have more time, more inclination, and a better knowledge of local problems with which to legislate for the good of the District." Local home rule for the District is the inescapable price Members of Congress must pay for freedom from its problems. We should think it a release they would welcome on moral as well as on practical grounds. We should think, too, that it ought to be coupled with full membership in the American society and representation in its National Legislature—so that we can share with Mr. DEVITT and his colleagues the great burdens of statecraft that they bear.

The Telephone Strike

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greeley (Colo.) Daily Tribune of April 9, 1947:

PATIENCE OF PEOPLE PRACTICALLY EXHAUSTED

When Congressmen come home they will find the patience of a patient people practically gone. For a great many Congressmen will go home to districts lacking dial phones. Their friends will want to know why the flower of the Nation's intelligence assembled on the banks of the Potomac cannot keep the basic utilities operating.

Almost daily in our country there bobs up another argument for compulsory arbitration of labor disputes. The telephone strike adds one more to the long list. It makes a stronger case because it is a strike in a utility without competition. It ties up a service very much affected with a public interest, as the lawyers say.

Only certain factors in union labor and certain groups of employers oppose enforced arbitration. The public, victim of recurrent quarrels between the two, wants essential services to go ahead without a break. Only forcing both sides to accept the ruling of an impartial court will guarantee that. Why belittle the United Nations set-up to work on an international scale, destined to bump against the stone wall of sovereignty, when within our own country we are unable to settle industrial differences by peaceful means?

If compulsory arbitration be not applied to all labor relations, at least it should apply to enterprises affected with a public interest. That is a broad term. It would take in coal mines and the telephone company.

Two British dominions have had long experience with compulsory arbitration. They are Australia and New Zealand. There it is taken as a matter of course. Laws regulate labor relations. Both countries are comparatively small. By American standards, they are poor. They cannot afford the waste of anarchy in labor relations. They cannot pay the costs of strikes—the civil equivalent of warfare. Perhaps Australia and New Zealand are politically more mature than the United States. Or would Americans deny that?

This has nothing to do with the merits of the telephone strike. They may be highly technical.

Some facts are simple enough for all to understand.

The telephone company operates under a franchise, without competition, and submits to public utility commission regulation. Therefore, it and other utilities should submit to compulsory arbitration. They do so in rates.

People who go to work for a public utility should realize that their status will be different from that of other workers. They should accept the responsibility of maintaining continuous service. They should be aware that their only protection is compulsory arbitration. They should know that they are bound to settle their differences with the company by peaceful means. They and the company should know that all must obey the order of an arbitration court with no more question than the order of another court. That is the way it should be under compulsory arbitration.

But the present Congress, during the terms of most of its Members, plagued by major strikes, including a railroad tie-up, a coal strike, and a telephone strike—to mention only the big ones—has brushed aside applying law to both sides in labor relations. Congressmen have dodged compulsory arbitration within this country. Yet some of them hope to apply it, in effect, internationally.

Anything less than compulsory arbitration is a subterfuge, a makeshift, an avoidance of basic issues, an invitation to industrial anarchy, and a delay in the solution until the United States becomes as adult in labor relations as are some smaller and less wealthy nations.

Waste of natural resources—soil, forests, and water—is not the only waste which this Nation confuses with liberty.

The Position of Korea

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include in the Appendix thereof an article written by Yongjeung Kim appearing in the New York Times of March 14, 1947, entitled "Position of Korea":

POSITION OF KOREA—AMERICAN AND SOVIET LEADERS ASKED TO FOCUS ATTENTION ON PROBLEM

To the EDITOR OF THE NEW YORK TIMES:

The appeals of small nations and small men often fail to reach important places. Therefore, through the good will of the Times, I am trying to gain the attention of Secretary of State George C. Marshall and Foreign Minister Vyacheslav M. Molotov.

The eyes of the world are turned today toward Moscow, where the chief planners of the peace are meeting to formulate treaties for Germany and Austria. The peoples of all nations, great and small, are hoping for a just settlement.

As Secretary Marshall and Foreign Minister Molotov come together there is a unique problem upon which their attention should be focused. It is the problem of Korea.

The unhappy Korean situation is the sole responsibility of the United States and the Soviet Union. Korea is a proving ground of

the relations between these two greatest powers. If they can solve the Korean problem amicably, the relations between the two countries, so often strained of late, will be tremendously improved. Their attention should be given to Korea more than to anywhere else in the world. And if they wish to, the two Foreign Ministers can settle this pressing matter easily and quickly in a brief personal meeting between the formal treaty-making sessions.

ARBITRARY DIVISION

The Korean people are not only racially homogeneous, but economically interdependent. If the industrial north remains separated from the agricultural south, Korea cannot long survive as a nation. The arbitrary division of the country at the thirty-eighth parallel has already caused much irreparable damage to Korean national progress and to good relations between America and Russia.

In Korea today more than 2,000,000 displaced persons wander, cold and hungry. A friendly nation is being needlessly punished. Suffering was expected from the enemy, Japan, but not at the hands of admired friends.

The Korean people become bewildered and restless. The whole world knows that they are not getting a square deal. This makes only the former enemy happy.

One year and 7 months after VJ-day Korea's promised independence is far from sight. The nation sinks deeper into political, economic and social chaos. The people are becoming apprehensive of Soviet and American intentions. Surely Secretary Marshall and Foreign Minister Molotov deplore the continuation of this intolerable situation. They do not wish to see a friendly nation strangled nor do they wish to lose the long-established friendship of the Korean people.

CRY FOR HELP

The Soviet and American commands have been unable to rescue the Korean nation from its disastrous position. Now 30,000,000 Korean people are looking hopefully to Messrs. Marshall and Molotov to save them from the imminent danger of national ruination. It is only humane to answer a cry for help. The two statesmen could spare a few minutes from other problems to iron out their Korean differences and rekindle the fires of hope in the hearts of the Koreans.

If the two foreign ministers make the welfare of the Korean nation their primary concern the settlement of the Korean question will be a simple matter. The United States and Russia told the world that their interest in Korea was to help and not to gain. Respecting the Korean right to self-determination is the key to the solution.

However inferior it might prove to be at first, Korea should be allowed to develop a democracy of her own at once.

YONGJEUNG KIM,
President, Korean Affairs Institute.
WASHINGTON, *March 12, 1947.*

Dedication of Memorial Chimes and Plaque, Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech I delivered at the Bruce School memorial chimes dedication, Lawrence, Mass., on Saturday, April 19, 1947, at 2 p. m.:

In all lands and in all times the ringing of a bell has called people together.

One of our first recollections is that of the school bell, summoning us to join in group study. And throughout the rest of our days, the bell calls to the community, bringing many different messages.

Our ancestors came from Ireland, England, France, Italy, and many other countries separated from one another by race and custom as well as by ocean and mountain and borders. But one thing they did have in common, and that was the universal language of the bells.

In every village, the bell tower of the church rose above the home like a shepherd standing in the middle of his flock. The bell served many civic purposes, but it is one of the reverent ones that I wish to speak. It was a signal of devotion, for the angelus prayers were said at morning, noon, and evening at the sound of the bell.

In between, its cheerful ring brought tidings of marriage and birth. At other times its slow and mournful voice spoke a last farewell for those who grieved a loved one.

We think of that tradition as we meet here today. It is significant that we assemble to dedicate this clock and these chimes in memory of those who sacrificed their lives in World War I, and for those who followed in their footsteps during World War II.

They gave all the wealth of their precious youth that we might live, and go on to do our small part in the great and total effort that must be made to win peace and security for all mankind.

Their loss is our loss, and one that is beyond all reckoning. But the spirit which animated them did not die. It simply passed over from them to us.

May the music from this tower forever remind us of the bond which unites the dead to the living and to those yet unborn so that we, in whom life vests at this moment, shall not fail in our task.

The world is filled with alarms and confusions, and most of us feel that we are being swept along by a restless tide and away from the real work which we should be doing. The daily, commonplace chores of life are necessary. Without them, such life as we know, would not be. At times, they are dull and irksome, and because they seem meaningless, we weary of them.

Yet, in the long and mysterious journey called life, all these little things add up, in a way that escapes our immediate understanding.

There are interludes, however, when the laughter of a child, or the boundless love of a woman, or the faith and courage of a man make us aware of the miracle of creation, and we know the meaning of reverence.

The music of the bells plays on our heart strings, touching unexplored depths within each and every one of us. It was John Donne who said that: "any man's death diminishes me, because I am involved in mankind. And therefore never send to know for whom the bell tolls. It tolls for thee."

What he said applies to us today, as we dedicate these chimes to the memory of our war dead. They were involved in the fate of mankind, giving up their lives for the dignity of human personality.

We, the living, are face to face with a terrible challenge. It is this. Shall we learn to control the vast power at our disposal for the good of all mankind? Or shall we fail so that the few who survive shall exist in the loneliness of the ruins?

It is from such small beginnings as this dedication, that we derive hope for the future. This afternoon, we have participated in a neighborhood effort. Here is the very root and source of all democracy. When men and women voluntarily work together to build that which is both beautiful and useful, they are on the road to ever-larger areas of cooperation, upon which the fate of mankind depends.

And when they name it in tribute to the self-sacrifice of their fellow men, we may be sure that such people are on the right road.

The Bruce School memorial chimes, keeping us company through the years, will help us to be faithful to the best that was in the past for the sake of freedom with security which all of us must help to build in the world neighborhood.

International Information and Cultural Affairs

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Life magazine for April 14, 1947:

MONEY FOR TRUTH—$25,000,000 IS NOT TOO MUCH TO GIVE THE WORLD A FAIR PICTURE OF OUR AIMS AND POLICIES

The other day in Washington a very competent observer of the national scene indulged himself in a little nonattributable speculation. "If the Russians were thinking of putting $250,000,000 into Greece," he said, "they would probably advance $175,000,000, spend $25,000,000 on propaganda, and save $50,000,000." There is little question but that Congress will approve the $250,000,000 appropriation for Greece. But the budget of the State Department's Office of International Information and Cultural Affairs (called OIC, and meaning propaganda) is at present receiving the most threatening scrutiny from some economy-minded members of the House Appropriations Committee. That budget anticipates that during fiscal 1948 the Government shall spend on informational activities in Greece an even $125,000.

THE OIC

Formed a year ago last January in a drastically slenderizing merger of OWI and the Office of the Coordinator of Inter-American Affairs, the OIC has a staff of 3,000 at home and in the 67 countries where the United States has missions. Each week it broadcasts 393 hours of news, music, and feature programs to Europe, Latin America, and the Orient. The programs originate from 36 short-wave transmitters in the United States and 4 overseas relay stations are used. They are carried in 25 languages, including, recently, Russian. Greek and Turkish are shortly to be added. These radio activities account for about half OIC's budget.

In addition the agency sends in Morse code a daily news bulletin to our embassies and legations, some of which is turned over to local news services at the point of reception. The OIC maintains 67 informational libraries in 41 countries, where exhibits of American books, art, photographs, and documentary movies may also be seen. It assists in the international exchange of teachers and students. The purpose of this large order of business is, according to Presidential directive, "to see to it that other peoples receive a full and fair picture of American life and of the aims and policies of the United States

Government." Or, in the words of George Marshall, "to cover the earth with truth."

The OIC was given $19,000,000 to tackle the job in 1946. It wants $25,000,000 this year, most of the increase being attributable to universal rising costs. It also wants $10,000,000 to build more relay transmitters and is interested in the $5,000,000 interdepartmental request for advisory assistance to Latin America, as well as the granting of our $3,000,000 dues to UNESCO. But the $25,000,000 operating budget is what has Assistant Secretary of State William Benton worried. For whereas it is the nature of a Congressman to appropriate overnight $9,000,000 to keep foot-and-mouth disease from crossing the Mexican border, he needs a great deal more than three times as much soul searching to appropriate less than three times as much money toward creating good will (and combatting ill will) for the United States in the rest of the world.

The legitimate skeptic is entitled to three questions about our informational service as it is now set up: (1) Does it duplicate the operations of private agencies? (2) Does it compete with them? And, most important, (3) is it effective?

The American press, movies, radio, and international philanthropies have long carried the brunt of the burden of conveying the ideas, the image, the voice, and the spirit of America to foreign peoples. But the very complexity of the ideas of a free press may often confuse rather than clarify American issues for that three-quarters of mankind which habitually gets its news from its governmental horse's mouth and in very simple terms, to say the best of it. The movie industry does not as a rule attempt to convey any aspect of America beside glamour, and it is not interested in documentary films to any great extent. The major American broadcasters have no larger commercial interest in short-wave transmission and have recently signified their willingness to let the Government go it alone—with some industrial advice from the side lines. As to philanthropies, the OIC serves only as a catalytic agent, when requested, between them and their overseas operations. In other words, OIC may be absolved of the charge of duplication.

The only voices to be raised on the question of competition from the OIC came from the Associated Press and United Press last year. AP and UP withdrew their services from the agency on the ostensible grounds that they did not wish to be associated with Government propagandizing. But there are exchange agreements between AP, UP, and Tass, the Soviet news agency. More understandable would be the press associations' unwillingness to give news free to parts of the world which might buy their services. At any rate AP and UP are out, and OIC gets along with Hearst's International News Service.

HOW EFFECTIVE?

The question of OIC's effectiveness is, of course, the paramount one, and one which calls for a certain amount of faith. There is no known poll which measures the fluctuations of a nation's world reputation solely on the basis of its informational program. Queried last week about the performance of OIC in their areas, Life correspondents split about even between verdicts of good and bad. In Japan, Korea, and the United States occupied Germany the correspondents turned in low marks (noting, however, that wasted countries make a poor seed ground for planting inspirational good will). In India, Austria and the Balkans the OIC got full credit for bang-up excellence. In New Delhi, where the Indians are now writing their first free constitution, the OIC library is filled with assembly delegates studying American constitutional practice. This fact may some day affect world history.

The quality of OIC broadcasts has received a respectable over-all appraisal from an unexpected source. Recently Representative TABER, of New York, chairman of the House Appropriations Committee and the one who used to groan loudest over OWI's appropriations, extensively sampled translations of the OIC product. "Not as good as Fulton Lewis," was his reported verdict, "but better than Raymond Gram Swing." Even so he is out to prune the agency's budget, and it will take all the congressional friends the OIC can get to keep him from doing so. These friends will have certain victories for the agency to point to, such as the occasion when Poland banned the Byrnes Stuttgart speech until the OIC had pumped it into the country for 3 days by air. But mostly they will have to fall back on the argument that OIC has only been in business a year, that it is too early to judge its accomplishments and that with Britain alone spending $40,000,000 a year on its propaganda machine and the Russians, God knows how much more on theirs, we ought to have one, too.

A PROBLEM IN PROMOTION

That is not too good an argument, for the pessimist's reply to the British appropriation might be, "And what has it gotten them?" The answer to that could well be that no amount of advertising can sell a product across public rejection. For in spite of Mr. Benton's reluctance as a former adman to consider his function in advertising terms, propaganda is a promotional and selling job.

As such its first necessity is a good product. The men at our short-wave mikes must have a picture to describe that is clear. Is it clear? Byrnes' Stuttgart speech, the "Truman doctrine" and Secretary Marshall's determination at Moscow certainly make it clearer than it was this time last year. The future performance of our informational activities should be all the more effective as a result. In any case, under whatever direction, called by whatever initials, and at whatever not unreasonable cost, it is a job that must be done and done well. Congress should appropriate the money.

In his Struggle for the World, which Life digested in its March 31 issue, James Burnham suggested that "United States propaganda could be, and would benefit by being, for the most part true, or close to the truth." Such a proposal, in line with so much of Mr. Burnham's thesis, tends to look upon the United States of America and the Union of Soviet Socialist Republics as two totalitarian powers already locked in mortal conflict. The Burnham thesis and the extent to which Life agrees and disagrees with it will be discussed at greater length on this page next week. Here let us remark that while Communist radio propaganda habitually refers to Mr. Truman as a "fascist imperialist," the United States does not and will not demean itself by responding in kind. The war of ideas in which we are engaged with Russia is, among other things, a war between truth and untruth, or at least between respect for truth and cynical manipulation of it. The case for OIC is simply this: When there is so much untruth around, the friends of truth are obliged to speak up.

Salute to Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Boston Herald, Friday, April 18, 1947:

SALUTE TO LAWRENCE

This week the arrow of attention points 26 miles northwest of Boston to the city of Lawrence, which is celebrating its one-hundredth birthday. Lawrence can be justly proud of its century of existence, for more than any other city does this manufacturing center illustrate the spirit of New England enterprise.

The city has been rocked by labor unrest, shaken by depressions, and torn by civic squabbles, but, like Antaeus, the wrestler in mythology who grew stronger with each toss to the earth, Lawrence has emerged the greater for its troubles.

As it has woven fabrics through the years, powered by the great Lawrence Dam, making Lawrence the leading worsted and woolen dress-goods center in the Nation, so, too, has the city woven the blood lines of 46 nationalities into one pattern, the democratic pattern, of life. Today, the excellency of this way of life is evident everywhere in the city.

From its industrial unrest has come systematic studies which have created a new industrial consciousness and relationship between workers and employers.

From its corporation boarding houses, of old, where death, birth, and romance crowded in endless sequence, have sprung an awareness that workers must not live a pigeonhole existence, and today the hillsides of the city are alight with the lamps of modern homes.

The city has developed parks, playgrounds, and recreational centers to match its forward housing program, and it has plucked out the prejudices and misgivings from its foreign population through systematic education in Americanization and naturalization. For many years, a free course of lectures, especially for industrial classes, on scientific and miscellaneous subjects, has been sustained by endowment.

Today, as the Lawrence Dam, a marvel of hammered granite, spills water in an unbroken crest 900 feet long exactly as it did in the city's early days, life has come to mean more than the power of the water over that dam.

It has pivoted itself in the spiritual and social forces of a new age as well.

Hartley Bill Would Aid Justice Department in Antitrust Suits

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include that portion of the Justice Department's report prepared last year at the request of the Senate Small Business Committee which deals with prosecutions of labor unions in the construction industry for antitrust law violations:

In 1939, 1940, and 1941, the Department brought a number of cases against labor unions for alleged violations of the antitrust laws. At the outset we made it clear that we were not attacking any of the legitimate activities of labor unions, such as the right of collective bargaining or activities designed to raise wages, reduce hours, and improve working conditions. We recognized the limited liability of unions under the

Clayton and Norris-LaGuardia Acts for activities which, but for the exemptions granted by these two acts, would constitute violations of the Sherman Act. Our program was based upon union activities which, in our judgment, went beyond the exemptions granted labor-union activities by the Clayton and Norris-LaGuardia Acts. The activities attacked were: (1) Jurisdictional strikes, particularly those in which one union struck against another union which had been certified by the National Labor Relations Board as the legitimate collective-bargaining agency with whom the employer should deal; (2) strikes to erect tariff walls around a particular locality; (3) refusal to work on and install prefabricated materials; (4) make work, including the transfer of work from one labor group to another, as well as requiring the performance of more work than that reasonably necessary to complete a job; and (5) agreements between employer and labor groups to fix prices on building materials. These latter agreements were enforced usually by refusal of the unions to work for manufacturers or contractors who would not join the price-fixing arrangement. Under such arrangements, the particular unions involved became the exclusive labor supply for the manufacturer group.

The Department lost almost all the cases in the first four groups, the courts holding that as long as the unions acted in their own self-interest and did not combine with nonlabor groups their activities were immune from prosecution under the Sherman Act, although trade and commerce be restrained. In the fifth group, the courts held generally that the unions were liable if they aided and abetted employer groups to achieve market and price control, even though the union's purpose in entering the combination related to terms and conditions of employment.

The Hutcheson case (*United States* v. *Hutcheson, et al.* (312 U. S. 219; 7 L. R. R. Man. 267)) was the first major defeat of the Antitrust Division in its campaign against restraints of trade in the construction industry. The case arose out of a jurisdiction dispute in the Anheuser-Busch brewing plant in St. Louis between the United Brotherhood of Carpenters and Joiners of America and the International Association of Machinists. The dispute arose between the carpenters and machinists as to who should perform various work of erecting, assembling, installing, and setting machinery in the brewery.

The controversy developed into a strike not only of the millrights, but a sympathetic strike of other members of AFL against Anheuser-Busch and against other construction companies who were building plant facilities for the brewing company. Boycotts were declared against the company's beer and notices were published to the effect that the company was unfair to organized labor. The Government lost the suit in the district court, and on an appeal to the Supreme Court the case was decided against the Government on February 3, 1941.

The Government argued that there is no form of labor warfare so opposed to the public interest as a jurisdictional strike and that an employer who finds himself a victim of such a strike is powerless because there is no concession he can make which will stop the attack on his business. The Court, however, decided that the strike was a labor dispute within the meaning of the Norris-LaGuardia Act and the Clayton Act, therefore there had been no violation of the Sherman law by the conduct of the carpenters' union.

DILEMMA OF EMPLOYERS

Jurisdiction strikes are permitted by this decision even though they are called by one labor organization against another after a bargaining election under the provisions of the National Labor Relations Act. This conflict of laws, therefore, places the employer on the horns of a dilemma from which there is no escape under present interpretations.

Two cases brought by the Department of Justice illustrate the dilemma mentioned above. Early in 1940 an indictment was returned against two AFL carpenters' unions in Chicago alleging that they refused to use plywood made by the Harbor Plywood Corp., which operates a factory in Hoquiam, Wash. (*United States* v. *United Brotherhood of Carpenters and Joiners of America et al.*).

In 1938 the local affiliate of AFL in Hoquiam petitioned the NLRB to hold an election to determine the bargaining agent for the company workers. A little later the affiliate of CIO also asked for an election. In September 1938 the election was held and the CIO local won it. Then the Carpenters Local No. 58 of Chicago, AFL, ordered its members not to work on any product manufactured by the Harbor Plywood Corp. and in October a strike was called against a consumer in Chicago using the product. As indicated above, the Department of Justice obtained an indictment against the Chicago union in February 1940, but because of the Hutcheson decision on February 3, 1941, the Supreme Court on April 7, 1941, sustained the local court's demurrer on the authority of the Hutcheson case (8 LRR Man. 459).

Another similar case was the boycott of CIO truckers in New Orleans by affiliates of AFL (*United States* v. *Building and Construction Trades Council et al.* (313 U. S. 539; 8 LRR Man. 459)).

As a result of an election under the direction of NLRB, the United Transport Workers of New Orleans, a CIO affiliate, was certified by the Board as the bargaining agent for employees of various trucking firms in the city.

All of the defendant labor unions which were affiliates of AFL would not receive material from trucking firms employing members of the local CIO. As a result of this refusal, a large number of interstate shipments of materials and building fixtures were held up and it became necessary for the members of the CIO local to sublease their trucking rights under their contracts with rail and water carriers to other truckers acceptable to AFL unions.

The Government sought to distinguish the Plywood case and the New Orleans Trucking case from the Hutcheson case on the grounds that the CIO union has been selected as the sole bargaining agent at an election under the National Labor Relations Act. Nevertheless, on April 7, 1941, the Supreme Court affirmed the judgment of the district court sustaining the demurrers in the New Orleans Trucking case on the authority of the Hutcheson case.

MAKE-WORK RESTRAINTS

In February 1940 an indictment was returned against a number of contractors and union officials in Cook County, Ill., on the grounds that they prohibited the use of cut or fabricated stone which was fabricated outside of the area. The Bedford-Bloomington district of Indiana is an important center for limestone used in the building industry. The district supplies about 80 percent of the limestone sold in the United States and 90 percent of that used in the Chicago area. Some of the stone is sold in rough blocks and some of it is finished and fabricated and cut to specified sizes and shapes. In the finishing process 15 to 20 percent of the rough stone is chipped off and must be disposed of in metropolitan areas. Therefore, there is a double freight haul on waste stone which is fabricated at the building site—one in and one out. The Chicago stone contractors and unions of stonecutters had an agreement to the effect that they would not install any fabricated stone finished in the Bedford-Bloomington district and the members of the Building Trades Council refused to work on buildings in which limestone fabricated in that district was used. The union boycott applied not only to stonecutters but to other building labor, including ironworkers and carpenters.

The stonecutters case was the subject of two trials in the northern district of Illinois. The second trial resulted in a directed verdict as a result of the Hutcheson decision of the Supreme Court (8 LRR Man. 459).

Another case which the Government lost as the result of the Hutcheson decision was the restraints by the labor unions in Chicago against the use of ready-mixed concrete. The latest development in the spreading of concrete is the use of truck mixers which agitate the cement on the way to the job. Such mixers are generally used in all of the metropolitan areas of the United States except Chicago, but the Chicago cement unions, both the operating engineers and the hod carriers, prevented the use of truck mixers or if mixers were used the same amount of labor must be employed as would have been used under the old methods of mixing on the site. The unions also warned manufacturers of the cement mixers that they would not be permitted to sell them in the Chicago area and prospective purchasers of trucks were warned that they would not be permitted to use them.

As a result of the Hutcheson case, the Government lost the ready-mixed cement suit against the Chicago unions. On April 17, 1941, the Supreme Court affirmed the judgment of the district court sustaining the demurrers on the authority of the Hutcheson case (8 LRR Man. 459).

In September 1940 the Government obtained an indictment against a group of producers of millwork and local building unions in the East St. Louis area which had combined to shut out millwork from other areas and to prevent the erection of prefabricated houses in the city and in adjacent areas. The grand jury found that:

"A condition of affairs has existed in the building industry in St. Clair, Madison, and Monroe Counties in the State of Illinois, which should never be contenanced in a free society."

The indictment then went on to point out that men had been assaulted and beaten up and their families threatened. Workmen had been driven out of the district, houses under construction had been bombed, and building supplies on the site had been destroyed, and the local citizens were afraid to complain.

A number of companies producing millwork and kitchen cabinets agreed with the labor unions that no products would be used which did not bear the AFL label, and contractors were warned that the unions would not erect prefabricated houses or install millwork which did not bear the union label. Products not bearing the label would have to be removed from the job and returned to the manufacturers from which they were obtained. The penalty of the boycott was the removal of all AFL workers of all crafts from the job.

The indictment also alleges that the unions refused to erect prefabricated houses which had been manufactured outside the State of Illinois and that other organized labor groups not affiliated with the defendants had been assaulted and beaten and driven from their work on the prefabricated houses and millwork not bearing the particular label.

A number of motions to quash the indictment on various grounds were filed and were sustained by the lower courts. For technical reasons in connection with the wording of the indictment and because of the court rulings in other labor cases, the East St. Louis case (*United States* v. *Goedde & Company et al.* (9 LRR Man. 662)) was not appealed.

RESTRICTIVE COOPERATION

The Government has lost, without the exception, the purely labor restraint cases which

have been brought under the antitrust laws, even though the jurisdictional strikes have been against other union groups certified after election under the National Labor Relations Act. Another group of cases, namely, those in which there is restrictive cooperation between producers, contractors, and labor unions offer some hope of successful prosecution of restrictive abuses. One case brought by the Government, namely, *Lumber Products Association of San Francisco* (144 F. 2d 546; 15 LRR Man. 510); and a private suit, namely, the *Allen Bradley case* (325 U. S. 797; 16 LRR Man. 798), has definitely raised the question as to the extent to which nonlabor groups can have restrictive agreements with labor unions in restraint of trade.

In the Lumber Products Association case a number of concerns manufacturing millwork and patterned lumber and a number of labor groups boycotted the use of millwork and finished lumber shipped into the San Francisco region from other areas, notably, Washington and Oregon, where the products were made in large volume and cheaper than in the San Francisco Bay district. The labor in the Washington and Oregon areas was unionized but the boycott was imposed nevertheless.

In 1936 the union groups demanded an increase in wages and this demand was acceded to by the manufacturers in the San Francisco area in exchange for an agreement by the union to prevent the sale and shipment to the bay area of products manufactured outside of California. The written agreement provided, among other things, that:

"No material will be purchased from, and no work will be done on any material or article that has had any operation performed on same by sawmills, mills or cabinet shops, or other distributors that do not conform to the rates of wage and working conditions of this agreement."

The district court overruled demurrers and refused to dismiss the indictment and the circuit court upheld the lower court in its ruling. However, there are still undecided questions of law involved and the case is now pending before the Supreme Court with respect to certain details as to whether manufacturers and labor unions can make joint agreements restraining trade in price fixing and in boycotting the products of others who are not members of the manufacturing or labor groups.

ALLEN BRADLEY CASE

Technically the Supreme Court has decided in the *Allen Bradley case* (35 U. S. 797; 16 L. R. R Man. 798) that labor unions cannot combine with nonlabor groups in restraint of trade but that the same restrictions can be imposed by the union acting alone. This may or may not be a hollow victory in favor of the antitrust laws, depending upon the extent to which certain restraints can be imposed by the unions without the connivance of the producer or contractor groups. This was a private suit appealed to the Supreme Court and decided on June 18, 1945. This was the first case since 1926 in which the Supreme Court has held labor-union activity as violative of the Sherman Act where the activity was related directly to terms and conditions of employment. In this case local electrical workers' unions entered into closed-shop agreements with local manufacturers of electrical equipment and electrical contractors in the New York area.

The contractors agreed to purchase electrical equipment only from the local manufacturers having closed-shop agreements and the manufacturers agreed to confine their sales to contractors who employed members of the local union. The local unions agreed in turn to work only on electrical equipment produced by the local manufacturers. The three-way circuit was thereby closed—local manufacturers, contractors, and the unions would have nothing to do with electrical supplies produced outside the New York area.

The Supreme Court said in part:

"We think Congress never intended that unions could, consistently with the Sherman Act, aid nonlabor groups to create business monopolies and to control the marketing of goods and services."

It is not clear, however, whether this decision will be effective, because the Court went on to say:

"Our holding means that the same labor-union activities may or may not be in violation of the Sherman Act, dependent upon whether the union acts alone in combination with business groups."

The net result of all the labor cases brought by the Antitrust Division in recent years is that none of the restrictive agreements involving restriction in production, price fixing, allocation of markets, and boycotts are violative of the Sherman Act if practiced by the labor unions alone. Even boycotts of plants where rival factions have won bargaining elections under the National Labor Relations Act are not restraints of trade within the meaning of the Sherman Act. The Department has received a number of complaints of such boycotts in which the management is helpless, the election having been ordered by NLRB, but no corrective action can be taken on these complaints by the Antitrust Division under the present interpretation of the law.

Mr. Speaker, since the Justice Department report was made last September, the Supreme Court has, on March 10, acted on the Lumber Products Association case referred to. The Supreme Court reversed the decisions and cited section 6 of the Norris-LaGuardia Act as basis therefor.

As evidence of the far-reaching effect of that opinion on future efforts by the Justice Department, Mr. Justice Frankfurter, in his dissenting opinion, said:

Practically speaking, the interpretation given by the Court to section 6 serves to immunize unions, especially the more alert and powerful, from Sherman law liability.

The Late Honorable Fred Norman

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. JACKSON of Washington. Mr. Speaker, all of us were greatly saddened to learn of the sudden passing on last Friday morning of our friend and colleague, FRED NORMAN.

FRED NORMAN was a tireless worker in behalf of his constituents—an able and devoted public servant. It was customary for him to work 15 and 18 hours a day. This work schedule no doubt was responsible in large part for his untimely death.

Although we were of different political faiths, I always found him sincere, friendly, and cooperative. It has been my privilege to work closely with him on various problems affecting the welfare of our State, particularly inasmuch as our districts adjoin.

FRED NORMAN came up the hard way. He was born in Illinois and came to our State as a young man, working for many years in the lumber and saw mills of our State. He was an active participant in various labor organizations, serving as an officer in unions affiliated with American Federation of Labor. He was interested in State politics for over 40 years. He served for several years as a State senator. In later years, he was engaged successfully in various business enterprises.

I join with my colleagues in extending to his family my deepest sympathy in their hour of sorrow.

Wage Increases and Postal Rates

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

HE'S YOUR POSTMAN

In an editorial not many days ago the Journal-News discussed the relationship between wage and price increases, showing how higher prices follow higher wages. To give this illustration, and to show how the problem came home to the Federal Government, the case of mail carriers and postal clerks was used.

This is an instance in which postal workers were given an increase last July, but while the wage increases naturally increase the expenses of the Post Office Department, those wage increases are not by any means the only reason for the necessary increases in postal rates.

Whether the average citizen knows it or not, the Post Office Department give free services to the public in the amount of nearly $350,000,000 a year in free mail to the blind, in congressional mail, in nonprofit publications, loss on c. o. d., loss on money orders, magazine mailing rates, parcel post loss, free Government mail, loss on direct mail advertising and newspaper rates. And all of these amount to only slightly less than the wage increase granted last year.

And while we're on the subject, perhaps there are a few other things people don't know about the wages and expenses of that man in blue who comes to your door or shop or store nearly every day, snow, rain, or shine.

For instance, do you know that the average mail carrier or clerk in the Hamilton post office is earning around $50 a week, with the increase? Do you know that he must pay income tax and all other taxes, must furnish his own uniforms, must pay 5 percent of his wage into the pension fund for a pension which will be taxable? He doesn't have social security either. The only things Uncle Sam provides are the keys, badge, and pouch.

Overtime rates have been adjusted, but during the war, when manpower was scarce, many carriers and clerks worked overtime, but their overtime pay—get this—was 19 cents an hour less than their regular pay.

These are facts, we believe, that few people know, yet which should be kept in mind. Think of them the next time postal matters are discussed.

United States of Europe

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article and editorial:

[From the New York Herald Tribune of April 18, 1947]

UNITED STATES OF EUROPE IS URGED BY 81 AS PEACE KEY—COUDENHOVE-KALERGI DRAFTS APPEAL FOR A UNION AS A LINK BETWEEN EAST AND WEST

An appeal for a United States of Europe, signed by 81 prominent Americans, and calling for a European union under the United Nations Security Council, was issued yesterday by Richard Coudenhove-Kalergi, president of the Pan European Union and head of the Research Center for European Federation at New York University.

The document said European disunity was a threat to peace and prosperity, and could only be remedied by a union which would "break down the trade barriers that cut through Europe's lifelines, hampering its recovery and sabotaging its efforts to achieve prosperity."

"European union is possible," it said, "in spite of Europe's varied mother-tongues and traditions."

"But it can come only if the European peoples who aspire to its attainment are given the aid and comfort in their aims which America's example and American good will can provide."

"Such a European union," the document said, "could provide the groundwork toward a good-neighbor policy between the United States and Russia."

"The alternative," it said, "is a division into hostile camps which 'would inevitably draw East and West into the turmoil of conflicting interest and ideology, and finally into a world war of atomic horrors.'"

This divided Europe, it continued, would also provide an opportunity for a fourth Reich to regain power by assuming the role of arbiter between East and West.

"Europe's future involves definitely our future; Europe's peace, our peace; Europe's prosperity, our prosperity; and Europe's freedom, our freedom," the appeal said.

Signers were James T. Adams, the Most Reverend Karl J. Alter, Emily G. Balch, Percival Brundage, William C. Bullitt, the Reverend Adelbert Chapman, Harry Woodburn Chase, Richard S. Childs, Norman F. Coleman, Frederic R. Coudert, the Reverend C. W. Covey, George Creel.

Also, the Reverend W. Lee Cutts, John W. Davis, George H. Denny, William J. Donovan, Stephen Duggan, the Reverend H. C. Eddington, Robert I. Elder, George A. Finch, Clayton Fritchey, Frank E. Gannett, the Reverend Elbert E. Gates, Frederick W. Gehle, Harry D. Gideonse, the Reverend James W. Graves, Albert Guerard.

Also, Edna F. Haskins, Senator Carl A. Hatch, Dr. Franz H. Hirschland, Philip Hockstein, Hamilton Holt, Sidney Hook, Graeme K. Howard, Edith J. Isaacs, Oscar Jaszi, the Reverend Vaughn M. Johnston, Hans V. Kaltenborn, James Kerney, Jr., John Y. Keur, Reginald D. Lang, the Reverend Henry S. Leiper.

Also, Samuel W. Levitas, Mrs. Alice Roosevelt Longworth, Ernest O. Lothrop, Mrs. Clare Boothe Luce, Miss Pauline Mandigo, John H. T. McPherson, Robert A. Millikan, Edgar A. Mowrer, Malcolm Muir, the Reverend C. K. Newsle, F. H. Norcross, Joseph H. Park, Herbert C. Pell.

Also, Lewis Perry, the Reverend Edward J. Pouls, Philip D. Reed, the Reverend William Reid, the Reverend A. W. Rogers, Jules M. Salmonowitz, the Reverend Mark F. Sanborn, William J. Schieffelin, Henry D. Sedgwick, George N. Shuster, Lawrence Spivak, Rinehart Swenson.

Also, Senator Elbert D. Thomas, Norman Thomas, Dorothy Thompson, the Reverend John F. Vichert, Oswald G. Villard, Harold O. Voorhis, Eric M. Warburg, George E. Warren, the Reverend Thomas Wearing, Paul Lester Wiener, Abraham Wilson, Mary E. Woolley, the Reverend P. C. Wright, and Arnold J. Zurcher.

[From the New York Times of April 18, 1947]

A UNITED STATES OF EUROPE

While the deadlock between Russia and the Western World continues at Moscow, a resolution to rally American support for a project which is the logical answer to that deadlock has been introduced in both Houses of Congress by Senator FULBRIGHT and Representative BOGGS. In a short but weighty 20 words it would notify the world "that the Congress hereby favors the creation of a United States of Europe within the framework of the United Nations."

As Mr. BOGGS declared, this proposal is neither novel nor utopian. In one form or another it has been advocated over a long period of years by such eminent minds as Victor Hugo, William Penn, Immanuel Kant, Aristide Briand, and Gustav Stresemann; and it is supported today by such practical world statesmen as Prime Minister Attlee, President Auriol of France, Winston Churchill, Prime Minister Smuts and, unofficially, by President Truman. Behind them stands a growing mass of public opinion in Europe itself, as expressed in a recent poll of Europe's parliaments undertaken by Richard Coudenhove-Kalergi, long an exponent of a European Union.

It goes without saying that a United States of Europe can be created only by Europe itself. As Senator FULBRIGHT stated, the resolution does not mean that we shall undertake to impose on the Old World the kind of federation which has worked so well in the New. That would be a futile and dangerous undertaking. But it does mean that the United States would pledge support to the forces already at work to make the dream a reality. Such support, adding another positive element to President Truman's policy of aiding the free nations of the world, would give a mighty impetus to a plan which holds out the best hope not only of putting an end to the nationalistic anarchy which has twice plunged us into world wars but also of bringing about a renaissance of west European civilization.

At best the federation of Europe would be a long and laborious process, as shown by the many practical problems involved in formulating a mere customs union between the kindred Netherlands, Belgium, and Luxemburg. But if it is to come about at all, it must start, as Mr. Churchill clearly saw, with a new deal between France and Germany. That deal cannot begin with either the enforced dismemberment of Germany, as originally demanded by French official policy, or, in the words of Mr. Hoover, with keeping Germany in economic chains, which would also keep Europe in rags. It can begin only by efforts to integrate a federation of German states into a larger federation of as many European states as possible on the basis of ultimate equality. For only in this way would it be possible to enlist all Europe's energies in the reconstruction and protection of the Continent, while preventing a German predominance within the federation by the numerical superiority of the non-German states. In this project France must take the lead.

Until recently, French official policy, torn between foreign political necessities and domestic party maneuverings, has provided little hope for that. But there are encouraging signs of a change. As if voicing a warning to Foreign Minister Bidault, Maurice Half, economic director of the French zone in Germany, declares that while France must fear a strong Germany, she must fear even more a disorderly Germany, made so by economic oppression and looking to the east for salvation. Moreover, as demonstrated at the Moscow Conference, France is turning away from the unprofitable Russian orientation and is now so close to the views of the United States and Britain that full agreement with them is in sight. It is to be hoped that this will include support of a United States of Europe. For it is only too true, as statesmen have said so often in one way or another, that Europe must federate or perish.

Appropriations for Department of Labor Should Be Adequate

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. FORAND. Mr. Speaker, under leave already granted me, I include as part of my remarks the following resolution adopted by the General Assembly of Rhode Island, urging the appropriation of sufficient funds to maintain the Division of Labor Standards at its present efficiency:

S. 266

Resolution requesting the Senators and Representatives from Rhode Island in the Congress of the United States to give immediate consideration to the restoration of the appropriation for the maintenance and operation of the United States Division of Labor Standards in the Department of Labor

Whereas the United States Division of Labor Standards, one of the oldest in the Labor Department of the United States, has done outstanding work in protecting industrial workers by securing raising of standards in the way of laws to secure shorter hours, higher wages, and by making the conditions under which they work safer by providing information of every kind which has been helpful to the directors and administrators of the labor departments of 48 States; and

Whereas, said Division has operated in such a manner that it has aroused the interest of and been adopted as a model for operation by other countries which have sent delegates here from the Far East, Europe, and South America to study methods of administering their own departments of labor; and

Whereas the lower House in Congress has omitted to appropriate anything for this Division of Labor Standards and, in order to carry on the excellence of the work of this Division adequate appropriation must be provided by Congress: Now, therefore, be it

Resolved, That the Senators and Representatives from Rhode Island in the Congress of the United States be and they are hereby earnestly requested to use every effort to have the appropriation for the maintenance and operation of said Division of

Labor Standards restored immediately; and the Secretary of State is hereby authorized and directed to transmit duly certified copies of this resolution to the Senators and Representatives from Rhode Island in the Congress of the United States, to Mr. Lewis B. Schwellenbach, Secretary of Labor; Senator Styles Bridges, chairman of the Senate Committee on Appropriations; and to Hon. John Taber, chairman of the House Committee on Appropriations.

Memorial Address on Thomas Jefferson

EXTENSION OF REMARKS
OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. McMILLAN of South Carolina. Mr. Speaker, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD a copy of speech delivered by W. Marshall Bridges, of Florence, S. C., at the grave of Thomas Jefferson. Mr. Bridges is a recognized student of the life and principles of Thomas Jefferson.

Mr. Bridges is one of the country's outstanding attorneys and we are proud to claim him as a citizen of South Carolina. We consider it an honor for our State to have Mr. Bridges selected to deliver the address celebrating Thomas Jefferson's anniversary at his graveside at Monticello, Va., Sunday, April 13. I hope that every Member of the Senate and House will take time to read the address delivered by Mr. Marshall Bridges on this memorable occasion. The title of Mr. Bridges' address is A South Carolinian at the Grave of Thomas Jefferson.

Mr. Chairman, ladies, and gentlemen, I greet you as friends of Thomas Jefferson.

During the past, on occasions like unto this, various distinguished Americans of your selection annually have been honored by being invited to this sacred spot to pay tribute to an even greater American, Thomas Jefferson, the first citizen of the world.

Your speaker, in addressing you, today, cannot entertain the high hope of adding materially to the wealth of lasting historical data already assembled concerning the life and accomplishments of Thomas Jefferson. That many books complete and accurate have been written, that eulogies of Mr. Jefferson delivered over the years contain some of the finest strains of eloquence in the whole circle of our literature, should not deter us nor preclude the humble contribution which we would make today. Truth may be told in other words. Truth bears repetition.

A learned and aristocratic gentleman, in the finest sense of those words, Thomas Jefferson was, nevertheless, the friend of the common man. He appraised his fellowman, not by financial worth, literary fame, political prestige, or social standards, but by the trend of the individual's traveling; by the motives and purposes actuating such a one's life.

In the selection of teachers, he demanded for his beloved university the services of the most learned and capable. In appointments to office, his prime consideration was the applicant's fitness. Governed thus by high standards of intellectual qualifications, he could, nevertheless, accept the services of the less qualified, provided they were actuated by noble motives. We, therefore, bottom our right to speak to you now on the simple, yet indispensable, basis that your representative holds in reverence, and loves the name of Thomas Jefferson.

The full life of Thomas Jefferson was spent in public service and in safeguarding the rights and welfare of his fellowmen. He stood eternally upon the watchtower against any who would lessen or destroy the rights of free people.

"I have sworn," says he, "upon the altar of God eternal hostility to every form of tyranny over the minds of men."

Bonds and barriers about the bodies, minds, and souls of other men were as painful to him as if personally endured.

It was his glorious accomplishments that rightly enshrined him forever in the hearts of grateful Americans. We should never permit our familiarity with these achievements to keep us from their frequent enumeration. Joseph Lewis to the contrary—we know that it was Mr. Jefferson who solely, by his own hand, wrote the Declaration of Independence. Jefferson himself recalled in these words the circumstances attending the writing of that immortal document:

"At the time of writing that instrument I lodged in the house of a Mr. Graaf, a new brick house, three stories high, of which I rented the second floor, consisting of a parlor and bedroom ready furnished. In that parlor I wrote habitually, and in it this paper particularly."

Mr. Jefferson induced this, his Commonwealth of Virginia, to give to the States of the Union as their common property the great Northwestern Territory. He purchased from France Louisiana and all the territory extending from the Gulf of Mexico to Puget Sound, thereby giving to our country full control of the Mississippi River. He successfully introduced and had enacted a measure destroying entailed estates, a bill to abolish primogeniture, an act permitting the maximum of religious freedom, and a measure establishing a system looking to universal education.

From Dr. Alexander Johnson, professor of jurisprudence, Princeton University, we quote:

"There is hardly any point in which the action of the individual American has been freed from (1) governmental restraint; (2) from ecclesiastical government; (3) from sumptuary laws; (4) from restrictions on suffrage, from restrictions on commerce, production, and exchange, for which he is not indebted to the words and teachings of Thomas Jefferson."

In his recent work, Thomas Jefferson, American Tourist, Mr. Edward Dumbald does not mention either of the Carolinas. As far as my research has disclosed, I think it can be accurately stated that Mr. Jefferson at no time visited South Carolina. Regretfully we record, no tourist-home proprietor within my State can truthfully advertise, "Thomas Jefferson slept here."

But, we hasten to declare that Jefferson's absence from the boundaries of our State was due exclusively to the heavy demands upon his time abroad, here in Virginia, and elsewhere. His warm personal friendship for many South Carolinians, his accurate knowledge of our State, its people, and our philosophy of life, brought about in the mind and heart of Thomas Jefferson a continuing love for South Carolina. And that State, then as now, loved Thomas Jefferson.

Two weeks ago, speaking to an appreciative South Carolina audience, Dr. Dumas Malone mentioned the fact that you loyal Virginians, even to this day, speak of Mr. Jefferson as though he were in the next room. In such disposition you are not peculiar. There are many South Carolinians who are familiar with his sweetness of life, his kindness, and his hospitality; those who constantly recall his greatness, reverence his memory, and pattern their lives after his deathless enunciations of democratic faith; Carolinians who even to this day continue to follow the unrivaled leadership of Thomas Jefferson. Indeed, there are South Carolinians who gather more pleasure from Randall Thompson's Testament of Freedom than they find in all of Chopin's melodies.

And, in turn, Mr. Jefferson loved South Carolina.

Some criticism of Jefferson arose here in Virginia, during his term as governor, by reason of inadequate military forces assembled in this his Commonwealth. That criticism was not well-founded, for the fact remains that much of the Virginia Militia had been sent into the Carolinas, there to thwart the plans of the would-be conqueror. An enemy on the soil of South Carolina was as abhorrent to Thomas Jefferson as if the enemy put his foot upon the land of his beloved Virginia.

Mr. Jefferson loved South Carolina. He loved this Little Mountain, the soil upon which we stand. He loved God and His great outdoors. To one of his Carolina friends, he wrote:

"The trees I should propose would be exotics of distinguished usefulness and accommodated to your climate."

He goes on to name these trees: The larch, the cork oak, the mahogany, the Indian rubber tree, the marroiner, and others. In what other individual has there been such marked versatility? Burdened down with the momentous duties of national import, he yet found time to be interested in his neighbor's garden

It was in 1813 to Henry Middleton, of South Carolina, that Mr. Jefferson wrote:

"I see with pleasure another proof that South Carolina is ever true to the principles of free government."

Five years earlier Mr. Jefferson expressed his love for our State in these words:

"The steady union of our fellow citizens of South Carolina is entirely in their character. They have never failed in fidelity to their country and the republican spirit of its Constitution."

On this, the two hundred and fourth anniversary of his birth, we of South Carolina thrill in recalling such words of approbation from the Master of Monticello.

Robert Mills, of South Carolina, was by President Jefferson appointed to the position of first Federal architect. Surviving structures of this man's designing attest to the wisdom of Jefferson's choice.

In need of advice and guidance, everyone felt free to consult Mr. Jefferson. Men instinctively turned to him as an inexhaustible source of wisdom and knowledge. To Jefferson the Santee and the Cooper were more than mere names of South Carolina rivers. Information was sought from him as to uniting these rivers by means of a canal. Mr. Jefferson's helpful reply came promptly.

In the year 1787, while Mr. Jefferson was abroad as our Ambassador, he learned of a species of rice certainly different and supposedly superior to that produced in the lower part of our State. His natural inquisitiveness and constant desire to be helpful led him to a thorough investigation. He thought of the rice fields of South Carolina. He wondered if the process of threshing accounted for the difference. He would find the answer. An arduous trip over the Alps could not deter Thomas Jefferson, if the end of that laborious journey would reveal information helpful to his neighboring Carolinians back home. To John Jay, Secretary of State, and to John Adams, President, he reported his findings. We quote now from only one letter—that addressed to President Adams:

"I had expected to satisfy myself at Marseilles of the cause of the differences of quality between the rice of Carolina and that of the Piedmont. Not being able to do it, I

made an excursion of 3 weeks into the rice country beyond the Alps, going through it from Bercelli to Pavia, about 60 miles. I found the difference to be not in the management, as had been supposed both here and in Carolina, but in the species of rice, and I hope to enable them in Carolina to begin the cultivation of Piedmont rice, and carry it on, hand in hand, with their own, that they may supply both qualities."

Mr. Jefferson's notes in his commonplace book further enlighten us as to the dangers he would undergo where South Carolina's welfare prompted action. From the private notes we read:

"Paggio, a muleteer who passes every week between Vercelli and Genoa, will smuggle a sack of rough rice for me to Genoa, it being death to export it in that form."

It was through these efforts of Mr. Jefferson that South Carolina became acquainted with upland or Piedmont rice.

Another incident must be mentioned. May I not refer to the time when your forebears prevented Dr. Thomas Cooper from taking his place on the faculty of your university, and did it with such decisiveness that he landed in the presidency of South Carolina College? If you have any more faculty members like this one of whom you would rid yourself, be assured they will be cordially welcomed in South Carolina. You need not, however, dismiss them so unceremoniously; in fact, we shall be glad to come for them.

By a deed of conveyance dated November 13, 1802, captioned "Claremont County, Sumter District," and recorded in what is now Sumter County, S. C., Gen. Thomas Sumter sold to Thomas Jefferson, as President of the United States, a tract of land subsequently found by survey to contain 523 acres and located at Great Falls, now Chester County. Ever alert to the best interests of South Carolina, Mr. Jefferson contemplated that the land would be used as a site for some national military academy or arsenal.

Be assured that our forefathers in South Carolina reciprocated fully Mr. Jefferson's admiration and love of our people, the evidence of which is imperishably inscribed within the permanent records of our State.

From the Commonwealth of Pennsylvania, the Honorable David Ramsay had renounced his citizenship and come to reside permanently in South Carolina. Mr. Ramsay had known Thomas Jefferson. Only through the aid and influence of Mr. Jefferson had Ramsay found it possible to have published his history of the American Revolution. The favor was not forgotten. Charleston accepted the accomplished gentleman from Pennsylvania, making him the recipient of honors and the bearer of responsibilities in his newly adopted State. Ramsay's benefactor, Mr. Jefferson, had died on July 4, 1826, Mr. Ramsay had been elected Senator from Charleston County. On the 19th day of December 1826, following the death of Jefferson on the previous 4th of July, Senator Ramsay introduced a resolution in the South Carolina Senate seeking an appropriation by the State to aid in saving the home of Mr. Jefferson.

This Ramsay resolution, appearing on pages 210–212 of the South Carolina Senate Journal for the session of 1826, beautifully epitomizes the life of our State's great friend, the immortal Thomas Jefferson. Through this measure South Carolina had the honor of being the first State in the Union to contribute toward the saving of this, Mr. Jefferson's home place. Prompted by our gift of $10,000, other States and many individuals made similar contributions, resulting in Monticello and this hallowed and sacred spot being saved to the heirs of South Carolina's great friend, that great American and citizen of the world.

Not a single instance can be found where Mr. Jefferson ever gave his approval to the political appointment of anyone who was not mentally and morally equipped for the position to which he had been thus appointed. Never once did he make a political debt. He possessed a profound respect for human personality. He wanted to believe in the potential development of every individual, but he knew too well that many lacked the desire, the power, and will to grow. The weight of his life, works, and ability were thrown into the battle against all artificial barriers tending to thwart opportunities for self-development. Mr. Jefferson's ideal was to make straight the passageways of life; to hold up for others plans for a fuller usefulness, freedom, and enjoyment; to show men generally the way. Yet, he knew many would not walk therein. He never attempted to design a royal road of ease for every man, irrespective of that individual's ability, character, and desires.

"I look to the diffusion of light and education as the resource most to be relied on for ameliorating the condition, prompting the virtue, and advancing the happiness of man. That every man shall be made virtuous, by any process whatsoever, is, indeed, no more to be expected, than that every tree shall be made to bear fruit, and every plant nourishment. The briar and bramble can never become the vine and olive; but their asperities may be softened by culture, and their properties improved to usefulness in the order and economy of the world."

Here in this sacred spot on this Sabbath day I would declare to you that it was no profane, desecrating hand that laid hold of the Holy Scriptures to mutilate them; it was the tapering artistic fingers of Jefferson, who with due reverence and the same loving touch which brought melodic music from his violin the same loving hand that selected beautiful and unusual flowers from foreign soil to send to his Carolina friends and to transplant upon the brow of this, his own "Little Mountain," the same deft touch given to the draft of the Declaration of Independence, and from the same brilliant mind and pure heart—it was through these means and in this attitude that Jefferson selected the portion of Scriptures making strongest appeal to him for his personal, devout use. These he reverently combined into his own "Philosophy of Jesus."

So long as our civilization lasts, appreciative writers and speakers will continue their efforts to portray adequately Thomas Jefferson, his matchless life, his varied contributions to our country, and his genuine worth. In these efforts none will fully succeed. There can never be a complete and definitive exhibition of all that Thomas Jefferson was, is today, and will continue to be.

In Thomas Jefferson's character there was no room for prejudice, pride, hatred, or malice. Such dispositions and tendencies were crowded out by his gentle and refined attributes, his absorbing and sacrificing interests in others, by his belief in the sacredness of human life, and every man's potentialities for liberty, freedom, happiness, culture, and gracious living. In no other individual yet born on American soil can there be found such varied personal accomplishments, such self-effacement for the public good, such matchless contributions toward the formation, preservation, and future greatness of our country.

What Goes To Make Up America

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial taken from the Lewiston (Maine) Evening Journal entitled "Three Wise Men":

THREE WISE MEN

Three wise men of this community and of this day symbolize a reason for the greatness of America.

They are:

Retired Active Justice Harry Manser, of the Maine Supreme Court.

Judge John D. Clifford, of the Maine district Federal court.

Benjamin L. Berman, former judge of Androscoggin probate court, county attorney, and one of Maine's, if not New England's, outstanding lawyers.

Last night they, among other wise men, for they do not assume all the wisdom of the hour and no doubt will be embarrassed at these words, they met at Poland Spring to fete Clifford, who recently became judge of the Federal district of Maine.

None of these had roots in the law. Each chose it as his profession. No family tradition of jurisprudence swept them along their way.

One, a youth of Irish extraction, whose father was a successful construction contractor.

Another, as he remarked in toast, a Jewish boy. His father was a small merchant in this city—but never was there a keener student of what went on about him than this father.

The third, the eldest, an Englishman, who settled here as a boy, and who without formal education in higher institutions of learning, read law in a local office and finally through steps of municipal, superior and supreme courts won his way.

The Irish lad. The Jewish boy. The emigrant.

In the party of friends and neighbors who gathered with John D. Clifford were those of other bloods. One could not identify them casually, such is the cosmopolitan complexion of this community.

It doesn't make any difference what language their forebears spoke, nor at what altars they worship. Nor whether their ancestors came here steerage in the *Mayflower* or some other boat. We may all claim descent from Charlemagne, if we wish.

Yet there are those at loose in the United States who would change this form of government. "The greatest Government in the world," remarked the distinguished Joseph B. Keenan, fresh from the prosecution of Japanese war criminals in Tokyo. "This Government will not survive," he suggested, "by its own weight but requires cooperation," he commented, from those that live under it, down into the neighborhood and the home.

What is America? One can but theorize.

It's the Cliffords, the Bermans, the Mansers, and the Greek, Tony Petropulous, the ex-cop who is elected to the city council. The Lemaires. The Gagnes.

America in her great hour of destiny is strong in such heritage!

Disaster at Texas City, Tex.

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. THOMAS of Texas. Mr. Speaker, the War Department has just received a telegram from headquarters, Fourth Army, Fort Sam Houston, Tex., relative to the assistance rendered by the Army

in connection with the disaster at Texas City, Tex.

General Wainwright and General Sheetz, AC of S G–2, departed by air early afternoon of April 16 for disaster area. General Wainwright remained in disaster area overnight and returned to Fort Sam Houston this date. General Sheetz remained at Fort Crockett as personal representative of the Army Commander in charge of all Army relief activities in this area with headquarters at Fort Crockett.

Six thousand blankets and 1,000 cots shipped by van from Fort Sam Houston to Fort Crockett. Shipped by air to Fort Crockett afternoon of April 16 were 36 medical officers, 50 nurses, and 30 Medical Corps men. Six Medical Corps officers requested as anesthetists in disaster area are being shipped by air from Dallas at noon today. One medical clearing company and one collecting company with 30 ambulances departed by motor from Fort Sam Houston at 1730 on April 16, destination Dickson Field, just outside of Texas City. Two hundred vials tetanus antitoxin sent to Crockett and 3,000 vials ordered to be flown in from St. Louis. Additional medical supplies flown to disaster area included sodium citrate blood transfusion equipment, penicillin, bandages, dextrose, surgical pads, gauze, oxygen therapy apparatus, morphine sulphate, embalming fluid, etc. Brooke Army Medical Center has placed at the disposal of Fourth Army beds for 500 patients from the disaster area.

Two days' rations for 3,000 people shipped to Fort Crockett. Mess equipment and kitchens for feeding 6,000 people shipped from Fort Sam Houston for possible use of refugees at Ellington Field, Camp Wallace, and Fort Crockett. Mess personnel for feeding refugees at these military installations totaled 10 officers, 14 mess sergeants, and 118 cooks. They are being flown from Fort Sill, Camp Hood, and Fort Sam Houston to arrive at destination by noon, April 17.

Six radio operators with two trucks dispatched from Camp Hood to Crockett to assist in operation of local radio equipment.

One military police company, 4 officers, and 75 enlisted men from Fort Sam Houston alerted for possible use in disaster area. No need is seen at present time but if used will be for control of refugees at military installations.

Latest report from Army representative in disaster area indicated that no Army troops will be used unless fires now burning in the city get out of control.

Army report to this headquarters from disaster area stated two large explosions took place at Texas City at 0110 today. Work on water front was then stopped. It is reported by our Army representative, but unconfirmed, that if necessary some oil storage tanks in burning area may be demolished to prevent fires from getting out of control. Several oil companies have sent special oil fire fighting crews to disaster to assist in the control of oil fires.

Red Cross disaster relief team of 12 individuals from St. Louis arrived in Texas City evening of April 16. Up to that time local agencies were not coordinating efforts, and each was operating on his own. Morning of April 17, meeting of Red Cross, Army, State, and civilian authorities was held in Texas City, resulting in Red Cross directing relief activities and doing a good job. They established main office headquarters at Galveston with a suboffice at Texas City.

Camp Wallace opened up night of April 16 for use by refugees. This station is intended for possible use if situation gets worse in Texas City. All wounded have been removed from Texas City, and dead have been cared for by civilian undertakers. Fourth Army Mortuary Officer is in area assisting. In Texas City electric lights and phone service restored, water operating but may be contaminated, gas and fuel service not in operation.

Fort Crockett Hospital handling patients with minor injuries. At present time only 40 patients at Crockett Hospital. Serious cases are being evacuated to Galveston and Houston.

Ellington Field, Camp Robinson, and Fort Crockett prepared to handled 2,000 refugees each. Less than 100 refugees are at any of these installations. Most seem to be moving to other areas and living with friends and relatives. Municipal auditorium at Houston is housing refugees.

One public relations officer and one photographer departed this morning from Camp Hood for Crockett by air to make Army photographic coverage of Texas City explosion.

Air Force installations have cooperated 100 percent in all requests made by this headquarters.

Use of Federal troops in disaster area is not anticipated unless fires get out of control. There is now at Fort Crockett adequate supplies and equipment to take care of foreseeable needs.

This headquarters no longer on 24-hour operational basis. Personnel are available after normal duty hours to transact normal emergency business. Latest report indicates 400 bodies recovered and 3,000 injured. Complete accounting impossible due numerous areas still burning.

Give the Germans a Chance To Feed Themselves

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. COLMER. Mr. Speaker, in December of 1945 upon the return from a study of European conditions, the Special House Committee on Postwar Economic Policy, of which I had the honor to be chairman, filed a rather comprehensive report with the Congress on the economic situation in Europe.

Among other pertinent recommendations made in that report was one advocating the unification of the control in Germany. We pointed out that Germany could not become self-sustained under such a division of authority as then existed. We took a strong stand against the so-called Morgenthau plan and emphasized that unless that plan was forgotten the United States would be called upon to spend untold millions of dollars in preventing starvation in Germany. In fact, Mr. Speaker, we have already expended many hundreds of millions of dollars to that end, and we will continue to pour this money down that particular rat hole with no hope of any improvement in the situation until that policy is changed.

More recently former President Hoover, as an emissary of President Truman, visited Europe and made a particular study of Germany. His recommendations were in line with ours. In fact, the former President spoke with approval of our committee's recommendations. This action must be taken, and the sooner the better.

In that connection, Mr. Speaker, I submit herewith an editorial which appeared in one of the leading newspapers of Mississippi, the Jackson Clarion Ledger, on this subject. The editorial follows:

GIVE THE GERMANS A CHANCE TO FEED THEMSELVES

Let it be granted that Herbert Hoover was not a very successful nor happy President. Americans are to apt to think a man good in one line must be good in another completely unrelated. Sometimes this works, but too often the specialist competent in his own field is a cat in a strange garret in one not his own. In the Presidency, Hoover was not in a field natural to his temperament.

But when it comes to feeding the hungry, he knows. With the utmost diplomacy and self-control he and his young men fed the Belgians during the World War I, getting along with Germans in occupation because they must. He fed starving Russians after the war. He thoroughly understands Germans and their tendencies, governmental and human. He remembers the Weimar Republic and understands the causes which led to Hitler. He knows what Russia was like in the famines of the first years after the revolution.

When Hoover says that it will take so much food to feed this nation or that, so much work of this kind or that to get Germans out of pauperism into earning their own living, he knows what he is talking about. There may be details requiring further study or adjustment, but on the main lines he knows his stuff and his report should be given thorough consideration.

When Hoover says we must let the Germans revive industry as a means of becoming self-supporting, it makes sense. Except for direct manufacture of arms or ammunition it is foolish to hold down production. Every plant becomes a war plant in a war. Let the Germans get going, and see that they keep the peace.

Labor-Management

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. KING. Mr. Speaker, for the past several months two things have become quite obvious in the domestic field of legislation. One is the need for sound constructive labor law to bring about perfection of collective bargaining consistent with fullest protection of the public welfare. The other obvious point referred to is the need for a nonpartisan approach to all labor problems similar to our present nonpartisan foreign policy. The public welfare is so interwoven in the activities of organized labor that it must suffer if labor legislation is to be continually handled as a political "football" game with sides clearly drawn and the partisan rooters crying for blood. Only the innocent spectator, the citizen, is injured, for at no time does he have anything to cheer about, inasmuch as he is seeking permanent industrial peace.

Our Government must develop a constant constructive labor policy that must

not depend on the outcome of any particular election. For years our foreign policy has been completely ineffective, as foreign governments in earlier years knew that this country's foreign policy was subject to change every 2 years, or 4 years, depending upon the results of our national elections.

This nonpartisan policy, I believe, was the object of the President, when, in his recent message, he urged the creation of a joint commission to inquire into the entire field of labor-management relations, composed of 12 Members of Congress chosen by the Congress, and 8 members representing the public, management, and labor, appointed by the President. He suggested that this commission investigate and make certain recommendations on certain subjects as, first, Nation-wide strikes in vital industries affecting the public interest; second, methods and procedures for carrying out the collective-bargaining process; and, third, the underlying causes of labor-management disputes.

The President, consistent with such policy, outlined certain immediate steps to be taken: (a) Legislation to prevent jurisdictional strikes intended to compel employers to bargain with a minority union instead of a majority union in their plants; (b) legislation to provide for peaceful and binding determinations of jurisdictional disputes over which a union is entitled to perform a particular work task; (c) legislation to prohibit secondary boycotts when used to further jurisdictional disputes or to compel employers to violate the National Labor Relations Act; and (d) legislation to provide for final and binding arbitration of disputes concerning the interpretation of the terms of collective-bargaining agreements.

No reasonable man can disregard the President's plea that—

> We should enact legislation to correct certain abuses and to provide additional governmental assistance in bargaining. But we should also concern ourselves with the basic causes of labor-management difficulties. We must not, under the stress of emotion, endanger our American freedoms by taking ill-considered action which will lead to results not anticipated or desired.

The President was catering to no special interest when he delivered his message on labor. He was interested in the public welfare. The President is not soliciting the political favor of either labor or management as is evidenced by his handling of the ship of state in all fields. This explains the high regard in which he is held by the American people as illustrated in the recent Gallup poll. Yet the proponents of H. R. 3020 disregarded the warning of the President and took the ill considered emotional action of presenting the House of Representatives with a punitive and drastic labor bill.

A brief analysis of this bill will demonstrate that it not only endangers our American freedoms but brings about results desired by no fair thinking, informed American. To pass or even support this bill therefore, can be classified as ill-considered action.

ANALYSIS OF THE HARTLEY BILL, H. R. 3020

1. The employer is granted new rights and powers to destroy labor and to substitute individual bargaining for collective bargaining (secs. 1, 2, 7, 8 (b), 8 (c), 8 (d), 9 (a), 9 (c) 2, 9 (c) 3, 9 (f), 10 203).

2. The employer is given the right to bring antitrust actions against his employees, to institute criminal prosecutions against them, to sue them for treble damages, and to obtain ex parte injunctions without a hearing against them (secs. 12 (a) (3) (C), 12 (c), 301). But the employer's violation of the law is subject merely to a cease and desist order issued after administrative hearing and court review (sec. 10 (c)).

3. The employer is granted the right to compel employees to accept a wage cut through forced labor for indefinite periods of time (secs. 2 (11) (B), 2 (13), 8 (b) (3), 203, 204).

4. The employer receives the right to break strikes caused by his own illegal conduct (secs. 2 (3), 8 (b) (3), 12 (a) (3), 12 (c), 301).

5. The employer is granted the right to obtain injunctions against strikes which have been legal for the past 50 years (secs. 2 (13), 8 (b) (3), 12 (a) (3), 12 (c)).

6. The employer retains the right to bargain through an employers' association but bargaining through national unions is outlawed (secs. 2 (2), 2 (16), 9 (f) (1)).

7. The employer is granted the right to disregard the bargaining agent and to play employees against each other (secs. 2 (11) (B), 8 (b) (3), 9 (d), 9 (f) (2)).

8. The employer is granted the right to sit at both sides of the bargaining table by establishing company unions (secs. 8 (a) (2), 8 (d) (3), 9 (f) (4), 10 (c)).

9. The employer is granted the right to disregard the bargaining agent and to refuse to bargain about such matters as health and welfare plans, apprentice-training programs and speed-up (secs. 2 (11), 8 (b) (3), 12 (a) (3) (C)).

10. The employer is given the right to break a strike for recognition even though the union represents an overwhelming majority of the employees (secs. 12 (a) (3) (C), 12 (c)).

11. The employer is given the right to outlaw and to crush any strike by hiring strike-breakers even though the strike is caused by his own misconduct (secs. 2 (3), 12 (a) (3) (C), 12 (c)).

12. The employer is given the right to cooperate with antilabor employers in order to destroy unions (secs. 2 (13), 2 (14), 12 (a) (3)).

13. The employer is given the right to lock-out and blacklist office clerks if they join a union (secs. 2 (3), 2 (12), 12 (a) (3)).

14. The employer is given the right to invoke injunctions, treble damage suits, and criminal penalties against the employees in one department if they strike against a wage cut in another department (secs. 2 (13), 12 (a), (3) 301)

15. The employer is given the right to instigate criminal prosecutions against individuals who exercise the right to picket (secs. 12 (a) (1), 12 (a) (2), 301).

16. The employer is given the right to prevent the designation of a bargaining agent for a period of years (secs. 3, 9 (c) (3), 10 (f)).

17. Spies may be planted in the union ranks by the employer and the union is powerless to expel them (secs. 8 (d) (4), 10).

18. The employer is given the right to grant or deny union security as he wishes; he is not required even to discuss it with the union and he may crush a strike or a threat of strike to obtain it (secs. 2 (11), 8 (b) (3), 8 (d) (4), 9 (g), 12 (a) (3) (C), 301).

19. The employer is given the right to crush any strike when a collective-bargaining contract exists even if the strike is caused by an issue not covered by the contract (secs. 2 (11) (A), 8 (b) (3), 12 (a) (3) (C), 301).

20. The employer is given the power to obtain from the Government a death warrant for the union of his employees (secs. 8 (b), 8 (c), 9 (f), 10 (a), 10 (c), 12 (d)).

It does not, however, require even mature reflection to realize that these proposals are deliberately designed to wreck the living standards of the American people. Under the false guise of correcting labor abuses this bill is designed to so weaken, as in effect to repeal, the National Labor Relations Act. By making practically all strikes unlawful it repeals the Norris-LaGuardia Act signed by President Hoover. By removing the protection of the Clayton Act from practically all trade-union activity, it makes trade-unions and their members subject to suits for treble damages under the Sherman Antitrust Act of 1890. It revives the common law doctrine of conspiracy against workers who band together to protect their living standards and thereby throws the law back to where it was in England in the late 1700's. The bill does not merely wipe out the gains of labor in the past 14 years, it turns the clock of history back at least a century and a half and eliminates safeguards and protections which both Repblican and Democratic Congresses have sponsored for generations.

The proponents of this devastating measure strike out at alleged abuses in all directions. But they are not content to merely prohibit jurisdictional strikes or disputes; they, instead, would wholly destroy labor's right to strike at all, as an organizational weapon. They are not satisfied to distinguish between justified and unjustified conduct on the part of labor unions; they just ban or wholly destroy activities of labor that have heretofore been legal or justified.

A nonpartisan policy toward labor legislation would have seen labor abuses corrected by legislation unanimously supported by the Congress, not the emasculation of the rights of the working people. At this very moment a bipartisan bloc in the United States Senate has given notice to the world that they cannot and will not accept the unwarranted legislation incorporated in H. R. 3020, and are presently writing their own bill more closely approximating the needs of the Nation in the fields of domestic labor legislation. When a political body such as the United States Senate, controlled by the same party as controls the House committee that created the present bill, cannot swallow the legislation at hand, I ask you whether or not such legislation is worthy of the support of any fair-minded citizen, much less a sworn representative of the people. I will readily support any legislation that will correct the abuses of labor, but no such bill should be used to mask the true objective of the present proponents, namely destruction of all of the rights of labor and a return to medieval practices.

War or Peace in Europe?

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden News of Camden, Ark.:

WILL IT BE WAR OR PEACE?

Will events in Europe lead to war or peace? At Moscow a most important conference is being held by foreign ministers of the four great powers in the world. In Washington President Truman has just asked Congress for $400,000,000 to aid Greece and Turkey. In China there is civil war. There is unrest in many areas. History is repeating itself, and there are many similarities between present events and those leading up to World Wars I and II. Whether you want to believe it or not, the United States is facing its most critical period in all its history. That includes the perilous days immediately after the Jap sneak attack on Pearl Harbor, when few Americans realized how badly we were hurt. Now after the war is over and all the facts have been published, Americans now realize that we had no Pacific Fleet and little defense the first few months after that attack. But we rallied quickly.

Today most Americans are more interested in getting a new automobile or more sugar than in world affairs. The News wants to wake you up about the dangerous situation and the nearness we are to war again. Forget a little about your personal pleasures and wants and think about your country and its future. Without a safe nation, all the autos, all the sugar, and all the worldly goods won't help you much. It will be too late then. Americans always are too prone to wait until the fight starts to get worked up. This time let us stop the fight before it starts. How? That is the problem. Start thinking about the President's plea. Greece today is the Manchuria before World War II. Turkey is almost as bad as the Ethiopian situation and China today is the Spain of pre-World War II days.

Whether you like it or not Russia is crowding the United States hard. The Reds are playing their cards close to the vest and they have a huge standing army, lots of tanks, and the world's largest air force. That armed force is trained to the minute. The Soviet has not demobilized. It has armed men stationed all over its domain and on borders ready to spring into action, be it Greece or China or Turkey.

America must give aid to Greece and Turkey now. But we must have some strings attached to it. We must not be the tail to the British kite any longer. The British Empire is no more. Great Britain is great in name only. It is bankrupt and has become a second-rate power. World War II was the finishing blow to this once mighty nation. Whenever a country as haughty and as proud as Britain comes to the United States or any other nation begging, you know it must be in dire straits. It has done that. The British have informed this Government that it cannot meet its financial commitments any more. It is broke. It took a lot of courage for the British to do that. We do not admire everything the British do. They have gotten under our skin a lot, but one thing we do know—the British have saved our hides many times by playing world policeman and patrolling the sea lanes. Now the British are done. They cannot protect us any more. It is either the United States or the Russians. We are the only two great powers left. France is a weakling. China is beset by civil strife. We have no other allies save the stanch South American friends, but they look to us and they have no large armies or navies. Therefore, it is the United States, on one hand, against a Russian-controlled Europe and China, unless we step in now and try to save the pieces.

Secretary Marshall is the best man for the job now, but he can't bluff forever. The Reds know the condition of our armed forces. He can stall and he can talk tough, but he must have something to back him up.

We must step into Greece and aid that gallant nation to save itself from the Reds and also the old imperialistic British plan. We must help the Turks stave off the Red thrust at the Dardanelles and our vital oil pipe lines. Oil is the key to all wars and also the key to peace.

Camden and Ouachita County people, the News asks you to start thinking about this problem. Then do a lot of praying about it. Ask God for divine help and guidance. Pray for this country now. Our leaders need help, and need it badly. Write your Congressman and Senators and let them know you are thinking about this crisis. If we go into Greece and help Turkey, we are in there for keeps. It may stop a war. It may not. But we can't sit back and let the Russians gobble up everything, for that means war most certainly, and then it will be the United States alone against most of Europe and Asia.

Think this over and do not let the myth of peace blind you to the cruel facts that are staring us in the face.

Will it be war or peace?

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on April 12, 1947:

Dear friends of the Triple Cities and my Congressional district, the housing situation seems to be well in hand in Binghamton with the Governor offering to use executive authority in handling it when bureaucratic officials in Washington definitely bungled it.

If the provisions of the veterans' housing bill, passed in the last Congress and which I helped through with my vote and support, had been carried out the way we in Congress intended, veterans would now have all the houses they need, and more, too.

The tragedy of the whole thing is to see agitators and fakers try to grab the spotlight by criticizing, yet offering no solution themselves.

If you attack a man for proposing something, you must suggest an alternative plan or you are all wet. The big talkers who attack me when I try to help the veteran either don't know enough to forward a plan of their own, or they are just knockers. In any event, they ought to crawl in their rugs and give up.

I am sure Governor Dewey will remedy the housing shortage with action. New York State has made a success of housing the veteran and should assure an immediate solution of the lack of facilities in our community.

While we are on the subject of housing, let me say to you veterans that I stand ready to do all in my power to help you. I urge you to write me, not only about housing but about any and all matters with which I can help you.

Remember, action is what counts, not sophisticated talk. I am here in Washington to serve you. Therefore, do not hesitate to call on me when you need help. I have aided others, why not you?

A few days ago I made a speech on the House floor and my words to the Congress are as follows:

"Mr. Speaker, the greatest privilege any man can possibly enjoy is to be an American. This privilege was given us all by our founding fathers when they wrote the Constitution.

"Today, Americanism is being challenged, not only, here, but in many places throughout the world. Other isms are defying and defiling our conception of government and flaunting the sacred folds of our American flag.

"The call to stand fast against the forces which would destroy our country has been sounded by the President and other national leaders. They would have us adopt a strong policy of striking back at the enemies of representative government.

"Today a token force, symbolic of armed preparedness, will march up Constitution Avenue and around the Capitol. This will not be as impressive as in war years. There will not be the great numbers of men or mobile weapons.

"All of which brings us to ask ourselves how well equipped are we to back up the demands our State Department is making in international councils? Will we be called upon to defend the diplomatic positions we are taking on far-flung territory and issues on every continent and ocean?

"We must preserve Americanism at all costs. It is our definition of freedom and liberty, and we believe is our greatest hope today in a troubled and perplexed world.

"But if we expect to preserve this way of life, we must be able to answer the question I asked, How well prepared are we, and how does our power compare with other great powers, some of whom may not see eye to eye with us on the subject of Americanism. We owe it to the Americans we represent to keep this Nation strong so that we may all be secure and our future starry and bright."

Thank you.

Excessive Taxation

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the very able and thoughtful statement by Mr. William C. Ross, a successful businessman of many years' experience and a resident of my home city of Knoxville, Tenn.

Mr. Ross emphasizes the fact that punitive, excessive, and confiscatory taxes injure not only the taxpayer but in addition thereto injure thousands of working men and working women who are deprived of jobs by diverting private capital from investment in productive industry into the hands of profligate bureaucrats.

TAX-AND-SPEND IDEA RUINOUS TO NEW INDUSTRY DEVELOPMENT

(EDITOR'S NOTE.—The following letter from William C. Ross, one of Knoxville's best known and most enlightened business leaders, strikes at the heart of an issue which not only touches every American economically but politically. Economic chaos is the inexorable forerunner of the loss of political freedom.)

EDITOR, THE KNOXVILLE JOURNAL:

I firmly believe that what the big majority of our veterans and other young people want is an opportunity for a job where they can earn for themselves and their families a good living. If this be true, it is absolutely necessary to create new industries and expand old ones to give the ever increasing number of youths coming from our schools and colleges as good opportunities as their parents had. This requires capital and the only possible way to get it is to save it out of income. Heretofore the men in the higher income groups have, unquestionably, been the ones who have been able to save most of the capital necessary to finance expanding industry, create new jobs, and increase production of things required for the maintenance of our young people. Unless we encourage this class to save and invest, there will be few new jobs and little increase of production of the things needed.

Now let's see what our present idea of tax and spend does to our young people. It would seem it destroys their opportunities by completely eliminating every incentive for those best able to save capital and put it into risk investments, if, in fact, it does not make it impossible.

CASE CITED

Let's take the case of an individual who has a taxable income of $50,000. Present Federal taxes take approximately one-half, leaving $25,000 for expenses of all kinds. However, if this individual had sufficient incentive, he might save at the very least $10,000 instead of spending it for things he might want. This $10,000 (and it would have been $25,000 if the tax rate had been 20 percent), together with the savings of others, invested in some productive enterprise could furnish new jobs and more products to take care of our young people. But most people would prefer to spend their money for personal enjoyment or hide it away for future use unless they felt reasonably sure their savings could be put to work to increase their incomes.

Today, this individual finds upon investigation that if he saves $10,000 and invests it in a productive corporation that can earn him 8 percent on his money, the corporation must pay 38 percent on his $800 earned, leaving $496 which, when passed on to him, falls in the bracket taxable at 75 percent and he can retain only $124, or less than 1¼ percent on his investment. He sees that at that rate it would require over 80 years to get his money back without profit. He knows that few if any corporations last anywhere near 80 years before going bankrupt. He sees he can't afford to borrow money for investment at a cost of possibly 4 percent when he could retain only 1.24 percent. (In the highest income brackets where most of the savings come from, as well as the ability to manage them, less than four-tenths of 1 percent would be left. Then he sees inheritance and gift taxes with ever mounting social security, old age, excise, State, county, and city taxes staring him in the face. So he says to himself, "No sane person would consider saving his money for the purpose of starting new enterprises or expanding the old." He thinks it much wiser to spend it or hide it for future spending.

It is not only Federal taxes, but local taxes as well, that are sapping the financial strength of our people. Under present conditions, how can we expect to get the capital for new industries necessary to give employment and consumable goods for our children and grandchildren?

There we have the cause and effect.

All through the records of history you will find wherever more than 20 percent of the income of the individual has been taken in taxes it has been only a question of a short time until the economic and social systems broke down and chaos followed. Surely our future looks dark indeed unless we immediately change our ideas of taxing practically out of existence the high incomes from which we have heretofore drawn most of the capital for expanding industry. Our present tax laws, including exempting from taxes cooperatives competing with taxed private industry, make us the most socialistic country in the world.

QUESTION ARISES

The question arises, "How are we to run our various governments without high taxes?" We can't, if we are to continue big government with extravagant spending. We must demand less government, and efficient government, where the taxpayer gets 100 cents on the dollar for every dollar spent. We must see that great sums of money, which otherwise would be used to finance new industries, are not taken from one small group of taxpayers and spent extravagantly for the so-called good of the many, thus depriving the many of the very opportunity they want for earning an independent living. Few realize what the slogan "Pay according to ability to pay" is doing to the future of our young people.

In the long run, a flat 20-percent tax on all incomes will produce more money than higher rates, because it will encourage savings and investment in the hands of future Henry Fords who know how to provide new industries. These new industries will be an ever-increasing source of more taxes as well as of new jobs and of more things produced to raise the standard of living.

These matters are of vital importance. If the above conclusions are correct, and I sincerely believe that to be, our scheme of excessively high taxes on the high incomes is destroying the opportunities of our war veterans and all other young people. They are not being given a fair deal and they should lead a movement against the policies of taxing away the savings that should go into industry. Everyone interested in the future of the country should join in this movement and let all our lawmakers, local as well as national, know what we think in no uncertain terms.

WILLIAM C. ROSS.

KNOXVILLE, TENN.

Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New Hampshire Morning Union of April 19, 1947, entitled "Behind the Iron Curtain":

BEHIND THE IRON CURTAIN

Little by little, more glimpses are beginning to come out from behind the iron curtain as to how the Russians conduct themselves. Recently, Alois Daneels, a 27-year-old native of Damne, Belgium, returned home after escaping from a Soviet slave camp near Koenigsberg, where he said there were 3,000 Belgian, Dutch, French, and Czechoslovakian civilian prisoners. Daneels was liberated by United States Army forces in the spring of 1945 after 18 months in German concentration camps, but had the misfortune to be scooped up by the Russians and hustled off to another prison camp.

Daneels said that he was living with 25 men in a working unit in a small stone barrack situated in a quarry, with little light and no heat. The men wore striped prison garments and the guards were regular Soviet Army troops.

The men were aroused at 5 a. m. and received a slice of buttered bread and a cup of malt coffee. At 6 o'clock they were in the quarry—by floodlight if dawn had not yet broken.

There was a 1-hour respite at noon, when some watery soup was served. Five hours more in the quarry rounded out the day. There was one slice of bread at 4 p. m. and two more for supper, when the prisoners returned to their barracks.

People who have seen Daneels say he is a badly injured, beaten man, bearing all the marks of a political prisoner in enemy hands. Before the war he weighed 165 pounds. Now his weight is 120, and at the low point of his imprisonment it dropped to 70 pounds.

About a year and a half ago, rock crushed his right forearm. The Russians permitted him to rest for a week, then ordered him back to the rock face, where a drill was fitted to his left arm. The injured arm and hand are still paralyzed.

This actual story is mild, compared to a recent book entitled "The Dark Side of the Moon," published by an anonymous author, who was a trusted friend of the late Polish Prime Minister, Gen. Wladyslaw Sikorski, who made available to her hundreds of Government and personal papers. The author can't reveal her name because members of her family are still in the hands of the Soviet.

The description in Dark Side of the Moon of the systematic destruction of a nation is unbelievably terrifying. Men and women in their seventies, pregnant women, children and infants in arms were seized. No charge was made against most of them, although some babies were accused of counter-revolution, and one woman was accused of resisting her husband's arrest by weeping.

Those arrested included not only the wealthy, but shopkeepers, tradesmen, and peasants. All professional men, doctors, teachers, scientists, journalists, were rounded up. Labor leaders, Socialists, and even Communists were seized, together with all their relatives. Anyone capable of keeping alive an independent Polish tradition was marked for arrest.

Crammed into prisons, 12 or 15 in cells meant for 2, with no food fit to eat, with no sanitary facilities fit even for cattle, with screams of tortured victims sounding in their ears, they waited sentence for their imaginary crimes. After sentence came the train journeys to Arctic labor camps and the most remote regions of Siberia.

Packed like herrings into unheated cars, with little food and hardly any water, sleeping in their own filth, with the dead and dying always with them, the Poles were shunted from the White Sea to Kamchatka.

In the forced-labor camps, they were considered political prisoners and so much inferior to the professional Russian criminals, who were the camp labor bosses. They worked 12 or more hours a day and were on their feet 15 or 16 hours. Their food was doled out to them according to how well they fulfilled a norm of hard physical labor. Strong men could usually do only half the norm. Weak ones died of cold, disease, and exhaustion and the weak sometimes were shot.

The author of the Dark Side of the Moon repeatedly emphasizes the point that the Poles were not treated any worse than millions of Russians have been treated for 25 years. In the new Russian civilization that is the way millions of people have to be treated so that stupendous feats of industrialization may be achieved and so that the regime may feel secure.

These are the sort of reports that dreamy-eyed Americans who still believe that communism offers something to America should read.

W. L.

Amendment of the Pure Food and Drugs Act

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MILLER of Connecticut. Mr. Speaker, yesterday I introduced a bill to amend the Pure Food and Drugs Act, as it is commonly called.

The enforcement operations under the Federal Food, Drug, and Cosmetic Act are of vital importance to the public health and welfare. These enforcement proceedings have been drastically curtailed under a recent court decision.

The inspectors seized macaroni and spaghetti found to be adulterated with rodent excreta and insects. This seizure was made under section 304 (a) of the act, which provides that articles which are "adulterated or misbranded when introduced into or while in interstate commerce * * * shall be liable to be proceeded against while in interstate commerce, or at any time thereafter, on libel of information and condemned in any district court of the United States within the jurisdiction of which the article is found." The contamination in this case occurred in the rodent- and insect-infested warehouse of the interstate consignee where the food was stored in its original unbroken packages.

The district court held that the defiled food was not adulterated while in interstate commerce and dismissed the case. The decision was upheld by the Circuit Court of Appeals and the Department of Justice petition to the Supreme Court for a writ of certiorari was denied. With this decision ended an important protection which the public had had for 40 years.

The bill which I have introduced will make available to the public the protection which they have been receiving by providing that drugs, foods, and cosmetics are subject to seizure for adulteration or misbranding while held for sale after interstate shipment, and before the ultimate commercial transaction has been completed.

In the 1945-46 fiscal year about 550 seizures were made where the adulteration was clearly due to insanitary conditions or other causes at the terminal warehouse. The absence of effective control in this area may result in serious illness, even fatalities. Recently there were a number of poisoning cases resulting from cheese contaminated with toxin-producing bacteria. It developed that a mouse drowned in the milk during manufacture and that the mouse, but not the milk, was discarded. Since the cheese was shipped very soon after it was made, it is doubtful if the toxin had developed before the interstate movement ceased. More probably it actually developed while the cheese was stored in the wholesalers' warehouses.

I believe the people of this country want this type of protection and I am sure it was the intent of Congress to provide it for them.

Mary Lucinda Nance

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the retirement of Miss Mary Lucinda Nance:

MISS MOLLIE RETIRES

Miss Mary Lucinda Nance, better known as Miss Mollie, is one of only eight employees who first came to the Census Bureau in 1900. She will retire April 30, and will move back to Arkansas, where she was born and where she has retained legal residence throughout her life.

Although she has worked in all except two of the Bureau's subject-matter divisions, Miss Nance has been assigned to Governments Division work for the majority of her Federal experience. She has served under eight different Directors of the Census and six different chiefs of the Governments Division.

Educated in public and private schools of her State, she became assistant postmistress in Lewisville, Ark., in 1896. There, in exchange for her services in practically every capacity except delivering the mail, she received as compensation one-half of the proceeds of the office. In 1899, Miss Nance traveled to St. Louis to take a special examination for the Census Bureau. She passed, and was appointed a clerk, at $600 per annum, effective May 1, 1900.

First woman to be appointed a permanent field agent and first woman to be an area supervisor, Miss Nance in 1934 received a letter from former Director William L. Austin, in which he wrote, "You are to be congratulated on being the first woman to receive a grade 6 field appointment." She has worked in nearly half of the States, compiling State and city financial reports for the Bureau. That Miss Mollie made many friends while in the field service is evidenced by the numerous queries and messages for her that our present field representatives receive from State and municipal officials and their employees. Her contributions to the Bureau's work have consistently been of real value.

In addition to her duties at the Bureau, Miss Nance has found time to indulge an interest in music, to attend the Washington College of Law for evening courses in accountancy and to pursue in-service training in State and local government. During World War II, in addition to maintaining a victory garden, she took Red Cross instruction in advanced classes, and taught first aid both to Census Bureau employees and to a troop of Girl Scouts.

Miss Nance is a member of the American Statistical Association, she holds life membership in Esther Chapter, No. 5, Order of the Eastern Star, and is a member of Chapter B, PEO Sisterhood, and of the Robert E. Lee Chapter, United Daughters of the Confederacy. A great-grandfather, Reuben Nance (who is also great-grandfather of former Vice President John Nance Garner), served in the Continental Army; hence, Miss Nance is eligible for membership in the National Society of the Daughters of the American Revolution.

Miss Nance's qualities may be summarized in this way: She is steadily loyal; she is unselfish; she is adjustable to new administrations and new policies; she is uncommonly industrious, having what is a veritable habit of staying several hours past closing time; she is devoted to her work; believing she is helping to strengthen community government, and she is technically superior, extraordinarily thorough, and long experienced; of her associates she speaks only good things; finally, her view is always youthful, always looking to the future.

The love, respect, and best wishes of all her many friends go with Miss Mollie as she leaves Suitland for Lewisville. All will miss her.

Problems of Peacetime Scientific Personnel

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. JOHNSON of California. Mr. Speaker, I ask unanimous consent that an address by Dr. M. H. Trytten, Director, Office of Scientific Personnel, National Research Council, Washington D. C., may be included as part of my remarks. This speech was delivered at the educational conference of the science talent institute of the sixth annual science talent search for the Westinghouse science scholarships. This conference was held in Washington on March 4, 1947, and was attended by the group of young scienists who had proven their worth by being selected as winners in the sixth annual science talent search and who later during the conference were awarded Westinghouse science scholarships. The address, entitled "Problems of Peacetime Scientific Personnel," follows:

The Science Talent Search has done much to focus attention on the importance of seeking out science talent and providing adequate facilities for the growth of this talent into competent scientific ability. But more than this, it has helped to awaken an awareness of the importance of an early start in the development of scientific interests.

It seems interesting that as a nation we have done so little to study our resources of highly trained manpower. For decades we have carefully studied our resources of water power, of soil resources, of mineral wealth, of timber, of high-grade animal stock, and many other resources important to the national welfare. Many people come to Washington to gaze at the many buildings and to wonder what on earth all these people do. Some of them come here because

they are sent by the voters to wonder about it and I suspect that many of them go back and never find out at all. In fact, a pretty large share of these workers is doing precisely what I have suggested—they study the national resources in diverse fields of importance to the national interest and report on our stock piles and our native undeveloped supplies to the Congress and to the Nation as a basis for future planning.

I believe it would not be difficult to prove that our trained manpower is our greatest national resource. In wartime a relatively small corps of technically trained men produced so much and so powerful equipment that the equivalent in other natural resources, including manpower, defies calculation. No greater demonstration of the power equivalent of the human intellect has ever been given. They not only demonstrated that scientific knowledge is, in every reality, a source of power but they revolutionized almost every concept of war and of international relations besides. What was done for war had in fact been done for our peacetime living, in great measure, in the past few decades and can further be done in the future.

It is, therefore, a curious thing, indeed, that we have never given much thought to our national supply of highly trained personnel. At the outbreak of the war practically no reliable information existed on the national supply of scientists and other highly trained groups, whether of acute interest in the emergency or not. Only in the case of doctors of medicine and a few like groups where the professions had been highly organized and licensed was the census approximately accurate. In other groups, the best available information was found in membership lists of professional societies and was admittedly not even approximately adequate. In many areas of scientific interest membership in societies covered only a fraction of the personnel in the field and often included many who were not even trained in the field at all.

Even today the information is not satisfactory in spite of the great efforts made by various agencies and groups. The National Roster by its wartime registrations and the National Research Council and others have contributed somewhat, but only the beginnings of the necessary accumulation of information have been made.

The reasons for this situation are no doubt many. But primarily they are two. In the first place, the dominance of science in the national scene is relatively recent. Less than half a century ago real scientists were rare birds in America. Those we had were either imported or went abroad for training. Before the First World War, scarcely 250 Ph. D.'s in the sciences were granted annually. Immediately after the First World War this had increased to 500 per year. By the early thirties we had passed the 1,000 mark. The next decade saw the expansion of this training effort to a full 2,000 per year by 1941. We thus doubled our training of scientists roughly every decade up to the Second World War. This means that eight times as many persons received the doctorate in the sciences in 1941 as in 1912. Probably about half of the scientists in the United States trained to the doctoral level were given their final degrees after 1936. The scientific activity and development in the land increased apace. Science was proving itself by the sheer power of its methods. And only during the war did we suddenly realize that it was no longer a decoration to our cultural life but a prime necessity for life in the modern world.

The second circumstance which may have prevented our realization of scientific talent as a national resource was the employment situation in the depression. It was a psychological impediment to a consideration of our scientific resources in trained manpower that we could not even find employment for competent and qualified scientists. The psychological impact of those years even now colors the judgment of many when they think of the personnel problem. Only the acute needs of the war, for this type of personnel, demonstrated that we cannot safely think of this problem without considering the supply of trained manpower from the point of view of the long time well-being of the Nation.

If we have been training double the number of scientists to the doctoral level since before the First World War the question naturally presents itself as to whether we can look into the future to determine what our needs may be in the coming years. It would be pleasant here to pose as a prophet and speak oracularly, but the hazards are too great. The force of circumstance is far too great and too unpredictable for that. However, certain observations are apparently not too hazardous.

The first observation is that there is now an unmistakable shortage of qualified scientists in practically all fields of science. Undoubtedly this is due to readily discernible factors. The first and most obvious is the continuation of researches to guarantee a well-equipped military establishment at least until the international situation has assumed stability. The wisdom of this seems unchallenged. Certainly the country seems united on the policy at present. The second factor is the concerted belief of industry in industrial research as a source of prosperity and higher living standards. The development of older research laboratories, the establishment of new ones, and the spread of industrial research among universities are phenomena observable on all hands. The third factor is the unprecedented enrollment in colleges and universities making the need for qualified science teachers a pressing one. One must add here some consideration of the leadership role of America in world science today. America cannot remain a nation at a high plateau technologically in a world at a much lower level. We are in large measure the custodian of the technological heritage of the ages at the present time. We are the trustees of the world's equities in this sphere and must give serious thought to our responsibility toward raising the standards of the world. A mere glance at the level of development in many parts of the world in such fields as public health, medicine, engineering, agriculture, and the physical sciences may give an idea of the work our scientists could be called on to do if we are to share our technological riches with the world. All of these factors seem to indicate that it will be years before the supply of scientists will equal the demand.

To measure this demand is, however, baffling. There are too many uncertain and qualitative considerations. For scientists are not peas in a pod. They are, if anything, more variable than other types of personnel. Of two apparently comparable men, from the point of view of training and length of experience, one may be ten times as productive as the other. And the demand may fluctuate in any area with every economic wind which blows and with every political shift in the stormy air of Washington. But, in spite of all of its uncertainty, it seems fair to state that if our Nation is to remain strong and progressive we must look forward to a widening scientific horizon with new areas opened up for exploration demanding an increasing number of competent and well-trained scientists.

Much has been said about the shortage of scientists the past year or two. But not enough has been said of the equally increasing demand for highly trained personnel in other fields. It would be unrealistic to assume that only in the science fields is additional personnel needed. It is true in other fields as well. Our technological civilization is characterized by increasing complexity. This gives rise to increased problems in almost every phase of human existence. The fields of social problems, economics, law, medicine, public health, industrial relations, and a host of others are fairly bristling with problems created by our departure from the simple lives of our fathers and our precipitation into modes of living of high interdependence and increasing artificiality. These considerations are important because they raise the question of where additional scientists are to come from. We would be serving ourselves poorly indeed in the long run if we diverted a larger and larger share of the best brains of the Nation into scientific work at the expense of other disciplines, perhaps in the long run of equal if not greater import to the national welfare.

It is interesting in this connection to examine enrollment statistics in American colleges and universities. As was stated earlier, the training to the doctor of philosophy level in the sciences increased by a factor of eight from 1912 to 1941. But in this time college enrollments increased from 375,000 in 1912 to 1,500,000 in 1941, or only four times the 1912 figures. It would be interesting here to have the percentages of male and female enrollments in the corresponding years, since it seems established that the education of women has increased more rapidly than that of men, but I have not found the figures as yet. In this same interval the percentage of the population attending college increased only from 0.4 in 1912 to 1.12 in 1941, or an increase of 2.7 times the 1912 figure. These figures indicate a rapid increase in the training of college graduates in the research sciences. Already the percentage trained in some fields is astonishing. In chemistry, for example, there were approximately 3,900 graduates at the bachelor's level in 1941, according to the report of the American Association of Collegiate Registrars. That same year there were 672 doctorates in chemistry graduated by American universities. This corresponds to 17 percent. Of all the sciences the figure seems to approximate 12 percent.

The exact meaning of these figures, however, is not crystal clear. Our colleges and universities are as yet not standardized nor uniform. But, in spite of that, it does seem that the time has come when the needs of our civilization for high competence may force us to examine carefully our resources in competent young men. We shall need to pay much attention to selection and identification of competent youth so that we can assure ourselves that we are not losing good material through lack of resources to train them, and we need to do this in such a way that no important activity is drained dry of talent to furnish adequate manpower for other activities.

"Buy American" Is a Dead Slogan

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article appeared in the Washington Post of Sunday, April 13:

"BUY AMERICAN" IS A DEAD SLOGAN

(By W. Averill Harriman)

Every American has a personal stake in the expansion of world trade. What role the United States is to play in this drama is one of the major decisions our Government faces today.

The interdependence of our own welfare with that of the world is today both a great challenge to us and a great promise to the world. My years in trouble-ridden Europe have convinced me that we must accept the challenge and live up to the promise.

Since my return I have become confident that we will. Public opinion is beginning to realize our tasks in today's one economic world.

But to be able to act with sufficient speed and imagination on a wise world-trade policy, every one of us must come to understand more fully the beneficial effects of expanding world commerce on our domestic economy.

DOMESTIC REBATE

What do exports do for us?

They provide at least one out of every 15 jobs in the United States. Through increased sales, they help to keep down domestic prices of passenger cars, trucks, radios, aircraft, machine tools, machinery, farm equipment, movies and many other important products. The large foreign sales of those goods, accounting for 7 to 40 percent of our total output, greatly lower the unit cost of our mass-production industries.

The magnitude of our export trade can be appreciated by comparing it with our domestic trade. Last year, our $12,200,000,000 in exports of goods, including gifts and surplus-property sales, and our $3,100,000,000 in exports of services (shipping, insurance, etc.) were equal in value to all the money America spent in the Nation's clothing and shoe stores, drug stores, and filling stations.

But even with exports so high, there is still much necessity and room—for expanding them.

The needs of foreign countries for larger quantities of machinery and many other kinds of American goods are real and urgent. They will have to be fulfilled in reasonable time if we are to help these countries progress economically—which alone can give free institutions and peace a fair chance.

In our own interest, too, a growing export trade is necessary. Our productive capacity today is far greater than it was before World War II. Technological progress in the future can raise it still further.

STILL A GREAT GAP

To enable the world to buy more from us, we must buy more from abroad. Last year the dollar value of our purchases of foreign goods and services was considerably greater than before the war. With $7,100,000,000, it equaled the total amount we spent at home on furniture, house furnishings, household appliances, radios, hardware, and farm implements. But it was $8,200,000,000 less than the value of our exports.

This great gap, mistakenly called our favorable balance of trade, will have to be narrowed if we are to be able to increase—or even maintain—the level of our exports.

For we cannot indefinitely make gifts to the world, as in 1946, when we made available $2,600,000,000 as taxpayers and $600,000,000 as private citizens. Nor do foreign countries have sufficient war-accumulated dollar balances and other assets in the United States to go on paying us cash from their reserves.

For some time we shall have to loan capital to our foreign customers to help them in a sound businesslike manner to increase their own production. But whether our lending can continue on the $3,000,000,000 level of last year or even a much lower level depends on our readiness in the future to accept interest and repayment of our loans in kind.

PLEASANT INVESTMENT

What can we do?

1. We can and should spend more dollars traveling abroad, broadening our knowledge of the world and enjoying personal contacts with its peoples.

2. We shall have to buy more of certain foreign manufactured goods. Additional imports of luxuries and semiluxuries can greatly add to our enjoyment of life.

3. We must buy more raw materials from abroad. We produce no natural rubber, coffee, tin, cocoa, bananas, and silk, and not enough sugar, wool, furs, lead, copper, petroleum, newsprint, etc.

4. We can conserve our domestic resources through liberal imports of some of our most essential industrial raw materials, like oil, lead, and copper. They're running low. We shall need more of them for our vastly increased industrial machine.

Imported goods are part of almost everything we use. Practically all of our industries would suffer the most critical bottlenecks without them.

Our motorcars, for example, contain some 300 vital foreign materials originating from 56 countries. In our cosmetics are some 150, in our soft drinks over 50 ingredients from the outside world. A good part of our pharmaceutical and other chemical products are partly of foreign origin. Every radio tube and light bulb contains materials from abroad.

OUR SILENT ENVOYS

Good will resulting from foreign commerce is a great factor in international relations. I know from my experience in Russia and elsewhere what an efficient American machine tool in the hands of a foreign worker can do to promote good will toward the United States.

Similarly, our buying of foreign products tends to create friendliness toward us among the farmers and miners, the craftsmen and factory workers abroad who come to realize that we are contributing more and more to their precarious incomes.

We are only 6 percent of the world's population; yet our country today turns out about one-half of the world's industrial production.

We have long been a primarily industrial country; yet our agriculture, apart from providing us with the highest standard of living, produces the greatest exportable surplus of food in the world. Our financial resources dwarf the wealth of the rest of the world.

DEPRESSION

It is true that, having contributed or pledged over $20,000,000,000, in gifts and loans to postwar reconstruction abroad, we are now doing about 25 percent of the world's entire international trade—three times as much as we did in 1939.

But many nations are wondering whether we will continue to assume our share of responsibility in making the world advance from devastation and backwardness to reconstruction and prosperity.

By our actions in domestic and foreign economic policy we can and must give the world a positive answer if we want to escape another tragic involvement in its miseries—first in depression and then possibly in war.

Our slogan, "Buy American," served us well enough while we were a debtor nation attempting to build up our infant industries.

But now that we are a great creditor nation our self-interest requires economic policies that would be better characterized by the new slogan, "Let's import—for peace and prosperity."

Mr. Speaker, note that the article states we do not produce enough wool and furs. Why do we not produce enough wool and furs? Time will tell. To listen to some people one would expect a Utopia when Canada furnishes us all our wheat needs; Australia all our wool needs; New Zealand and Argentina all our beef needs; and Russia all our fur needs. The citizens of the United States can then draw their social security and live happily ever afterward.

The Scientific Way

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. JOHNSON of California. Mr. Speaker, by unanimous consent I am making a part of these remarks a very interesting address delivered by Dr. Vannevar Bush, president, Carnegie Institution of Washington, at the awards dinner of the sixth annual science talent search, conducted by the Westinghouse Corp.

The Westinghouse Corp. annually cooperates financially in trying to discover young men and women who are specially adapted to training in science. Science scholarships are awarded. The search is conducted by Science Clubs of America, administered by Science Service under the direction of Mr. Watson Davis. Each year the winners of this search are brought to Washington where they spend several days listening and participating in discussions relative to science. The culmination of the visit is a dinner at which the winners of the awards are publicly announced. It has been my privilege to attend several of these dinners and I can say without reservation that they are a most inspiring event. At these dinners we have some of the leading scientific minds of the country and this year we were especially favored by having present Dr. Vannevar Bush, one of the outstanding men of this generation. We also had before us the young men and women who personified for us our hope of the future that science may be utilized in the ways of peace.

In this transition period of the world we have vividly in our minds the ghastly effects of the atomic bomb, which was the creation of our great scientists and their contribution to the winning of the war. We are all hoping, and the Members of the Congress are especially hoping, that policies can be formulated that will bring the world to an even keel and guarantee a long period of peace. Scientists are primarily objective and we earnestly pray that their great talents may be utilized for the blessings of mankind in peaceful ways. We hope that their ingenuity and their scientific ability may never again be needed or used to destroy human beings or any of their works. Science offers so much in the way of elevating living standards and dignifying the individual that we pray that the statesman who must fashion the machinery which will bring a workable and lasting peace will succeed, so that science in the future can be used

for the welfare of the individual as well as the welfare of the whole of mankind.

Dr. Bush's speech follows:

THE SCIENTIFIC WAY

It is both pleasure and privilege to be asked to make these remarks this evening. I say this because, for one thing, I used to have great enjoyment and satisfaction from being a teacher, and an occasion such as this, when we are met to honor a group of vigorous and able student minds, necessarily calls back many pleasant recollections of classroom relationships of years ago. My generation is often criticized, moreover, on the ground that we talk too much. I don't believe I will admit that flatly. But it may very well be that we talk too much to each other, and not enough with other, younger generations whose direct views and freedom from preconceptions would be very salutary for us. On this score you 40 finalists in the sixth annual science talent search have me under an obligation.

For it is a welcome event—to have opportunity to join with a group of vigorous younger minds who have already proved their possession of signal potentiality, and to join with them in examining into such a fascinating, vital, and complex subject as the nature of science and scientific research—the scientific way. We know that occasions are rare when for a little we may stand aside from the exactions and preoccupations of active affairs, in order to appraise and seek to understand the lasting significance underlying them. In such occasions one always finds reward and stimulation, and one always draws from them renewed demonstration of the great truth framed by Socrates, that "an unexamined life is not worth living." The chief among their many values is that they help us in the effort to discern what actually we seek to do, and why we seek to do it. In the hurry and bustle of our crowded and complex daily life we all too easily become engrossed with immediate things to such an extent as to lose sight of lasting things. We hence run a great danger, for unless we maintain the balance and comprehension that come from awareness of the basic and durable reasons for action, we may become as futilely frantic as the squirrel on a treadmill or the rat in a maze.

It is from the point of view of these considerations that I welcome this meeting as an occasion to inquire into the scientific way. I am, of course, an electrical engineer, and speak primarily as an engineer. It is fitting enough for an engineer to examine into science, however, for engineers and engineering depend upon science much as medical practitioners do, or much as, say, the weaver both depends upon and fosters sheep raising, or the publisher is both the servant and the sponsor of literature.

The human being has four great sources of strength on which to draw for the energy which he puts forth in carrying on the varied activities that go to make up civilization and thus serve to distinguish mankind from other forms of life. They are his reason, the exercise of which finds clearest expression in law and science; his imagination, whence spring art, music, poetry; his physique, mastery and skilled utilization of which reaches consummation in the ballet, in sports; and his spirit, out of which grow the lofty conceptions of philosophy and the noble aspirations of theology and religion. Almost anything that man does, of course, calls to some extent on all four of these wellsprings; certain groups of activities, however, draw more heavily on some one, other groups on some other, of them. In science, the great draft is on reason. Naturally, imagination contributes in the building of a theory and in the devising of experiments to test a theory. Sometimes the physique is placed under heavy toll, particularly for adroitness, steadiness, and dexterity in the assembly and use of apparatus and for reserves of stamina to meet the strain of long, concentrated work. It can fairly be said, too, that spirit—maybe simply intuition, maybe something greater and more significant—often has in the work a part which is real, which can be sensed and recognized, even though it cannot be easily defined.

But science, research, the scientific way, place the greater draft on reason. To follow this way demands at the outset a consistent willed effort at concentrating the analytical powers of the intelligence to classify and so to assimilate the necessary and sometimes very large body of existing knowledge. It demands then a different but equally delicate type of analytical skill to study the mass of knowledge, thus accumulated, in order to discern gaps. Once a gap has been discerned and defined—this is another way of saying once the need and opportunity for research with a specific objective have been discovered—there must come into play a further sort of questioning thought, for the possible ways of filling the gaps must be surveyed and evaluated, and the right selection must be made from among them. When procedure has thus been decided upon, the various steps in applying it must be planned, and the performance of them must be controlled. At last, when result has been achieved through these operations, the investigator is faced with the sometimes confusing and always exacting task of assessing his findings, relating them to the problem which he sought to solve, and determining whether they actually do solve it or whether they are deceptive and must therefore be abandoned, no matter how much long and arduous work they represent.

What I have just sketched are, of course, not the only stages by which one travels the scientific way. There is a reverse course, of equal importance and of equal difficulty, which one often takes and which makes comparable demands on reason. This occurs when a new fact is apprehended as new—that is, when the investigator realizes that he has in the process of an undertaking encountered a phenomenon which is an addition to knowledge. To make this realization, to recognize the new as new when it is first met, demands an alertness of mind, a freshness of vision, which are maintained only by deliberate effort; it is perilously easy for man to go through his daily routines almost automatically and thus to relax his vigilance and let his responsiveness to events become atrophied. The follower of the scientific way who guards against this peril, however, and who hence knows when he has come on a new thing, vigorously exercises reason thereafter, to define the new fact, to limit it, to distinguish and explain its similarities and dissimilarities to older known facts.

Thus his effort is to relate the new thing to the whole body of knowledge, finding where it belongs and what its bearing is on the whole and on the several parts of the whole. As he does these things, he works toward establishing the intrinsic signification of the new fact—that is, toward determining what it means in and of itself. In addition he works toward making clear and understandable its extrinsic significance—that is, toward tracing out the ways in which the new addition to knowledge illuminates other matters which have hitherto been obscure, contributes to the ultimate formulation of answers to other problems which have not yet been brought to solution, and so increases the homogeneity of knowledge as a whole.

Now clearly, the intense joint application of the will and the intellect which is involved following either of these courses along the scientific way is no child's play. It is exertion of the most exacting sort. It is just plain hard work. There are a lot of easier ways of earning a living, and sometimes a more cushiony living, in the material sense, than is the usual scientist's lot. Then why do people do it? Inquiry into some of the many reasons for their action will contribute substantially to understanding of the scientific way. In such inquiry, we may leave out of account the practical necessities of earning a livelihood. They apply with equal force to most if not all men, and hence have no special bearing on men's motives in making one or another choice of career. The question hence is found fairly sharply. What are the special satisfactions, the special obligations, of the scientific way?

As is true of any human activity which is carried on with full vigor and full sincerity, a basic motive which for many people is by itself sufficient can be found in the individual personal aesthetic satisfaction which comes from doing a thing well. This is the reward of self-sufficient virtuosity. Just as the virtuoso of the imagination can consider the phrase "Art for art's sake" an all-encompassing answer, so the virtuoso of the reason may declare "Reason for reason's sake" or "Science for the sake of science" cause enough for his doing what he does. Think of the fly-fishing enthusiast who rigs his tackle and solemnly casts and casts again on dry land, sheerly for the zest of doing a difficult thing with all the skill at his command. This joy of the virtuoso, this satisfaction of the connoisseur, is one of the most powerful incentives; it has probably been a principal motivating force in many independent investigations in the most abstract and recondite subjects. I have no doubt that it meant much to Leonardo, to Newton, to Count Rumford, to Lowell, or that it means much to many among our contemporaries, and therefore is productive and vital in the expanding progress of science in our time. It demands a mind strong enough to avoid becoming precious, to avoid taking the position of the scientist who is reported to have boasted of his pride that, as far as he could determine, no conceivable use attached to anything he had ever done in research.

At the extreme from this remark, which really sounds too ivory-domed even to come out of an ivory tower, let alone an ivory lab, is the view that the practical usefulness of the results of research is reason enough for a man's entering upon science as a career. The argument runs that most research, most scientific endeavor, is undertaken primarily in order to produce immediate practical utility. It is true enough that the practical uses of the knowledge gained through scientific research bulk very large, indeed, in our civilization. In nearly all its aspects, our culture relies upon machines, implements, instruments, techniques, and processes which have developed from scientific knowledge, and it relies upon them to a greater extent than has ever been true before, to such an extent that we plough and cultivate science as the Romans ploughed and cultivated their fields.

Even so, a mere moment's glance into the history of science is enough to disabuse us of the notion that practical application is the prime motive of research, or that a research is begun only when a clear objective has been defined in terms of a specific theory, technique, or application to be achieved. In general, the knowledge out of which some practical advantage or benefit grows has itself been long in existence before the application is made—and this is true in general even in our own time of skill in applied research for a definite purpose. Often, moreover, new knowledge comes to light at a time and in a way having no relation whatever to possible applications. Practical use-

fulness is good, of course; for demonstration of that, all we have to do is look at the long curve of history where the trend in spite of many aberrations and fluctuations such as those that indicate the troubled spots and unsettled problems of today, has been steadily toward an easier and richer life for the ordinary human being. Practical usefulness, then, is naturally enough the greatest justification, in the minds of the generality, for science. And to scientists themselves, it is satisfying to see that the general welfare is aided by practical applications of the knowledge which they accumulate. They would be considerably less than human otherwise. But their greater satisfaction, I believe, comes from other sources, primarily from being able and enabled to fulfill the demand, or requirement, or faith which is the essential condition for being a scientist.

What is this condition? It is not a mastery of mathematics or physics or chemistry, nor an adeptness at devising experiments, nor a more than ordinary power of logical analysis, nor even a heightened capacity for the rare combining of intelligence, imagination, and intuition in the act of creative thought which constructs the great hypotheses and syntheses. The essential condition is not the possession or the exercise of any of these attributes, though each is a great value in itself. Rather, the essential condition is an intense, innate conviction that knowledge is good, that knowing is good, and that, therefore, to increase knowledge by conscious willed exertion of the intelligence is both duty and high privilege. Knowing is hazardous, we recognize, and we declare it worth the risk. To follow the scientific way is thus a profession of the faith that as we know the truth, the truth will make us free. Here our distinction of motives or incentives becomes clearly set out. As knowledge contributes to the general welfare, whether through applied science, engineering, or some other avenue, it is a good in immediate or pragmatic senses. In the sense of the essential condition, however, of the scientific way, knowledge is good in and of itself, without regard to such immediate or pragmatic benefit as it may offer.

Now, if we regard knowledge thus highly as a good absolute in itself, we comprehend that knowledge has an integral quality, that it has a virtue; that it has an inherent right to our respect for its integrity. The man to whom this recognition has come is, therefore, humble before knowledge; he will not trespass upon it, but he will rather accede to it, seek to understand it, and to participate in it. Therefore he strives for objective, selfless honesty in approach, in definition, in operation. Here in this objectivity of attitude, far more than any set of working procedures, is the reason for the essential unity of the various scientific disciplines, whether nuclear physics or classical philology.

We come each to our own comprehension of the individual human intelligence confronted by the vast mass of knowledge. The contrast is great, so great that the attainment of a thorough grasp in a lifetime seems impossible on the face of it. Yet we know that a working relationship is attained, and we must recognize this as one of the two or three most amazing and humbling facts. We come each to that comprehension only slowly at best, with many false starts and departures from the true course. History in general, and the history of one's own discipline in particular, are of profound worth in this search, in great measure because through reciting the courses which others followed, history may safeguard us against pitfalls which they discovered. The aim toward which the student of science perseveres is that of ultimately doing original investigation, exploring the unknown. Just as in preparing for this he repeats classical experiments in his studies, so in working toward his philosophy of science—that is, his comprehension of the relationship between himself and knowledge—he is wise to review classical experiences.

You students of science who have attained honor in this sixth annual science talent search have already in your studies and in your own research undertakings made a distinguished start along the scientific way. You have unquestionably seen your own projects state unequivocally one of the great and hard lessons which all travelers along that way must learn—the lesson that in research, in the exploration of the unknown, the price of one success is often many failures, and that therefore the effort and ability to detect failure and error early, and the capacity and strength to abandon a line of approach however treasured and however far committed, once its fruitlessness is sensed, are vital elements in the complex compound of plan, reason, patience, and courage out of which new knowledge is precipitated. You appreciate that the great quality is not simply to be able to stand up under disappointments, but to be able to do so without losing the zest and exhilaration that should attend success. You know the fascination and the compulsion of the characteristic quality of science—that it is in the broadest sense a regenerative system in that a discovery made, a question answered, reveals new unknowns to seek, new questions to ponder.

Before you, as you advance your own investigations and as you develop further your comprehension of the scientific way, is the great and heartening awareness of another truth which is closely akin to this last, and which lies at the vitalizing center of man's existence as a sentient being. Science is a regenerative system. So is the combined act of will and intellect which the scientific way calls forth. By effort of the will the intellect is exercised, that exercise in turn renewing effort of the will, and so in turn again, to one of the deepest satisfactions man can know. In the years before you 40 younger scientists in whose honor we are met tonight, to some we may be sure will come prominence, acclaim. For others among you, maybe, the lot will be one of inconspicuousness if not obscurity. To some, success in the world's terms will be attainable, and there will be satisfaction in it. To all, there will come as there must, reverses, set-backs, disappointments—in the world's terms. It is honest for me to say that all these are temporal and do not matter, and will not matter too much to you, for all of you may achieve the serenity, the equanimity, and the balance which come from certainty concerning what you do and who you are as creators and creations of this conjoint, self-replenishing, and inexhaustible power that resides in will and intellect. It is for that that I congratulate you and wish you well.

King Christian X of Denmark

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. JENSEN. Mr. Speaker, news of the death of King Christian X of Denmark has saddened millions of Americans. It has been a matter of profound sorrow to the hundreds of thousands of Americans of Danish origin.

For nearly 35 years—during two tragic world wars—the Danish monarch ruled over his industrious, law-abiding people. As in the historic song of Denmark, King Christian Stood Before the Mast, King Christian stood before the mast, sharing the suffering of his subjects as he shared their successes. He towered to the heights in character as he towered in physical stature. It was no wonder that the Danes loved him from the first happy days of his reign through the dark days of Nazi occupation to the hour of his death. He never left them. His ever-present wisdom, his courageous example, was always with them. He was a king among kings. He was a man among men. Under his inspired leadership, the Danish people never ceased to resist Nazi occupation, which contributed to Allied victory.

Since I am of Danish ancestry, and since I have the honor to serve the largest community of Americans of Danish ancestry in the United States in the House of Representatives, I have anxiously watched the bulletins which came from King Christian's bedside after he was stricken on Easter Sunday.

It must have cheered this leader's final hours to have had with him the realization that he was leaving the sacred trust of his people's happiness in the capable hands of his eldest son, now King Frederik IX. When, as Crown Prince, Frederik IX visited the United States in company with Crown Princess Ingrid, I met him and talked with him. His accomplishments in connection with the drafting of the Danish constitution, his sincerity and his understanding of the fine relationship between the people of Denmark and the people of the United States impressed me deeply. I am confident King Frederik IX will carry on his father's tradition of selfless service to his people.

Our heart goes out to the bereaved family of the deceased monarch in this hour of great sorrow.

We who have admired King Christian X will never forget him. His reported words, just before his death, are a lesson and an inspiration to us, the living—"My task on this earth is over. I am at peace with God and myself."

Wallace's Current Activities Recall Dr. Wirt's Charges

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. SHAFER. Mr. Speaker, last November the people of the United States elected a new Congress. Tabulated results of that election proved that the country has had enough of spendthrift policies of the New Deal to reduce the United States to the status of a third-rate power by spending ourselves into national bankruptcy.

The mandate of the people of the United States to the Eightieth Congress was to reclaim America from the communistic ideologies of the New Deal and to reestablish our governmental system of free enterprise.

Today the remnants of the New Deal in the administrative branch of government are still demanding expenditures up to the very limit of income. The administration is fighting reduction of the taxes of the American people, and at the same time seeking to commit us to long-term economic policies which will continue to keep us committed to extravagant spending.

The administration is seeking to commit us to a one-world foreign policy by sending American tax-raised dollars around the world to interfere in the governmental affairs of other nations. The demand is that we fight communism abroad, while within our own borders a Communist fifth column has bored into department after department of our Government, seeking to influence our course permanently into the channels originally dredged by the Roosevelt New Deal in 1933.

Too many have forgotten what has transpired in the 14 years from November 1932 to November 1946. Too many have been indoctrinated by the thought that winning World War II was the sole reason for the weakened state of the Government of the United States today, militarily, economically, morally.

But we must not forget that the Roosevelt administrations, in their early years of power, smugly said, as the successive steps of their plan to regiment the United States unfolded, "We planned it that way."

In view of all of this it might be well for those Members of Congress who were elected by the popular revulsion to 14 years of New Dealism last November, to refresh their minds as to just what has happened since the New Deal began.

It may be well for all of us to look at the record.

We find Henry Agard Wallace, former Secretary of Commerce, former Vice President, former Secretary of Agriculture, in successive New Deal administrations, parading throughout Europe, ridiculing the policies of the Government of the United States, smearing our Members of Congress as "tory," as "reactionary," and as "imperialistic."

We find our State Department and Department of Commerce preparing to attend trade conferences in Geneva in a month or so, to wrap up in an 18-nation agreement more of the reciprocal trade agreements which were the dreamy, idealistic fetish of Cordell Hull and Franklin D. Roosevelt.

We find our armed forces, which saved the world from Nazi totalitarianism, demobilized, scattered to the four corners of the Nation. We find our vast industrial organization, which produced the tanks, the planes, the ships, the munitions, and the food to sustain the Allies in the winning of World War II, reconverted to the purposes of peace or entirely abandoned.

We find our natural resources vastly depleted by the very efforts which supplied our forces and the forces of our allies with the finished materials to win World War II.

We find ourselves unable to keep up to schedules for stock piling those strategic raw materials needed to supplement our sources depleted through aid to our World War II allies.

We find millions of our people so indoctrinated with the "Santa Claus" policies of the New Deal that they favor continuation of the theory that the Government owes every American a living instead of the American way of thinking that the Government is the servant, not the employer of the people.

Mr. Speaker, it may well be that the state of the Nation today is a result of the careful schemes of men such as Henry Agard Wallace, Robert Morss Lovett, Dr. Rex Tugwell, and others of that original New Deal group who "planned it that way" prior to 1932.

It may be well to recall that Lenin, one of the original Big Three of Russian communism, discussing the barriers between Russia and world Communist domination, said, in effect: "Great Britain and the United States are our barriers. But in 20 years Great Britain will fall apart from internal political dissension. In that same 20 years the United States will have spent herself into the status of a minor power."

Mr. Speaker, few of us elected last November will deny that the intervening years have proved Lenin to have been a major prophet. It took a few years longer than he predicted, but our gigantic national debt, our unprecedented tax rates, our shrinking national resources, demand that we who carry the people's mandate of last November must look at the record.

Current trends make it most appropriate, in my opinion, to trace back along the trail of Mr. Wallace and his associates to perhaps find the motivation of their entire group, and, perhaps, find signboards which will show where the planners have tried to take the American people under their dream of a planned economy.

During the second session of the Seventy-third Congress the files will show that Report No. 1439 was submitted to this House by the gentleman from North Carolina [Mr. BULWINKLE] as chairman of a select committee to investigate certain statements made by Dr. William A. Wirt, at that time connected with the public schools of the city of Gary, Ind. That committee was created under House Resolution 317 of the second session of the Seventy-third Congress. It consisted of five members—three Democrats and two Republicans. The Democrats were A. L. Bulwinkle, chairman; John J. O'Connor; and William A. Arnold. The Republicans were Harold McGugin and Frederick R. Lehlback.

The committee, as reference to House Resolution 317, second session, Seventy-third Congress, will show, was directed to summon Dr. Wirt, require him to reveal the sources of his information, and to summon such other witnesses and make such further investigations as the committee might deem advisable.

One portion of the statements made by Dr. Wirt and circulated by him in printed form, read by James Rand, Jr., before the Interstate and Foreign Commerce Committee of the House of Representatives on the 23d day of March 1934 stated:

PLAN OF REVOLUTIONISTS

The fundamental trouble with the "brain trusters" is that they start with a false assumption. They insist that the America of Washington, Jefferson, and Lincoln must first be destroyed and then on the ruins they will reconstruct an America after their own pattern. They do not know that the America of Washington, Jefferson, and Lincoln has been the new deal, and that during the eighteenth and nineteenth centuries we have been making great social progress. The common man is getting his place in the sun. Why try to put him back into the Dark Ages?

Last summer I asked some of the individuals in this group what their concrete plan was for bringing on the proposed overthrow of the established American social order.

I was told that they believed that by thwarting our then-evident recovery they would be able to prolong the country's destitution until they had demonstrated to the American people that the Government must operate industry and commerce. I was told that, of course, commercial banks could not make long-term capital loans and that they would be able to destroy, by propaganda, the other institutions that had been making our capital loans. And, of course, when Uncle Sam becomes our financier he must follow his money with control and management.

ROOSEVELT ONLY THE KERENSKY

The most surprising statement made to me was the following: "We believe that we have Mr. Roosevelt in the middle of a swift stream and that the current is so strong that he cannot turn back or escape from it. We believe that we can keep Mr. Roosevelt there until we are able to replace him with a Stalin. We are thinking that Mr. Roosevelt is only the Kerensky of this revolution."

When I ask why the President would not see through this scheme they replied: "We are on the inside. We can control by avenues of influence. We can make the President believe that he is making decisions for himself." They said: "A leader must appear to be a strong man of action. He must make decisions and many times make them quickly, whether good or bad. Soon he will feel a superhuman flow of power from the flow of decisions themselves—good or bad. Eventually, he can easily be displaced because of his bad decisions. With Mr. Roosevelt's background we do not expect him to see this revolution through. But strong men must take their places when the country is once engulfed in flames."

I asked how they would explain to the American people why their plans for retarding the recovery were not restoring recovery.

"Oh," they said, "that would be easy." All they would need to do would be to point the finger of scorn at the traitorous opposition. These traitors in the imaginary war against the depression would be made the goats. And the American people would agree that they, the brain trusters, should be more firm in dealing with the opposition.

Thus they, the brain trusters, would soon be able to use the police power of the Government and crack down on the opposition with a big stick. In the meantime, they would extend the gloved hand and keep the big stick in the background.

POWER OF PROPAGANDA

I was frankly told that I underestimated the power of propaganda. That since the World War, propaganda had been developed into a science. That they could make the newspapers and magazines beg for mercy by threatening to take away much of their advertising by a measure to compel only the unvarnished truth in advertising. That they could make the financiers be good by showing up at public investigations the crooks in the game. And that the power of public in-

vestigation in their hands alone would make the cold chills run up and down the spines of the other business leaders and politicians—honest men as well as crooks.

They were sure they could depend upon the psychology of empty stomachs, and they would keep them empty. The masses would soon agree that anything should be done rather than nothing. Any escape from present miseries would be welcome even though it should turn out to be another misery.

They were sure that the leaders of industry and labor could be kept quiet by the hope of getting their own share of the Government doles in the form of loans and contracts for materials and labor, provided they were subservient.

They were sure the schools and colleges could be kept in line by the hope of Federal aid until many of the New Dealers in the schools and colleges had control of them.

They were sure that their propaganda could inflame the masses against the old social order and the honest men as well as the crooks that represent that order—communism.

I asked what they would do when the Government could no longer dole out relief in the grand manner. By that time, it was answered, the oft-repeated exhortation to industry and commerce to make jobs out of confidence and to produce goods and wages out of psychology, together with their other propaganda, would have won the public to the idea that the only way out was for Government itself to operate industry and commerce.

They were certain that they did not want to operate agriculture for a long time. But the farmers could be won by doles to support Government operation of industry and commerce. Farmers would be delighted to get their hands in the public trough for once in the history of the country. The farmers would be one with the masses—united for a redistribution of the wealth of the other fellow. All they would need to do with the opposition would be to ask, "Well, what is your plan?"

When the hearings were held Dr. Wirt was permitted to call only six people—five Government employees and the representative of Tass, the Russian Government-controlled news agency who, he said, had attended a dinner at the home of one of the Government employees.

Dr. Wirt was not permitted to call in witnesses to substantiate his claims that his printed statements had been gathered from printed matter of Dr. Tugwell and other brain trusters. He was not permitted to bring in Henry A. Wallace, though he said that one of the Government employees at the dinner had told him that Wallace and Tugwell were the leaders of their group.

Records of the select committee hearings show that the two Republican members of the committee were consistently voted down by the three Democratic members in every effort to permit Dr. Wirt reasonable latitude to prove his points. The hearings were limited to the six witnesses who attended the dinner. They were all but unanimous in insisting that none of the things reported by Dr. Wirt had been said by any one of them.

The majority report submitted by the committee upheld the strange finding that at a dinner lasting approximately 4 hours, no one had been able to edge in any conversation—that Dr. Wirt conducted a monolog.

The two Republican members submitted a strong minority report, but the whitewash had been made complete; Dr. Wirt was discredited, nothing was done, and the New Deal, in its heyday of power, with tremendous power in both Houses, went merrily along with its program.

Dr. Wirt was a prophet ahead of his time. In that early New Deal day, 1934, a full investigation of the charges he made might well have revealed plans for the program which has since become history in part, and which is still on the books of pending legislation.

I want to put before the Members of the House some thoughts of what might have been revealed had not Dr. Wirt been smeared and ridiculed into oblivion.

To examine this situation with some degree of understanding I first read Dr. Wirt's charges, carefully, and then the report of the chairman, the gentleman from North Carolina [Mr. BULWINKLE] and his two supporting Democratic members. Then I read the dissenting report. It seemed to me that the best way to examine subsequent events in the light of evaluation of the Wirt charges, it was best to lay down a definite procedure, under these headings:

First. Motivating groups behind the planned program.

Second. Legislative steps planned to produce pieces of a jigsaw puzzle, which, when put together, would carry out the plan.

Third. Methods and instruments used to bring about the desired legislative jigsaw pieces.

Fourth. The pattern or final picture—the goal desired—and how far we have gone toward achieving that goal, and fulfilling the Wirt prophecy of 1934.

When the New Deal first came to power the "brain trust" was born. Raymond Moley was with it. But Moley chose, before long, to get out.

After the "brain trust" came the full-blooded New Dealers to positions of power—Tugwell, Robert Morss Lovett, Tommy Corcoran, Ben Cohen, Sam Rosenman, Wallace, and the rest.

Then came the National Planning Board—look up their plan for the regionalizing of the entire United States—to get the big picture.

After the National Planning Board came the left-wingers, the Communists and the fellow travelers—Hillman and his PAC and the offshoots of that.

They were the motivating groups. Let us look briefly at what they wanted to accomplish by legislation. These steps come under that phase:

(a) Over-all planning—the planned-economy idea.

(b) Expansion of Federal police power and investigational power.

(c) Development of Government corporations, so set up that they were responsible to the executive rather than to the legislative branch.

(d) Every additional possible means of strengthening the executive branch against the legislative branch.

(e) Use of propaganda and propaganda techniques by the executive departments and branches to boost their own projects and smear those who might oppose them.

(f) Create confusion in laws, agencies, and operations on the theory that confusion divides the opposition, prevents crystallization of new opposition, and overcomes resistance of people to change. One technique is the presentation of recurrent "crisis" legislation. Bruce Barton, when in Congress, listed more than 30 recurrent "crises" from the New Deal.

(g) Inject the Federal Government into the private economy by purchase, persuasion, or force.

(h) Alter the Supreme Court and supporting court system to evolve a political court rather than a justice system of courts.

(i) Make alliances with the mass movements to further pressure.

(j) Wherever possible, widen the prevailing differences between groups of the people on economic, social, and cultural lines—seeking to pit race against race, officer against enlisted man, nationality against nationality.

(k) Infiltrate economic and social organizations and groups with the idea of either neutralizing them or taking them over for use as instruments.

(l) By political and other purges, seek to retire opponents of the plan to private life and if already in private life, smear them into ineffectiveness by ridicule, smear charges, and similar familiar methods.

These points interlock with section III and lead up to the ultimate goals. These are:

(a) Establish a state economic and socialistic system over the private enterprise, or capitalistic system, in the fields of finance, industry, agriculture, transportation, education, health, social security, and every other field affecting the daily life of mass-population groups.

(b) Centralization of power in the Federal Government and reduction of the States to local administrative units to carry out the centralized government policies.

(c) Take over the control of production and finance, public and private.

(d) Work to abolish national sovereignty and set up a world government.

I believe, Mr. Speaker, that Dr. Wirt, discredited as he was in the so-called hearings held in 1934, was a far-sighted individual who, after his death, should be recognized as one of a very few men who realized what was taking place, and had the courage to do his very best to expose it.

I believe that, in the retrospect of what has happened since Dr. Wirt made his martyr-like appearance before a committee of this Congress in 1934, we should fully reexamine the charges he made at that time.

I believe that the mandate of the American people last November calls upon us to check the legislative program of the New Deal from 1932 to date, in the light of those charges. I believe that, before the people of the United States vote again in 1948 to elect a President, 435 Members of the House, and 96 Senators, there should be a full understanding of what the New Deal did toward regimentation of the people, centralization of power in the executive department, and indoctrination of our youth in communistic ideals.

To make certain that a clear picture be gathered and presented to the sovereign people of the United States, I urge the appointment of a committee to reopen the hearings of the committee created in 1934, that the charges made by Dr. Wirt be thoroughly reexamined. I urge that this committee have full power to subpena witnesses, take testimony under oath, examine records, all in the light of events of the intervening years, and report findings and recommendations to this House on or before the opening date of the second session of the Eightieth Congress.

I urge that this committee consist of not less than seven members, and that it be given adequate funds, counsel, investigators, and clerical help to carry out the letter and spirit of its mission.

I shall introduce a resolution to carry out this proposal.

Puerto Rico

EXTENSION OF REMARKS
OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. FERNÓS-ISERN. Mr. Speaker, under leave to extend my remarks in the RECORD, and yielding to the importunities of colleagues and friends, I include the following address I delivered on March 6 before El Club de las Americas in the auditorium of the Department of the Interior, Washington, D. C.:

POLITICAL, INTELLECTUAL, AND ECONOMIC ASPECTS OF PUERTO RICO

After the discovery, Puerto Rico was one of the first places in America where European man established a home. Juan Ponce de Leon, Governor of the Province of Higuey, in the neighboring island of Hispaniola, founded the first Puerto Rican city in 1508. Save for the brief interregnum of a few months in 1598, when the island was occupied by the military forces of England, for 390 years—from 1508 to 1898—Puerto Rico formed part of the Empire of the Crown of Spain.

During this period the Indian population was conquered and enslaved by the colonizers; decimated by European diseases against which the indigenous races had built up no resistance; absorbed by intermixture with their white conquerors and with the blacks brought to the island during the course of three centuries. The slave trade was abolished in the beginnings of the nineteenth century.

In the manner I have referred to, the Indian, as such, disappeared therefore, from Puerto Rico, a long time ago. The last news of a settlement of Indians in Puerto Rico was dated in 1776. But there is Indian blood in Puerto Rico, of course.

Until 1812 Spain was an absolute monarchy. Puerto Rico was governed under the exclusive authority of the King, assisted by his Council of the Indies. In 1812 Puerto Rico was declared a province of Spain and called to take part in the first constitutional parliament. Don Ramon Power, a captain in the Spanish Navy, and a native of San Juan, was our first representative. He was elected vice president of the parliament. In 1814, Ferdinand VII again proclaimed absolutism and dissolved constitutional institutions. In 1820 the constitution was again proclaimed and once more a representative of ours was elected to the parliament, this time the Brigadier Don Demetrio O'Daly, also a native of San Juan.

But in 1822 the hundred thousand sons of St. Louis, the French Army commanded by the Duc of Angulema, invaded Spain and reinstated the king in his absolute power. When years after, on the death of Ferdinand VII, the Queen Regent had to avail herself of the aid of liberal Spaniards to defend the throne of her daughter, Isabella, against the pretensions of Don Carlos, Spain again entered a life under a constitution. The province of Puerto Rico, however, did not have representation in the assembly. "The overseas provinces," recited the new constitution of 1837, "shall be governed by special laws."

It is maintained by erudite students of history that this provision was actuated by good intentions; that it was the expression of a recognition of a reality well understood by the statesmen of the epoch who admitted, basing their arguments on the separation of the settlements of South America, the necessity of recognizing in the overseas Spanish settlements their own individuality which demanded a system of government distinct from that of the metropolis. If this were the motive, it is certain that it was not conducive to a happy fruition.

Some 30 years passed and the project was lost in the confusion of the reign of Isabella II and there lasted in Puerto Rico during these years an absolutist government as in the times of Ferdinand. It was not until the dethronement of Isabella in 1868 that Puerto Rico again had her representation in the assembly. She had it thenceforth the same as the other Spanish provinces, until 1898.

This 30-year period saw in Puerto Rico the formation of political parties, the abolition of slavery, the abolition of the vagrancy law and so-called workers' books and the adoption of freedom of assemblage and freedom of the press. The final result was universal suffrage and the autonomy of the province with a status analogous to that of the English dominions—this in the year anterior to the Spanish-American War.

I do not believe it was the intention of the men of 1837 to initiate the separation from Spain of her overseas provinces; but with the perspective furnished by the years and the accomplished facts, to me it is clear that at that time the hour for this separation was indicated on the timepiece of history. The Spanish-American War was a short-cut of history. The separation occurred at that time as a consequence of the war, but without the war it would have occurred anyway; a little after that time it might have occurred inevitably.

Puerto Rico is a people of America. The men who left Europe to found new homes in Puerto Rico, commencing with Ponce de Leon and ending with the last immigrant of 1898 were carrying out a command of destiny. Europe was becoming a very narrow precinct, and only within those narrow confines did the forces of western civilization operate. The theater should be of dimension commensurate with the magnitude of the drama to be presented. The Eurasian peninsula which we know as Europe decidedly was not a proper stage for the events with which the future was pregnant. The wide lands of America offered space commensurate with the magnitude of the forces of our civilization. America had to be—she is—the see of western civilization.

In the twentieth century Puerto Rico commenced her American life. For a century she has lived under the aegis of the oldest and most developed nation of America, the most portent, above all the one which implanted in America the doctrine of liberty and democracy, the nation which has made democracy the creed of America.

Democracy is not a vain word nor is it a word written only in a constitution, to remain imprisoned and mute in the tracings of the printed letters, juridical language of a document. Just as human speech does not live in dictionaries, so democracy does not live in constitutions. Human speech lives in the man, in the mind, in the heart; it is consubstantial with the man who thinks ideas in terms of words. Democracy lives in the mind, in the heart, of the man who conducts himself in society in compliance with the standards which in themselves are the values of democracy.

When once the spoken language exists, the grammarians write their grammars and the linguists their dictionaries. In case of doubt in our use of words we have reference to them to find our bearings.

When a people lives and understands and conducts itself in a democratic manner then may its lawyers write their democratic constitution. In case of doubt we have recourse to the constitution. There are peoples who have neither an academy of the language to establish an official dictionary, nor do they have a written constitution; yet they speak their language and live their democracy. Use determines the dictionary, and use determines the constitution.

Puerto Rico can now proceed with the writing of its democratic dictionary, can now proceed with the writing of its democratic constitution. She has indeed the democratic custom; the democratic manner of itself forms part of her feeling and living. After 50 years of living in it, believing in it, being in it and it in us, for our people democracy turns out to be indeed our manner of living and being.

Whether democracy ought to be or ought not to be in Puerto Rico, there is no discrepancy in Puerto Rico. In Puerto Rico there is only one problem with respect to democracy, and it is this: That of the life of intercourse of our democracy as regards our economic necessities and as regards hemispheric security.

I speak of democracy for the living, not democracy for the dead. Death is the great leveler—in the cemetery we all occupy the same position, the horizontal. But it is the democracy of the living with their virtues and their vices, their ambitions or their meekness, their great capacity or their great simplicity, their pride or their humility; it is the living democracy which offers problems of facts that must be faced: Above all, the necessity of bread for every day for everyone.

Puerto Rico, an island of only 3,500 square miles, with 2,200,000 inhabitants, cannot live isolated. It is an island that one cannot isolate.

The economic situation of Puerto Rico still is not brilliant. There is unemployment, there is poverty. But 2,200,000 souls live there, and they live because Puerto Rico is not isolated. They will live better and will live more fully because Puerto Rico will be able to augment her production and to live from her production which will have greater value because she is not isolated.

Our economy until the present time was agricultural but not agricultural purely and simply. Ours is an industrial agriculture. We harvest cane but we export sugar. We produce tobacco and export cigars; we produce coffee and we export powdered coffee. We produce fruits and we export canned fruits.

We are growing rapidly towards industrialization: Cement, synthetic wood, glass, ceramics, shoes, toys.

Free trade exists between Puerto Rico and continental United States. The natural play of economic forces makes it possible that we not manufacture that which we are able to buy cheaper than it would cost us to produce it; makes possible that we may produce that which we are able to produce and sell to better advantage.

There are those who see in the present policy directed toward the lowering of international trade barriers a threat to our

position within the tariff sphere of the United States. I confess that I do not have these fears. The change should be gradual and careful, but the orientation is wise. If it has been wise within the limits of the United States, why not extend the sphere gradually until it embraces the world? The readjustment ought to be gradual, but in the end it should culminate in a solid world economic organization based on development and employment at a high level of life for everyone.

The political relations of Puerto Rico with the United States must be modified, clarified, and adjusted; but the life of intercourse, the close association between the island and the United States must endure. As to the form it will take, the voice of the people of Puerto Rico must be heard but their voice cannot be the only voice. Indeed there is no place in the world for monologs, and still less for the monologs of those whose abilities allow them to show them only in the chorus. Whatever be the nature, the character of the intercourse between the continent and the island, it ought to be based upon economic, geographic, strategic, and ideological realities which should determine the political nature of these relationships.

Let us contemplate the map of America. Where is Puerto Rico? It is in the principal avenue of American travel, the point of convergence of aerial navigation, an obligatory stopping place for northern airplanes bound south and for southern airplanes bound north.

The two languages of America live in Puerto Rico. The two cultures of America are intertwined and epitomized in Puerto Rico. The races of America are interlocked and fraternize in Puerto Rico.

Puerto Rico knows the meaning of isolation—the sterility, the hopelessness, of isolation. She used to live with Spain, but was distant and isolated from Spain by geography. She is near America geographically, but she used to be remote because of tariffs and language. Upon her separation from Spain she still remained isolated. For a generation she remained isolated from the United States through the barricade of language, even when she was tied to the United States.

Puerto Rico, however, has among her characteristics extroversion and a capacity to associate easily with others. Her geographical dimensions do not correspond with her vision of life. Perhaps population density and internal economic pressure actuate upon that people as a centrifugal force to disseminate it physically and spiritually over the face of the earth. There are more Puerto Ricans in the city of New York than in San Juan, P. R. Many Puerto Ricans reside in Washington and in Miami, and they are found in considerable numbers in the Dominican Republic, in Cuba, in Panama, in Brazil, and Mexico. There are, however, 2,200,000 still in the island of Puerto Rico and the population increases by 50,000 a year.

Prolific Puerto Rico, of such notable vitality, has spiritual and physical resistance. The law of the survival of the fittest has there had a place to manifest itself. Our life is not the conventional life of the Tropics. It is hard, rapid, energetic, and dynamic.

The small island of 3,500 square miles of area with settlements at every interval, highways everywhere, and dwellings the length of every highway, gives the impression of being a crowded human ant hill, of restless, talkative ants. We have an excess of manpower, but we can apply this force to producing for the markets the finished products of industry. We have access to the richest market of the world without tariff barriers in the free exchange that has endured over the 47 years of our relationship. This seems to offer to us the opportunity of selling the fruit of our industry in exchange for raw materials and food that we do not produce ourselves; and this, it may be said in passing, includes all the territory of the United States.

We are changing rapidly to bilingualism. We aspire to use with equal facility two of the three dominant languages of the New World. With one or the other we shall be able to understand and make ourselves understood in almost all of the rest of the world.

We are not able to say that our economic structure is firm and resistant, that our spiritual life is free of anxieties. We are able to say, however, that although our spirit is young we face reality with the spiritual sereneness of maturity.

Puerto Rico still has two objectives to reach: To free herself from want and to attain full democracy. The sure road of her success lies through the way of work, education, health, justice, and peace.

Under the burning tropic sun, in the canebrake, in the workshop, in the coffee groves, in the factories, in business, in the sciences, in the arts, Puerto Rico works. And she puts into education, both academic and vocational, the faith of conviction. In 50 years we have reduced illiteracy from 90 percent to 30 percent, and we are teaching ourselves to read and write in two languages at the same time. Free general education is provided from the elementary school to the university.

Unfortunately, only 50 percent of our population of school age attends school. This does not mean that 50 percent never attend school; it means that a majority attend for only 4 years, a third part of the time they should attend. The practical result is that the entire population of school age for the first four grades go to school; a third of this number concludes primary instruction, but only a minority finishes high school instruction and goes to the university.

Economic necessity is the reason that children leave school when they have barely acquired the most elemental knowledge.

Our primary instruction, until a short time ago, consisting of 8 years, has been reduced to 6. This is followed by junior high school instruction for 3 years and high school instruction for 3 years. It is our object to increase the number of schools and improve the economic situation to the point that every Puerto Rican child may conclude at least the primary school instruction of 6 years.

Where human capital is the only capital, where land is not available, and there is only the shoulder, it is necessary to strengthen the body to lodge a robust heart, to nourish the blood, that the heart may quicken the mind through the iron blows of the blood.

Tropical infirmities are treated as things of importance in Puerto Rico. Malaria and uncinariasis are in the process of rapid and complete subjugation. Deaths from malaria have been pushed down to a seventh or eighth place in causes of death. Uncinariasis causes anemia but does not kill any more.

Our list of the causes of death would seem to be about as they are in temperate countries, including the United States: Diseases of the heart, the kidneys, cancer, accidents. But there is something that sets us apart as would a tragic headpiece: Tuberculosis, childhood diseases of the digestive tract, and the bronchial pneumonia of childhood head the list.

Fundamentally, what are they? Inadequate housing, malnutrition, crowding; in short, unemployment, partial employment, and poverty.

But the mortality figures are steadily decreasing. From 1900 to the present time we have reduced the general mortality rate from 30 per thousand to a little more than 13 per thousand in 1946. With the improvement of the standards of living, both the death rate and the birth rate will be lowered. The ryhthm of population increase will assume a slower pace. Production will increase on the basis of a better and more healthy human element; and the spiral which seemed to have been sinking itself in the abyss like an enormous and tragic corkscrew will unscrew itself in the opposite direction leading toward higher levels of life and civilization.

For all this a wide base of popular cooperation is requisite. This is not the work of the few, it is the work of an entire people. The people have leaders, but the people follow or abandon their leaders. The people know that in a democracy there is 1 day every 4 years in which all authority rests in their hands; and this day in truth they deposit this revocable power for 4 years in the hands of those who should be faithful. Like the Cid, the people say to the elected leadership: "Each one of us is as worthy as thou; and all of us together worthier than thou. Take it or leave it."

So it was that the people caused the enforcement of the law limiting corporative land holdings, wise law of the Congress, the basic element in our organic charter which for 36 years was forgotten by functionaries of the law. This neglect has cost the people uncountable millions of dollars, and in great part is the cause of their present poverty; but from 1936 to the present day the law has been enforced, and the people who a little while ago appeared to be on the road to converting themselves into a landless people now are on the road to recuperation, paying for it the new market price. They cultivate their land with love because they know they will gather from it the full fruit of their labor.

Thus there is in force a law for minimum salaries. Thus there are in force laws on collective bargaining, on industrial accidents, on hours of labor, on the work of women and children; and a program of home construction is beginning to substitute hygienic dwelling quarters for the hovels of the outlying districts.

Intellectually, economically, socially, and politically, Puerto Rico has entered her maturity.

In the portico of America, a gem in the girdle that encircles the waist of America, Puerto Rico, a point in the map of the New World, most decidedly is not an interrogation point in the world of ideas; she is an entire affirmative sentence: We believe in America, in the brotherhood of the Americas, in the justice which is the standard of America. We believe in democracy, which is the creed of America. We believe in peace, in work, and in civilization.

Hartley Labor Bill

EXTENSION OF REMARKS
OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article appearing in the Washington Daily News by Thomas L. Stokes. This editorial is predicated upon a speech made by the distinguished gentleman from Arizona, Mr. HARLESS, when he was discussing the labor bill recently passed by the House.

I think Mr. HARLESS was expressing the view of many Members of the Congress, and his statement on the floor of the House, as well as this article by Mr. Stokes, deserves very careful consideration, regardless of whether one was opposed to or in favor of the legislation passed.

SOWING THE WHIRLWIND

(By Thomas L. Stokes)

Perhaps the best one-sentence description of the Hartley labor bill passed so overwhelmingly by the House in a high state of emotion came from a moderate Democrat, Representative RICHARD F. HARLESS, of Arizona, who told the lower Chamber:

"I cannot go along with this measure because I feel that if it is enacted into law it will give the power to the employer to destroy labor unions and to substitute individual bargaining for collective bargaining."

After listing the various weapons the measure gives to the employer, including easy access to the courts, Representative HARLESS summarized the basic change of approach in this bill which cannot be overlooked:

"In substance the employer is given the power of a dictator at the hands of the Government over the union."

The Wagner Act's purpose, which the Hartley bill almost nullifies, was to free the workers from previous business and industry-imposed restrictions that had grown up in custom, and to protect his right to join a union and act collectively to protect his economic interest. The Government, representing the people, thus stepped in on behalf of a large segment of the people, our industrial workers, to readjust the balance which for so many years was overweighted for employers.

The Hartley bill, as well as many provisions of the Senate bill, is to check and reverse this process and return to the employer the power to curb the rights of workers, and in more ways and more devious ways than is apparent on the surface. To implement this power it gives the employer backing of the courts and, to a degree, of the Government itself. Now, we learn, it is the Senate's intention to make its more moderate bill a more drastic measure because of the overwhelming House vote for the admittedly severe Hartley bill.

During the progress of labor legislation in Congress there has been much talk about the lack of cooperation between congressional leaders and President Truman. The two, it is said, should try to reach a general agreement. But the real truth is that the President and congressional leaders are so far apart—poles apart—that it is hard to see how they could get together. This is because of a difference in fundamental philosophy.

This is the difference, on one hand, between the philosophy of the New Deal or progressive wing of the Democratic Party, now much weakened in Congress but still having its only available symbol in President Truman in the sphere of action, and the philosophy of the business and industrial managers of our economy. Businessmen have seized this time, when they are freed of Government restraints and are well heeled financially, to deliver their long-planned blow at labor, deprive it of its protection and recover the control they once had. It is not necessary to rely upon surmises as to their purposes, or privately expressed aims. Their public speeches reveal the intent.

It shows a lack of statesmanship and vision in the managers of capitalism today. The Wagner Act, among other original objectives, was to strengthen labor so that it could gain, by its own efforts, a larger share of the national income and thus help, by spreading purchasing power, to rebuild the shattered economy of our last great depression and thereafter help maintain a balance. If we are to have another depression, or even a recession, it is just as essential that labor be strong enough to act as a brake. It won't, if anything like the bills in House and Senate become law.

And business and industry, as well as labor, will be caught up in the whirlwind.

United Nations Educational, Scientific, and Cultural Organization

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Dr. George Schuster, president of Hunter's College, New York City, at the National Catholic Education Association convention held at Boston, Mass., April 8, 1947.

In his address, Dr. Schuster dwelt on the activities of UNESCO in promoting better understanding among the peoples of the world, with emphasis on the problem of our relationship with Russia and the part that may be played by Catholic leadership in this field.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have been good enough to ask me for an opinion of UNESCO. No doubt there is implicit in the request some expectation of views on the relationship of this organization to the educational tasks which you have specially in mind. I should like to assure you that I appreciate the compliment while at the same time feeling a little like a corporal whose captain honored him with a chance to go out and capture the enemy.

No doubt it will help if we do not let ourselves get bogged down in a discussion of the now developing mechanics of UNESCO. All good things by season, seasoned are, Shakespeare reminds us; and certainly an undertaking created to operate on uncharted seas will have to spend some time perfecting a map and a method. The public instinct not to worry too much about how a governmental agency is set up and to concentrate rather on what that agency hopes to do seems to me correct and sound. We shall therefore content ourselves with saying that this latest and not least important of international enterprises is from the management point of view something like a three-leaved clover. One part of it is the International Secretariat, seated for the time being in Paris, the business of which is to carry out the program devised by the periodic UNESCO conferences in which the representatives of the various nations participate. The second part is constituted of the National Commissions, which are groupments of bodies and agencies in the several countries interested in education, science, culture, philosophy, religion, and other intellectual pursuits. And the third part is quite simply the people, speaking through the societies and associations in which the multiform concerns of its culture find expression. UNESCO cannot possibly get on unless all three parts not only function but collaborate effectively and continuously. That will naturally be very difficult. We do not believe that it is impossible.

But just what is to be done by UNESCO? It is this question which is persistently asked. I think the answer can best be given if we avoid being either too specific or too general. After all, we would not try to give some European an impression of American education by sending him the titles of courses or an essay on educational theory. We should attempt rather to describe types of schools, curricula, and objectives. Of course one can say about UNESCO either that it will do such things as exchanging students and studying illiteracy, or that it will try to outlaw war by banning it from the minds of men. But that seems perhaps too little or too much. We all agree that ideas are the forces which control human life. Though we may be awed and cowed by the energies which have latterly been channeled out of the innermost treasure-house of nature, we know that they remain mere instruments in the hands of human beings which will be used in accordance with the social objectives they set for themselves.

The principal question we asked by UNESCO is then, this: How and to what extent can it temper, or civilize, the process of the intercommunication of ideas? In other words, can it find methods for subjecting the convictions and loyalties to a different sort of arbitration than war? We may answer first of all that of course it cannot do so by setting up any one philosophy as binding and orthodox. Even if the failure of every attempt to impose doctrines by force or guile were not so clearly demonstrated in history, the Christian at least would know, if he credited Revelation only and no mundane evidence, that the conflict between good and evil, truth and falsehood, is destined to be grim and unending. Therefore, we must hope for, work for, the creation of a world-wide forum of discussion inside which the teaching of competing views of life, or of rival national allegiances, will be honest and free, rather than fanatical and bloody.

The goals of honesty and freedom have been before UNESCO from the beginning. Both the Constitution and any number of subsequent resolutions emphasize these terms. The organization is committed to fostering the free flow of communication; to promoting the sharing of knowledge by scholars in all fields of enquiry, across national boundaries; to placing at the disposition of less well-educated peoples the educational methods best calculated to insure their mastery of pedagogical and technological skills; to overcoming the handicaps imposed upon countries harassed by war, in the belief that educational retrogression is dangerous to the peace of the world community; and to the gradual development of the cooperative use of the great mass media of communication for the purpose of diffusing knowledge and understanding.

One must of course concede that honesty and freedom are not easy to define. There surrounds all human experience, insofar as it goes beyond a comparative handful of axioms and is not concerned with the apprehension of revealed truth, an aura of relativity. We may, for example, be reasonably sure that the methods employed in American industrial production are more efficient than those used elsewhere, but it does not follow that we can assume with certainty that the application of these methods will in the long run prove beneficial to society. Or we may entertain grave doubts as to whether freedom to argue in favor of a given view of life, even when this view is not discernibly subversive of human welfare, will not in the end lead to the suppression of freedom itself.

But we have no choice in the matter, because the ultimate absolute round which the discussion turns is the freedom of the will of man. Even in hours when we long for some kind of romantic walled town, inside which those we love could be insulated against the impact of alien opinion, we cannot for a moment forget that such towns would be subject to constant siege. The steady, unrelenting pressure of the newspaper, the film,

the radio program, the magazine, the book, the stream of conversation, is so tremendous that any resistance the group or the individual can put up is doomed to be in part at least ineffectual. The only thing to do is to go out and participate in the discussion.

And UNESCO is first and foremost the provision of opportunity for participation in world-wide discussion. I stress opportunity. The right of freedom to speak and be heard may be taken away by dictators, or it may corrode under the evil influence of purely commercial controls. But in the final analysis it can be destroyed altogether only by failure to make use of it. While the practical purpose of the discussion which UNESCO creates is to serve the peace of the world by mitigating blind nationalistic hatreds based on mutual misunderstanding or mutual arrogance, the sources of such hatreds are so complex that practically no subject will be eliminated from the discussion—neither education, nor science, nor culture, in any of its many aspects. It is true that this discussion will proceed regardless of what UNESCO does. In particular it will proceed through the great modern mass media, which will in a year or two blanket the globe. What are new are the standards which UNESCO proposes to advócate for the conduct of the discussion.

Now you will ask what is to happen if those standards are not agreed to? Are we not all interested in the elimination of fearful and venomous animosity? But what if others take a different point of view? Here we come face to face with the most difficult single problem which UNESCO faces—the problem of relationships with Russia. There can be no doubt about it. Russia propaganda is at present ruthless, imperialistic, dishonest, and dangerous. It is an instrument in the hands of would-be revolutionary conquerors who batten on pent-up resentments and inferiority complexes. We have not been able to elicit from the Kremlin any expression of opinion about UNESCO—not even an official newspaper editorial. Nor have Americans as a people succeeded in bringing about any alteration of Russian policy in the domain of international relations. But this does not mean we must conclude that matters will always necessarily remain what they are now, or even that we must now load our planes with cargoes of atom bombs.

That UNESCO will to a great extent fail unless the attitude of Russia toward other peoples can be changed is evident. It is likewise clear that no secretary-general is able to effect that change. But this is in my opinion no argument against UNESCO. I have said that the organization is a cooperative enterprise. If speaking pro domo is now appropriate, let me express the opinion that precisely this Russian difficulty presents the Catholic public with a major opportunity to support the work of UNESCO.

There are in western and central Europe no energies other than those of Catholicism capable of assuming leadership in resisting the onward sweep of totalitarianism. The reasons are twofold. First, every other important group is in some manner allied either with capitalism, in the predatory sense or with Marxism. Second, other groups will follow Catholic leadership if it is offered. If then there is to be any debate with Russian communism in terms which Europe can understand, it will be a debate in which Catholics are protagonists. I have no doubt they can win it, provided they really want to. What is needed is confident eagerness to have a discussion, and careful preparation. I suggest that American Catholics prepare to spend $25,000,000 or even $50,000,000 on financing that venture.

With these sums we can muster a corps of experts and later of workers here and abroad, eager to labor in the spirit of the great Jesuits who in the seventeenth century won back Poland and gained a strong foothold even at the Court of Catherine of Russia. Only this time the majority of them must be laymen, and we must not be too squeamish about each of them except in terms of his complete dedication to the cause. They must know economics, politics, literature, the labor movement, modern life. The mustering of public opinion for the manifest blessings of antitotalitarianism must be their chief interest.. I believe that within 2 years such a group could make a serious dent in the iron curtain, and that in a few more years it could gain access to the Russian people.

The question is not whether the Russians have found an answer to the conundrum of business cycles, or whether the United States is a country of bigger and better bathtubs. It is just what UNESCO wants it to be—namely whether the Russian Government can freely participate in an honest discussion of the values of freedom, or peace, and of culture. I am sure we can determine the answer if we really make up our minds to do so.

You may call me romantic if you insist. I shall merely retort that the record isn't too bad, and that today there is probably nobody who will deny that the Berlin Olympic Games presented in their day a unique and fateful opportunity to carry on the struggle against Hitler short of war. And if you wish to argue about money, let me say that even $50,000,000 would be dirt cheap compared with the levy which will be exacted by another war. That war would cost American Catholics alone billions of dollars and millions of lives.

Before we sit back and complacently declare that UNESCO can't solve the problem of East or West, let us ask ourselves whether we have done our best to help solve it. Perhaps if we tried we would fail. Well, anybody who expects to live during the next 10 years is an incorrigible optimist unless he is willing to assume all the risks which the situation demands.

Imagine what the Catholic position in the modern world would be if it were patent that they had solved the Russian problem. It would constitute one of the greatest achievements in human history since the victory of Constantine, and for my part I believe that this is the hour of our destiny.

Surely our glances should be focused on such matters rather than on whether Mr. Julian Huxley is Secretary General of the UNESCO. Mr. Huxley is only a minor authority on birds and an equally minor menace to them or to anybody else. The important thing surely is the forge on which we can hammer out through discussion such questions as these—and they are tremendous questions:

What do the 250,000,000 people of Europe think they can do in order to rebuild their society? What ideas and plans, what extensions of the intellectual frontier, will help them to succeed?

What is going on in India? What resources of scientific information, of food, and of industrial engineering are required to lift this great people above the level of famine?

What can be done to remedy the errors which in the past have sundered the peoples of China and Japan from the west?

What resources are available in the indigenous cultures of Africa upon which moderate creative effort can be based?

Do we really understand the Near East?

How can we enlarge and ennoble American thinking about the rest of the world? What is realism in international affairs and what is wishful day dreaming?

If we make up our minds to participate wholeheartedly in this colossal undertaking we shall benefit ourselves and others. If we stand aside, it will be carried on, for good or ill, without us.

Of course, the success of this enterprise is not insured. We shall make mistakes—yes, at times we shall make fools of ourselves. But there is for us only one reliable ticket to self-destruction. That is to go out and hide our light under a bushel.

Address by Ralph E. Becker to Young Republican Western Regional Conference

---

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Ralph E. Becker, chairman of the Young Republican National Federation, before the Young Republican Western Regional Conference, at Salt Lake City, Utah, on Saturday, April 12, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Finlinson, Mrs. Priest, Mr. Romney, fellow Young Republicans, we Young Republicans are making political history here this week end. With the establishment of this western conference on a permanent basis, the Young Republican National Federation now completes its regional organization and looks ahead with confidence to next year, when the American people will complete the job of freeing themselves from a decade and a half of wasteful, expensive, and oppressive bureaucracy.

This enthusiastic binding together of the Young Republican effort in our 11 Western States is a far cry from the situation which confronted us when we returned from the battlefields of Europe and the Pacific. Less than a year ago we Young Republicans held our first national convention since before the war. Eighteen States were represented.

In less than a year's time since then we have taken Paul Bunyan strides—45 State clubs and District of Columbia fully organized. Guided by the impelling thought that ours is the generation which has most at stake in the future of this Republic, we have organized Young Republican clubs. We have enrolled the enthusiasm of college groups. Our teen-age units are growing. The returned veteran has found his medium of political expression in our ranks.

Last year, ours was not only the task of supporting Republican candidates. We did that despite the natural disorganization which war brought to the Young Republican movement. We also faced the job of putting our own house in order for effective work. Yet we met the challenge of last fall's election well.

It is interesting to note that in May 1946 the Gallup poll showed that 40 percent of the young people between the ages of 21 to 40 were interested in the Republican Party. The Gallup poll as of November 6 showed that 51 percent of the same age group voted for the Republican Party—in other words, an increase of 11 percent whereas other age

brackets only showed an increase of 4 percent. Although there were other factors that caused this trend on the part of the young people, it is conceded that one of the major factors was the organization of Young Republican groups throughout the country who participated in practically every major congressional, senatorial, and State campaign.

The result of our work is manifest everywhere. In the Congress, and in legislatures in States where there is a two-party system, there are today young Republican men and women working for a better tomorrow.

Here in your vast western empire, Young Republicans have more than kept pace with their national federation. Your organizational work is reaching a climax today in this formal establishment of a regional conference. But you did not let the details of organization prevent you from aiding mightily in the election last fall.

It is our plan that this organization be permanently set up so that it will be a subcampaign headquarters during the election of 1948. In that way at a centrally located point, such as Salt Lake City, you will be able to render a service to the entire Rocky Mountain Region and the Pacific Coast.

Look at the amazing record of your Republican Party of the West. Of the 49 Representatives in Congress from these 11 Western States in 1944, only 20 were Republicans. Today there are 32. Of the 22 Senators, only 5 were Republicans 2 years ago. There are now 10, and there is every indication that the 1948 election will give our party a majority of the western Senators.

In fact, a critical study of the election returns in the far West convinces me that if your fine organizational work continues all 11 States will be in the Republican column in November 1948.

Incidentally, your achievement at the polls last fall already has assured your mighty west of a greater voice in the selection of our party's nominee in 1948. An unofficial tabulation in this month's Republican News shows that the West's total apportionment of delegates to the national convention in 1948 will be 12 more than it was in 1944. You undoubtedly are pleased to note that of the 36 additional delegates who will vote at that convention exactly one-third of them will come from west of the Rockies.

Perhaps we are counting our chickens before they are hatched. While it is fine to anticipate the victory of 1948 as confidently as we approached the 1946 election, let us not lose sight of the fact that we Republicans control only one of this Nation's three branches of Government. We have majorities in the Congress. The executive branch still is held firmly by the same political party which has dictated our destiny since 1933. We cannot remove that heavy hand until after the 1948 election, but we can do much now—in this off-election year of 1947—to support our Republican Congress and thus insure the election of a Republican President.

Make no mistake about it. The Republican Congress needs support, and it needs it now and continuously until its work is done. It needs support because the vast propaganda army still employed at the taxpayers' expense by the Democratic administration has not been demobilized. That is one army which this Nation well could do without, but those mimeograph mercenaries now are fighting a desperate rear-guard action in behalf of their precious jobs. They are out to silence our Republican tax-cut guns before we can score a direct hit on the citadel of bureaucracy.

Craftily, these tax-fed propaganda experts have played on the impatience of the American voter who last fall said he had "had enough." The voter is impatient for relief from bureaucratic regimentation and controls. It is a natural impatience. The voter also is impatient because he still must lose about 1 day's pay check out of every 4 to the tax collector. Certainly, that is a natural impatience. Likewise, it is natural for the voter to be impatient at such things as the unsolved housing shortage, the evidence of Communists in our Government, and the continuation of labor-management strife.

Such impatience can fall a quick victim to the professional publicity agents of the Democratic administration if we Republicans do not do some plain talking right now. We need no twisted words. We need no half-truths. We need only to tell the facts.

What is the record to date of the Eightieth Congress—the first Republican Congress since 1930?

It has streamlined itself. In so doing it has accomplished what a long procession of Democratic Congresses did not have the courage to do. The old system of a multitude of committees with overlapping duties is gone; there is an efficient Congress at work now.

In less than 2 months, it has determined that President Truman's swollen budget can and should be cut. Being studied now is the amount which will be saved. The House already has passed several appropriation bills at a total saving of a billion dollars.

The House also has approved an income tax-reduction bill which will mean more take-home pay for everyone.

OPA will be a dead pigeon on June 30; sugar rationing has been extended to October 31.

The Presidential tenure bill has been adopted and several States already have ratified it.

Time has been extended for reinstatement of veterans' life-insurance policies.

A bill to outlaw portal-to-portal lawsuits soon will be on Mr. Truman's desk for signature. Both Houses are winding up extensive hearings on measures designed to bring industrial peace to this Nation.

Are these few examples the samples of a "do-nothing" Congress? Emphatically, no. Rather, they are the products of a Congress which has made more rapid progress toward the enactment of important legislation than any other in recent years except that first New Deal rubber-stamp Congress in 1933.

Therein lies the vital difference. The impatience of the voter will disappear as soon as he is reminded that this Eightieth Congress is listening to the voter's mandate, not to the dictation of a so-called Brain Trust. This Congress is not rushing to pass bills which have not even been read. This Congress is not being stampeded into unsound and vicious legislation. This Congress is more concerned with doing the right thing rather than with setting a speed record.

The record of the Eightieth Congress so far indicates clearly that it will do everything within its power to keep the promises its Republican Members made last fall. Whether President Truman permits the fulfillment of those promises remains to be seen. There is much administration talk these days of Presidential vetoes. Strange talk it is, too, because how can there be anything to veto if this is, as administration propaganda experts say, a "do-nothing" Congress?

Yes, here is a chore for all of us now. It is the job of giving the lie to the bureaucrats and their propaganda presses as they insist that their jobs, their spending, and their heavy taxes are essential and indispensable.

But we can do more. We can explode the growing myth of Mr. Truman, the President who offered such fine "cooperation" to the new Republican Congress. To do this, we need again only to look at the record.

Mr. Truman said he would cooperate. Obviously, that meant cooperation in the enactment of a program advocated by Republican candidates who had just been elected by the people.

One point in that program was economy. This is how Mr. Truman cooperated on that score: He presented a budget which was $2,000,000,000 more than he had requested just a year before.

Another point was tax reduction. Just last week, Mr. Truman cooperated by opposing any immediate tax relief. He said he would like to cut taxes at the proper time. There are those who suspect Mr. Truman's proper time will be about 6 months before the Presidential election next year.

A third point was a fair and workable labor policy. Despite 14 years of inaction by Democrats on this critical problem, Mr. Truman's only cooperation has been to suggest another commission to study the problem.

A fourth point was to rid the Government service of Communists and fellow travelers. To be sure, Mr. Truman has cooperated on that score, albeit in a rather confusing manner. On February 28 he was on record as calling communism a bugaboo and as saying that he didn't think anyone really would want to overturn our form of government. A month later, however, he used the other side of his mouth and ordered the Government service to be purged of all whose loyalty is questioned. The record shows, however, that he did not take this action until after a committee of the Republican-controlled House had approved a bill which would have forced him to take such action.

All of this makes one of our jobs as Republican workers in the off-election year of 1947 crystal clear. We must expose the masters of the mimeograph. We must go back home and impress upon our fellow Republican workers the necessity of telling the true story of what is happening in Washington today; of how the Republican Congress stone by stone is rebuilding the badly wrecked structure of our great Republic; of how that Congress is doing the job with little or no cooperation from an administration whose words apparently are much louder than its actions.

That we are doing our second and organizational job as Republican workers is proved by this and other Young Republican meetings which literally are piling one on the other. I have just come from Young Republican State conventions in Arizona, New Mexico, and Nevada. Next week, I look forward to other State-wide conferences in Wyoming and Montana. Meanwhile, Young Republicans are marching forward in the South, in the Midwest, and in the East. We shall meet together in the greatest of all Young Republican national conventions in Milwaukee this June.

I salute the Golden West and this formal proof of the collective strength and vigor of Young Republicans in its 11 States. I welcome you as one of the four great regional pillars of our Young Republican National Federation.

I pledge you the cooperation and assistance of the Republican national chairman, Carroll Reese, and the Republican National Committee as well as the senior State chairmen and your national officers, as together we perform the pleasant and patriotic tasks of bulwarking our 1947 Republican Congress and preparing for the election of a 1948 Republican President.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a very interesting article by Roscoe Drummond, chief of the Washington Bureau of the Christian Science Monitor, published under the heading "State of the Nation," in the April 21 issue of that newspaper. The articles relates to the political situation which may arise with respect to the labor bill which the Senate is presently considering.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE NATION

(By Roscoe Drummond)

WASHINGTON.—Events are pointing to a deadlock between Congress and the President over labor legislation.

There still is an opportunity to avert this deadlock, but so far neither side is showing any disposition to take advantage of that opportunity.

This means that we have at hand the first concrete test of how well or how badly our divided Government, divided between Republican Congress and Democratic President, can function when faced with a really controversial issue.

There were such grave forebodings when the results of last fall's elections left both parties in charge of the Government—the Democratic Party in charge of the executive and the Republican Party in charge of the legislature—that one Democratic Senator proposed that President Truman appoint a Republican Secretary of State and resign. Mr. Truman wisely did no such thing. The President promised full cooperation with Congress, affirmed that legislative initiative would rest with Congress. He has indulged in no petty heckling from the side lines.

But all this has been relatively easy. It was easy for the President to cooperate with Congress because he has no other choice in the matter. It was easy for Congress to cooperate with the President because the stage where cooperation has to embrace give and take had not been reached.

That stage now is at hand. Last week the House of Representatives passed a far-ranging labor bill by a vote of 308 to 107. The Senate Labor Committee has approved a more moderate measure. Some merger of the two probably will prevail, but before any labor bill can become a labor law it must pass the judgment and the action of President Truman.

Legislation placing restraints upon big labor in the public interest is as reasonable and justified as legislation placing restraints upon big business in the public interest. Big business didn't like it and it fought it to the last ditch. Big labor is doing the same thing.

The trade-union has become a powerful instrument in our industrial society. Twelve years ago the labor unions had only 4,400,000 members. Today they have 14,000,000 members. It's a good estimate that they will have 20,000,000 members in another 10 years. When the economic institutions of credit and of the corporation became powerful instruments in society they had to become subject to regulation in the public interest. It is just axiomatic that the labor union is going to have to accept restraints commensurate with its power.

A new labor law is needed. There is no doubt about that. The President wants one kind of labor law; Congress wants a different kind. Because the Presidency and the Congress are in divided hands, it is imperative that a real effort be made by Mr. Truman and the Republican leaders to work out the widest possible area of agreement between them.

Thus far, there is every evidence that 1948 campaign politics is playing a dangerous part in the strategy of both sides.

Here's the way some of the Republican politicians figure it: Pass an omnibus labor bill; make it as stringent as possible. Put everything into it, including what the President would welcome and what he is most likely to veto. Some would welcome a veto, and since there probably are not enough votes in the Senate to override the veto, let Mr. Truman take the blame for no legislation and keep the issue hot for 1948.

And some of the Democratic politicians see it this way: The Democratic Party needs labor support. It may not be able to win with labor backing next year, but it certainly can't win without it. Therefore, Mr. Truman will be serving his political interests by having no consultation with the Republican leaders on labor legislation. Do nothing to discourage the most extreme bill and then veto it and stand as labor's champion.

This just isn't good enough. The Republican leaders can ignore the President by deliberately throwing everything into the labor bill but the kitchen sink. Such an attitude risks any labor bill.

The President can ignore the Republican Congress by not calling its leaders into consultation before it's too late. By holding back his own views, he will be deliberately courting a labor bill of a kind he can veto—and the Nation will be the loser.

A dangerous legislative stalemate can be averted if Mr. Truman and the Republican leaders are prepared to adjourn 1948 politics until 1948.

Cooperation Between the President and Congress

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. WHERRY. Mr. President, in yesterday's Washington Star, under the headline "The political mill," there appears an article by Gould Lincoln which I believe to be of interest to the Senate. Therefore I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL

(By Gould Lincoln)

How far is President Truman willing to cooperate with the Republican Congress—as he said he would after the congressional elections last November?

Up to date the only real cooperation between the President and the Congress has been on the part of Congress. Under the leadership of Chairman VANDENBERG, of the Senate Foreign Relations Committee, and under that of Chairman EATON, of the House Foreign Affairs Committee, the Republican majority in both bodies has gone along with the Chief Executive on foreign policy. So effectually is this the case that an American foreign policy has evolved—a policy whose severest critic is a former Democratic Vice President, Henry A. Wallace. Further, Republicans in the Senate—again under the leadership of Senator VANDENBERG—rallied to the support of the President's choice for Chairman of the Atomic Energy Commission, David E. Lilienthal.

When the voters elected a Republican House and Senate it was for the purpose of having them "do something" about serious domestic issues—taxes, Federal expenditures, labor, and so forth. They wanted a reduction of taxes and of expenditures. They wanted laws which would curtail the dictatorial operations of labor leaders, which were hamstringing American industry.

Well, the Republicans have done something about these issues, and from all reports Mr. Truman stands ready to undo what they have done or are in the process of doing. Is that cooperation? Or perhaps the President does not believe that the people were in earnest about these things when they turned a Democratic majority out of Congress and replaced it with a Republican majority.

The Republican floor leader of the House, Representative HALLECK, of Indiana, meeting with the Republican National Committee in Kansas City, has given an account of what the Republicans in Congress have been doing. It is an impressive array of achievement, despite the fact that Democratic leaders have been charging the Republicans with no accomplishment during the first hundred days of the present session of Congress. Some of the legislation has passed both Houses, and some of it only one, but it is all on the way to the White House where Mr. Truman will have to decide whether he will cooperate or not.

Here is what the Republicans have been doing. The House has passed and sent to the Senate a bill to reduce personal income taxes; it has passed and sent to the Senate a bill to amend the Federal labor laws; it has passed four departmental appropriation bills, lopping off hundreds of millions of dollars in expenditures. The Senate and House have both passed the so-called portal-to-portal pay bill to prevent serious attacks on American industry through portal-to-portal pay suits—one of the greatest rackets ever devised. Both Houses have passed and sent to the States for ratification a proposed constitutional amendment limiting Presidents of the United States to two terms.

Both Houses have passed legislation to provide a more liberal allotment of sugar for the American people. Both Houses have contributed to the termination of many wartime powers of the administration to control the economic life of the Nation. Both Houses have given consideration to the President's request for loans to Greece and Turkey—to check the advances of communism—and both Houses will agree to it.

The Republicans have had the support of some Democrats in both the House and Senate for these measures. The Democratic support, however, which is essential if some of these bills are to become law, is that of Mr. Truman. The support for these measures has come in Congress from anti-New Deal Democrats—not from the 100-percent New Dealers. Mr. Truman must determine whether he will go along with the more conservative Democrats or with the New Dealers, who at present are in a minority in the Democratic groups in House and Senate.

Repeated changes by the administration in estimates of both Federal expenditures and receipts since last fall have kept Congress and the people guessing, particularly as to whether it is feasible to have income-tax reduction. The President and his aides estimated first there would be a deficit at the close of the present fiscal year. Later estimates reduced the deficit, and the last estimate shows a surplus of $1,250,000,000. Now it appears there is no adequate reason for delaying tax reduction, although the President continues to insist that this is not the proper time and that he will make recommendations for relieving the tax burden of the people (presumably next year).

It looks, to the man in the street, as though the administration was attempting to play politics with this matter of tax reduction—and very stupid politics at that.

Conservatism in Public Finance

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Something Rare Under the Sun," by John W. Owens, published in today's issue of the Baltimore Sun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOMETHING RARE UNDER THE SUN

(By John W. Owens)

One of the more entertaining of the political curiosities of the day is the spectacle of a Democratic President lecturing a Republican Congress on conservatism in public finance. For decades the Democrats have been suspect. True, Cleveland and Wilson, both sons of Presbyterian ministers, were careful men. But there was Bryan, with his monetary ideas, and there was Roosevelt, with his somersault from the orthodox into spending which made the Hoover deficits shrink to corner-store proportions. Moreover, the Democratic Party has long included worker and debtor groups which could find some advantage for themselves in occasional relaxation of the rigors of conservatism in public finance. On the other hand, throughout the years the Republicans have professed the faith in sonorous tones. Nevertheless, here is the situation: With a national debt on our shoulders far larger than any conservative would 10 years ago have thought bearable and with a hold-Russia policy in the making, the cost of which is unpredictable, the Democratic President is saying, "Hold onto your revenues," and the Republican Congress is saying, "Cut your taxes."

By this time most of us should know that there is no such thing in our day as sure prophecy on the course of business. The forces at play—social and political, as well as economic, are too numerous and too intricate to be brought fully within the purview of any economist or financier or industrialist. That is true in all analyses of conditions within the United States. And, of course, conditions abroad impinge upon us, and the play of these conditions is no less mysterious. There was, as we all remember, almost unanimous miscalculation of underemployment that would follow the end of the war and the cancellation of war contracts. And, at this moment, we are living in the midst of revelation that the National Association of Manufacturers and associated groups overjudged last year their ability to produce in the volume required to balance demand and to level prices. Prices have risen steeply and, consequently, a new chapter of wage increases is being written, which we long were told would be a dangerous step toward inflation. As for theories on ways to prevent inflation's leading to deflation, and vice versa, discussion now verges upon the occult.

But one would suppose that the very complexity of the conditions under which we live, conditions without precedent, would lead to caution. In the debate last year on price control few of those who advocated continuance held that price control was a positive good. The prevailing argument among those who called for continuance was caution, caution against haste in lifting price control as the Nation made its way from war socialism back to free enterprise. Today, amid all the confusion about trends, one would suppose that the instinct of caution would assert itself in conservatism and, as against the vast debt, would hold on to every dollar of revenue that a boom places in the Government's coffers. Instead, we have a Democratic President lecturing a Republican Congress on conservatism. True, Republican leaders say they will so reduce the budget that they can make a reduction of the debt while reducing taxes. But if they should be able to reduce the budget and yet hold on to the full flood of boom revenues, they could take a slice off the vast debt instead of a sliver.

Sage observers of the scene explain that both parties are playing politics in this matter of tax reduction. The Republicans think, one hears, that they will gain an advantage if taxes are reduced this year, in accordance with their rather lavish promises in the congressional campaign. The Democrats think, one hears, that Mr. Truman will have an advantage if taxes are reduced next year when the Presidential campaign will be taking shape. These calculations may well be in the minds of the strategists of each party. The ordinary man must be puzzled. Why should tax reduction, voted by a Republican Congress and signed by a Democratic President, be a Republican asset in 1947, while tax reduction, voted by a Republican Congress and signed by a Democratic President, would be a Democratic asset in 1948? There are times when one suspects politicians of not knowing the difference between strategy and superstition.

But whether such maneuvers be strategy or superstition, why bother about them in these days? So far as anybody is able to see, if the country can keep out of a recession (we called the worst collapse in generations a depression), the parties probably will have an equal chance. If the country goes into a recession, the parties may still have an equal chance. Certainly nobody can say today how prosperity or slump would affect the parties. In the midst of full employment the Democrats were well-nigh overwhelmed in last year's elections. That was unusual, to say the least. Within 6 months Mr. Truman—and presumably his party—had recovered a faint margin in the polls of public opinion. That is unusual, to say the least. Old signposts are awry. The only thing certain about the political situation today is that the right is solid, the left is divided, and the center apparently fluctuates—at present toward Mr. Truman. Why weave partisan webs around the detail of tax reduction? Why try to reason from the flimsy premise that great numbers of voters will plump on this side or that, according to the date of tax reduction?

One is led to suspect that neither Republicans nor Democrats would lose anything if, in thinking about the billions that pour into the Treasury so swiftly in this postwar boom, they took a long look at the towering debt and gave a long thought to the cost of subsidies and of armed forces that may befall us in a divided world. Probably, however, we shall continue to be amused by the spectacle of a Democratic President lecturing a Republican Congress on conservative finance.

Freight-Car Building and Car-Repair Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include herein the following letter and chart received from J. M. Johnson, Director of the Office of Defense Transportation, relating to a matter of import to many persons and concerns, as well as civic organizations throughout the country.

OFFICE OF DEFENSE TRANSPORTATION,
Washington, D. C., April 16, 1947.

The Honorable JOHN W. McCORMACK,
House of Representatives.

MY DEAR MR. McCORMACK: In conversation with a representative of your office on March 27, I promised to give you a full report of developments in connection with the expanded freight-car building and car-repair program since the March 14 meeting of our freight car builders advisory committee. At that meeting a production committee composed of representatives of the contract car builders, the railroad and private car lines, and the component parts manufacturers was appointed for the purpose of developing actual monthly requirements in steel and pig iron needed to meet the car-building schedule submitted by the American Railway Car Institute as of March 12. The production committee worked with my staff, March 17 through March 22, and the steel requirements as developed for each participant were submitted to the CPA Industry Advisory Committee for Distribution of Steel for Freight Cars (hereinafter referred to as the Steel Industry Committee), which met here on March 25, 26, and 27 for the purpose of distributing the steel requirements in various mill products among the steel mills contributing car steel.

The steel requirements we submitted to the Steel Industry Committee total approximately 239,000 tons per month, of which 171,000 tons was designated for new cars and 68,000 tons for repair of railroad rolling stock and locomotives. The committee disputed the requirements as presented by ODT claiming that there was some duplication and inflation in the figures. I want to point out that the industry representatives on our production committee had made a sincere effort to avoid duplication in the quantities which they reported. Whereas the combined average tonnage per new car on the basis of information developed by our car builders committee called for approximately 17.1 tons per car the steel-industry people insisted on a much lower figure but finally compromised on 15.1 tons per car. On this basis they underwrote a total of approximately 151,000 tons for 10,000 new cars per month. They reviewed the tonnages set up in their January meeting for MRO, which totaled approximately 63,000 tons at that time, and decided in the light of their experience with steel orders since January to underwrite approximately 59,000 tons for MRO at this time. The total quantity of steel underwritten in various products, as detailed on the attached distribution sheet, was 210,063 tons. It should be noted that the figure of 151,000 tons for new cars agrees with a break-down of tonnages prepared by the American Railway Car Institute for cars now on order. Though the Steel Industry Committee cut our requests by about 29,000 tons per month my staff is of the opinion that the 10,000-car program can be reached together with an effective car-repair program. This belief stems partially from the expectation that the quantities agreed to by the steel companies are minimum and will actually be exceeded by deliveries.

The total tonnage of 210,063 tons shown on the Steel Industry Committee's distribution sheet was divided between new-car requirements and MRO requirements approximately as follows:

	Billets	Shapes	Plates	Bars	Pipe	Sheet and strip [1]	Axles	Miscellaneous forgings
New cars	1,835	41,610	50,340	13,320	1,080	23,700	16,123	3,055
MRO		7,000	25,460	17,000	2,900	5,400		1,240
Total	1,835	48,610	75,800	30,320	3,980	29,100	16,123	4,295

[1] The 6,000 tons of galvanized sheets underwritten by the steel committee were not divided between new cars and MRO.

We had hoped that the Steel Industry Committee would agree to increase May rollings to the greatest extent possible and to have the increased tonnages for the 10,000-car program made fully effective with June rollings. The steel committee, however, decided that increased tonnages would be made available to the greatest extent possible for the June rollings, and the program would be placed in full effect in July rollings. The average lead time required between steel production and car completion is about 2 months. The decisions reached by the Steel Industry Committee have been transmitted to all of the participants appearing on the attached distribution sheet, but it is expected that approximately 3 weeks will be required before full details have filtered down to all levels of the steel industry and arrangements can be made for the revision of schedules. It is unlikely that the steel consumers will have much success in placing orders under the enlarged tonnages until this process has been completed in the steel industry. The steel companies have been provided with copies of the detailed requirements prepared by our production committee, and they will be in a better position to determine the actual requirements of each consumer.

As you know, the steel industry in January underwrote 165,000 tons of steel on a monthly basis for a 7,000-car program plus MRO requirements. We are told that tonnages of car steel in excess of this figure will be rolled in April and will be continued through the months of May and June. The car builders' schedule of March 12 indicates that the builders aim to accelerate their fabrication processes beyond the 7,000-car rate immediately so that the 10,000-car level of production would be practically attained in June and would be continued in subsequent months.

We are not entirely satisfied with the results of the steel committee's action, but we are willing to be shown that the tonnages they have underwritten are sufficient for the production of 10,000 cars per month and fully adequate for the car-repair program, as they contend. We will follow the programs closely to obtain the best possible distribution of these tonnages with the thought that if subsequent experience demonstrates the tonnages to be insufficient, we will insist on enlargements of them where needed. We are now establishing here a follow-up procedure under which a running record will be kept of tonnages allocated by each steel mill to steel consumers for this program. This record will permit checking on space available for particular steel products in various mills, and through this procedure we expect to assist consumers who are unable to place their orders after exhausting their own efforts so that they can be told where to make further contacts to have orders accepted.

Cordially,

J. M. JOHNSON,
Director.

Labor Bill Nullifies Collective Bargaining

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a newspaper article by Thomas L. Stokes.

The article is as follows:

NATIONAL AFFAIRS

(By Thomas L. Stokes)

WASHINGTON, April 21.—Perhaps the best one-sentence description of the Hartley labor bill, passed so overwhelmingly by the House in a high state of emotion, came from a moderate Democrat, Representative RICHARD F. HARLESS, of Arizona, who told the legislative body:

"I cannot go along with this measure because I feel that if it is enacted into law it will give the power to the employer to destroy labor unions and to substitute individual bargaining for collective bargaining."

The Arizona Member's diagnosis is valuable because he is for a labor-regulatory bill; he approved many of the provisions of the Hartley bill, and he is a Member-at-large from a southwestern State of small population.

In another sentence, after listing the various weapons the measure gives to the employer, including easy access to the courts, he summarized the basic change of approach in this bill which cannot be overlooked:

"In substance the employer is given the power of a dictator at the hands of the Government over the union."

The purpose of the Wagner Act which the Hartley bill almost nullifies was to free the workers from previous business and industry-imposed restrictions that had grown up in custom, and to protect his right to join a union and act collectively to protect his economic interest. The Government, representing the people, thus stepped in on behalf of a large segment of the people, our industrial workers, to readjust the balance which for so many years, as was clearly recognized, was overweighted for employers.

The Hartley bill, as well as many provisions of the Senate bill, is to check and reverse this process and return to the employer the power to curb the rights of workers, and in more ways and more devious ways than is apparent on the surface. To implement this power it gives the employer backing of the courts and, to a degree, of the Government, itself. Now, we learn, it is the intention of the Senate to make its more moderate bill a more drastic measure because of the overwhelming House vote for the admittedly severe Hartley bill.

Somewhere there is a middle ground to correct the obvious abuses by some labor instrumentalities, but the House did not reach it, and did not try to reach it. Herein lies the real purpose of the measure which Mr. HARLESS accurately pointed out and which goes back to influences behind the bill.

During the progress of labor legislation in Congress there has been much talk about the lack of cooperation between congressional leaders and President Truman. The two, it is said, should try to reach a general agreement. But the real truth, of course, is that the President and congressional leaders are poles apart, and it is hard to see how they could get together. This is because of a difference in fundamental philosophy,

which goes, too, for many other issues in Congress, but is perhaps most vividly illustrated here.

This is the difference, on one hand, between the philosophy of the New Deal or progressive wing of the Democratic Party, now much weakened in Congress but still having its only valuable symbol in President Truman in the sphere of action, and the philosophy of the business and industrial managers of our economy. Businessmen plainly have seized this time, when they are freed of Government restraints and are well-heeled financially, to deliver their long-planned blow at labor, deprive it of its protection, and recover the control they once had. It is not necessary to rely upon surmises as to their purposes or privately expressed aims. Their public speeches reveal the intent.

It shows a lack of statesmanship and vision in the managers of captitalism today. The Wagner Act, among other original objectives, was to strengthen labor so that it could gain, by its own efforts, a larger share of the national income and thus help, by spreading purchasing power, to rebuild the shattered economy of our last great depression, and thereafter help maintain a balance. If we are to have another depression, or even a recession, it is just as essential that labor be strong enough to act as a brake. It won't, if anything like the bills in House and Senate become law.

And business and industry, as well as labor, will be caught up in the whirlwind.

TVA—Built for the People

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. KEFAUVER. Mr. Speaker, with leave to extend my remarks, I include an article written by Alfred Mynders, columnist and editorial writer of one of Tennessee Valley's leading newspapers, the Chattanooga Times. He discusses the attitude of former TVA opponents as they view this development today. Mr. Mynders writes:

Bill Cunningham, syndicate columnist and a widely heard radio commentator, carried a whole page under a Chattanooga date line in the Boston Herald concerning the TVA. He is among those who oppose the TVA original idea. There is space for only a few of his comments, but since he formed his ideas here in Chattanooga and in the TVA network, those ideas are of interest locally.

About Mr. Lilienthal, he said: "TVA could not avoid being major in the Lilienthal argument because he built it, did it, has been directing it, may have dreamed much of it. While on the subject of Lilienthal, which is not the subject of this article, there is none here, not even amongst those who resent the entire TVA idea, who fails to praise Lilienthal as a fine man and a directional genius. Many strong TVA men, such as States Rights' Finley, general manager of the Chattanooga Power Board, and a Jacksonian Democrat, as witness his baptismal name, say there is no communism whatsoever in Lilienthal and that they know him well from many contacts.

"Others, such as Scott Probasco, the local banker, a staunch Republican, and one of Wendell Willkie's directors during the fight against the TVA, which brought Willkie to national political prominence, says he is fundamentally and immovably against this type of inroad into private enterprise, but that while he has no information concerning Mr. Lilienthal's ideological predilections, if any, no possible criticism can be leveled against the man's honesty or ability as TVA organizer, builder, and administrator.

"I have combed the local territory and can find no one who has any complaint to lodge against Lilienthal either as a person or as an executive. This seems worth noting because Lilienthal came from Wisconsin, and one would expect this district, like most districts, to be suspicious if not jealous of strangers."

Concerning the effect of harnessing the Tennessee River, Mr. Cunningham wrote:

"In the first place, that once murderous run of water is now a series of placid lakes some 600 miles long. A 9-foot channel runs the entire length and barge lines connecting the region with every major city in the eastern United States now haul grain, ore, automobiles, and other freight up water that has practically no perceptible current. The forests, once knocked down and washed out by rains, have been and are being replanted. The hardscrabbled farms that once clung to the hills offering nothing but poverty to the inhabitants are now being restored with fertilizer turned out by the TVA, and farmers have been taught the tricks of terracing their land and rotating their crops."

Fields long barren are blooming again. The farmers have cattle and pigs and something to feed them with. There are statistics on all this, and I have them, but statistics are boring. The net of it is that the rural part of that once poverty-ridden valley is now beginning to bloom like the original Eden. The threat of floods here and farther south now seem completely controlled.

Concerning the power development and the work of the Chattanooga public power board, he writes, in part:

"The result is that Chattanooga now is undoubtedly the electrical center of the United States. Homes completely run by electricity, including heat, have been increasing as rapidly as equipment can be produced. There are 40,000 Negroes in the approximately 200,000 population of Chattanooga. Somebody for some reason wanted a survey made as to how much electricity the Negro families were using, and when that survey was completed it was discovered that these generally considered underprivileged in the South were equaling the national per capita usage of electric lights and equipment.

"Chattanooga's usage of residential electricity is now 2½ times the Nation's average, and the electrical users of this particular city in the 7 years they've been patronizing the TVA have saved $21,000,000, figuring from the rates last charged by the private power operators, which were 3 cents for residences, 3.2 for commercial users, and 0.9 to industrial customers."

Mr. Cunningham goes into the use of electricity in the rural regions:

Little communities have their neighborhood deep freezers. The farmer has an electric feed chopper in his barn. Some who once didn't make $250 a year are now in the dairy business with electrical equipment. The miracle of cheap light and power has struck and has changed this entire part of the world. Even the farthest hills where all once was poverty and hopelessness now blaze with light and hum with hope.

But the big story in cheap power is the story of the big industrial users now flocking into this region to take advantage of it. I have before me a list of more than 80 manufacturing firms that have moved into this city alone since the TVA began to produce and came expressly to take advantage of the cheap electric power. There have been more, but these firms listed require 20 kilowatts of power for operation. That's equivalent to 30 horsepower. That means they're operations of size.

Then he mentions the better health, the great recreation facilities on the lakes, and Mr. Cunningham sums it all up as follows:

"The sum of it is that whether sinister or admirable in concept a whole economy has been saved, a whole region reborn with this experiment.

"But the rest of the country paid for it, the critics protest, and that's correct up to now. The people here, however, resent that sort of talk. They are paying for what they use with their own local money, they say, and they further say that the TVA is clearing around $35,000,000 a year above operating expenses.

"There are no plaques, no tablets saying, 'Built during the administration of Franklin D. Roosevelt.' There are no bronze words reading, 'David Lilienthal, chairman.' There is just one big line carved into each magnificent job of construction. It's the same on each, and it merely reads, 'Built for the people of the United States.'"

Murder in Slovakia

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. O'KONSKI. Mr. Speaker, the recent hanging by the Communists of Czechoslovakia of the brave and gallant Monsignor Josef Tiso was murder in its most ghastly and shameful form. The brave and gallant Monsignor Josef Tiso went the way of the immortal General Mihailovich and the immortal Bishop Stepanic, of Yugoslavia. On trumped-up charges, the Communists disposed of these brave men because they dared to oppose communism among their respective people. These murders will set the pattern of what will happen to all who have opposed communism wherever communism takes over.

On trumped-up charges, they held a farce of a trial and sentenced Monsignor Tiso to be hanged. Imagine the joy in the hearts of the Communists when they succeeded and used the Czechoslovakian Government as a puppet to do their dirty murders for them. Yes; this is a modern tragedy, but there will be more like it as time goes on.

But the hanging of Monsignor Tiso itself is not the greatest tragedy. The greatest tragedy is the silence by our American President and by our American State Department while this murder was going on. Our Government gave the Czechoslovakian Government hundreds of millions of dollars in the past 2 years. We are going to give them millions of dollars more. Yet, with this giving of millions of dollars to the Government of Czechoslovakia, our President and our State Department are not even men enough to stand up and protest against this murder by the Soviets. All of this leads me to believe that the leaders of our country in the White House and in our State Department no longer understand the meaning of the term "honor."

Monsignor Tiso is dead. He was murdered. While he was murdered America was silent. The day is not very distant when these American leaders will regret their silence. The day may come and may be too soon when these leaders who were so shamefully silent will be treated the same way that Monsignor Tiso and

Bishop Stepanic and General Mihailovitch were treated. Then maybe there will be protests. But then it will be too late.

Frankly, I do not think America could have saved the life of Monsignor Tiso. But I am ashamed that my country did not even have the decency and honor to file a protest—just for the record. By some miracle such a protest might have at least postponed the execution. Here in America our officials grant our basest criminals a stay of execution. The least that our national leaders could have done is file a plea for the same consideration for a Christian lover of freedom—Monsignor Tiso—whose only crime was that he hated communism just as he hated nazism. But America remains silent and murder has free sway.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial relative to the action of the Senate in passing the bill providing for assistance to Greece and Turkey. The editorial was published in today's issue of the Baltimore Sun.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SENATE'S APPROVAL OF THE AID PROGRAM

Yesterday the Senate voted in favor of the bill authorizing President Truman to furnish assistance to Greece and Turkey. This bill must now be voted on by the House; but today's vote offers a sufficient indication that the proposal will encounter no serious further obstacles. Indeed, a refusal now by the lower House to go along in support of the program would be so damaging to the prestige of the President and the Secretary of State that a favorable vote is imperative.

In the course of the discussion, remarkably little has been said about the contents of the bill itself. Briefly, it authorizes the President to furnish assistance to Greece and Turkey "upon request of their governments, and upon terms determined by him." The assistance would be of four types: (1) Financial aid in the form of loans, grants, and so forth; (2) the detailing of American officials for purposes of assistance; (3) the detailing of limited numbers of military men "in an advisory capacity only"; and (4) the provision of any articles, services, and information which the President may deem advisable.

Thus, the President is granted practically blanket powers, qualified only by the adverse vote of the General Assembly of the United Nations. He will submit a quarterly report to Congress on what he has done.

But what, actually, will he do?

For one thing, he has the crucial responsibility for selecting the personnel to carry out the program. This is crucial because nothing could more quickly pervert the program from its proper objects than the choice of men, particularly in the case of Greece, who do not know the country intimately, whose definition of stability coincides with the Rightist elements who now dominate the feeble Government of Greece, or who misread our purposes in undertaking this new venture in foreign policy.

Second, it will be the President's task to insist on appropriate internal reforms as the conditions of our aid. Most Americans understand, by now, that all is not well with the Government in Greece—that this Government, dominated by a fragment of the population, has done little more than deepen the division within Greece, and has virtually shut out from an effective voice in government the great mass of moderate, middle-of-the-road people. One after another, competent American observers have reported the Government to be riddled by graft and subservient to a military and financial minority. It will be up to the President, in defining the conditions of our aid, to see that the Greek house is really cleaned. Otherwise, we shall aid not Greece but a minority of Greeks whose record to date has shed no luster.

It would be hard to exaggerate the importance of these two decisions. For "aid" is no mere abstraction. Aid wisely given to Greece, as to Turkey, can stop the process of Communist erosion in southeastern Europe and the Middle East. Aid wisely given can be a beacon of hope to the forces of individualism now fighting a losing battle in many lands against extremists of both Left and Right. Aid wisely given can stop Russian expansionism, bring out conditions more favorable to a firm understanding with Russia—and so serve the cause of peace. But aid provided on the wrong conditions and administered by the wrong men could do none of these things.

Failure To Equalize Income Taxes for Community-Property States

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 10, 1947

Mr. HAYS. Mr. Speaker, regardless of final congressional action upon the Knutson bill, providing for a reduction in income-tax schedules, one glaring injustice will remain. I refer to the failure of Congress to equalize income taxes for the community-property States and those which do not have community-property laws. Under leave to extend my remarks, I include a table which shows how inequitable the present income-tax laws are. Congress should not postpone a correction of these indefensible discriminations. Citizens of all of the States should be permitted to file tax returns on the same basis.

The table follows:

Taxable income	Income tax in non-community-property States	Income tax in community property States	Savings in taxes for man and wife living in community property States	Percent of savings in taxes for man and wife living in community-property States
$3,000	$589	$570	$19	3.2
$5,000	1,045	969	76	7.2
$10,000	2,508	2,090	418	16.6
$12,000	3,230	2,584	646	20.0
$16,000	4,940	3,724	1,216	24.6
$24,000	9,082	6,460	2,622	28.8
$30,000	12,559	8,987	3,752	28.3
$50,000	25,479	19,285	6,194	24.3
$100,000	63,954	50,958	12,996	20.3
$200,000	148,979	127,908	21,071	14.1

The Labor Bill

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a radio broadcast made by me on April 23, 1947, as follows:

The House of Representatives has passed by a vote of 308 to 107 an omnibus labor bill, which should not, and more than likely will not, become law in its present form.

The bill is a huge conglomeration of proposals, aimed at practically every fault, that has been found with organized labor. Some of its provisions are sound. Others are of most questionable wisdom. Still others, in my opinion, would be almost certainly to create resentment and strife that this country is in no condition to afford.

What the American people want, in my opinion, is a law to hold unions, and their leaders, responsible for proper use of the great power which the Government has helped them to attain; to correct the Wagner Act's bias; to protect workers, employers, and the public, against abuses that have become flagrant and habitual under the present system

We do not believe they want a law to go as far as the House bill goes. It is a fact that many of the Representatives who voted for this measure would have preferred—and that a number who voted against it, would have supported—something less drastic. But the House strategy permitted no choice. It was this bill or nothing.

The history of the last 20 years has taught us that free self-government can exist only in free economies. Political freedom, without economic freedom and security, is a myth that is short lived.

I have always stood for free, competitive enterprise in an economy based on free labor and free management. Freedom of either depends upon the freedom of both. America wants no Government-dominated labor front, nor sovietized industry. Our individual liberty remains real only to the extent that management and labor remain free from the domination of a highly centralized state.

During my campaign for Congress last fall I stated on many occasions that I stood solidly on the platform of the Republican Party of the State of Washington. This platform was adopted unanimously by the Republican State Convention held at Seattle, September 21, 1946.

This platform reads in part as follows:

"The Republican Party fights for a free American society and against any totalitarianism for America. We stand for free enterprise—free from Federal controls and bureaucratic planned economy, which deprives Americans of food, clothing, and housing—a free trade-unionism, free management, free collective bargaining—free from governmental meddling—the right to profit, the right to strike."

The platform concludes: "Finally, the first and greatest issue in this country, and the world today, is that of freedom under self-government as opposed to slavery under totalitarianism. We dedicate ourselves anew to the age-old struggle of man to be free, and invite all freedom-loving men and women to stand with us."

This is the platform on which I campaigned. That is the platform on which I was elected.

Less than 2 weeks ago young Republicans from 11 Western States met at Salt Lake

City, Utah, to organize the Western Conference of Young Republicans. At this conference several resolutions were adopted. Among these was the following statement on labor:

"We stand for free, competitive enterprise in an economy based on free labor and free management.

"We recognize management's right to profit and labor's right to strike. We reaffirm our faith in the American institution of free collective bargaining—free from legislative regulation and governmental meddling.

"We oppose, therefore, legislation which in any way destroys the rights of freemen to negotiate mutually agreeable labor contracts.

"We insist that both management and labor accept equal responsibility in our economy and equal treatment under law."

By this resolution western Young Republicans have affirmed their faith in a democratic society under which both management and labor are protected from an all-powerful state. I commend these young Republicans for their foresight and wholeheartedly endorse their stand.

Last week the House Labor and Education Committee reported to the floor of the House a labor bill referred to as H. R. 3020. I fought to amend this bill and, in the final analysis, I voted against it. I could not support the form in which this bill was presented to the House because it does not achieve the objectives of the people in the Sixth Washington District relative to the industrial-relations problem.

We want industrial peace, but H. R. 3020 encourages and creates industrial strife.

We want equality of the bargaining power, but the bill gives to employers unjust advantages. We want to restore and guarantee free collective bargaining, but this bill seriously restricts collective bargaining by specific limitations and gives an employer arbitrary control over whether he will bargain and, if so, how far he will go in the bargaining process.

We want to make unions responsible for their conduct and safeguard the sanctity of the contract, but this bill denies to unions the security of contract with its members and destroys common disciplinary power without which it cannot be responsible for the actions of its members. We want to eliminate Government from industrial relations, but this bill extends Government control and, in addition, brings court injunctions back into the picture.

America's past industrial confusion is not the fault of free collective bargaining. We have had industrial unrest because free collective bargaining has not been given a genuine opportunity to function. There has been too much Government intervention.

I opposed H. R. 3020 because its provisions are contrary to our American way of life. I cannot vote for a bill which will start America down the road to serfdom.

Poland's Boundaries

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following article which appeared in the New York Herald Tribune on Sunday, January 30, 1944:

POLAND'S BOUNDARIES—READER URGES THAT JUSTICE BE DONE AND OLD ASSISTANCE NOT FORGOT

To the NEW YORK HERALD TRIBUNE.

Let us sweep fear and self-gain from the international slate. Let us look at the so-called Russo-Polish boundary problem with clear eyes, with eyes guile free and greed free. Then at once we can see to the core of the thing. Actually there is no boundary question. There is only the question of our keeping the faith. Already we—China, Russia, Great Britain, and the United States—have pledged ourselves to fair play and the impartial restoration of all overrun nations regardless of size. We have promised them freedom and independence and the right to run their own interior affairs.

Now, the first test of our honesty has come.

Are we men of our word or not?

This is the prime question.

If not, then we are back in the jungle age of 1938.

We well know where Poland lies on the map, Poland since her miraculous resurrection through the efforts of Paderewski, who pleaded the cause of all lesser countries, not only his own. He had no armies nor underground nor secret police to help him. Generosity and integrity of spirit were his buckler and sword. Yet he won. Ultimately, justice always wins, for there is a law of cause and effect in moral affairs, as well as in all other realms. Faithfulness flowers into friendship, but treachery breeds hate. We cannot found a better world upon an initial iniquity. If we sow devil's seed, we shall not reap oats of peace. Nature does not work that way, nor does the human spirit.

What we sow we reap. It would be wise to remember this before it is too late, before we kick away the foundations of the future by any sacrifice of Poland to expediency. Such sacrifice would shatter the new-sprung hope of small nations (physically speaking) in the magnanimity of the large and irreparably crack the cornerstone of the whole edifice of peace—the cornerstone of mutual trust.

" 'Away with Poland!' they cry. 'Long live humanity!'—as if humanity could live by the death of nations." These are Paderewski's own words, ringing out with energy—as true today as when his living lips uttered them in the year of 1910 at Chopin Centenary Festival held in Lemberg.

Poles fought at Washington's side in his darkest hours, during that uncertain period when our Nation was coming to birth. The souls and swords of Kosciusko and Pulaski flashed for our cause, served under Washington with fire and fidelity. General Pulaski was killed at the siege of Savannah. This Polish noble had, literally, given his life for the freedom of a land not his own. The Poles are like that—freedom is the breath of their nostrils. We have never lived without liberty; they have, and by its loss they know its value. During all the decades since our War for Independence the Polish people have been coming out from under the oppression of the Old World into the free air of the New. Today they are more than 5,000,000 strong here in the United States. They labor and dream under Uncle Sam's flag and contribute much to the general weal, and none among them has maneuvered against us, either above or under ground.

On November 11, 1918, at the ending of World War I, I happened to be in New York and was caught up in a joy-crazed crowd that tramped and milled along Fifth Avenue. Papers and hats whirled high in the air. Church bells and fire bells wildly clanged. Ticker tape streamed down from office windows—a bizarre confetti for this mad Mardi Gras. In the midst of it I kept remembering those who were not there. Shadows were over the day, among us limped shadowy men. A great, deep prayer surged:

"Beneath the clangor of bells, amid the froth of bannered joy, moves a hidden tide of tears, of tears and prayers for those whose ready gift of life and long-drawn sacrifice have made possible this glad security of ours.

"God, harden the fluid texture of our souls into an imperishable selflessness, lest we, who have so little suffered, may too lightly hold this gift of peace, sprung from the yielded hopes and broken bodies of our many brothers in far lands. Fix us in the firm resolve to prove worthy of that exalted kinship; help us to make this world the place of which they dreamed, and dreaming died. Keep us from sloth, from inanition; cleanse us of braggart, puerile pride. May we not lose our new-won vision of an earth made safe for gentle things, nor prove too soon, too cheaply satisfied with slight achievement. May we in utmost fullness share with the triumphant, tried dead their costly victory."

Now this prayer resurges again. Today the need for prayer, for right thinking, for steadfast and loyal action, challenges you and me as never before. With our youth and our dead, with yesterday and tomorrow, with Kosciusko and Washington, with Tolstoy's dream of brotherhood, with Christ's dream of compassion, we cannot break faith.

LUCY EMBURY.

NEW CANAAN, CONN., *January 24, 1944.*

Iowa's Livestock Production

EXTENSION OF REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. DOLLIVER. Mr. Speaker, I cannot refrain from commenting on the facts revealed by the April 1947 publication of the Bureau of Agricultural Economics of the Department of Agriculture. On page 9 of the Agricultural Situation, it is said:

Iowa farmers last year produced more corn than any other State—marketed most of it as hogs, as fed cattle, as calves, as butter, as eggs, and as chickens. Iowa led in the marketings of these products—and at good prices. This put her at the top of the list in cash receipts from livestock and livestock products.

The statistical table appearing on page 8 of this publication is headed "Iowa leads in receipts from livestock."

The figures show that the dollar amount of cash receipts from livestock in Iowa for 1947 was $1,493,966,000. This is well over 10 percent of the livestock sales in the entire country, totaling $13,243,419,000.

These comments and statistics from the official publication again impress upon our minds the importance of Iowa's agricultural production. Like every other Iowa congressional district, the Sixth has large agricultural resources. I congratulate Iowa's farmers on their magnificent contribution to the food supply in a sorely disordered and needy world, hungering for the very things we supply.

Americanism

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay written by Lynn Learey, a freshman at the Van West (Ohio) High School:

AMERICANISM BEST OF ALL, SAYS LEGION ESSAY WINNER

(EDITOR'S NOTE.—The following essay, judged one of 12 best in the Ohio American Legion essay contest, was written by Lynn Learey, son of Rev. and Mrs. Kenneth S. Learey and Van Wert High School freshman, and won the author a trip to Washington, D. C., and other points of interest in the Eastern States, April 12–29.)

Americanism or—? What is Americanism? Perhaps we should begin with a definition; let us see what Webster says. In his dictionary we read, "an attachment or loyalty to the United States, its traditions, interests or ideals." The greatest historial tradition of the United States is our democratic way of life. The richest heritage of our Republic is its idealism and its idealism is measured by Americanism.

The dynamic of this American way of life is the spirit of democracy as expressed by the immortal Lincoln, "a government of the people, by the people, and for the people." Democracy means justice and liberty for all peoples. We are the state, we are the government.

We ask the question, Americanism or else—what else is there? What other form of government, political, economic, or social system has afforded so many opportunities for each person?

Let us look at our Nation; though it has many faults, many inequalities, many problems—yet it has given to its people:

The highest standards of living in the world with its inventive genius, its assembly lines and mass production, its manner of distribution. According to some GI friends who have returned from all over the world, no nation has so many luxuries as we. In fact our economic system has been more efficient than any other.

The highest standards of education and culture. Our free public schools, with its system of education, has given to many generations of boys and girls the training necessary for life. Reading and writing is accepted by all as a normal American standard. We have an abundance of newspapers, magazines, libraries, and colleges, perhaps more than any other country.

More cooperative and free agencies promoting public good for, by, and of the people than reported from other countries.

More freedom of speech is permitted in the United States than elsewhere. We have town meetings, radios, forums, youth groups, and all kinds of organizations in which and through which our democracy operates. Ours is a representative form of government—even with human failures.

Freedom of worship is an American custom. Our Pilgrim forefathers came 3,000 miles across the sea to worship God as they saw fit. No other form of government fosters this spirit of freedom in religion and patriotism.

Freedom of the press is just another expression of our educated peoples living under the Constitution of the United States. Other nations living behind the iron curtain have only propaganda in their newspapers and over the radio.

It was the spirit of Americanism which won the war. It was the love of home and homeland that caused our democracy to mobilize in an all-out effort. It was Americanism expressed in patriotism and devotion that won military victories over totalitarian forms of government. Free peoples together can win.

And this is a postwar world. It was a people's war, a people's victory, and now a people's peace. We can beat all the other "isms" by giving people the advantages of a prosperous and spiritual nation. We can give through our cooperation, in "the land of the free," a high standard of living, a better education, more comfort, and more luxuries. We can produce goods and goodness under the ideals of freedom, justice, and democracy, which are the stars of Americanism.

We can as free peoples keep our feet upon the ground and our eyes upon the stars—the stars of Americanism.

The only answer to the question Americanism or —? is not found in another form of government, be it communism, fascism, or nazism, but rather the answer is found in America and Americans. Peace and prosperity as promoted "for, by, and of" the common good is the spirit of true America. Americanism is the answer.

Resolution Adopted by Richard F. O'Brien Post, No. 2016, Veterans of Foreign Wars, Amesbury, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following resolution adopted by Richard F. O'Brien Post, No. 2016, Veterans of Foreign Wars, Amesbury, Mass.:

Whereas the Government of the United States of America has made no provisions within the continental limits of the United States, for the perpetuation of the memory of individual servicemen who died in action and whose final resting place is unknown; and

Whereas it is impossible to designate a specific final resting place for the above-mentioned casualties; and

Whereas the families of said casualties are, in many cases, without means to provide suitable memorials: Therefore be it

Resolved by the Richard F. O'Brien Post, No. 2016, on January 7, 1947, That this post go on record as unanimously favoring the placing of a bill before the Congress of the United States. Said bill to direct the providing of headstones for individual family lots of all men who gave their lives in the military service of the United States of America, and for whose remains there is no final resting place known or designated.

Is Congress Slow?

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of April 21, 1947:

IS CONGRESS SLOW?

Under the heading, "Slow-moving Congress," the Philadelphia Bulletin has joined that innumerable caravan of those who think, because the new Republican majorities at Washington haven't accomplished miracles in 3 months, they are hopelessly bogged down in divisions, dissensions, and red tape.

Just what do they expect?

By any fair standards of comparison, the present Congress has been one of the most efficient and productive ever held.

It reorganized last January, only a little over 10 weeks ago. Facing it was a holy mess of domestic and foreign bungles; a tangle of disagreement going right down the middle of the Democratic Party on such subjects as labor, finances, taxation, and foreign policy.

For 14 years Congress had been so buffeted, first by blasts from the White House and second by criticisms identical with those of today, that it was bewildered and disorganized. It had almost completely lost that status of national balance wheel clearly intended by the Constitution.

When it took office, it had before it the promises of the President that he would offer unity and cooperation. Presently it turned out that all he wanted was to have his own way, and that his assurances of cooperation weren't being taken seriously by his followers.

A newspaper-radio barrage that had all the earmarks of being deliberately inspired and operated hit the new Congress at the outset. Every variety of real and imaginary obstacle was thrown into its path. It was told, in one breath, to be quick and to be cautious; to act as a unit and to let all the Members follow their own lead, to take a firm stand on Republican principles and to make big concessions to the President.

Moreover, it found two internal problems on its hands. One of these was the presence of a host of new, freshmen Members who were eager to pitch in, but who needed training and experience before they could be of real help. The other was the compulsion of going through an elaborate reorganization called for by laws passed last year when the Democrats were in power.

There was a still further stumbling block, the nature of which is politically sensitive. In the House, the Republicans had a large and effective majority. But in the Senate, the margin was too close. Moreover, the Senate hold-over Republicans included those with a wide range of political philosophy.

In the House, unity and harmony prevailed. But in the Senate, tie-ins between insurgent Republicans and the Democratic membership started at once. The Senate Republicans, on recent roll calls, have been divided. On several issues which seemed open and shut Democrat versus Republican, two-thirds of the Republicans stood firm, and the other third jumped to the Democratic side.

In the broader field of public policy, Congress was confronted by a general shift of the President's political position. Despite his earlier pledges of "holding the line" for

the Roosevelt program, he presently abandoned it. Congress found its opposition taking up wholly new entrenchments; and performing the most amazing political sommersaults without apology or embarrassment.

That any progress whatever could be made under these circumstances is surprising. Yet real progress has been made. Early as it is—and ordinarily a Congress would still be marking time on preliminaries—a great deal has been done.

This is especially true of the House. Here the Republican unity and solidarity has been outstanding. Speaker MARTIN has done wonders both in holding his boys in line and in keeping their noses to the grindstone.

The House passed its tax plan by a vote which was all but unanimous—and took a bloc of Democratic votes with it. It has its labor program in the final stages. What economies have been made in the President's spend-and-elect schemes have been done in the House House committees have turned the President's budget inside out, and know what they are saying when they report that there is plenty of "water" to permit their 20 to 30 percent tax cuts.

The portal-to-portal pay-suit bill has been passed by both Houses and is in conference. The House has completed and passed the liquidation of OPA and Temporary Controls agencies. Several appropriation bills also have been completed in the House. Many lesser bills have been passed.

Part of the reason why the House is ahead of the Senate in bills passed is the fact that the Senate has had to spend time on treaty confirmations and on Presidential appointments—matters which do not go before the House. Moreover, with the Republicans holding only a slim and uncertain margin in the Senate, the stage is set for dilatory, obstructionist tactics, which have been used repeatedly by White House lobbyists.

There is a wholly different side to this matter. Was it ever intended that Congress be quick on the draw? Quite the contrary; the framers of the American Constitution felt that deliberation and painstaking were admirable virtues. They knew that the faster a government works the more mistakes it makes and the sooner it becomes a dictatorship.

The slowness of democracy—of the representative republican form of government—is one of its great strengths. Only by taking time to be safe, by holding long hearings and discussing all phases of public questions, can the public be informed of these matters, Congress have time to learn the public's sentiment, and the principle of popular sovereignty be maintained.

Does anyone expect the foundation of a great building to be fast, or criticize an anchor because it is slow? Those are far more apt comparisons for Congress than anything in the mind of the present crop of critics.

Congress isn't a jeep.

Republican Congress Delivers

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a copy of the address made by Majority Leader HALLECK before a meeting of the Republican National Committee held in Kansas City, Mo., on Monday, April 21.

This address by the Honorable CHARLES A. HALLECK should be read by all interested citizens of this Nation. Congressman HALLECK very ably and successfully points out the record being made by the Republican Party in the House. He states very pointedly our party purposes, objectives, and accomplishments, so there no longer should be any doubt in the minds of well-informed citizens that party principles and goals as promised in the November elections of 1946 are rapidly becoming realities and are becoming realities because they are right and in the best interest of our Nation.

REPUBLICAN CONGRESS DELIVERS

I am in Kansas City attending a meeting of the Republican National Committee. I bring you people of the radio audience their greetings and the greetings of the Republican Congress, which is moving full speed ahead to accomplish the things you want done in Washington.

Before last November's elections, you will recall, the Republicans in Congress joined in summarizing the issue as follows:

"Today's major domestic issue is between radicalism, regimentation, all-powerful bureaucracy, class exploitation, deficit spending, and machine politics, as against our belief in American freedom for the individual under just laws fairly administered for all, preservation of local home rule, efficiency and pay-as-you-go economy in Government, and the protection of the American way of life against either Fascist or Communist trends.

"We believe that genuine social and economic progress can be achieved only on these American constitutional principles and it is our purpose to give our citizens this clear-cut choice."

We knew then that the things we promised the American people were right. The people said these pledges were right when they voted the Republican Party into control of Congress. And we are going to enact these pledges into law if the President does not get too handy with the veto.

The people gave the Republican Party a go-ahead signal to stop reckless spending of the people's money, to abolish needless, tax-eating bureaus, to lighten the back-breaking tax burden, to pass a bill of rights establishing labor-management peace, and to toss Communists and their New Deal fellow-travelers out of the Truman administration.

It took the President a long time to recognize years of warning by the Republican Party that the executive branch of the Government was infested by Communists.

However, the Republican Party welcomes Mr. Truman's late, very late conversion. We hope that his long-overdue action will match his words, and not give the termites new hope to hamstring our Government by saying communism is a mere bug-a-boo. That is what he said in a letter to former Governor Earle of Pennsylvania, dated as recently as February 28.

Overwhelming defeat in the last election never changed the policies of the New Dealers. From the President down they are fighting the Republican program, as vigorously as ever.

They do not want real economy in Government, industrial peace and tax reduction. They do not seem to realize that the people have said in landslide proportions they have had enough of the New Dealers' game of tax, spend, and elect.

Now, I am going to tell you some of the things the Republican Congress, in 14 short weeks, has done to correct 14 long years of bungling by Democratic administrations.

1. The House has passed and sent to the Senate a bill to reduce personal income taxes—the first genuine tax reduction in 16 years.

2. The House has overwhelmingly passed a bill to establish and maintain industrial peace in behalf of the public, the rank and file of workers and employers. The Senate soon will pass on this measure. Then the President will have an opportunity to sign this bill and take a stand for industrial peace.

3. The Senate and the House have passed a bill to prevent ruin of American industry by the portal-to-portal suits racket. These suits threatened to take $6,000,000,000 from industry and put many firms out of business. Again, when this bill reaches the President's desk in a few days, he will have a chance to take his stand with a Republican Congress to save industries and jobs.

4. Congress submitted to the States a constitutional amendment to limit to two terms the tenure of any man holding the office of President of the United States.

5. Congress insisted upon termination of many wartime powers of the administration to control the economic life of the Nation.

6. Congress has passed legislation to provide a more liberal allotment of sugar for the American people.

7. The House already has passed four departmental appropriation bills lopping off hundreds of millions of dollars in expenditures. Soon they will be on Mr. Truman's desk and he will have his opportunity to cooperate in giving the people the economy they demand.

8. The new Congress has completely reorganized and streamlined the legislative branch of the Government.

9. Both branches of Congress are considering legislation to give aid to Greece and Turkey.

So, you see, the Republican Congress delivers. In looking at the record of 14 weeks, it should be remembered that under the Constitution all revenue measures must originate in the House. It also has been the long-established procedure to have appropriation bills originate in the House.

As majority leader of the House, I report to you that our Republican Congressmen have been working harmoniously and getting good results. The Senate, you know, is much more closely divided between Republicans and Democrats than is the House. Nevertheless, the Republican leadership in the Senate is making good progress, too, considering time required to act on such matters as Presidential nominations and on foreign relations, that are solely the Senate's function.

I am happy to report that in both branches of Congress support has been given to the people's program by some Democrats. The Republican Party welcomes this cooperation for good government. But New Deal Democrats, taking their cue from the White House, have balked all the way.

President Truman's often-repeated statement that he is against lightening the people's tax burden now, and his rigid opposition to any substantial reduction in his budget estimates, have been signals for New Deal Democrats in Congress, administration and pressure groups, to fight the will of the people every step of the way.

Mr. Truman, in his address at the Democratic Party's Jefferson Day banquet, said that he would favor tax relief at what he termed "the proper time." Presumably, since he was addressing a partisan political gathering, he believes the proper time to cut taxes is just before the 1948 elections. He wants to take credit for tax reduction.

You will recall that Mr. Truman, in a message to Congress last January, made the amazing statement that currently high taxes were necessary for the security of the Nation.

The Republican Congress does not go along with that kind of thinking. It is not what the people want.

The people want substantial reduction in Government expenditures without impairing the armed services and other necessary activities—and they want it done now.

They want tax-eating bureaucracy lopped off—and they want it done now.

They want Government personnel reduced—and they want it done now.

They want tax relief—and they want it now.

The Federal Government's annual budget was only $4,500,000,000 when the Democrats, with their tax and tax, spend and spend, elect and elect program took over the Government.

They increased it to an average before the war of $10,000,000,000. The President last January, when we were again at peace, submitted to Congress a budget calling for expenditures of $37,500,000,000 during the fiscal year beginning July 1.

Your Congress is ignoring his opposition to reduction in his padded budget, just as it is rejecting his protest that now is not the time to cut taxes. We are reversing the trend of almost annual increases in taxes to finance star-gazing bureaus hatched by New Dealers.

Under Republican leadership the House tax-cutting bill was passed. Of the tax reduction provided, 61 percent goes to persons receiving net incomes of $5,000 or less, and of this amount almost 71 percent goes to individuals with income under $3,000. Thus, the largest percentage of reduction goes to the little fellow. It is a fair bill.

The bill for industrial peace passed by the House is now before the Senate. That bill will bring order and sense out of disorder and nonsense in labor-management relations.

It will give to the American worker the freedom that the Wagner Act promised, but took away instead. It, too, is a fair bill. It is based upon the sound premise that the public interest is paramount.

It recognizes the inescapable truth that, to raise our standard of living, and to improve the lot of all our people, we must all work together for output of goods in tremendous amounts so that all our people can buy them at reasonable prices.

The Wagner Act purported to reduce industrial strife. But there were three times as many strikes in the first 10 years under the act as in the 10 years before the act, and in the disastrous year of 1946, there were more strikes than ever before. The bill corrects defects in the act that brought this about.

The bill forbids monopolistic practices in relations between employers and unions that limit competition, restrain trade, hold the wages of all workers in an industry down to the level of those paid by employers who can afford to pay the least, and result in calamitous strikes that prostrate our economy and imperil the health and welfare of our people.

The bill has been called, and rightly called, the worker's bill of rights. It gives him a voice in the affairs of any union that is his collective bargaining agent, guarantees to him fair and honest elections in his union, protects him against excessive dues, fines, and assessments, frees him of fear of losing his job because of his opinions.

It protects also his lawful right to strike and it protects him against strikes that his leaders call without his consent or that deprive him of his work because of disputes to which he is not a party.

A small but noisy minority would have you believe that in order to exist unions must be free to engage in extortion, coercion, violence, and other lawlessness, and must be free to abuse employers, workers, and the public.

We deny this. And we predict that with enactment of the comprehensive, fair measure now taking shape in Congress the labor movement will take healthy root and enjoy healthy growth. Sound American reasoning will be given a chance to supplant the present chaos in labor-management relations.

Yes; the Republican Congress delivers. The parade of bills from Capital Hill to the White House, keeping the Republican Party's pledges, has begun.

The President will have his opportunity to do the right thing as these measures reach his desk. After all, the welfare of the entire Nation is at stake.

Our task in Congress is to go forward—to reclaim and redeem and restore in all its promise and all its power and all its moral glory and spiritual strength the great American heritage of freedom and order, to redeem them from the profane hands of reckless and spendthrift bureaucrats.

And that we shall do.

Refuge Denied

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include herein an editorial appearing in the Boston Herald of March 28, 1947, entitled "Refuge Denied" that presents in powerful and convincing manner a challenge to the Congress to enact legislation in response to the call of humanity set forth in the editorial:

REFUGE DENIED

We Americans have accused the Nazis of some of the greatest crimes in history. Yet with thousands of the victims waiting for a decent, human measure of assistance, we have turned our eyes away. Shall we be quite guiltless in the recording of history?

There are some 850,000 persons in Europe without a country and without any present hope of acquiring one. They are the nonrepatriable displaced persons, living in camps, mostly Poles, Balts, and Yugoslavs, for whom a return to their native land means death or slavery. Some 20 percent are Jews for whom Palestine is barred.

Our immigration quota laws exclude all but a negligible few. Can we sit comfortably down behind those laws and say that we owe no human thought for these unfortunates? Is our membership in the International Refugees Organization to be our only aid, while we piously hope that other countries will show the practical charity we do not?

There is danger of it. For there exists in Congress a terrific fear of immigration which is as senseless as it is heartless.

What is the basis of that fear?

That the admission of a few hundred thousand DP's would increase unemployment? But immigration does not have that effect. Those who come are consumers as well as workers. They bring skills we need, open new enterprises that employ more, relieve labor shortages that slow our economy.

That the racial traits are not those we want, as indicated by the quota preference for western Europeans? But this is rank hypocrisy from we who denounced Aryanism. If this melting pot cannot absorb these people as a small fraction of 1 percent of our population, then we are no better than Nazis.

That we have been admitting too many immigrants? Not at all, for year after year, we have fallen well below the 153,879 admissible annually under the present law. To let in 100,000 a year for 4 years without nationality quota would not begin to make up our deficiency.

That Americans cannot tolerate strangers? Surely this is absurd. Boston could certainly welcome 540 newcomers a year for 4 years, which would be our proportionate share in a 100,000 annual influx.

Yet the bill to admit those 100,000 will go under unless we, the people, disabuse Congress of its anxieties.

What can we do? We can let our delegations in Congress know that we have grown out of any old xenophobia, that we recognize America's responsibility, that we do not wish to expunge those lines on the Statue of Liberty:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tossed, to me!
I lift my lamp beside the golden door."

Tax Reduction

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Erie (Pa.) Dispatch-Herald of April 13, 1947:

PROMISED TAX CUT—AN OLD DEVICE

No one—certainly no one of our acquaintance—would object to a reduction of his taxes. A promised cut in taxes is one of the oldest vote-getting devices in history. Only a few months ago the Republicans used it, and it undoubtedly contributed heavily to their success at the hustings.

Politicians were promising tax cuts the first year after the founding of the Republic. They were promising them when Lincoln ran for the Presidency, again when Roosevelt I ran, and still again when Coolidge, Hoover, and Roosevelt II were candidates.

In spite of all these promises, taxes generally are higher now than ever before, representing a steady upward trend through the decades. The truth of the matter is that no politician and no party can guarantee to reduce taxes and the promise is largely an empty bit of hokum.

At the moment, the Republicans are trying desperately to reduce taxes in spite of the greatest national debt in history and the necessity for more huge outlays of Government money in the near future. Citizens are demanding more and more Government service, and more and more from their political subdivisions. The need for preparing this country against armed aggression grows more desperate daily. The veterans want and deserve more financial assistance. Private business has fouled up the housing problem and Government help seems inevitable.

President Truman has cautioned against weakening the Nation's purse. Bernard Baruch pleads that we take stock of our national monetary needs, present and future. Yet the people clamor for tax cuts and the Republicans try valiantly to please them for reasons that seem valid to the politicians of the party.

Tax cuts are nice, on the rare occasions when they come, but less taxes mean less of something else—including national security.

Amendments to Charter of United Nations

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include herein a copy of resolutions recently adopted by both branches of the General Court of Massachusetts:

Resolutions providing for requests for amendments to the Charter of the United Nations resulting in a limited world federal government

Whereas modern science has now produced means by which mankind can destroy itself; and

Whereas disarmament and world peace can only be achieved by world order, world law, and some measure of world government; and

Whereas the United Nations is an organization in being and its Charter is capable of amendment so as to make it an effective instrument for the maintenance of world order; and

Whereas the people in 255 cities and towns of the Commonwealth, by a vote of 586,093 to 63,624 favored strengthening the United Nations: Therefore be it

Resolved, That the President of the United States be requested to direct our delegates to the United Nations to propose or support amendments to its Charter which will strengthen the United Nations and make it a limited world federal government able to prevent war; and be it further

Resolved, That in the preparation of such amendments our delegates should advocate:

1. Delegation to the United Nations of limited but adequate legislative, executive, and judicial powers:

(a) To maintain such world inspection police and military forces as are necessary to enforce world law and to provide world security;

(b) Gradually and progressively to eliminate national armaments (other than those necessary for internal policing); and

(c) To provide for dependable revenue.

2. Balanced representation of each nation in the general assembly upon a just formula which will recognize influence in the world, natural and industrial resources, literacy, population, and other relevant factors; each representative to vote as an individual.

3. Adoption of a bill of rights assuring fair trial and other adequate protection of persons affected by the charter and laws enacted thereunder.

4. Reservation to the member nations and their peoples of all powers not expressly delegated to the United Nations, in order to guarantee to each nation its right to maintain its own domestic, political, economic, social, and religious institutions; and be it further

Resolved, That the Congress of the United States be requested to urge the calling of a general conference under article 109 of the United Nations Charter to review the Charter and to recommend appropriate amendments thereto; and be it further

Resolved, That this resolution shall not be construed to advocate unilateral disarmament by the United States; and be it further

Resolved, That copies of this resolution be sent by the State secretary to the President of the United States, to the Secretary of State, to the Senators and Representatives in Congress and to the delegates of the United States to the United Nations.

In house of representatives, adopted March 26, 1947.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, March 31, 1947.

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

FREDERIC W. COOK,
Secretary of the Commonwealth.

King Christian X of Denmark

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. H. CARL ANDERSEN. Mr. Speaker, the attached editorial from the Washington Evening Star is a splendid tribute to a man who was held in high esteem by his people. Christian X exemplifies what is best in royalty. As the Evening Star states, "Now that King Christian's life has closed, his services will have formal recognition everywhere." The editorial follows:

The Scandinavians almost invariably have been fortunate in their citizen-sovereigns. Pernaps it is the heroic tradition of the ancient past that prompts them to carry their burdens with quiet distinction. Or it may be simply the inherited gentility of the family to which they belong that commonly endows them with lofty ideals, distinguished bearing and, most notably, chivalrous manners toward all conditions of people. Be the explanation what it may, the line of Northern princes ha· deserved the high place in modern history which it occupies.

King Christian X was the sovereign of Denmark during a whole generation. Relatively few of his subjects can remember any other monarch. The annals of his reign ran the full gamut of administrative experience. He knew great successes and more than his share of sorrowful disappointments. The government he headed managed to avoid entanglements in the First World War, but failed to escape involvement in the Second. From April 9, 1940, until May 4, 1945, his entire realm was held by German troops under a Nazi dictator, Gen. Hermann von Hannecken. The royal family in effect were prisoners during that bitter half decade. But they never compromised their honor.

On the contrary, the late King set an example for other Leads of states who may be caught in similar dilemmas in aftertimes. When the Danes were pressed to adopt the infamous Nuremberg laws Christian led them in a determined resistance to the demand. Not even the slaughter of several thousand men, women and children by German troops firing indiscriminately in public thoroughfares altered their refusal to collaborate. Denmark was overrun by Hitler's forces, but never conquered by them. In spirit the country and its constitutional ruler were allies of the democratic nations from start to finish of the long struggle.

Now that King Christian's life has closed, his services will have formal recognition everywhere. Particularly in America will he be remembered with appreciation. He was a good neighbor in the most inclusive meaning of the term. His successor, who will take the title Frederick IX, is no stranger on this side of the Atlantic. For him and his wife, the new Queen, every blessing is bespoken.

Preferential-Employment Rights of Veterans Under Bonneville Power Administration

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

PORTLAND, OREG., *April 23, 1947.*

Hon. JOHN RANKIN,
House Office Building,
Washington, D. C.:

The Oregon Department of the American Legion understands that the proposed item for the Boneville Power Administration in the Interior Department appropriation bill, as reported by the House Appropriation Committee contains a proviso that no part of the appropriation shall be available for work performed on a force account basis. Such a proviso would constitute gross discrimination against veterans. It would deprive at least 166 employees of their preferential rights to employment as veterans. (This is over 64 percent of total employment in the construction section.) Under the GI bill of rights, and other statutes and regulations, veterans have preferential rights to employment by the Federal Government. They do not have preferential rights in competing with nonveterans in the general labor market.

Furthermore, these veterans are skilled technicians, trained for construction, operation, and maintenance of the highly specialized electrical power system of the Bonneville Administration, and it would be entirely unfeasible for private contractors to perform much of the work done by these veterans who are used interchangeably on operations and construction under an economical agreement with organized labor. There are large numbers of unemployed veterans in the Pacific Northwest. For example, a recent survey shows 7,500 unemployed veterans in Multnomah County alone and 18,000 in the State of Oregon. There are probably twice as many in the State of Washington. Deprivation of the preferential employment rights held by veterans now working for Bonneville would undoubtedly result in increasing unemployment of veterans in this area.

This provision appears to have been inserted to protect private contractors at the expense of veterans and career employees in the Federal service. The House subcommittee could recommend such a proviso only on the basis of lack of knowledge of large power-system operations, or as discrimination against veteran employees of the Government We strongly urge that you lead the fight to have the proviso removed from the bill.

FRED A. LOTHROP,
Department Commander of Oregon.

Mr. Speaker, a similar telegram was also sent to me by Earl C. Mean, commander, and Fred B. Corn, adjutant, Department of Oregon, Veterans of Foreign Wars.

General Cable Corp. Agrees With President Truman and Does Something About Cutting Prices

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. PRICE of Illinois. Mr. Speaker, this morning every Member of the House received an unusual and encouraging telegram from Mr. Dwight R. G. Palmer, president, General Cable Corp., New York, N. Y.

Mr. Palmer advises the House that this great corporation, although having recently granted liberal wage increases and other related workers' benefits, now proposes to make substantial reductions in the sales price of its commodities.

The General Cable Corp. is to be congratulated upon taking the lead in heavy industry in the program of bringing prices within reason before it is too late. This action and other related price-reducing steps that have been taken in the last 2 weeks are concrete evidence that the American people are accepting the moral leadership of President Harry Truman in his drive to reduce the cost of living.

Under leave to extend and revise my remarks, I include the telegram received from the General Cable Corp.

NEW YORK, N. Y., *April 22, 1947.*

Hon. MELVIN PRICE,
Member of Congress, Washington, D. C.:

Our economy is being challenged on every front while the widely heralded business recession continues its enlistment of recruits from the upwards spiraling of costs and sales prices, each of which vies with the other for top honors.

Such conditions cannot long endure, the law of gravity still prevails.

Far better that all parties at interest try out their landing gear now, making a couple of trial landings while they can afford to, which conceivably may forestall a crash landing later.

As we review our situation we find that the earnings of our own people compare favorably with those of the highest pay industries. Also the wage bracket of General Cable is among the highest if not the highest in the electrical wire and cable industry.

Our people enjoy other substantial benefits, such as payment for holidays not worked, a liberal vacation plan, etc. These are the conditions under which our plants have been operating for some days the management at several of our major plants has been engaged in wage negotiations with the unions representing our people. As the result of such negotiations which were concluded this past week, we increased all these hourly paid workers 11½ cents per hour effective April 13. This new wage level is to be maintained for 1 year. All other terms and conditions of our union agreements remain unchanged and continue for the same period.

Notwithstanding such increases and notwithstanding the fact that our backlog of orders is at record high levels, we feel that it is our job to take the lead in our industry to meet the challenge that has been laid down. We do so confident that all of our people, hourly as well as salaried, will resolutely face their responsibility and provide increased efficiency and greater production.

Accordingly, as of April 23 we will effect the following average price reductions which will be applicable to all shipments made on and after that date, including shipments made account of orders and contracts now on our books:

Building wires and cables for home building, industrial building, and other uses—6 percent.

Weatherproof copper wires for utility and farm lighting use—10 percent.

Bare copper wires and cables for all purposes—7 percent.

Magnet wires for motors, radios, transformers, automotive, and appliance uses—12 percent.

This over-all price reduction of the products listed will beneficially affect the cost of home building, electrical appliances, automobiles, farm lighting, and as a matter of fact all activities where electrical wire and cable are used. To complete the picture we are canceling our escalator clause, thereby stabilizing our prices except for fluctuations in the price of copper and lead.

DWIGHT R. G. PALMER,
President, General Cable Corp.

Interstate Transmission of Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a petition signed by 60 qualified voters in Gering, Nebr., relative to S. 265, a bill to prevent interstate transmission for advertising of all alcoholic beverages and the broadcasting of such advertising by means of radio. I am sending a copy of this petition to the proper committees in the Senate and the House of Representatives. The petition follows:

PETITION

To the appropriate committees of the Senate and the House of Representatives of the Congress—in particular to the Senators and Representatives in Congress of the signers of this petition:

We, the undersigned qualified voters, respectfully request that you give favorable consideration and support to S. 265, a bill to prevent the interstate transmission of advertising of all alcoholic beverages and the broadcasting of such advertising by means of radio; and that you support any other bills of similar character, if such support will best serve to secure quick relief from the offensive and injurious promotion of the beverage alcohol custom and traffic. The social and economic evils arising from the present widespread use of alcoholic beverages should certainly not be increased by the systematic promotion of their use. We believe that many millions of people are profoundly concerned because of existing conditions and almost daily offended because of the invasion of their homes by liquor sales promotion.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of April 23, 1947, quoting remarks by Secretary of War Patterson from an article in the Saturday Evening Post in respect to universal military training:

WEAKNESS MAY MEAN EXTINCTION, PATTERSON WARNS

NEW YORK, April 22.—Secretary of War Patterson said today that if the United States becomes weak militarily it is in danger of enslavement or national extinction within the lifetime of most Americans now living.

In a signed article in the Saturday Evening Post, Patterson warned that the United States monopoly of the atom bomb is only temporary and urged universal military training as the only kind of "survival insurance."

DRIFT HAS BEGUN

"If the United States again drifts back—and the drift has begun—to a policy of military weakness, then we are in danger of enslavement or extinction as a Nation within the lifetime of most Americans now living," he said.

Patterson scorned the push-button war as a "vision of the cocktail-party scientist" and advocated a four-point program based on universal military training as a matter of "overriding national necessity." He said this country must have:

1. "An intelligence service which will keep us informed of hostile moves anywhere in the world—military, economic, political, or scientific—and which will assist us in keeping abreast of new developments in warfare."

URGES SCIENTIFIC RESEARCH

2. "An intensive program of scientific research and development designed to insure for us continued leadership in the perfection of new weapons and defensive devices."

3. "An industrial mobilization under which we shall have at all times an initial supply of the most modern instruments of war and widely dispersed plants ready at a moment's notice to produce additional planes and weapons of the newest design."

4. "And, basic to all others, we must have the trained military manpower to use the weapons developed by our scientists and produced by our factories."

Patterson declared that universal military training was less expensive than maintaining a large standing Army, even though it would add more than $1,000,000,000—or perhaps as much as 4 percent—to the national budget.

Trade War

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Washington Post of April 16, 1947:

TRADE WAR

The second meeting of the preparatory committee charged with completing a draft of a charter for the International Trade Organization has begun its work in Geneva. Concurrently representatives of the United States will carry on negotiations with 17 nations for reduction of trade barriers under the provisions of the Trade Agreements Act. This may seem, and it is, an ambitious program. But it is a good thing that the work of preparation for a long-range program designed to pare down trade barriers and restore multilateral trade under the aegis of an international organization is being carried on at the same place and time as the conferences looking toward actual reductions of trade barriers by agreement. For the task confronting the proposed ITO is such a formidable one that its sponsors need the support afforded by positive achievements.

Tariff reductions are only one, and by no means the most important, of the reforms essential to free world trade from hampering restrictions. Exchange controls, quotas, and other restrictive devices in monetary and economic relations constitute even more formidable obstacles to free interchange of goods. The world has become a maze of impediments and obstructions far worse than in prewar days. Attainment of some order and stability will necessitate substantial modifications of internal legislative programs that directly or indirectly interfere with conditions by the terms of which goods are exported or imported. And that is true for the United States as well as other countries. Then, too, many restrictions, such as import quotas, cannot be dispensed with by countries having to conserve their foreign exchange funds for a long time to come. The ITO will, therefore, be compelled to subordinate principle to expediency in developing its program of action.

It is the organization of this new world agency that is at present of main importance. The ITO would be a sort of economic United Nations, a body which would lay down rules of international behavior in the buying and selling of goods across national frontiers, a tribunal before which complaints of nonobservance could be brought. With its goal well defined, it can be of immense service by affording trading nations an opportunity to consult with one another, become acquainted with one another's problems, and receive the kind of advice and assistance necessary to speed them on their way toward final emancipation from the discriminations which are strangling world trade. That bondage can only be broken first by a truce and then by cooperation among nations in place of the economic war that is now raging—the same kind of war which Hjalmar Schacht waged for Germany before the outbreak of physical hostilities.

Aid for Countries Devastated by War

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. SMITH of Wisconsin. Mr Speaker, under leave to extend my remarks in the RECORD, I include the following minority views on House Joint Resolution 153:

MINORITY VIEWS

Mr. JONKMAN, from the Committee on Foreign Affairs, submitted the following minority views to accompany House Joint Resolution 153:

The undersigned find themselves in disagreement with the majority with respect to the bill that has been reported out. We find that this bill goes much further in the amount sought to be authorized and the scope of the relief program, as to countries included, and the manner and duration of relief, than is warranted by the actual circumstances. Moreover, the matter of raising the money, outside of the three hundred and fifty million sought from the United States taxpayers, seems to have been given little if any thought.

The original bill stated in its preamble, among other things, that—

"Whereas, for humanitarian reasons, and in order to promote healthy ecomonic conditions abroad which are essential to the security and economic well-being of the United States and of the world, the Government of the United States desires to assist in the furnishing of such relief: Therefore, and so forth.

This is an administration bill. The loose thinking under which it has been brought to the Congress could well support the presumption that the State Department felt that for any Member of Congress to oppose this legislation would mean that he was wanting in humanitarian instincts, and against the security and economic well-being of the United States, and therefore there would be no opposition.

However, such a premise is misleading. The American people have every sympathy for the seriously undernourished men, women, and especially children in other lands and wish to help feed them in accordance with our means. Members of Congress, as Americans, have the same feelings and objectives. But as representatives of the people, they are bound by the time-honored maxim that "they must be just before they are generous with the taxpayers' money."

Before considering foreign grants by our Government for the relief of any and all nations of the world who may be in destitute circumstances, we should consider—

(1) What resources and substance have we at our disposal?

(2) What do we need to maintain and support our own way of life?

(3) What is sought of us abroad, and how long will the need continue?

(4) What good purpose will be served by any program we may initiate?

We have to consider our national debt of two hundred and sixty billion; our over-all National, State, and local tax burden amounting to 35 percent of our national income; whether that national income, at present amounting to one hundred and seventy billion, is temporary or permanent. We have to consider the drain on our production machine (already the State Department admits that we are short two-fifths of the grain cereals in this program and they will have to come from the next fall crop). We must bear in mind that these exports are destroying our economy like a two-edged sword by their cost in taxes and inflation from the resulting scarcity.

In the proposed prodigal program to reach occupied, liberated, and even neutral nations, we will be dissipating our strength and service without having reached the children, the men, and women who really need help, and whom we could reach by a judicious, well-considered application of the limited means at our disposal. If we are to relieve the peoples of foreign nations, it must be done on the limited scale of seeking to meet only the most desperate and necessary needs, and only in those countries where these needs exist.

It seems that the administration has paid very scant attention to these considerations.

In the first place, we know that this bill grows out of the recommendation of the General Assembly of the United Nations, made last December. However, it made a proposal of residual relief for a term of 6 months following the termination of UNRRA on March 31 Herbert Hoover also recommends a 6 months' term, to end with the fall harvest. The budget contains a provision for $100,000,000 for 1947 and $250,000,000 for 1948. In his message to Congress recommending this appropriation, the President stated relief: "The authorization recommended is designed for the urgent relief needs for the balance of the year." But apparently to justify the expenditure of the whole amount, the State Department doubles the term of relief.

The Under Secretary states, on page 3 of the hearings, in accord with the President's message, with Hoover, and the United Nations, that the need is "particularly acute during the spring and early summer months" and that there is every reason for anticipating that these countries will not need further free relief after 1947. Then in the bill the State Department asks for sufficient relief to operate until June 30, 1948. When the Department finds that our stock of grain cereals is only sufficient for three-fifths of their requirements, they blandly propose that the other two-fifths be supplied from our crops next fall (p. 97).

In the second place, the State Department asks for blank checks up to the amount of $350,000,000 to be used in any country they see fit. It is true, they say that at the present time they have in mind six countries; Austria, Greece, Hungary, Italy, Poland, and possibly China. But that is only their present intention, and they reserve the right to make changes and additions if, in their judgment, the money should be devoted to other areas.

Not only that, but they wish to keep secret the break-down of this $350,000,000 and the figures they have used as the needs of each country. In other words, they are asking the members of the Committee on Foreign Affairs to stultify themselves and come to Congress and the people, advocating the grant of $350,000,000, without giving the basis of their calculations. This ostensibly is none of the business of the Congress or the people.

It is true they use as an excuse the pretext that, once the allocation for each country is given, that country will consider that allocation as our debt to them, and a cut would cause dissension. We are not impressed by this argument for keeping Congress and the people in the dark. How can the State Department assure enforcement of the stern conditions precedent proposed in the bill for the giving and continuation of relief when they show the aforesaid weakness?

The State Department proposes to lay down such conditions for the distribution of this relief without discrimination as to race, creed, or political belief; that where such assurances are not given, they positively will not go in and give relief; that in such cases the allocated amount will be used in other countries. We are not satisfied that such conditions will be accepted, for instance, in Poland or Hungary, which are absolutely dominated by the Communists; and in such event we do not approve of spending it in other countries with prodigality. But even if such conditions were accepted in those countries, does anyone believe relief would go to deserving Polish patriots as freely as to the members of the Communist Party line? Past experiences all show the contrary.

We are just as desirous of aiding those really in need in these countries as any other

person; but, if those people cannot be reached, is it wise to give such supplies to the governments of such countries where they will be used to bolster up the Communist movement?

There are other considerations which fall almost within the same category. For instance, on page 75 of the hearings, it is admitted by the State Department that by this relief to Hungary we will be paying Hungary's reparations bill of twenty-three millions a year to Russia; that if Hungary had no reparations to pay, the relief would not be needed.

Then, in Greece, of course, there will be duplication in that another economic mission will be set up there under the so-called bill for $400,000,000 relief to Turkey and Greece, with which Paul Porter has already admitted the undertaking to Greece provided for in this bill should be merged.

It is even questionable what provision this bill makes for feeding undernourished children in the countries designated. Certainly they should be our first care and consideration. A reading of page 41 of the hearings speaks of a future contribution for that purpose. Certainly, such supplementals as cod-liver oil and milk for children are in as much immediate need as anything for anybody.

While the Greece and Turkey aid bill is primarily concerned with reconstruction and military aid, the bill presently under consideration also transcends the bounds of strict relief and goes into rehabilitation and reconstruction, as indicated on page 4 of the hearings and in the bill itself, reciting processed and unprocessed materials for clothing and fuel, while the so-called secret documents seem to go even further that that.

The State Department, while assuming that other nations will contribute as in UNRRA, has no assurance that they will join us in this undertaking.

The over-all cost of this relief undertaking has been set at $610,000,000, of which the State Department proposes that we pay 57 percent, or $350,000,000, with the other 43 percent, or $260,000,000, to be borne by other countries. However, this seems to have had only scant consideration. On page 81 of the hearings, the State Department says:

"This figure of $350,000,000 was in some respects a figure based on judgment and in part picked out of the air."

With reference to the willingness of other nations to contribute, according to the hearings on page 10, the only definite assurance they had was with reference to Great Britain's contribution in Austria, which they claimed had already received $40,000,000 from Britain. They emphasize this time and again (pp. 3, 10, 11, 88, and 90), although on page 88 it is clear they are pessimistic about further aid from Britain. As this seemed rather anomalous that Britain would be pulling out of Greece and yet be distributing relief in Austria, inquiry at the proper source elicited the information that this $40,000,000 was a sterling loan to Austria and not a grant. The State Department later qualified its statement and admitted that it was partly a grant and partly a loan, and there the matter stands with reference to Britain.

The only other nation consulted, as far as the record shows, was Canada. After several discussions, they got no further than that the Canadian Government was sympathetic and thinking about it.

Australia last year suffered severely from drought and probably will be unable to assist. Yet if other countries contribute in the same ratio as they did in UNRRA, these three countries, United Kingdom, Canada, and Australia, will have to contribute two hundred and fifteen millions of the two hundred and sixty millions expected from the other nations of the world under this program.

In other words, the $260,000,000 to be contributed by other countries has by no means been assured to the State Department; nor do they seem to have considered whether, if any countries should contribute, these would have to set up their own relief agencies or whether the United States in this venture would become a fiscal agent of foreign countries.

Finally, the State Department has not made any on-the-spot check of the needs in these countries. It does not know whether there is scarcity in Warsaw or Athens; and if so, which of the two has the greatest scarcity. Its analysis of needs might be very misleading To arrive at a country's needs it strikes a balance of the excess of estimated imports over exports and assumes that the resulting shortage is the exchange needed to buy necessaries of life and to prevent economic retrogression. In other words, if, as was reported from Greece on March 29, she squandered her foreign exchange by "importing 19 tons of colored combs of all sizes, huge quantities of toy balloons, nylon, and lipsticks of all shades, and other fantastic types of commodities," this would raise her imports much in excess of exports; and according to State Department diagnosis, she would need that much more exchange to purchase the necessaries of life. In other words, there may be no relation of this unfavorable trade balance to the food supply. It is similar to a squandering family which may produce or earn (export in goods or services) $100 a week and spend (import) $125. It is certainly running into trouble and will need credits or loans, but that does not necessarily mean that the children are not being fed, although, of course, such may be the case.

The same uncertainty lies in their proposed machinery for the distribution of relief. The relief goods will be turned over to the controlling governments for distribution. This is the same hurdle that caused such a miserable flop in UNRRA. But the State Department says, on page 33 of the hearings, "if you did it effectively (direct distribution with American personnel) it would take all this money to pay for the personnel to look after it."

The question may well be asked: How much of the money will it take to make an effective check on ruling governments' distribution?

We propose to offer amendments which will reduce the authorization in this bill to $200,000,000 and provide that no transfers of supplies or establishment of credits may be made thereunder after December 31, 1947.

This will more nearly meet all the considerations which a judicious approach would recommend and which is adequate to accomplish the desired result if distribution is made with reasonable diligence.

ROBERT B. CHIPERFIELD.
BARTEL J. JONKMAN.
LAWRENCE H. SMITH.

Jefferson Day Address by Senator Hoey

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a brief summary of a speech which I made at the Jefferson Day dinner at Raleigh, N. C., on Saturday night, April 19, 1947, as it appears in a news report in the Raleigh News and Observer of Sunday, April 20.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Predicting that President Truman would be reelected in 1948, Senator CLYDE R. HOEY asserted here last night that the President "did more by himself in the month after the election than the whole Republican Congress has been able to accomplish during their entire tenure of office."

HOEY's assertion was received enthusiastically by a throng of 550 Democrats attending the party's annual Jefferson Day dinner at the Sir Walter. The diners, exuding confidence that the Democrats not only would name the President next year but also would regain control of the Congress, happily agreed with HOEY when he declared that the majority of the American people have "had enough" of the Republicans and are ready to shift back to the Democrats.

MANY LEADERS PRESENT

It was a typical party dinner, attended by municipal, county, State, and National party leaders. National Committeeman Wilkins P. Horton, of Pittsboro, who was chairman of arrangements for the dinner, presided as toastmaster; Governor Cherry presented Senator WILLIAM B. UMSTEAD, of Durham, and UMSTEAD, in turn, presented HOEY for the principal speech.

Senator HOEY said:

"The Democratic Party has a great heritage of public service. Thomas Jefferson, the founder and patron saint of the Democratic Party, and Andrew Jackson, its militant knight errant, gave to this great party and to the Nation the broad concept of service to the whole people as the dynamic political philosophy to be translated into practical governmental action.

PARTY FOUNDER

"Thomas Jefferson was the author of the American Declaration of Independence and the Virginia Statute of Religious Freedom. He was the moving spirit in amending the Constitution of the United States to include the Bill of Rights, and he founded the Democratic Party in 1801. His philosophy of government was expressed in a memorable letter in 1810 in which he said: 'The freedom and happiness of man are the sole objects of all legitimate government.' And he stated the obligation of the citizen in this language: 'A debt of service is due from every man to his country proportioned to the bounties which nature and fortune have measured to him.'

"For 146 years the Democratic Party has served the Nation. Until our country was divided by civil strife, the party had a long and illustrious career of service in power. Following the War Between the States, it has continued to guide the Nation along democratic lines to the achievement of democratic goals, whether in or out of power. It has been able to survive defeats. It has led even when it failed to triumph at the polls. After the war our first victory upon which we were permitted to realize came with the election of the great American Grover Cleveland, in 1884, followed by his defeat in 1888 and his triumphant reelection in 1892. The Democratic Party gave to the Nation and the world Woodrow Wilson as President in 1912 and again in 1916, whose record of service translated into law the progressive measures for which the party and its leaders had battled unsuccessfully for the 16 preceding years. These great measures still remain upon the statute books, and they have made possible the unparalleled growth, expansion, development, and prosperity of this country.

"After 12 years of Republican rule the people overwhelmingly elected Franklin D. Roosevelt and a Democratic Congress in 1932, and successively reelected this matchless statesman and world leader for a total of four consecutive terms. Death removed him

from the scene of action and service on April 12, 1945, mourned and loved by the whole civilized world. His successor was Harry S. Truman, who was elected Vice President in 1944 and who came to the kingdom at the most critical hour in world history. Faced with greater domestic and international problems than any previous Vice President in all of our national history, Harry Truman is measuring up to the full stature of greatness, and I predict that the people of America will give him an overwhelming vote of confidence when they reelect him President in 1948.

"Some people who did not know him well questioned whether he was a big enough man for President. No one now questions his ability, his courage, or his fitness. He is the only man living or dead who has ever brought John L. Lewis to his knees and successfully asserted and maintained the sovereignty of the United States Government and its supremacy over this autocratic labor dictator.

"The legislation enacted during the Roosevelt administration and the policies put into effect under his leadership have saved this country from financial disaster and large-scale bankruptcy and possible revolution. The standard of living in every part of America has been raised for all the people. Better wages, shorter workdays, more leisure for recreation and pleasure, improved educational and health opportunities, and more general prosperity have resulted.

PARTY PRINCIPLES

"More people have more money throughout the United States than at any other time in all history. The Democrats believe in prosperity for all the people. The Republican philosophy is that if you have prosperity at the top that it will trickle down to the masses below. The Democrats believe in starting at the base and let it grow up through every group in our whole economy.

"More people have employment at profitable wages, the farmer is getting a better price for all of his products, industry is being profitably operated on full scale with increasing demand for all manufactured products, the banks are overflowing with money, and there hasn't been a bank failure in the United States in 3 years, although there were 5,302 bank failures in the 4 years of Hoover's Republican administration. No wonder the Republicans are not repealing legislation passed by the Democratic Congress during the past 14 years.

"Playing upon the dissatisfaction of the American people last fall with various restrictions, regulations, and controls which had not been removed as rapidly as the people thought should have been done, the Republicans won the election and obtained a majority in each body of Congress. Their campaign shibboleth took the form of a question, which was 'Had enough?' They have been in power a little over 3 months and Dr. Gallup surveyed the public opinion of the Nation, and a majority of the American people, reviewing the record of the Republican Party, responded that they already 'had enough' of the Republicans and were ready to change back to the Democrats. President Truman did more by himself in the month after the election than the whole Republican Congress has been able to accomplish during their entire tenure of office.

"The whole philosophy of the Democratic and Republican Parties is different. The Democrats believe in legislating and administering government from the human level—the Republicans from the dollar level. Our past experience has demonstrated that the more humanity we put into government the better economy we will have. The genius of our free institutions and our free enterprise must rest upon equality of opportunity for all the people, with full protection of the law for the small and the great, the rich and the poor, the worker and the employer—and the public.

SUSTAINS TRADITION

"The foreign policy of our Government represents the high thinking of America's best minds and most devoted patriots. It sustains the great tradition of our concepts of freedom and justice for little peoples and small nations and our own inherent purpose to maintain freedom, liberty, and justice for the people of our own country, and to protect and make secure our way of life. By following this policy we are the more surely traveling the road to world peace.

"I pause to pay tribute to the Republicans in the Congress who are patriotically supporting President Truman in his firm and intelligent foreign policy. It is gratifying to see national unity in our effort to solve the international problems, and the Republican leadership deserves much praise for joining wholeheartedly in the determined effort to work out a fair and just solution of our war problems and to lay the basis for lasting peace. Whatever differences may exist in domestic matters, when it comes to our foreign policy we are no longer Democrats or Republicans, but all Americans, and with this unity in thought and action there is every promise of finally achieving our goal of world peace.

"The record of the Democratic Party in North Carolina reads like a romance. In the aftermath of the war of the sixties, when the carpetbaggers were pillaging and plundering the State, the Democratic Party gained ascendancy and wisely administered her government until the Republican-Populist victory in 1894. The people soon tired of this regime, and in 1900 the Democrats again came into full control of every branch of the State government and for more than 46 years have given the State wise and progressive government, unexcelled for economy and efficiency. The State has grown and prospered in material resources and in the higher human values. We have surpassed our sister States of the South and advanced to a high place in the Commonwealth of States. Every North Carolinian can feel a sense of pride in his State anywhere and everywhere.

"Under the masterful leadership of Governor Cherry, with the full cooperation of the recent General Assembly, we are advancing to still greater heights of public service, and we shall face the future unafraid. The Democratic Party has justified the confidence of the people in giving it this long lease of power, and its great record of accomplishments in the past is the best assurance for the future.

"This hour calls for a rededication to the cause of popular government and a fresh baptism in the faith of a democracy which has saved the Nation in peace and war and will lead the way to continued peace and prosperity at home and abroad."

Financial Statement of Local No. 1057, Textile Workers Union of America

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I have received a copy of a financial statement of Local No. 1057, Textile Workers Union of America, which the union had published on April 7 as an advertisement in the Fall River Herald-News of Fall River, Mass. I have also received a similar advertisement setting forth the financial condition of the Thread Workers Local 445. I am advised that these unions have from the beginning issued both a monthly and an annual report to their members. I believe that this matter is of distinct interest to all students of labor problems and that it is particularly appropriate that it be placed before the Senate as we are commencing consideration of the labor bill. The advertisement published by local 1057 is a fair sample of what these two unions are doing, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the financial statement was ordered to be printed in the RECORD, as follows:

A REPORT TO THE PEOPLE OF FALL RIVER

It has always been the policy of the locals of Textile Workers Union of America, CIO, to keep its entire membership fully informed as to finances through monthly reports at regular meetings and by presentation of an annual statement.

The so-called Barnes bill requires only that an annual financial statement shall be filed with the Department of Labor of the Commonwealth of Massachusetts.

Voluntarily, Local 1057, Textile Workers Union of America, CIO, herewith submits to the people of Fall River, through the press, its financial statement for the year ending December 31, 1946:

Income:	
Dues	$152,686.62
Initiation fees	6,510.90
Strike donations	7,935.25
Interest from banks	450.03
Miscellaneous	2,976.45
Total income	170,559.25
Expenditures:	
Per capita tax to national union	75,033.38
Wages	17,581.04
Expenses of officers and stewards	9,895.42
Strike donations	7,938.00
Printing, postage, and office expenses	5,068.76
Expenses of delegates to conventions and conference	4,297.00
Socials	2,674.63
Rent	2,115.25
Dues—Massachusetts State CIO	1,241.00
Organizing committee	1,200.00
Lost time	1,098.92
City, State, and Federal taxes	1,044.33
Legal services	1,000.00
Public donations	800.00
Telephone service	337.79
Electricity	275.98
Premiums for bonds and insurance	143.98
Commission to collectors	137.74
Expenses of election tellers	88.00
Expenses of auditing committee	87.00
Miscellaneous	1,094.52
Total expenditures	133,152.74

ASSETS

General fund:	
Balance in checking account	11,020.10
Savings accounts	16,462.71
United States bonds	23,532.00
Petty cash	150.00
Loan to national union (building fund)	20,000.00
Furniture and fixtures	19,869.85
Total assets, general fund	91,034.66

Mortuary fund:	
Balance in checking account	$6,376.55
Savings account	16,052.39
United States bonds	888.00
Total assets, mortuary fund	23,316.94
Total assets, all funds	114,351.60
Total resources, Dec. 31, 1945, all funds	82,579.80
Increase in net worth during period	31,771.80
Total resources, Dec. 31, 1946, all funds	114,351.60
General fund:	
Balance checking account, Dec. 31, 1945	16,191.45
Cash received, Jan. 1 to Dec. 31, 1946	170,559.25
	186,750.70
Cash disbursed, Jan. 1 to Dec. 31, 1946	133,152.74
	53,597.96
Less transfers:	
Savings account	450.03
Mortuary fund	11,607.58
Loan to national union (building fund)	20,000.00
Furniture and fixtures	10,520.25
Total transfers	42,577.86
Balance checking account, Dec. 31, 1946	11,020.10
Mortuary fund:	
Balance checking account, Dec. 31, 1945	3,368.97

Why Jesse H. Jones' "Boys" Got Ahead

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. CONNALLY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the New York Times for April 24, 1947, in the column "In the Nation," by Mr. Arthur Krock, relating to Jesse H. Jones' conduct of the RFC.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—WHY JESSE H. JONES' "BOYS" GOT AHEAD

(By Arthur Krock)

WASHINGTON, April 23.—Senator CHARLES W. TOBEY, of New Hampshire, whose investigation of a loan made to the Baltimore & Ohio Railroad by the Reconstruction Finance Corporation is developing into an inquiry into the whole record of the RFC, seeks always to be on the side of the angels. Sometimes he loses his sense of direction, but it is never intentional. And his activities thus far in uncovering the history of the Government financing of a sick economy as directed by Jesse H. Jones show once more that Mr. TOBEY's motives are the best.

But, as is often true of congressional investigations, however high the public standards of the chief inquisitor may be, the Senator up to this point has got into the record a lot of good names with an unfair connotation. This connotation is, though Mr. TOBEY has not said so, that the owners of some of these names misused their RFC employment to get jobs in the private industries for which they had approved loans, and that this was a systematic policy formulated and enforced with a strong arm by Mr. Jones.

Everyone familiar with the Federal loans that were made under his direction, and with his employment requirements, knew three things about Mr. Jones' RFC. One was that he got the best and most competent men he could find for the important jobs and helped them to careers in private business when those jobs were done. The second was that whenever he approved a loan of any size to a company, he sent one or more of these men to "watch Uncle Sam's money." The third was that, never doubting he and the RFC would be investigated by Congress, he kept complete records, and on these records are some of the most famous and distinguished initials in recent public service.

Whenever Senator TOBEY gets around to summoning Mr. Jones for testimony these records will be found to be as illuminating as they are precise. And this correspondent ventures the opinion that high authorization will be found in the documentation of any major financing which Mr. Jones did not think met all of his own cold business requirements. If the Senate inquiry should reveal the former Federal Loan Administrator and Secretary of Commerce as wasteful of public funds, careless, confiding, or venal in any instance, most of those who watched his direction of the RFC will be even more astounded than the borrowers with whom he dealt so rigidly.

In fact, the chief criticism of Mr. Jones was that he insisted too strongly on being businesslike in using the funds of the RFC. These were allocated, when the agency was first set up, to protect the depression economy from collapse. When the threat of war came, and then the war, the funds were allocated to produce the materials of combat. The United States had very inadequate reserves of essential imports from the Pacific area when Japan closed it off, and Mr. Baruch among others critized Mr. Jones for the limited funds he had assigned—for rubber, principally—when the threat of war was plain. (He has an initialed paper on the document which authorized the synthetic-rubber program, too.)

Mr. TOBEY has now obtained from the RFC, and published, the names of more than 80 employees or agents of the RFC under Mr. Jones who held or have acquired important places in industries which are on its books for loans. Most of those loans have been repaid, and nearly all the others which were made on the Chairman's own decision are being liquidated. No Government agency has made a more businesslike record.

To assure this, Mr. Jones had two policies: To insist on good collateral, and intimate and complete knowledge of how the Federal money was being used. It is this second precaution which accounts for the disclosures in the list published by Senator TOBEY that, for example, Stanley Reed, now an Associate Justice of the Supreme Court, was a director of a Detroit bank while he was general counsel of the RFC, and that Stewart McDonald became chairman of the executive committee of the B. & O.

Mr. Jones enforced these policies by attracting to Government service the ablest men he could find, and when on occasion he made a place for the proteges of men influential in politics, he never gave them jobs with a higher rating than he thought was within their capabilities. The assistants who performed the most important duties at the RFC were indeed Jones' boys.

Some of them finished their assignments with the companies that borrowed from the agency and returned to their posts. Some, like Justice Reed, Judge Jerome Frank, and Secretary John W. Snyder, rose to more important places in the Government on the RFC records they had made. Others, like Mr. McDonald, Sam Husbands, John W. Barringer, and Russell I. Snodgrass, so impressed themselves on the RFC clients that they were brought into the management of these companies.

The implication has been made that it was unethical for the latter group to accept the opportunities their RFC connection made possible. But this would condemn to the low pay of Government service men who made heavy sacrifices in the public interest, especially in wartime. Only if it can be demonstrated that Government power was misused to obtain the connection can such an implication be sustained If Mr. TOBEY can do that his list will mean something. Otherwise its publication in the context will only have erected another obstacle against getting men of promise into the Government.

No Freedom of Press in Turkey

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. BENDER. Mr. Speaker, on Monday of this week I pointed out that freedom of the press does not exist in Turkey. The Greco-Turkish military alliance bill which the President has proposed includes a provision that a free press shall be guaranteed to the American newspapers.

Yesterday the New York Times carried an article on page 3 which I include in my remarks. The story begins with the headline "Turkey suspends two more papers." When we read the story, which I trust every Member will do, we discover that two important newspapers have been indefinitely suspended in the capital of Turkey for criticizing the administration. The Government suspended these two newspapers under martial law which is still enforced in six provinces around Istanbul. It is important to note that martial law has existed for the past 7 years in most of Turkey. The Government, in announcing the suspension of these two newspapers, pointed out that

all writing which aroused doubt and suspicion in respect to the actions of the present Turkish Government should not be published.

It may be of interest to the Congress that the titular owner of one of the two suspended papers is a Turkish general named Saldik Aldogan, who happens to be an opposition deputy in the Turkish Government.

Mr. Speaker, the Congress might be interested in the fact that Turkey has now suspended a total of 11 daily and weekly newspapers because they dared to suggest that some small criticism should be made of the way in which the present Turkish dictatorship runs the country.

I trust that every Member of this House will read this report from Istanbul by the correspondent of the New York Times. We will be indulging in a criminal waste of the American taxpayers' money if we vote this Greco-Turkish aid bill. We will be forming a military alliance with a government which on the record is proven to be irresponsible and dishonorable. And it will be an unparalleled act of hypocrisy for this House to vote an act which guarantees the freedom of the press to American newspapers when that freedom we know for an absolute fact does not exist in Turkey today. That arrogant Turkish military dictatorship is asking us for money with the full knowledge that they intend to violate every provision required by the Congress. Let us not be hypocrites. Let us for once cease to be a rubber stamp for arrogant bureaucrats of the State Department. Let us defeat this Greek-Turkish military alliance.

The article from the New York Times of April 23, 1947, follows:

TURKEY SUSPENDS TWO MORE PAPERS—OPPOSITION ORGANS PUBLISHED DEPUTY'S SPEECH CALLING ASSEMBLY ILLEGAL

(By Raymond Daniell)

ISTANBUL, TURKEY, April 22.—Freedom of the press here received another set-back today when the Government indefinitely suspended two important opposition newspapers for publishing a speech by a deputy criticizing the administration. The Government acted under the martial law still in force in six provinces around Istanbul—theoretically, at least, because of the danger of foreign aggression.

The two new suppressions bring the total of banned publications, daily and weekly, to 11. The latest victims were Democrasi and Tasvir, both important organs and both critical of the Government. The action closely followed a riot in Smyrna last Saturday when students demonstrating against communism attacked the offices of Zincirli Hurrivet [Freedom in Chains].

The titular owner of Democrasi is Gen. Saldik Aldogan, an opposition deputy. The chief editorial writer for Tasvir is Cihad Baban, independent deputy who has been highly critical of the Government and the dominant People's Party.

On April 19 both papers published reports of a speech by Adnan Menderes, one of four founders of the opposition Democratic Party, declaring that "democracy cannot be established by force, trickery, and deceit." He charged that Celal Bavar, Democratic leader, was followed on his campaign tours by members of the secret police.

The Government's announcement of the suspension said: "Tasvir and Democrasi of April 19, 1947, which, despite an announcement issued by the state-of-siege command on July 24, 1946, to the effect that writings arousing doubt and suspicion should not be published and that the state-of-siege command would take action against provocation, printed a provocative report quoting a deputy as saying the Grand National Assembly was illegal, are suspended and their printing offices are closed for an indefinite period."

Witnesses to Saturday's riot said the outbreak did not appear to be spontaneous and the police made no effort to intervene. The mob destroyed copies of papers, threatened the staff with violence, and did some damage to the plant.

The editor is Mehmit Ali Aybar, whose wife is the American-educated director of physical education at the American college for girls. The paper has been regarded as Leftist, pro-Russian, and opposed to the American loan.

The necessity for martial law here was questioned by Kenan Oner, an influential Democrat, who charged that "internal political questions" were the real reason for the maintenance of the state of siege adopted 7 years ago. He said that the latest newspaper suspension was "nothing else but another in the series of steps taken by the Government to crush the opposition."

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Greek-Turkish Aid," published in the Pittsburgh Post-Gazette of April 23, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREEK-TURKISH AID

The overwhelming nonpartisan Senate vote in favor of aid to Greece and Turkey reflects the desire of this country to protect free people from forces which threaten their way of life and, ultimately, our own.

The vote came after a full discussion of President Truman's proposal. It followed closely the latest endorsement of Secretary of State Marshall, who called the program indispensable.

Secretary Marshall participated in the formulation of the program and in the decision to go forward with it. After 6 weeks of fruitless discussion in Moscow, he is still fully in accord with its aims. He attached the highest order of urgency to immediate passage of the Greek-Turkish-aid legislation.

Thanks to a statesmanlike amendment sponsored by Senator VANDENBERG, the program does not bypass the United Nations. Rather, it supplements the purposes of the peace agency. It will tend to preserve the status quo so that the UN ultimately will have a better chance to work. An explosion now in the Middle East could blow the UN out of existence.

The legislation goes now to the House, where we hope the margin of approval will be even greater than in the Senate.

The Power of the Union Boss

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. HOFFMAN. Mr. Speaker, below is a letter which came in this morning, which is typical of many and which is a complete answer to those who contend that, under the Hartley bill, factory workers will not be forced to agree to a union shop. True, the bill provides that a union shop can be had only when a majority of the workers and the employer agree.

That sounds fairly reasonable; but under present practices, not only can the employer be forced to agree by certain union activities but the men in the plant can be forced to sign a request for a union shop.

If it be answered that the employee can refuse to sign, that he has a remedy at law, the reply to that is that experience has demonstrated that the union has ways and means of enforcing the will of the union boss.

The letter follows:

DETROIT, MICH., *April 19, 1947.*

Representative CLARE HOFFMAN.

SIR: You being for labor legislation, I wish to report the condition in the shop.

Union bosses use pressure in different ways to obtain their end. In the last few days, they came through the department and gave us a post card, telling us to sign it.

The card and also telegrams are to Congressmen demanding a vote against labor legislation. They gave us no choice, gave us the post card and pencil and said sign it. If we don't, we will be in the doghouse and it is almost unbearable conditions to work in from then on.

Now there are thousands of men in the shop that fee' the same as I do. For example in my section, three-sevenths of us are hoping and praying that the day will soon come that we will be away from union dictatorship.

I am not signing my name for if I did and the union run this down, I would be out of a job where I have worked for about 25 years and but little hope of getting another as long as the union is so strong.

A FORD WORKER.

And here is another angle of the situation. This comes from a company manufacturing cheese in a farming area. It reads:

APRIL 21, 1947.

DEAR MR. HOFFMAN: The writer was in Washington last week trying to sell cottage cheese. I was informed that the union has notified the milk companies that they will not be allowed to handle cottage cheese that is not made in Washington by local union members. This is not an economical operation, since 70 percent of the original milk can be left at the manufacturing plant in the form of whey, which has some value as animal food.

Labor talks about more money because of high prices, but no consideration is given the method of distribution and other related processes that affect costs, so long as they get theirs. Such practices are certainly in restraint of trade and free enterprise and must be treated as such. Government spokesmen are asking industry to reduce

prices but in many cases similar conditions as mentioned are present and hold prices up artificially.

The individual is too small to be heard and if we do not get legislation sufficiently strong to bring about a balance of power, prices will not come down. I commend you on the good work you have been doing and urge you to continue the battle. A union shop instead of a closed shop is not the answer. Men and industry must be free to make their own choice rather than be dictated to by the modern labor racketeer.

Very truly yours.

Retirement of the National Debt

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill introduced by me:

A bill to establish a sinking fund for the payment of Government obligations

Be it enacted, etc.—

SECTION 1. There is created in the Treasury, a cumulative sinking fund for the retirement of the public debt. The Secretary of the Treasury shall, in each fiscal year, place $10,000,000,000 of the money from taxes collected under chapter 3 of the Internal Revenue Code (relating to estate taxes), in such sinking fund, and moneys not expended for payment of interest or principal for one fiscal year shall be added to the fund for the following year.

SEC. 2. (a) The Secretary of the Treasury is hereby directed to use said sinking fund, first, to pay the interest on the obligations of the Government; and second, to retire and cancel such long-term bonds and notes as may mature or become callable within any given fiscal year; and, in the event that several long-term issues mature within the same fiscal year, priority of retirement shall be given to the issue or issues having the longest term of maturity.

(b) The sinking fund shall not be used to pay interest on or to retire obligations owned by Government agencies or corporations and established as trust funds, and special issues by act of Congress, or obligations having a maturity period of one calendar year or less.

(c) Subject to the above limitations, retirement of all other obligations shall be at the direction and discretion of the Secretary of the Treasury.

SEC. 3. The sinking fund and all additions thereto are hereby appropriated for use in carrying out the provisions of this act.

Potential War Materials

REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, if we are in earnest about stopping communism, then we should stop this practice of giving away potential articles which will make for weapons of war.

I have before me a statement prepared by Chester T. Lane, Lend-Lease Administrator, showing the materials that were shipped to Russia under a lend-lease agreement beginning last July. There are such items as radio stations, steam locomotives, marine Diesel engines, pumps, crushing, screening, and mixing machinery, industrial trucks and tractors, cranes, derricks, hoists, winches, fan and blower equipment, electrical equipment, and so forth.

We are again repeating the very things that we did prior to Pearl Harbor when we sent oil and ammunition and steel and copper to Japan. Let us cut out this monkey business.

The letter and statement by Mr. Lane are as follows:

OFFICE OF THE FOREIGN
LIQUIDATION COMMISSIONER,
Washington, D. C., March 20, 1947.

The Honorable CHARLES A. EATON,
House of Representatives.

DEAR MR. EATON: Through the clerk of your committee, we have received a request to furnish the committee with information showing the lend-lease "pipe line" shipments to the Soviet Union made since July 1, 1946, broken down by months, with an indication of the general nature of the material involved. The attached table shows the dollar value of such material loaded aboard ocean vessels in each month from July 1, 1946, through December 31, 1946, with a brief indication of the nature of the bulk of the materials. All shipments consisted of material covered by the agreement between the United States and the Soviet Union dated October 15, 1945, entered into under the authority of Section 3 (c) of the Lend-Lease Act.

In a few instances material which had been transferred to the Soviet representatives in this country prior to December 31, 1946, and to which legal title had passed prior to that date, has been physically removed and shipped by the Soviet Government since that date. Except for those items, all shipments have been suspended in response to the General Accounting Office's opinion that shipments should be terminated on December 31, 1946, unless Congress would indicate that such termination had not been intended when the Third Deficiency Appropriation Act, 1946 (Public Law 521), signed on July 23, 1946, was enacted. The Department's request for action on this matter is now pending before the House and Senate Appropriations Committees.

If any further information is desired, please do not hesitate to call on us.

Sincerely yours,

CHESTER T. LANE,
Lend-Lease Administrator.

Major categories of material shipped from July 1 to Dec. 31, 1946, lend-lease "pipe line" agreement of Oct. 15, 1945, between the United States and Union of Soviet Socialist Republics

Month (1946)	Value	Major categories of material
July	$14,003,712	Radio stations, over 1 kilowatt. Steam locomotives. Marine Diesel engines. Pumps. Crushing, screening, and mixing machines. Industrial trucks and tractors. Cranes, derricks, hoists, and winches. Fan and blower equipment. Electrical rotating equipment, marine and other. Generator sets. Metal melting and heating furnaces.
August	$17,598,623	Gas generating and producing apparatus. Machine tools. Secondary metal-forming machinery. Welding machinery. Mining and quarrying machinery. Optical, indicating and controlling apparatus. High-speed tool steel. Insulated wire and cloth. Tires. Rubber products. Engines for trucks. Spare parts for trucks. Steam locomotives. Marine Diesel engines. Compressors, marine and other. Pumps, marine and other. Crushing, screening, and mixing machinery. Cranes, derricks, hoists, and winches. Industrial trucks and tractors. Fan and blower equipment. Bearings. Valves. Electrical rotating equipment. Generator sets. Primary electric-power transmission equipment. Motor starters and controllers. Foundry equipment. Gas generating and producing apparatus. Machine tools. Secondary metal-forming machines. Welding machinery, marine and other. Metal-cutting tools. Mining and quarrying machinery. Excavating and dredging machinery. Industrial-type locomotives Steel-alloy tubes. Insulated wire and cable. Tires. Rubber products.
September	1,813,509	Marine Diesel engines. Marine winches and cranes. Generator sets. Motor starters and controllers. Gas generating, conditioning, and producing apparatus. Machine tools. Metal-cutting tools. Locomotive car wheel tires.
October	6,234,733	Marine Diesel engines. Salvage stations and diving gear. Marine compressors. Pumps, marine and other. Crushing, screening, and mixing machinery. Marine winches. Cranes, derricks, and hoists. Marine generator sets. Primary electric-power transmission equipment. Gas generating, conditioning, and producing apparatus. Machine tools. Cemented carbide cutting tools. Mining and quarrying machinery.
November	4,527,176	Marine Diesel engines. Pumps. Electrical rotating equipment. Generating sets. Blast and reverberating furnaces. Machine tools. Industrial-type locomotives. Mine-type locomotives.
December	1,984,863	Marine compressors. Cranes, derricks, and hoists. Electrical rotating equipment. Generator sets. Machine tools. Industrial-type locomotives. Mine-type locomotives.
Total	46,162,616	

History in the Missouri Valley

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 17, 1947

Mr. CASE of South Dakota. Mr. Speaker, under permission heretofore granted, I place in the RECORD portions of an address by Dr. Ronald F. Lee, chief historian of the National Park Service, made before the Westerners and the Friends of the Middle Border in Chicago, February 24, 1947:

Director Drury, Sheriff Watson, and friends, it is a pleasure to have this opportunity to meet with the Westerners in joint session with the Friends of the Middle Border and to discuss historic and prehistoric rescue work in the Missouri Valley. I grew up on a tributary of the Missouri—the Heart River, in southwestern North Dakota—and moved to the "effete" East, as Director Drury remarked, a comparatively few years ago.

Living in Washington, D. C., I missed the Middle West until an incident occurred which illustrated to me how close the Great Plains are to the Capital. The father of a friend of mine came to Washington—a lean, wiry individual, his face weather beaten and tanned from 70 years of dry farming in the Dakotas and Wyoming. One Dust Bowl year we stood outdoors talking on a windy Washington day. Suddenly the old man reached up into the air and brought his hand down rubbing his fingers together. "Do you know what this is?" he said, opening his hand and showing particles of sandy dust. "This is soil from north of Laramie, Wyo., and mixed in with a little clay from the Dakota Badlands."

Ever since then, as I walk around in Washington, I spot here and there little patches of Great Plains soil that have drifted in with the big dust storms from the Middle West, and I feel more at home.

Living in the crowded East increases one's appreciation for the spaciousness of the Missouri Basin. It occupies one-sixth of the land area of the United States. It is eight times as large as New England, and 10 times as large as old England. It is equal in area to the combined dimensions of Belgium, the Netherlands, Denmark, Norway, Sweden, Switzerland, Austria, Hungary, Czechoslovakia, Lithuania, and Latvia. An optimistic westerner has claimed that the Great Plains are bounded on the north by the aurora borealis, on the east by the rising sun, on the south by the procession of the equinoxes, and on the west by the day of judgment. Personally I think he was exaggerating; the Great Plains are only 90 percent that large.

The Missouri River is certainly one of the great rivers of the continent. It is longer than the Yukon, the Columbia, the Colorado, or the Red. Four State capitals are situated on its banks. With its tributaries the Missouri River drains part or all of 10 States and two provinces of Canada. It is one of the crookedest rivers in the country, and in this rivals the Mississippi. It has been said, according to Stanley Vestal, that of all the variable things in creation the most uncertain are the action of a jury, the state of a woman's mind, and the condition of the Missouri River.

When I was growing up the State of North Dakota built a bridge over the Missouri River north of Bismarck at a cost of half a million dollars. The following year when the ice broke and began flowing downstream there was a jam some miles above the new bridge. The water was backed up for miles behind a dam of ice. The pressure of the impounded waters almost forced the river into an alternate channel which would have left the bridge high and dry a mile away from the main stream. As one North Dakota engineer said: "I spent 2 years putting a bridge over the Missouri, and it looks like I will spend every year from now on keeping the Missouri under the bridge."

RIVER-CONTROL PLAN

Since the people of the United States have learned how to control rivers, a vast and magnificent plan to harness the 2,500 miles of the Missouri main stream and many times that mileage of tributary streams has been projected.

Programs of the Bureau of Reclamation and the Corps of Engineers call for the ultimate construction of 105 dams to provide power, irrigation, navigation, flood and silt control. Five huge earth-fill dams are to be constructed on the main stream of the Missouri, one of which will create a reservoir 200 miles long and another a reservoir 100 miles long. Dams on the tributaries vary in size, but some will be as high as 200 feet.

These great structures, together with their related works, including canals, power plants, construction camps, pumping stations, and so on, constitute a colossal engineering program. With the cumulative changes in the territory surrounding each project that are sure to accompany the development of this program, one may anticipate a vast alteration in the landscape of the Missouri Valley and in the social and economic life of its people.

A generation from now the Missouri Valley will present a vastly different appearance than it does today.

NATIONAL PARK SERVICE AND THE FLOOD-CONTROL PROGRAM

What does the National Park Service have to do with this vast flood-control program? Seventeen units of the National Park System are situated in the Missouri Basin. Four of these are national parks, including Yellowstone, Rocky Mountain, Wind Cave, and Glacier; 11 are national monuments, including Scotts Bluff, Fort Laramie, and Custer Battlefield; and 2 are national memorials, 1 of which is Mount Rushmore.

The first national park established in the United States, and therefore anywhere in the world, is in the Missouri Basin. This park is, of course, Yellowstone. The first national monument, proclaimed by Executive order after the enactment of the Antiquities Act of 1906, is in the Missouri Basin. This national monument is Devil's Tower, in Wyoming.

It is the primary responsibility of the National Park Service, in respect to the Missouri Basin water-control program, to preserve these natural and scientific resources, which have been established as permanent units in the national-park system, unimpaired for all time so that this generation and all future generations may enjoy them to the full.

I am happy to report that, so far as I am aware, none of the 105 flood-control projects in the Missouri Basin will directly affect the permanent preservation of any area in the national-park system.

Such a statement cannot be made, unfortunately, for all the national park and monument areas outside the Missouri Basin. But it is true that within the basin the national-park system, so far as we now know, will not be affected adversely by any contemplated water-control project.

On the other hand, many new recreational resources of the active kind will be developed and made available.

HISTORIC ITEMS IN RESERVOIR AREAS

The National Park Service has a second concern with the flood-control program. Upon the request of the Bureau of Reclamation and the Corps of Engineers, detailed studies of the recreational potentialities of the numerous reservoirs that are to be developed in the comparatively dry and treeless plains country have been initiated by the National Park Service. These studies, begun more than 2 years ago, are being actively prosecuted at the present time and constitute a significant contribution of this Service to the planned use of water resources in the Great Plains area.

Hardly had these recreation studies begun when it became very evident that the projected reservoirs would seriously affect the conservation of important historic, prehistoric, and paleontological remains found in the valleys where extensive land areas are to be inundated, unless recovery measures could be speedily adopted.

It is estimated by archeologists that 80 percent of the Indian archeological remains of the United States are to be found in 2 percent of its area, namely, along the great river systems. This is, of course, very natural. The Indians traveled the water courses, hunted and fished there, farmed there, built temples there, and there they buried their dead. Evidences of this primitive life survive in the form of village sites, camp sites, mounds, petroglyphs, pictographs, burials, and in other forms. From this evidence, and from this evidence alone, can the story of prehistoric America be reconstructed, including the slow steps of primitive peoples to their artistic and technological peaks, and their subsequent mysterious decline and ultimate disappearance.

This evidence of prehistoric America is of great human and scientific value. It is part of our national heritage, and belongs to the people. Archeological evidence is a natural resource as much as water power, forests, and soil, and it can be turned into scientific and educational value and enrich the Nation. The record of prehistory to be found in these surviving remains is unique and once destroyed can never be replaced.

Conscious of the need to conserve these values, and stimulated greatly by the Committee for the Recovery of Archeological Remains formed by professional associations, the National Park Service, and the Smithsonian Institution entered sometime ago into an agreement to conduct surveys of archeological and paleontological sites that might be inundated and lost as a result of the flood-control program.

With excellent support from the Bureau of Reclamation and the Corps of Engineers, preliminary surveys were begun by the Smithsonian Institution in July 1946, under the general direction of Dr. Frank H. H. Roberts, Jr. The field parties were placed under the direct supervision of Dr. Waldo Wedel, of the Smithsonian Institution.

WHAT HAS BEEN FOUND

What has been found by the preliminary Smithsonian Institution and National Park Service survey of the Missouri Basin to date?

During the 8 months since last July, preliminary archeological and paleontological surveys of 28 projected reservoirs have been initiated. Of these 28 projects, 9 are under construction, and 19 are in advanced stages of planning.

Preliminary data show the existence of 300 Indian village sites along the main stem of the Missouri River, many of which will be directly affected. These villages are both open and fortified in type and may be from 100 to 500 years old. Several hundred other sites are also known to be situated in areas on the main stream or along tributaries where they also may be affected by the flood-control program, including camp sites, ossuaries, pictographs, petroglyphs, bison falls, and other evidence of primitive life.

I shall now describe a few kodachrome slides provided by Dr. Waldo Wedel of the Smithsonian Institution, to exemplify the problem as a whole.

THIRTY-FIVE PREHISTORIC VILLAGES IN OAHE

One slide shows an airplane view taken within the area of the great Oahe Reservoir in South Dakota. The Oahe Dam will be located some 50 miles north of Pierre, S. Dak., on the main stream of the Missouri. It will create a reservoir 200 miles long, reaching almost to Bismarck, N. Dak.

Preliminary surveys of this reservoir area show that not less than 35 prehistoric village sites will be submerged at full pool. Many of these Indian village sites are unusually large, occupying from 5 to 50 acres, and containing refuse deposits, house pits, and other features. None of these sites has been comprehensively excavated. Together, these prehistoric remains, according to Dr. Wedel, constitute one of the richest and most important archeological areas north of Mexico.

In the foreground of this airplane view is a roughly circular area known as the Buffalo Pasture site. This prehistoric Indian village site is located near the upstream tow of the proposed Oahe Dam. It occupies an area approximately 175 by 125 yards in extent. It is surrounded by a ditch 7 to 10 paces wide and 3 to 6 feet deep. Within the rampart are 30 to 40 house pits.

Preconstruction operations at the Oahe Dam, and particularly earth borrowing, may destroy this prehistoric village unless archeological excavations are started in the near future.

On the other side of the Oahe Dam location and near to it, is the Scotty Phillips ranch site, another prehistoric Indian village shown in another airplane view. The primitive remains surviving here occupy an area estimated to be 125 by 75 yards in extent, surrounded by a ditch 5 to 6 paces wide, and 2 to 5 feet deep. Within the enclosure are found 18 house pits and many smaller depressions. This important site will be destroyed when the moving of dirt for the south spillway of the Oahe Dam begins.

RACE AGAINST TIME

Salvage archeology is a race against time. Even the preliminary surveys carried out so far were undertaken late, long after the general flood-control program was already underway. Twelve months must elapse from the time a financial estimate of the cost of even a preliminary archeological survey is submitted to the Government before the appropriated funds are available to begin work. After the preliminary survey is completed, another 12 months is very likely to elapse before funds for comprehensive excavation become available. Excavation work may be delayed further by slowness in securing Federal title to land on which the excavations must be carried out.

It is obvious that the recovery of important scientific data must be carried forward in a manner commensurate with the unique and irreplaceable character of the data involved. Painstaking care takes additional time. Unexpected finds may divert or alter the course of an excavation once it is in progress, and create new problems. Engineers have a way of speeding up construction schedules so that the anticipated length of time during which scientific records may be recovered may be shortened unexpectedly. All these factors together with the usually slow processes of Government make doubly and trebly urgent the pressing forward of this program before it is too late.

So far we have considered only paleontological and archeological remains. Many persons underestimate the historical antiquity of life in the Missouri Valley and the long lapse of time which has passed since the earliest days of the white man's exploration there. I believe I am right in saying that Father Marquette was the first white man to have sighted the Missouri River and to have reported the fact. He first saw it in June 1673.

To get some idea of how long ago that was, let me remind you that in 1673 John Milton was still alive and Charles II was on the throne of England. In France, Louis XIV was building Versailles, and 11 years were to go by before Peter the Great mounted the throne of Russia. In America, Miles Standish, one of the Pilgrims, had been dead only 17 years. Only 7 years had passed since the New Netherlands became an English colony. Just a year before Father Marquette glimpsed the Missouri, the Spanish had begun building the Castillo de San Marcos in St. Augustine. Eight years were still to pass before William Penn's charter, and 20 years before the witchcraft episode at Salem, Mass. In other words, the Missouri Valley has a long and respectable history of its own and is not quite the new country easterners are like to believe.

HISTORY FOLLOWS VALLEY

The course of history, as the course of prehistory, tended to follow the river valley. It was a route for explorers. Here were located the early fur-trading posts, the Indian agencies, the military posts, and the pioneer settlements and villages which later became towns and cities.

Beginning last July, the National Park Service initiated a survey of historic sites and buildings likely to be affected by the Missouri Reservoir program. Mr. Merrill J. Mattes, a historian of long and valuable experience in the history of the West, was assigned to this undertaking and for the past several months has been collecting data from his base of operations in our region II office at Omaha.

I will not attempt to summarize all of the findings which Mr. Mattes has made to date, but instead will illustrate with slides recently secured from the United States Signal Corps some of the western military posts which will be directly or indirectly affected by projects which are high on the construction program.

Slide 1 is a view of Fort Randall in what is now South Dakota, the site of which is situated directly at the base of the Fort Randall Dam. Fort Randall, an active military post from 1856 to 1892, was one of a strategic chain of frontier posts which included Forts Leavenworth, Riley, Laramie, Kearney, and Ridgely. It played a leading part in the Indian War, 1862–66.

Here you see the Twenty-fifth Infantry on dress parade at Fort Randall in 1880.

Slide 2 is another view showing Company B of the Twenty-fifth Infantry on dress parade with Captain Bentzoni.

Slide 3 shows Sitting Bull, who led his warriors in the Battle of the Little Big Horn, is shown here with his family as a prisoner at Fort Randall, Dakota Territory, in 1882. Captain Bentzoni is on horseback in the background.

Only one building of old Fort Randall is left. Portions of the chapel survive and, according to present plans of the Corps of Engineers, it will be restored. The site of the fort is immediately below the great dam and may be affected by spillway construction. Plans are under way, in addition to the projected work on the chapel, to recover historical material from the site by excavation, to mark the foundations of certain structures, collect records, and to develop a museum and exhibit program.

The site of old Fort Randall will not be a unit in the National Park System. It will be preserved through the Corps of Engineers or an appropriate State or local agency. But it should be carefully noted that even elementary preservation is dependent upon the expenditure of funds for this purpose in the very near future. Fort Randall is now under construction, and the old fort site must be cared for from the beginning of clearing operations if its full value is to be rescued.

Slide 4 is a view of an Army detachment pitching camp at Fort Bennett, S. Dak., located on the west side of the Missouri, perhaps 40 miles above Pierre and within the Oahe reservoir area. Fort Bennett was established in 1870 and abandoned in 1889. Among other buildings it had barracks for two companies, officers' quarters, guard house, three storehouses, and two blockhouses, all built of cottonwood logs.

Slide 5 is of Cheyenne Indian Agency as located at Fort Bennett and as it looked in 1876.

Slide 6: Proceeding on up the Missouri, we come to Fort Totten, 1867–90. Situated on the southeast shore of Devil's Lake, Dakota Territory, Fort Totten will not be directly affected by the flood-control program, but will be indirectly influenced by developments in the vicinity. It was established as a military post in 1867 by Gen. A. H. Terry. The original fort was constructed of logs which were later replaced with brick buildings, so that it came to be known as one of the best-built forts in North Dakota. It was used principally as troops' winter quarters and housed from one to five companies of soldiers at a time. These troops were occupied in keeping the Indians in check, protecting railroad survey parties, and the International Boundary Commission.

Slide 7: Still further west is Yellowtail Canyon on the Big Horn River near the Montana-Wyoming boundary. This view shows the spectacular character of canyon topography. Here a Smithsonian field party has found much archeological evidence, including fire hearths, rock circles, quarry zones, flakes, and scattered artifacts, as well as rock shelters.

Slide 8: Three-fourths of a mile below the Yellowtail Canyon and dam site is the site of old Fort C. F. Smith, 1866–68. This fort was the northernmost of three military posts established by the United States Government in the summer of 1866 in an effort to protect travelers along the perilous Bozeman Trail. The other two were Fort Reno and Fort Phil Kearney.

This view is from a sketch by Anton Schonborn as redrawn by Captain D'Ismay.

These slides give only a fragmentary conception of the effect of the Missouri flood-control program upon historic sites and buildings. A better conception is provided by a recent statement submitted by Mr. Mattes as part of a preliminary report on the Oahe Reservoir in South Dakota:

"SUMMARY OF SITES IN OAHE

"Following is a highly compressed summary of the more significant sites involved in the Oahe Reservoir, all in South Dakota: The Lewis and Clark Expedition of 1804–6, a primary historical event, left 18 recorded camp sites within the reservoir area which have been identified. The early fur trade, which became the vehicle of western exploration and discovery, is represented by Valle's post (1804), Fort Manuel (1812–13), Fort Primeau (1861), and Ashley Island, the setting for the bloody clash between Arikara Indians and American soldiers and fur trappers in 1823, which precipitated a new era in fur trade history.

"The surviving 'Harney cabin' (1865) and the extensive sites of Fort Sully (1866–94) and Fort Bennett (1870–91) are reminders of the Indian wars and military occupation. The Cheyenne River Indian agency and the St. Stephens and St. Benedict missions on the Standing Rock Reservation are symbolic of cultural values important to the historic Sioux Nation.

"The period of early white settlement, during Dakota Territorial days, is richly represented by the Oahe mission (1874) and the Buffalo pasture of Philips ranch in the immediate vicinity of the dam site, and by such river ghost towns as Fairbank, Forest City, Scranton, and Le Beau.

"The immensity of the Oahe Reservoir project, in effect obliterating the immediate valley of the Missouri River for over 200

miles, prompts the historian to sound a note of warning. Even though we may be able to photograph, chart, study, excavate and otherwise preserve certain fragments, the disastrous effect of the reservoir on important local and regional historic and cultural associations along the main channel cannot be overestimated.

"From the national point of view, the sum total of the loss goes beyond the inundation of individual sites to consideration of the disappearance of this huge section of the natural river valley. America's first continental westward route, which saw the colorful procession of explorers, fur traders, missionaries, soldiers, exploiters, emigrants, and settlers who followed by dugout, keelboat, and steamboat in the wake of Captains Lewis and Clark."

How To Tell Fascism From Communism

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I desire to call attention to the following editorial from the Saturday Evening Post. It provides an intriguing and impressive answer to one of the most widely discussed queries in America, How To Tell Fascism From Communism. It provides an answer you will want to read and remember.

It has long been part of the Communist Party line in this country to accuse everybody who opposes communism of being a Fascist, a Hitlerite, anti-Semitic, tory, a monopoly-capitalist, or an imperialist. One good way in which to test the ideological background of some stranger about whose left-wing affiliations you have some question is to sound off in his presence against the sinister aspects of godless communism. If he begins replying in the Commie code words of the party liners, he may not be a Communist, but you can bet your bottom dollar that if he is a Communist he will lapse into the abusive lingo in which the Red Fascists have come to specialize. The Saturday Evening Post, therefore, does well to present its analysis of the kinship of fascism and communism.

Mr. Speaker, for a time one could distinguish between the basic tenets of fascism and communism by the varying lengths of the mustaches of the leading disciples of these totalitarian doctrines, but now that Hitler is dead, even that slim margin of difference has ceased to exist.

However, let the Saturday Evening Post tell its own story in answer to the provocative question, How To Tell Fascism From Communism.

[From the Saturday Evening Post of April 12, 1947]

HOW TO TELL FASCISM FROM COMMUNISM

It may not be too late to commend to puzzle fans Max Lerner's piece in PM pointing to a couple of shortcomings in the resounding apologia of Americans for Democratic Action, the latest coagulation of liberals. The principal misdemeanor was ADA's statement that it rejected association with Communists and Fascists alike. Mr. Lerner felt that the Communists, although they "believe neither in democracy or freedom," are "on the left" and "to cut the progressive movement off completely from the Communists and their sympathizers is—outwardly and temporarily—to weaken the forces of the left." This seems to leave us with the idea that to maintain freedom and democracy, it is necessary to keep up some connection with a group opposed to freedom and democracy. In any event, Mr. Lerner insists that "to lump the Communists with the Fascists is an atrocious reading of history, an invitation to chaos in international relations with Russia and eastern Europe."

There are, it is readily admitted, at least two major differences between communism and fascism. One is that the Fascists, either through carelessness or corruption, permitted a lot of people to escape from their slave states. These refugees were able to tell the rest of us what the Fascist "wave of the future" was like in practice. The Stalinist Communist regime has been tougher; very few escape, even today. Another difference is that, whereas the Fascist fifth column abroad had to depend on a handful of dubious Yorkville Germans and the American wives of broken-down Italian counts, the Communist fifth column includes some of the fanciest intellectuals of the day.

A footnote to this confusion is supplied by Arthur Koestler in an interview in the New Leader. Speaking of what has happened to the left, Mr. Koestler, who regards himself as on that side, said: "Today the left is silent about the crimes of Stalinist totalitarianism, silent by dint of its moral lassitude, because of its false allegiance; the left, by the sin of omission, becomes an accomplice of this eastern neonazism. The left is the prisoner of its own past."

Mr. Speaker, in the same edition of the Saturday Evening Post as that which contained the foregoing editorial I came across another discussion of the events of our times which Members of Congress may well read with profit. Credit should go to this largest of all American magazines for its astute analysis of a phenomenon of publicity which has largely been overlooked by the average American. The following editorial might well have been entitled "The Record Is Broken but the Anthem Lingers On." However, the erudite editors of this journalistic legacy of Benjamin Franklin have named their editorial Lame Duck Columnists Shellac the GOP.

Many Americans from coast to coast may have wondered at times why so many columnists and commentators make a business of concentrating critical blasts upon the Republican Party. Some have thought it to be malice; some have attributed it to ignorance or careless reporting; others have believed it to be the result of something more sinister or startling. The following editorial, however, allays these suspicions and attributes this tirade against Republicans to what appears to be a very natural cause—lame duck columnists like lame duck politicians are slow to relinquish their creeds and their causes. In due time, the great fields of radio and the press will certainly produce columnists and commentators who are more in tune with the times and whose commentaries upon the present are not poisoned or perverted by prejudices of the past.

Mr. Speaker, I commend to your reading and to the thoughtful reading of the Congress and the country the following diagnosis of the strange situation now existing in so many syndicated columns and over so many network broadcasts. Even stranger, however, is the fact that substantial business establishments, newspaper and radio enterprises, and great private profit institutions dig down into their treasuries to pay for the comments of folks whose counsel, if followed, would make impossible the continuance of these self-same profitable private ventures. Some day—perhaps too late—American business will surely realize that it plays with a fierce, uncontrollable fire, when it pays fat checks to support columnists and commentators who make it their main objective to criticize and condemn the business institutions of America. Unfortunately, big business learns its lessons very slowly—in fact, many have already forgotten that it was big business in Germany which gave Hitler his start and which supported his tirades against the establishments and order which made possible their survival.

Here then is an editorial which all should read and which many will want to clip for their scrapbook to have it available for later reference:

[From the Saturday Evening Post of April 12, 1947]

LAME-DUCK COLUMNISTS SHELLAC THE GOP

The Republicans have a rather thin control of Congress, but, because the voters had no way to elect a new set of newspaper columnists, the same old commentators continue to comment, most of them in tones unsympathetic to Republicans. Consequently, the newspapers are filled with endless chatter about how laggard the Republicans are, and how divided they are and how they have no policy—in short, how little they resemble the days when, if you take these critics seriously, everybody agreed with everybody else, the BYRD lay down with the young CABOT LODGE, and the MCKELLAR played in the CLAUDE PEPPER's den.

Actually, of course, the Republicans, taking them across the board from TAFT to MORSE and from BRICKER to SALTONSTALL, are no more divided than any body of men is certain to be when confronted with difficult and perplexing issues. But to hear the column pundits tell it, the GOP is "hopelessly split" because some of its leaders took Lilienthal while others felt that Senator MCKELLAR, in his long lecture course in anthropology covering human life from Adam to Lilienthaler Man, had cast doubt on whether the evolutionary process had reached its full fruition when it produced the former TVA magician. If a party can be split on the elevation of a bureaucrat to new responsibilities, then the Democrats would have disappeared long ago, ground to powder between Bowles and BILBO.

Senator WHITE, of Maine, who is a man of few words but much sense, made a short and unjustly neglected address in the Senate in which he added a few facts to the controversy over congressional and therefore Republican inefficiency. As far as we have seen, no Washington commentator noticed Senator WHITE's remarks.

Senator WHITE pointed out that the Reorganization Act compelled a basic change in the way Congress does business—a change which had to be put into effect by a party which had not been in power for 14 years. While this complicated task was being carried out, the deliberations of the new Congress were interrupted by the Bilbo case, which not even a Washington columnist so far has blamed on the Republicans. On top of that, President Truman handed the Senate, in the first month of its existence, a total of 8,177 executive nominations which

had to be acted on. This number is to be compared with a total of 11,056 nominations for the whole session of the previous Congress. Congress also received, in its first 3 weeks, a total of 472 bills, of which 8 have been passed. In the corresponding period of the Seventy-eighth Congress—1943, that era of harmonious and quiet efficiency—Congress received 591 bills and passed 3. Topping the whole argument, of course, is the fact that the White House and the Federal bureaucracy are still in the hands of the Democrats.

We hold no brief for the Republicans in Congress as the operators of a streamlined, well-oiled political machine. In the early part of the session, the columnists did attempt to show that Senator TAFT was trying to make the party into just that—a smooth, well-oiled political machine. When it looked as if the Republicans might have a machine, this was supposed to be bad. When the machine idea turned out to be nothing but democracy at work, the hammer boys detected chaos. Nothing if perfect, but our feeling is that the Republicans don't look so bad except to those who wish they weren't Republicans at all.

Asia Watches Democracy at Work in Philippines

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. MILLER of California. Mr. Speaker, the Washington Daily News of Thursday, April 10, 1947, published an article by Mr. William H. Newton entitled "Asia Watches Democracy at Work in Philippines." This is a splendid article and one that I trust will be read by Members of Congress at both ends of the Capitol.

The United States set a new pattern in international affairs when it gave the Philippine Islands their independence.

Our act was a rededication to the basic principles contained in the Declaration of Independence and implemented in the Bill of Rights.

Our act was the remuneration of a policy of imperialism.

Our act struck directly at those forms of government that fail to accept the dignity of the individual as the foundation of civilization and government.

ASIA WATCHES DEMOCRACY AT WORK IN PHILIPPINES

(By William H. Newton)

MANILA, April 10.—This brand-new republic, which has yet to celebrate its first birthday, is carrying the challenge of American democracy to communism in the Orient.

Millions upon millions of people in the Far East, oppressed for centuries under systems of ancient feudalism, today are preparing to choose between western democracy and Soviet communism.

REBUILDING UNDER WAY

In China, Japan, and India the conflict between the two systems is going on, by political means in India and Japan, by civil war in China. What happens here to democracy's newest and proudest offspring may help to decide the issue. The Oriental peoples involved constitute half the population of the world.

Democracy and independence in the Philippines is orchestrated by the steady pounding of hammers, the whine of saws, and the squawking horns of American jeeps. Temporary wooden buildings are going up everywhere to replace homes and offices wrecked in the fight for Manila. The city moves on little jeepneys, jeeps converted into small busses by the addition of wooden seats and tops.

The Philippines are recovering from the terrible devastation of the war. Things are a long way from perfect, but they're steadily getting better. The degree of recovery is probably greater than in any area of the world which was occupied by the enemy.

Here is the record to date:

The export of copra—the vegetable fat obtained from the coconut from which soap is made—is already above the prewar level.

Coastwise shipping has reached 60 percent of its prewar peak.

Of the 12 dividend-paying gold mines in operation before the war, 3 are again in production, and by the end of this year the mines will be producing 40 percent of their prewar capacity. The mining of gold represented 85 percent of all Philippines mining. Chrome mines are operating at 50 percent of prewar capacity. The smaller copper, iron, and manganese mines have not yet resumed operation.

Before the war the Japs controlled the coastal fishing. Their fishing craft were destroyed. But by constructing small craft of their own and obtaining vessels from the United States the Filipinos have brought the catch up to 30 percent of the prewar level.

By the next harvest the production of rice will be above the 1940 war figure. Production of corn is higher than before the war.

Production of hemp is about one-third of the prewar figure.

All these statistics must be considered in the light of the complete devastation suffered by the country. Manila itself was a battleground. All the buildings which they did not use as defense posts were deliberately blown up by the Japs.

CURRENCY SOUND

Prices are coming down. In May 1945, bread cost the equivalent of $2 a pound. Now it's 10 cents a pound. Rice, which in May 1945, cost $2.50 a ganta (5 pounds), now costs 70 cents a ganta. In 1945 cheap cotton textiles cost between $7 and $11 a yard. Now it's 60 cents a yard.

Because of the lack of construction materials, building costs are high. Most of the city's hotels were destroyed. In those that were left rates are astronomical—if you can get a room. Meat is still expensive because Australia, which used to supply the Philippines, has diverted her production to Britain.

But prices of things the average Filipino needs and uses slowly but steadily are being reduced. His wages are paid in national currency which is as sound as the United States dollar and backed by deposits. There's no printing press money here as in China and almost every other war-ravaged country.

GROWING PAINS

This new child of democracy isn't a perfect baby by any means. It suffers quite a bit from growing pains. Currently the fashion in the Philippine Congress is for everybody to accuse everybody else of graft and corruption.

American agencies, involving the United States Army and the Foreign Liquidation Commission, have not been exempted from criticism in this regard.

There is lawlessness and defiance of authority—heritages of the Japan occupation when it was a man's patriotic duty to oppose and defy the government. Young men swagger around the streets with pistols strapped to their belts and there are highway robberies reminiscent of America's old West. But lawlessness gradually is being brought under control.

The Philippines have received American help in their desperate struggle to rebuild their ruined land. That help has been effective. Compared with other war-torn countries the record of recovery and the record of this young democracy is impressive. It has got to be impressive.

Asia is watching.

New Deal OPA for Greece

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 15, 1947

Mr. BUFFETT. Mr. Speaker, Mr. Truman's proposed Manchurian incident, officially called Greek-Turko intervention, may become a reasonable facsimile of Japanese development for Manchukuo.

In becoming an American puppet state, Greece is to get New Deal OPA and WPA treatments promptly. Light on this project is found in the following article from the Wall Street Journal of April 24, 1947:

AMERICAN EXPERTS PLAN PRICE CURBS, RATIONING IN RETURN FOR GREEK AID—DRAFT OTHER REFORMS, FROM SOAK-THE-RICH TAX TO CONTROL OF LABOR, CURRENCY—PORTER REPORT ON THE WAY

(By Carl Thompson)

WASHINGTON.—The Greeks may have a phrase for it: Omicron Pi Alpha—which means just plain OPA.

Price control and rationing of consumer goods are high on a list of reforms Uncle Sam is likely to exact from the Greek Government in return for United States financial aid.

Specialists on Greece are now preparing a number of other economic plugs to stuff in holes they say drained off a good part of the $360,000,000 or more spent by UNRRA in that Balkan nation up to March 31.

"There've got to be some major reforms in Greece if the spending program there is to be successful," says one State Department official. "We don't want to pour good money after bad."

TAX AND CONTROL

The American planners suggest more "soak the rich" taxation, export and import controls reminiscent of United States wartime regulations, currency and banking reforms, and controls over wages and agricultural credits. And these suggestions, if adopted as firm United States policy, can be backed up by power to withhold the planned aid to Greece.

The experts want their economic program ready to function as soon as Congress votes final approval of the legislation to provide emergency funds for Greece and Turkey. The 67 to 23 vote in favor of the bill by the Senate this week is spurring the State Department's efforts to have an economic program ready to go when the measure gets a Presidential signature. The House will take up the bill next week.

The Truman administration contemplates spending up to $350,000,000 in Greece during the next 15 months. About $300,000,000 of this will come from the $400,000,000 Greek-Turkish aid measure now before Congress. Another $50,000,000 to $60,000,000 is

earmarked for Greece in blanket appropriations for foreign relief.

MR. PORTER'S REPORT

The base of the new Greek economic program will be an official report of the American Economic Mission to Greece headed by Paul A. Porter, former chief of the Office of Price Administration. This detailed study is still in preparation for the President and the State Department.

Here is background for some of the reforms the Greek Government is most likely to be asked to make:

1. Taxation: Increased income and customs taxes. At present only about 13 percent of tax revenues comes from income and inheritance taxes. Nearly 40 percent are raised by a levy on tobacco consumption.

2. Price control and rationing: There have been no such controls in Greece except for certain regulations on UNRRA goods.

3. Control of imports and exports: Many luxury goods have flooded Greece and drained its exchange reserves.

4. Currency regulation: Although a currency committee, largely dominated by British and United States members, has attempted to stabilize the Greek drachma, there is constant pressure to speed up the printing presses.

5. Wage and manpower regulation: Needed repairs to roads and railroads have been neglected, partly through inability of the Greek Government to pay labor enough in terms of purchasing power for consumer goods.

6. Governmental expenditures: The Greek civil-service system is under close scrutiny by our own bureaucrats. They see means for tightening the Greek budget by eliminating padded pay rolls.

7. Merchant-marine control: The Government up to now has exerted little control over sizable shipping interests who reportedly are accumulating profits abroad.

LATITUDE FOR THE PRESIDENT

The bill before Congress leaves almost entirely to the President the spelling out of terms on which Greek aid will be advanced. That was to be left to the mission detailed to Greece under terms of the measure.

Present plans contemplate an American Recovery Mission to be headed by one man, probably borrowed from the Army. But the State Department will have a determining voice in it.

There's still controversy in Washington as to how strongly the United States should swing its economic big stick to bring about internal reforms in the Balkan nation. One group within the State Department contends the sole aim of the $400,000,000 aid program is to stop Communist aggression. And, they say, it's of no concern how the money's spent, so long as it does that.

But another, apparently influential faction believes the Greek people, and even the present Greek Government, will willingly institute major internal reforms, if backed and urged by the United States. Proponents believe inflation in Greece is driving the people rapidly to the extreme left and the extreme right. Reform would lend strength to the moderate center, they believe.

THE CASE FOR CONTROL

The case for controls is backed up by such UNRRA reports as these.

"Only a small amount of food is on the general ration in Greece and only the rationed food is price controlled. These prices are considerably below the price level of necessary supplemental food such as meat, fats and dairy products. This means that, in order to live, a man must buy a good portion of his food on the open market at an estimated cost of three to five times the cost of his UNRRA ration * * * at least 15 percent of the Greek people have to sell part of their meagre ration (about 700 calories a day) in order to be able to afford the balance."

The Greek foreign exchange balance has been rapidly dwindling. Gold and foreign exchange holdings dropped from $170,000,000 on October 1, 1945, to $98,000,000 on March 7, 1947. And $84,000,000 of the $98,000,000 is in sterling balances, limiting its use to the British sphere where there is a shortage of goods on which it can be spent.

One UNRRA observer has called control over Greek imports a joke.

"In both Athens and Salonika, even smaller towns, tremendous numbers of Swiss watches are on sale. Store windows are full of Parker 51's, Dunhill lighters, new kodaks, nylon hose, and all the latest perfumes from France. Englishmen, who have been putting up with the austerity at home in order to build up their export trade are more than annoyed when they find huge quantities of fine English woolens in a country which is much worse off economically than their own. And you can buy good Scotch whisky anywhere."

Greater exports of Greek goods—running about one-third prewar volume—will be encouraged by the American mission. To boost exports of olive oil and other valuable Greek goods, including currants and raisins, sponges, liqueurs, leather, and some spices, the Greek Government may be persuaded to put into force strict inventory and hoarding regulations to pry out the holdings of exportable goods and convert them into foreign exchange.

Reforms Long Overdue on Wagner Labor Act

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star of April 18, 1947:

REFORMS LONG OVERDUE ON WAGNER LABOR ACT—NEW HOUSE BILL SEEN ATTEMPTING TO EQUALIZE ECONOMIC POWER

(By David Lawrence)

A strange psychology has been built around the effort to enact legislation regulating labor relations.

Thus, the bill passed by a majority of the House of Representatives—including a substantial number of Democrats as well as Republicans—has often been described in the news dispatches as severe or tough. If amendments were offered, they were usually referred to as an effort to ease the bill or to soften it.

Such phrases, used as they are occasionally even by the objective correspondents, emphasize the habit of thinking and writing that has been formed under the New Deal. Whatever tends to remove the severe restrictions imposed on employers is now called destructive of liberty or antilabor. One radio commentator from Washington in the early morning hours the other day spoke of the House bill as a man-eating bill.

The truth is that the Wagner Labor Relations Act, passed in 1935, was the most restrictive measure ever enacted on the subject of labor-management relations.

BLANK CHECK FOR 10 YEARS

Although for 150 years the subject of management-labor relations had always been regarded as one coming under the police power of the States, and not a single constitutional amendment had ever been passed by either House of Congress to allow the Federal Government to legislate on either wages or working conditions or strikes, except in transportation and strictly interstate business, the Supreme Court of the United States nevertheless upheld the Wagner Act in 1937 by a vote of 5 to 4 and applied it to virtually all businesses.

Under this decision and under the broad discretion then assumed by the National Labor Relations Board, scarcely a week passed when the Board did not issue a decision that really made new law.

For nearly 10 years the Labor Board and not Congress has been making the pro-labor laws. Now when Congress—which at last realizes that it had granted a blank check on labor relations—undertakes to prescribe standards and specify just what an employer or union can or cannot do, the left wing cries out in horror that the clock is being turned back to reactionary days.

A reactionary is one who believes in letting the state be master and restrict human rights, or one who upholds private mastery or monopoly of the goods or services of other individuals. A liberal is one who espouses individual liberty and opposes monoply. The left wing today insists on the right of monopoly for a labor union. It completely distorts the right to strike and calls any limitation on that right involuntary servitude. The right of an individual to work or not to work is the cardinal right of all. When two or more individuals band together, however, to coerce or intimidate or even to persuade others to quit work, this is a questionable right which the Constitution will protect only as long as exercise of the right does not damage the interests of other citizens by depriving them of the necessities of life.

INVOLUNTARY SERVITUDE

To band together as employers and fix prices or gobble up competitors is acknowledged to be monopoly, but for a group of citizens to form a labor-union monopoly and to control whether men shall or shall not work, as John Lewis does with the Nation-wide miners' union, doesn't seem to impress the left wingers as being a monopoly. Nor do they concede that there is any involuntary servitude when a miner is bound by his union's closed shop and can be read out of the union and deprived of a job if he refuses to obey Lewis.

Congress now is trying to prohibit the closed shop, but the left wing wants it preserved. The Republican majority in the House has yielded to the monopolists to the point of sanctioning compulsory unionization in the so-called union shop, where a worker is told by the employer at the time he is hired that after 30 days he must join the existing union or lose his job. Under the Wagner law at present it is an unfair labor practice for an employer to refuse to hire a man because he is a member of the union, but it is not an unfair labor practice for the employer to agree with a union to fire a worker who, after 30 days, refuses to belong to a union.

Isn't it involuntary servitude when a man can't retain his job without accepting union control of his livelihood? Even a conscientious objector against compulsory unionism loses his right to work in his own trade and industry.

To establish justice in these matters is not to pass a tough bill but to apply long overdue reforms. The House bill just passed has in it some faults, but its main objective is to correct inequities in existing law—not really to introduce new laws. An accurate description is to say the new House bill attempts to equalize economic power which has been thrown out of balance through the one-sided Wagner labor-relations law.

James P. Martin

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. HOEVEN. Mr. Speaker, in a special ceremony conducted at his home at Sutherland, Iowa, 99-year-old Civil War veteran James P. Martin was recently installed as State commander of the Iowa Grand Army of the Republic, of which he is the only surviving member. Amy Noll, of Des Moines, department secretary of the Iowa GAR, who was in charge of the installation, and members of other Sutherland organizations—the Women's Relief Corps, the American Legion, and the American Legion Auxiliary—together with many friends, also participated.

I met Commander Martin at a Memorial Day observance at Sutherland, Iowa, a few years ago. On that occasion I congratulated him on his long life and the splendid service he had rendered his country and his community. I little realized at that time that he would some day be the State commander of the Iowa Grand Army of the Republic and its sole survivor.

The community of Sutherland and the State of Iowa are very proud of the honor conferred upon this outstanding soldier and citizen. I am especially proud of the fact that Commander Martin is one of my most distinguished constituents and my personal friend. May God richly bless him and keep him in his declining years.

The Administration's Economic Policy

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Test for Free Enterprise," published in the Philadelphia Bulletin of April 23, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEST FOR FREE ENTERPRISE

In his address to the Associated Press, President Truman dwelt on factors in our national economy that self-evidently are of the highest importance. It is true, as he says, that private enterprise now bears the main responsibility for prices. That restraint in its use of the power to fix prices would benefit business as well as the entire community is beyond question. Some business leaders are strongly advocating price reduction. Others may be expected to join them, but it would be almost without precedent if voluntary action should bring about adequate restraint on the cost of living.

The settlements which have been made with labor are encouraging. The President's list of musts for business, labor, and government covers a lot of ground. If every factor in production should cooperate to the degree needed, private enterprise would score heavily in its contest with state-regimented industry. The few months to come will be a sharp test of whether industry's horse sense measures up to technical proficiency.

The facts plainly stated by the President put Congress under the obligation to scrutinize present policies as to spending, debt reduction, and tax reduction in the light of the considerable degree of inflation under way. These policies were largely framed for their political appeal. They may backfire on their projectors if a President markedly and increasingly in favor with the people can bring home to any party or any political leaders a measure of responsibility for the ruinous consequences which will occur if the price situation really gets out of hand.

Address by Maj. Gen. E. R. Quesada Before Charleston Chapter, Air Reserve Association

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most excellent and able address delivered by Maj. Gen. E. R. Quesada, commanding general of the Tactical Air Command, before the Charleston Chapter of the Air Reserve Association, at Charleston, S. C., on April 20, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure and a privilege to be the recipient of Charleston's hospitality. When a visitor to Charleston has been entertained as we have been today, he can be sure that he has received an honor of a sort infrequently bestowed—except in Charleston. Charleston welcomes strangers and sends them away with a sense of having been adopted.

I think that Charleston is successful in giving visitors the sense of being welcome and of belonging here, because of the mood it consistently maintains. There is no other city in which the dominant mood is so completely one of repose and of successful adjustment to the problems of communal and personal living. At no time during the year is this mood so easily recognized as during the Azalea Festival.

This mood of peace, which every visitor is certain to assume, is characteristic of Charleston—and is not deceptive. It may seem to some a strange mood for a town with such a splendid military history and so strong a military tradition.

Charleston, that has seen so much of war, has also witnessed the introduction of new weapons. During the War Between the States, the Confederate submarine *Little David* sank the U. S. S. *Housatonic*, in the first such action in the history of warfare. During that same unfortunate war, the Federal troops, just east of Fort Johnson, installed a cannon of a new type, the Swamp Angel. It shelled the city from the tremendous distance of 7 miles. The Swamp Angel introduced for the first time artillery with shells that could explode and not destroy merely by impact.

As much a part of Charleston's history as her role in four major wars and numerous minor ones is the great military academy whose name is almost synonymous with the name of the city. The Citadel has trained many a leader for the armed forces and for the Confederate States. The cadets of the Citadel manned the cannon on the battery that forced the U. S. S. *Star of the West* to retire when it sought to bring supplies to the Federal garrison on Fort Sumter. The graduates of the Citadel have distinguished themselves as leaders in the community and in the civic life of the Nation, as well as in the profession of arms. Today the president of the Citadel is Gen. Charles P. Summerall, one-time Chief of Staff of the United States Army. In his person there is provided a strong link between Charleston and our national Military Establishment.

I think the lesson to be learned from any attempt to reconcile the quiet atmosphere of Charleston with her stirring military history and her noble military traditions is a lesson which all Americans need to take to heart. It is the lesson of preparedness—a realization of the fact that the armies which fight our wars and secure our Nation's integrity must be trained in peace if they are to be prepared to defend us in war. Leaders cannot be trained after war breaks out. Forts that are not built will not defend us in the event of sudden attack. Weapons that have not been designed cannot be used against an aggressor.

What Charleston has learned from her long experience and her wise leaders is what the Army Air Forces asserts as its chief doctrine. A strong nation is a peaceful nation. If America is to be peaceful, she must be strong—in her Army, her Navy, and her Air Force. The citizens who cried so loudly for a rapid demobilization after VJ-day do not yet understand to what a state of ineffectiveness that disintegration brought us, and they face with complacency our present state of preparedness.

World War II was a global war, fought in the Aleutians as well as the Marianas, in Norway as well as in Africa. It witnessed the perfection of the airplane as an instrument of war and as a means of transportation. One aircraft, carrying a single atomic bomb, gave the Japanese an excuse for surrendering, unconditionally. Our Air Transport Command set up a schedule of world-circling flights that made air travel seem commonplace in all parts of the globe. We flew military matériel from India over the Himalayas to the Chinese. We flew troops and matériel across the Atlantic and the Pacific. President Roosevelt traveled by air to confer with leaders of our allies at Casablanca, Teheran, and Yalta. President Truman joined Premier Stalin and Prime Minister Churchill for a conference and a victory celebration in Berlin. We established bases in Brazil, in the Azores, in Iceland and Greenland—in fact, wherever there were land masses suitable for bases our airplanes followed.

The old definition that a straight line is the shortest distance between two points has a special meaning to us. Ships can go only where channel conditions permit. Surface vehicles can travel only where physical barriers do not exist or have been overcome—by the building of roads, tunnels, bridges, and the like. But aircraft fly above such limitations and in defiance of nature's hazards, and modern long-range aircraft go the shortest distance from point to point, which, in the navigator's phrase, is a great-circle route.

Aircraft do not fly east to go from New York to London just because ships sail in that direction; aircraft fly north. Likewise, aircraft fly north instead of west to go from San Francisco to Japan. Last October a B-29 Flying Fortress—of the type that had carried the atomic bombs to Hiroshima and Nagasaki—flew nonstop from Hawaii to Cairo, Egypt, a distance of 9,444 statute-miles. The pilot of this aircraft chose naturally to follow the shortest route between Hawaii and Egypt; he flew by way of Alaska and across the Arctic Circle.

The lesson to be learned from that flight is not merely that an aircraft can fly nonstop so great a distance. It is that aircraft do not follow the routes of ships or land armies, and that attack by air can come over regions uninhabited and uninhabitable by man.

This is the polar concept, which aviation offers as a true concept of the world in which we live. We have replaced the old concept of the Mercator projection and of our grade school atlases. Throw away your old latitudinal projection maps and look at a polar projection map. Moscow is north of New York City. Vladivostok is north of San Francisco. The industrial countries of Europe and of Asia, that have been the aggressors in the world's most terrible wars, lie north of the United States and Canada, beyond the Arctic regions and the North Pole. Should attack come from any one of these countries again it would not come from the west, as it did at Pearl Harbor, or from the east, whence the Germans sought to paralyze our shipping. It would come by modern long-range aircraft or modern long-range aerial missiles across the polar wastes. Oceans and coastal defenses no longer protect the continental United States. A good neighbor on our northern border is no guaranty against attack from that direction.

In the world in which we live, changes have come to us. Charleston was on the outer rim of our continental defense during the American Revolution. During both World Wars German submarines approached near, indeed, to the coast and to Charleston Today Charleston is no more on the periphery of our defense than is Rockford, Ill. No city in the United States is invulnerable to attack by air. The industrial cities of the Middle West, which contributed most of the matériel of our World Wars, might well be the first targets of a new attack. Experiences in World War II taught us, and should have taught, possible aggressors, that armies can be defeated in the field if the industrial potential of a nation is paralyzed. Our strategic bombing of German and Japanese industry may well have set the pattern that a future enemy might choose to follow in an attack on us. It is certainly a logical pattern.

Against such an attack as this the Army Air Forces seeks to employ but a single weapon—and that is a strong air force, adequately staffed, adequately trained, adequately equipped to meet offense with offense, and to make immediate retaliatory action the method of defense in the United States. Our Air Forces should be able to assure the national suicide of any aggressor.

The building and the maintenance of such an air force necessitates primarily a well-integrated organization. The Army Air Forces has, in its three combat commands and its five supporting commands, established itself in accordance with lessons learned and experience gained in World War II.

The Air Defense Command is charged primarily with the defense of the United States and with the training of our civilian components to become an effective element of our regular Air Force, capable of immediate mobilization.

The Strategic Air Command is a global striking force, unrestricted geographically, which must be prepared to conduct long-range operations in any part of the world at any time, either independently or in cooperation with land and naval forces.

The five supporting commands are established to supply the three combat commands with matériel and with trained personnel, and to insure them of the needed services of transportation, communication, etc.

No organization, to be effective, can exist on paper alone. An air-force-in-being, supported by the civilian components, is an essential of national security.

The rapid demobilization that reduced the Air Force from a total of 2,314,000 officers and men on VJ-day to approximately 340,000 at the end of 1946, robbed the Air Force of many of its most experienced, its most highly trained technicians, and reduced its effectiveness to a state that is difficult to measure, but that our enemies as well as ourselves can easily recognize. In our Air Force only 70 percent of our officers are pilots, and over 55 percent of our officers and men, exclusive of our pilots, must be technically trained in long and difficult courses. When such an organization loses its highly trained men as rapidly as we did, its effectiveness cannot be maintained.

The Army Air Forces can, of course, train new men, but training takes time, and our training facilities have had to be rebuilt. Today the Army Air Forces has less than 75 percent of its needed personnel, and among the numbers it has many are engaged in the job of disposing of surplus property left over from World War II or otherwise performing tasks that contribute nothing directly to the combat effectiveness of our interim Air Forces; as such they are ineffective.

The demise of selective service has increased the problem of recruitment. For one reason or another, voluntary recruiting, in spite of all the inducements offered, is not giving us the men we need. Universal training, which is currently considered, may solve the problem of creating for us a reservoir of trained personnel from which to draw in time of need. The problem is one to which there are numerous solutions. I do not suggest or endorse any one, but I do want to stress the problem.

The Army Air Forces that needs men also requires weapons. Today our program for procuring the needed weapons is facing a crucial test. Cuts in the budget for the Army Air Forces threaten the very existence of the program that has been projected. Scientific research, engineering planning, and technical developments are expensive, very expensive; but how much less expensive, in dollars, lives, and misery, it is compared to defeat, I will leave to your imagination. Those of you who have seen Germany or Japan will be the most capable of drawing the comparison.

The Army Air Forces has contemplated the establishment of a program for scientific research and development even before VJ-day. In January 1946 the Office of Research and Development was established on a deputy chief of staff level. The sole duties of this office, General Spaatz stated, "are to guide and control a program of research and development, and to maintain close liaison with Government research agencies." This office keeps informed of what is happening in private and public laboratories throughout the land, and investigates the possibilities of the application of new knowledge and new techniques to military use. The modern airplane is a triumph of science and engineering. New discoveries, or the application of former developments to new uses, may yet give us aircraft and weapons that will make our present methods outmoded. The Office of Research and Development is especially interested in the application of jet- and rocket-propelled aircraft, and the development of pilotless aircraft and guided missiles.

At Wright Field, Ohio, headquarters of the Air Matériel Command, the application of scientific developments to Army Air Forces matériel and equipment is planned and supervised. At the various bases of the Air Proving Ground Command, from Florida to Alaska, the equipment is tested. By one means or another the Army Air Forces makes certain that its weapons will be the finest and the most effective possible.

This, then, is the postwar Air Force with which we hope to secure the integrity of the United States; an air-force-in-being, with its full complement of personnel, adequately trained to carry out their responsibilities, and supported by a program of scientific research and development that will insure our having the most effective weapons, aircraft, and other equipment.

Our Air Force cannot exist without the fullest support of America's citizens, who must always, as General Arnold reminded them, make air power their business. "In the final analysis," General Arnold said, "our air striking force belongs to those who come from the ranks of labor, management, the farms, the stores, the professions, the schools and colleges, and the legislative halls. It is the American people who will decide whether this Nation will continue to hold its air supremacy."

There are three direct ways in which the American people can make sure that our Air Force will remain strong. First, through its Representatives to Congress, it can assure adequate support for our military needs.

Secondly, the American public can make sure that trained personnel will be available at all times in adequate numbers to fulfill the manpower requirements of the Military Establishment. Our economy does not permit us to maintain a large standing Army; but neither does our economy permit us to engage in such expensive wars as World War I and World War II. Maintenance of a strong Military Establishment is the premium we pay on a national insurance policy. It is cheaper in our national defense structure, as it is in any business structure, to pay the premiums than to replace the property when it has been destroyed.

Third, the American people can support the armed services, and specifically the Army Air Force, by voluntary enrollment for reserve training in the Air National Guard or the Air Reserve. Together they are a reservoir from which we must replenish and augment our Regular Establishment in time of war. A flow of such reservists into the combat zone must start immediately after attack, or it will be too late.

Unfortunately, the cuts in appropriations that have threatened the reduction of our Regular Establishment, and which threaten still further reduction, have already effected a serious curtailment of our reserve program. Without option in the matter, the Army Air Forces has had to reduce the active units of the Air Reserve from 70 to 41, and a corresponding number of AAF bases have had to be closed. The Air Reserve training program has been crippled; there is no denying it. How seriously crippled, it may take another war to reveal.

In the selection of bases, the Army Air Forces has chosen to maintain the bases where facilities for the most effective training of the greatest number of Air Reserve personnel are already available, and with regard to proximity to densely populated areas. The units retained are in most cases those with the largest enrollments of reservists. Twenty States are now left without Reserve bases. In most of those 20 States there are units of the Air National Guard. The location of an Air National Guard unit is the prerogative of the State concerned, and the wishes of State authorities must be recognized in instances where units of both the Air National Guard and the Air Reserve are not justified under the reduced program. If an Air National Guard unit exists in your State but not in your city, it is because State officials put it elsewhere. If the Air Reserve

base in your State has been closed, it is because an impartial survey of the situation left the Army Air Forces without alternative in the matter.

The closing of a base does not end the opportunities of a reservist, however, nor should it kill his interest in the Air Reserve program. Rather, it should serve as a challenge to his loyalty and his devotion, and an incentive to fight the harder to put the program across. Much can be accomplished by formal identification with the program. Membership in the Air Reserve Association is an announcement of intention to support the Reserve program. The bigger the membership of the Air Reserve Association, the more weight will the Organized Reserve have throughout the Nation. The prime objective is a strong national defense, unweakened by false economy.

Cheap national defense is the most expensive thing in the world. It cost us hundreds of thousands of lives and $350,000,000,000 in World War II, when the debt—the money debt—was still unpaid on World War I.

The last place to economize is in our Reserve training program. A well-trained reservist costs the taxpayer far less than the trained Regular. Don't forget that the reservists constitute 90 percent of our fighting forces in tim eof war.

In the face of a possible national disaster it is of small comfort to be reminded as a great poet once reminded himself, that: "They also serve who only stand and wait."

It is a great comfort to us in the armed services, to whom national security is our life's blood to have the active support of your own Senator, Senator MAYBANK, and your own governor, Governor Thurman.

In the person of Senator MAYBANK we have found an American well founded in our democratic principles and with a courage capable of supporting them. We like Senator MAYBANK.

In your governor, we find one capable of leadership in peace as well as in war. It is gratifying to us that the same type of man who landed on a Normandy beachhead in a glider on D-day is now engaged in affairs of public interest.

Your own mayor attended West Point, so naturally we consider him among our friends.

Your Congressman, Mr. RIVERS, in addition to his other contributions, is now a member of the House Naval Affairs Committee.

Your own Senator JOHNSTON is naturally aware of what war means and so, therefore, it is assumed that he is anxious to avoid a recurrence. He saw service as a sergeant in World War I.

Those remarks directed to your own leaders and legislators are not made with a view of polishing the apple; they are made merely as an expression of gratification on our part in finding that our leaders are men of understanding, with that understanding having been gained through contact with the horrors of war, as well as a high intellect.

I would like to conclude with a word of appreciation to the Charleston chapter of the Air Reserve Association and to all Reserve officers here for the splendid work that is being done in this area. I know that I also express the thoughts of General Spaatz when I say that the Army Air Forces is deeply appreciative of your many efforts—efforts constantly directed toward insuring the maintenance of an adequate air force in being and an air force second to none. Your active interest and continued participation in furthering the cause of national defense reflects your genuine interest, as citizens, in the affairs of our Nation and is indicative of the patriotism with which you are imbued. This is a mighty fine sign and augurs well for the future of our democracy.

I would like to leave one final thought with you, and it is simply this: Air power was established as a decisive factor in war by the Royal Air Force and the Army Air Forces. What irony it would be if the very countries that created air power were destroyed by it.

Thank you.

Polish-German Frontier

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter that was sent to President Harry S. Truman by the Polish Roman Catholic Union of America regarding the Polish-German frontier:

POLISH ROMAN CATHOLIC
UNION OF AMERICA,
Chicago, Ill., April 17, 1947.

Hon. HARRY S. TRUMAN,
President of the United States,
White House, Washington, D. C.

MR. PRESIDENT: As chief executive of the Polish Roman Catholic Union of America, the oldest and one of the largest organizations of Polish-Americans, I feel that it is my duty to raise a voice of protest at this crucial moment when members of our Government are trying to perpetrate an additional injustice on the heroic Polish Nation, the land of our forefathers.

I have read with astonishment and indignation the proposition of our Secretary of State, George C. Marshall, at the conference in Moscow: First, for the return of some agricultural territories along the present German-Polish frontier to Germany; and second, for placing industrial Silesia under international control. In the opinion of the Secretary of State, these changes of the present status are necessary for the rebuilding of German economy.

I venture to say that proposals of the Secretary of State create an absurd situation and add new injustice to the betrayals of Poland at Teheran and Yalta.

Our Government has agreed to an unprecedented annexation of almost half of Poland by Russia—without even consulting Poland, and against her protest; now our Government proposes to strengthen Germany, again at the expense of Poland.

During the war we have exploited Poland's valor and Polish blood, promising her and the rest of the suffering world freedom and independence; now we are displaying more concern for the welfare of our own and humanity's enemy than for the welfare of our first, and most faithful, and now most unhappy ally.

If we have wrongly deprived Poland of almost half of her eastern territories, then we should at least leave her those western territories, which have been assigned to her at Potsdam, to which Poland has undeniable rights. It is important to the cause of justice and peace that we give Poland a chance of regaining sound economic equilibrium and independence.

Internationalization of Silesia will not contribute to the future peace; on the contrary, it will surely endanger it, by remaining an open ground for political strife, as was so sadly illustrated by former experience.

Mr. President, when you recently proclaimed a new policy of defending the world against encroachments of Communist tyranny, we had hoped that at last the United States is beginning to embark upon a sane diplomatic course. Now we fear that we are returning to the old system of groping in the dark.

If we are willing to help Greece and Turkey, why at the same time are we destroying all hope for Poland? What is the use of rebuilding Germany at the expense of our betrayed friends when recent past has clearly proved her incorrigibility?

The vacillations of American foreign policy fill us with fear for the future of our country and of the world. We ask for a bold and fearless policy of justice to our friends and all possible help to all nations which form ramparts against tyrannies.

Mr. President, why does the present administration's policy tend to eventually annihilate the Polish nation? Why is it that Poland's rights and territories are repeatedly questioned? Our Government is protecting the rights of Austria, Italy, Hungary, Yugoslavia, Greece, Turkey, Germany, and other nations, but is constantly neglecting and trampling upon the rights of a faithful ally that has contributed proportionally more to the final victory in the recent war than any other nation. We feel that Poland is entitled to just compensation for her sufferings and losses, instead of punishment by a new partition of her territory.

I sincerely hope that our Government will strive tc undo past errors committed against this old and true friend of our Nation, thus restoring our record as champion of freedom, justice, and peace among nations.

Most respectfully yours,
JOSEPH L. KANIA,
President, Polish Roman
Catholic Union of America.

Wool Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein an article on wool legislation, written by Charles T. Lucey, appearing in the Washington News of April 24, 1947, as well as an editorial appearing in the News of the same day.

(By Charles T. Lucey)

The "wool boys" in Congress have devised a brand-new gadget for price-jumping. It can be fitted neatly into a piece of legislation. That's what they're trying to do now. There's the story—

About 10 days ago the Senate passed a bill providing that the Government's Commodity Credit Corporation c ntinue through 1948 to pay a support price of 42 cents a pound for uncleaned domestic wool. Cleaned, so that it can go into wool fabrics, that comes out at about $1.20 a pound.

But foreign wool, even after a 34-cent-a-pound tariff, can be sold here 10 to 12 cents a pound cheaper than domestic wool.

In recent years the Commodity Credit Corporation has piled up a huge surplus of domestic wool—more than 400,000,000 pounds.

It wasn't permitted to dispose of this wool at below the so-called parity price, and so was at a competitive disadvantage in relation to imported wool.

But still it managed to sell a lot of wool, taking a loss of $38,000,000 on it.

SUPPLY AND DEMAND—DROP

If all domestic wool had gone on the market, the wool price would have been forced down.

Thus while taxpayers provided money to meet the Government's losses on wool, they

paid more for woolen clothes and fabrics because the price-support program held up basic wool prices.

Then the House Agriculture Committee added its further price-jumping gadget. It directed the Secretary of Agriculture, whenever he finds proper cause, to levy an additional import fee on foreign wool to wipe out its advantage—despite a heavy tariff already levied—over domestic wool. With one-half to two-thirds of the total wool used here coming from abroad, the price increase would affect a huge volume of manufactured woolen goods.

The Secretary of Agriculture could do this whenever he found that lower imported wool prices interfered with the domestic price-support program. The additional import fee could go as high as half the value of the wool.

"INTERFERENCE" RIGHT AWAY

Congressmen seem to agree that this could mean slapping on this fee at once since, it is pointed out, there obviously is "interference" when the Government is left holding the bag with more than 400,000,000 pounds of wool, as is the case today.

Representative CLIFFORD HOPE, Republican, of Kansas, chairman of the House Agriculture Committee, conceded this proposal might have the effect of increasing prices of some woolen goods and that it was contrary in spirit to the reciprocal trade policy preached so long by the Government.

OPPOSITE TO H. T.'S APPEALS

Other Congressmen agreed that, as far as wool goes, it is contrary to President Truman's appeals to business to keep prices down.

Representative CHRISTIAN HERTER, Republican, of Massachusetts, charged that "in effect the import-fee proposal will mean an embargo on foreign wool, because the Secretary of Agriculture can fix prices high enough to keep foreign wool out until domestic wool is sold.

"There isn't a single manufacturer who can tell what price he may be paying for wool—the Secretary can, without formal or informal hearing, determine what the import price is to be. His decision would be final. It is no derogation of the Secretary to say he should not be given this kind of power."

Mr. HERTER contends the bill is contrary to Congress rules. He points out its import fee would produce tariff revenue, yet it did not originate in the House Ways and Means Committee but came, instead, from the Senate. By rule, the House acts first on all money bills.

Chairman HOPE says the bill may come to the House floor next week, and Representative HERTER says a determined fight will be made against it. But wool, politically, is strong.

SOMETHING MORE FOR WOOL

Unless a sufficient number of Congressmen say "no," the "let's do something for wool" boys are likely to perform an artistic shearing job on that much-clipped fellow, the American consumer. Charles Lucey's story, on page 10, tells the tale.

For a long time now the Government has bought wool at above market prices to help support western wool growers in a style to which they would never be accustomed if they had to compete with imported wool. Much of this the Government has sold, but it holds a 400,000,000-pound bag of wool on which it pays storage charges.

The loss to date on this program is $38,000,000—and that doesn't include increased costs to consumers from artificially supported prices.

The wartime emergency spigot is a hard one to shut off, and now the wool boys are back asking for support for domestic prices until December 31, 1948.

But that's not all. They're asking that the Secretary of Agriculture be empowered to lay an additional import fee on foreign wool over and above a 34-cents-a-pound tariff already levied—this new impost, up to 50 percent ad valorem, to be added whenever the Secretary thinks it wise.

It makes a joke of the foreign-trade expansion idea envisioned in the reciprocal-trade program, and a joke of congressional power to lay taxes. It ignores President Truman's pleas to hold prices down.

That bleat you hear is not from the sheep, Mister, but from the poor old consumer—whose interests so far haven't been considered in congressional debates on this issue.

John Taber: The Man

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Gould Lincoln has paid just tribute to our friend and colleague the gentleman from New York, JOHN TABER, in an article which appeared in the Sunday Star, April 20, 1947. The tribute which he passes to our friend is just, and demonstrates that the service he has been rendering this Nation down through the years is appreciated by many. Under leave to extend my remarks, I am including herewith this outstanding article by Mr. Gould Lincoln:

THAT MAN WITH THE AX IS LOOSE ON CAPITOL HILL—REPRESENTATIVE TABER SWINGS SAVAGELY AT THE BUDGET—LONG EXPERIENCE WITH APPROPRIATIONS GUIDES HIM

(By Gould Lincoln)

JOHN (Jack the Budget Killer) TABER is wielding the meat ax in the greatest economy drive the country has ever seen.

As chairman of the House Appropriations Committee this veteran Republican Representative from up-State New York is carrying a tremendous burden. He is initiating every move to cut the Truman budget—$37,500,000,000 for the fiscal year 1948—$6,000,000,000. That is the size of the cut ordered by the House. The Senate voted instead for a $4,500,000,000 reduction in the Presidential budget. The two Houses, it is expected, will ultimately support a compromise slice in the neighborhood of $5,250,000,000.

MADE IMPRESSIVE START

Probably no man better equipped for the economy drive could have been found either on the Republican or Democratic side of the House. JOHN TABER has been a Member of the House for nearly a quarter of a century. During all that time he has been a member of the Appropriations Committee.

It is an unusual thing for a freshman Member of the House to spring immediately into the powerful money-spending committee. But it happened in TABER's case. The late Martin Madden, of Illinois, Republican, was chairman of the committee when Mr. TABER came to Washington in December 1923, to take his seat in Congress. None of the older Republican Members of the New York delegation was available for the vacancy in the Appropriations Committee which TABER ultimately filled.

Representative Wainwright, a New Yorker, too and another freshman Member of the House that year, had been in the Army during World War I and had 2 years as Assistant Secretary of War. He indicated he was willing to serve on the Appropriations Committee, provided he could be a member of the subcommittee dealing with appropriations for the War Department. Chairman Madden, however, was accustomed to settling the question of subcommittee assignments. Mr. Wainwright, he said, would not get the War Department assignment, and that was that.

FAMILIAR WITH MILITARY FUNDS

The late Theodore Roosevelt, Jr., who became a general in the Second World War, was Assistant Secretary of the Navy at the time. After Mr. TABER, through no effort of his own, had been appointed to the Appropriations Committee. Mr. Madden did accept a suggestion from Roosevelt that the New York Congressman would be a good man to serve on the subcommittee dealing with naval appropriations. So Mr. TABER was a member of the naval subcommittee for 10 years. More recently he served as a member of the War Department subcommittee for 4 years. So the chairman of the committee is thoroughly conversant with Army and Navy appropriations.

This is important. For undoubtedly there will be slashes in some of the budget estimates for the military and naval services. Chairman TABER insists they can be made without injury to the national defense; that the new coordination of the military services—in one department—proposed by the President will make possible some savings. Also there are a number of yards and posts for the Navy and for the Army which are merely "political," in the sense it is to the advantage of Members of Congress to have them where they are, spending plenty of money. They are not all essential, and if Mr. TABER has his way, they will go. That is the kind of slash in expenditures, however, which will be followed by screams of pain.

PLENTY OF OPPOSITION

Democratic taunts and charges that TABER cannot cut the President's budget by six billion, or even $3,000,000,000, roll off the broad back of the Appropriations chairman. He is confident, he says, that when all the appropriation bills have been put through the cuts will have been made. He doesn't fool himself, however, over the desperate contests which will be made by the Democrats—who do not want the budget cut with a resultant loss of hundreds of thousands on the Federal pay roll—and by special pressure groups.

These pressure groups include farmers, veterans, reclamation, labor, and river and harbor improvement groups. There are others—but these are principal ones. They all want Federal money—the money that comes out of the pockets of the taxpayers—for innumerable projects and services. Many of these projects and services are worthy. The question, however, is whether the American people can afford to pay for them.

SNORTS AT "FALSE ECONOMY"

Mr. Taber takes no stock at all in the charge made by President Truman in his Jefferson Day address that to cut the budget below the $37,500,000,000 figure would be "false economy."

"False economy," Mr. TABER snorts, "lies in spending money you do not have when taxes imposed upon the American people are higher that ever before in history and a great burden."

Not only does the drive for governmental economy rest in the first instance on Chairman TABER, but it is quite clear that if Mr. TABER fails to deliver, material reduction of the income taxes, promised the people by the Republicans, will be impossible. The same is true about substantial payment on the Government's $260,000,000,000 debt.

GETS HIS OPPORTUNITY

Fortunately for Mr. TABER—and for Congress and the people generally—he is not a

nervous human being. He is a tremendous worker and conscientious. He has been waiting for more than a decade to get to work, as chairman of the Appropriations Committee, cutting the swollen budgets of Democratic administrations of the late President Franklin D. Roosevelt and of President Truman.

This is his opportunity—growing out of the Republican victory in the congressional elections last fall—and he is not going to forego it. For years he thundered in the House and in committee against the big appropriations demanded by the administration—as the ranking minority member of the committee. His constant attention to details probably saved the taxpayers many millions of dollars as it was.

The stentorian tones of Mr. TABER's voice have echoed through the House Chamber in protest against spending and more spending, for years. He has a deep, rasping voice, with the tearing qualities of a file. When he talks over the loud-speaker system in the House his voice carries far out into the corridors.

Chairman TABER does not hail from the big-business center of his home State—New York. He is a native of Auburn. There he went to school, and from school to Yale College, from which he graduated in the class of 1902. He studied law at the New York Law School and went back home to hang out his shingle.

He described himself as "a country lawyer," when he first set sail for Congress. This is, however, not a complete description. He had, as a matter of fact, made a very material success at the law. He had also held important posts in manufacturing and banking institutions in Auburn. In local Republican politics he early became interested, serving on the Cayuga County Republican Committee, as a delegate to numerous Republican State conventions, and then as chairman of the county committee. He was a delegate to the Republican National Conventions of 1920 and 1924. When Norman Gould, his predecessor as Representative of the Auburn district in the House, decided to quit in 1922, Mr. TABER was prevailed upon to run for the nomination and election. It was a walkaway race for him, and he has been reelected every 2 years since then by majorities ranging from 18,000 to 40,000. Last year he was reelected with a lead of 39,000.

HARD MAN WITH PUBLIC MONEY

Before his election to the House, Mr. TABER knew little of the National Capital. He had visited Washington only twice for brief periods. He has learned plenty about the Capital in the last quarter of a century, however. One of the things which has been impressed upon him is the terrible urge that bureau heads, Cabinet officers, and others in the executive departments have for more and bigger funds to spend. They all want more money—so much so that Chairman TABER has come to regard every official who appears before his committee with suspicion—especially if he requests additional appropriations.

For 14 years—from the time the late President Roosevelt entered the office, Mr. TABER was the ranking Republican member of the House Appropriations Committee. Literally thousands of men came before the committee during that period on the appropriation bills. Too many of them, Mr. TABER insists, have not been frank enough, and he has had to fight three-fourths of them over estimates of expenditures. He gives a pretty good bill of health, however, to the officials of the Post Office Department and the Internal Revenue Bureau. Some of the others he describes as awful.

Decidedly Mr. TABER is not against the Army and Navy. He wants a strong national defense at all times. He insists, however, that money can be wasted by the War and Navy Departments, just as it can by other Government agencies—and that he is against. He looks with suspicion on huge foreign loans by this Government always—and wants to be convinced that they are good and that they are necessary.

HIS PHILOSOPHY

In his opinion, the real coordination of the Army and Navy will be accomplished through the appropriations made for both, and his committee will play a major part in bringing about this coordination.

By nature JOHN TABER is conservative, but he is also constructive. His own philosophy he puts something like this: "As a general rule a fellow makes his contribution who looks ahead and tries to have things a little better every day; who tries to keep the Government from spending too much money; who tries to see that the proper obligations of the Government are met, and who puts as much business into running the Government as possible. He promotes the progress of and better things for the people. On the other hand, the so-called liberal, with a paucity of ideas, always running around making demagogic speeches, and trying to play to the gallery, is the real reactionary the Government has to fear."

This is in line with what he wrote in an autobiography for his class book (at Yale) 20 years ago, when he said:

"I have lived in a small city always and have been so busy that I have kept pretty close to my home. I have prospered sufficiently to enable me to satisfy any reasonable want—be it said, my wants are few—and to enable me to devote a very considerable portion of my time to the public service and to quasi-public efforts."

FACING RESPONSIBILITIES

"My ambition is to be of some service in developing and sustaining public sentiment along constructive lines, in trying to make American citizenship honestly realize its responsibilities and meet them face to face."

Certainly Mr. TABER is overmodest in his comments upon himself, in the opinion of his classmates, of whom I happen to be one.

In college Mr. TABER, a long, lanky, friendly fellow, went out in freshman year for his class football team, and for 4 years was a candidate for the track team. Later, when he was at work, he gave as much time as he could to keeping his garden. He never went in for golf. Today his recreation is reading and a bridge game, occasionally, with old friends. His workday, which often includes Sundays, runs from 9:15 a. m. until 6:30 p. m.—long enough.

The Soviet Spies—The Story of Russian Espionage in North America

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. RANKIN. Mr. Speaker, last year while the Committee on Un-American Activities, of which I am a member, was trying to run down a foreign spy ring operating throughout this country, the Canadian Government was bending every effort toward the same end.

Canada succeeded in running those spies down and exposed the most vicious plot of international espionage ever used against the people of Canada and the United States.

Under permission granted me to extend my remarks in the RECORD, I am inserting an article on this subject which appears in the May issue of the Reader's Digest which every patriotic American should read.

The matter referred to follows:

THE SOVIET SPIES

At 285 Charlotte Street in Ottawa, the Canadian capital, there is a three-story red-brick building with a sloping slate roof and high white porches, of a type favored by solid citizens in the late nineteenth century, when they built large homes to raise large families. Early in 1942 it was taken over as diplomatic headquarters of the Soviet Embassy. The main portion of the house was used by Ambassador G. N. Zaroubin and his staff, while the rear wing, formerly the kitchen and servants' quarters, was closed off from the rest of the building by double steel doors, and windows with iron bars and steel shutters. Here was located the secret cipher department where the highly technical tasks of encoding and decoding the secret dispatches to and from Moscow were performed.

For the sake of insuring absolute secrecy, each of the five sections of the Embassy maintained its own code, and had its own clerk in a sealed-off room. For example, the military section, headed by Col. Nicolai Zabotin, had one Igor Gouzenko stationed in its code room to handle the communications which went to the Director of Military Intelligence in Moscow. Cipher Clerk Gouzenko's code books were placed every night in a big steel safe which also held the secret diaries of the military attaché. Similarly, the NKVD, or secret police, had its own means of sending messages to Moscow, as did the Ambassador, the commercial attaché, and the chief of the political section.

Gouzenko, a grave-eyed, serious young man of 25, had been handpicked for this highly responsible job. As a lieutenant in the Red Army he had undergone a long period of special training before being sent to Ottawa. He was a graduate of a special intelligence school conducted by the Red Army General Staff. He had seen front-line service, too—a long year of action during 1942, including the winter campaigns before Moscow. Finally, after a tour at the main intelligence division of the Red army, where his past behavior and his reliability were subjected to exhaustive inquiry by the NKVD, he was cleared for service abroad. He was sent to Canada in June 1943.

He took his wife with him—tall, dark-haired Svetlana Borisovna. Soon after their arrival in Ottawa, their son, Andrei, was born. They had a small apartment at 511 Somerset Street, facing a park. The neighbors thought highly of the young couple; they were quiet, courteous, and dignified.

Gouzenko's outward appearance gave no clue to the ferment and turmoil which racked his soul. From his unparalleled vantage point he saw accumulate before his eyes the detailed operations of an espionage system which was directed against a country whose way of life he was coming more and more to respect and admire.

When Igor Gouzenko left his office at 8 o'clock on the evening of September 5, 1945, he not only cut himself off irrevocably from his homeland, but he faced the threat of assassination. All day long he had worked at fever pitch, certain in the knowledge that what he was doing would be of ultimate benefit to all the free peoples of the world. From the safe and the code sacks he had chosen key documents. Some were cables, some were diaries, some were torn scraps of paper which had been given to him to burn. Altogether they made a packet of considerable bulk, but by distributing them among his pockets and by pinning them beneath his shirt, he was able to avoid arousing the suspicions of the door guard, a member of the NKVD.

Safely past the doorman, Gouzenko walked away without a backward glance. Lost among the evening strollers, his spare, slender figure attracted no attention, either by his pace or demeanor. Yet his actions were to be of the utmost significance in their influence on the future relationships between nations.

Carefully he had thought out his task. He intended to reveal nothing less than the Soviet plan to establish in Canada an espionage base for use against not only the Dominion, but the United States and Great Britain as well. He intended to back up his assertions with incontrovertible documentary evidence. In return he would ask only for the protection of the Canadian Government for his wife and child. As for himself, he had weighed the risks, and thought that it was probable that he would be killed before his mission was completed.

Gouzenko walked to the offices of the Ottawa Journal and asked to see the editor. He apologized for not being able to explain his purpose.

"The editor is not in," he was told. "You can see one of his assistants."

To the latter, Gouzenko explained that he had information of the greatest importance, not only to the people of Canada, but to the peace and stability of the world. From a coat pocket he took one of the numerous flimsy sheets in Russian typescript. "I have many documents," he said. "They should be studied by you."

Their talk went on for almost an hour. So fantastic was Gouzenko's story, and so strange to the newspaperman was the collection of documents, that the latter was completely at a loss. Finally he said: "You'd better go to the police. They are the people to handle that sort of thing, not a newspaper."

It was then almost 10 o'clock, too late to accomplish anything till the next day.

The next morning Gouzenko and his wife went to the Ministry of Justice, to the office of the Crown Attorney, Raoul Mercier. Here he spoke to Mrs. Fernande Joubarne, secretary to Mr. Mercier, explaining what he had done and what he proposed to do. He had his wife open her handbag in which the documents now reposed.

"Everything is here," he said, "including secret information on the atomic bomb. You must tell your Government about this."

"The Crown Attorney is in court," said Mrs. Joubarne, "but I will try to put you in touch with the proper people."

She called the Under Secretary of State for External Affairs, Norman Robertson. He said: "Keep him waiting. I will seek instructions from the Prime Minister."

Gouzenko was anxious to get his story heard quickly. He knew that his absence at the Russian Embassy would arouse suspicions. But reaching the Prime Minister the morning of September 6 was difficult. It was the day set for the opening of a new session of Parliament.

At 11 o'clock the Commons were seated in their chamber. It remained only for Prime Minister William Lyon Mackenzie King to enter and the ceremonies would begin.

King was in the cloakroom off the main floor when an aide came up and whispered a few words into his ear. The Prime Minister went to the telephone.

"Sorry to interrupt you, sir," said Under Secretary Robertson, "but this is something which only you can decide." He told King about Gouzenko.

Mackenzie King replied, and these are his own words as later revealed to a special session of the Canadian Parliament: "This is a case where we cannot be too cautious. We do not know whether the documents are fabrications or not. We do not know his state of mind or anything of the circumstances which prompt his offer. I do not think the Government of Canada can take any action which would cause the Soviet Government to believe that we are prying into their affairs. Tell the young man to return to his Embassy with the papers he has in his possession."

It was too late for Gouzenko to do that. He and his wife went back to their apartment. For the time being there appeared no other place to go.

They went into the house by the back entrance. When they reached their apartment, No. 4, Gouzenko peeked out the window toward the park across the street. Seated on a bench opposite, he saw what he had feared—two men rather obviously watching his windows.

Early that night there was a knock on the door. Then came the voice of Under Lieutenant Lavrentiev of the Embassy staff "Gouzenko—otkroyte dver" (open the door).

The cipher clerk and his wife held their breath. But little Andrei ran across the floor toward a toy Teddy bear. He tripped, stumbled against the door. Lavrentiev made no attempt to enter, but he now knew the apartment was occupied.

Gouzenko picked up the child and went out through a back door leading to the rear balconies shared in common with other apartments on the second floor.

Here were seated an RCAF sergeant and his wife. He was smoking a pipe and reading the evening paper.

"Excuse me," interrupted Gouzenko, "May I speak with you?"

The sergeant looked up in surprise.

"Sure, man, what is it?" he replied.

"Please to take my little boy with you tonight—something maybe happen to my wife and me."

"What's going to happen?"

"Get killed," was the laconic reply.

Gouzenko and the RCAF sergeant were standing on the balcony when they saw Lavrentiev walking away down the lane. The cipher clerk paled. "There he is," he whispered. "Perhaps you had better take my wife in your apartment as well."

As they were talking Mrs. C. D. Anderson, a motherly looking housewife who lived in apartment 6, appeared. On hearing the story, she said: "I have plenty of room for all of your family, including yourself, Mr. Gouzenko. I will be very happy to give you shelter as long as you require it."

"You go along with her," said the sergeant. "I'll call the police. Those fellows will not dare break into the house of a Canadian citizen."

That was at 7 o'clock. At half past 7, Constables Tom Walsh and J. B. McCulloch, who had been patrolling the district in their prowl car, responded to the call.

In apartment 6 they found the Gouzenkos. The cipher clerk identified himself, said that he had information of extreme importance to the Government, and requested protection. The officers assured him that they would watch the apartment house.

"Keep the light on in the bathroom here. We can see it from the park. If you need us, put out the light."

When they went back to their car they moved it to a spot in the park.

Nothing happened until 11:30, when four men drove up to 511 Somerset Street. They went at once to Gouzenko's apartment. They began by knocking on the door. They knocked so loud and so long that the RCAF sergeant thought that it was the police returning for a further inquiry. He opened his door and looked out.

Realizing his error he was about to close the door when one of the men ran up to him.

"Where is Gouzenko?" he demanded.

The RCAF sergeant gave him a blank look. "You got me, buddy," he said, and shut the door tight.

There was a conference in the hall, then the four men put their shoulders to the door of Gouzenko's apartment and broke in.

From apartment 6 Gouzenko watched the proceedings through the keyhole. He got up, went to the bathroom, switched out the light.

In the park, the police officers caught the signal. They streaked for the apartment house on the double. In apartment 4 they found all the lights on and all the closet doors open. Consul Pavlov was in one closet, Colonel Rogov in another. Two assistants from the Soviet Embassy were in the room.

"What are you people doing here?" demanded Walsh.

Pavlov produced his card and said that all present were members of the Embassy staff, who were looking for certain official papers. "The man who owns this apartment has left town, but we have his permission to enter and get what we need."

Walsh pointed to the broken lock, part of which still lay on the floor. "For people who have permission to enter an apartment, you certainly chose a funny way to get in."

Pavlov shrugged. "We lost the key," he replied. "This is Soviet property and we can do as we wish. You will please leave."

The officers shook their heads. "Not until an inspector arrives."

Consul Pavlov held a conference with his group, and decided to call it a night. The police made no effort to detain them, and they went back to the Soviet Embassy.

For the rest of the night the Gouzenkos remained in apartment 6 under the watchful care of the city police.

Shortly after daybreak on September 7, the Gouzenkos and their documents were moved to the headquarters of the Royal Canadian Mounted Police. Commissioner S. T. Wood personally notified Prime Minister Mackenzie King of the events of the preceding evening.

Again the Prime Minister pointed out the need for proceeding cautiously. "Be certain that this man's motives are above suspicion and that his documents are genuine."

The first thing Commissioner Wood sought to establish was the reason for Gouzenko's decision to leave the Soviet Embassy.

"I will be glad to explain that to you," was the reply. His statement is reproduced here because of the lesson which it contains for every thinking person.

"I, Igor Gouzenko, wish to make the following statement of my own will:

"Having arrived in Canada 2 years ago, I was surprised during the first days by the complete freedom of the individual which exists in Canada but does not exist in Russia. The false representations about the democratic countries which are increasingly propagated in Russia were dissipated daily, as no lying propaganda can stand up against facts.

"Holding forth at international conferences with voluble statements about peace and security, the Soviet government is simultaneously preparing secretly for a Third World War. To meet this war, the Soviet government is creating in democratic countries, including Canada, a fifth column, in the organization of which even diplomatic representatives of the Soviet government take part.

"During my residence in Canada I have seen how the Canadian people and their government, sincerely wishing to help the Soviet people, sent supplies to the Soviet Union, collected money for the welfare of the Russian people, sacrificing the lives of their sons in the delivery of these supplies across the ocean, and instead of gratitude for the help rendered, the Soviet Government is developing espionage activity in Canada, preparing to deliver a stab in the back of Canada—all this without the knowledge of the Russian people.

"Convinced that such double-faced politics of the Soviet Government toward the democratic countries do not conform with the interests of the Russian people and endanger the security of civilization, I decided to break away from the Soviet regime and to announce my decision openly."

The next problem was to examine the documents, translate them, and establish their authenticity. A mass of papers, they were of all colors, shapes, and sizes, and one glance at their varied nature told the officials that the task of sorting and checking was not going to be easy.

It was decided to set up a special headquarters for the operation in the Rockcliffe Barracks of the RCMP. Here the anti-espionage squad, headed by Inspector John Leopold, began to uncover a story of intrigue, conspiracy, and treason without parallel in the history of espionage in North America.

Meantime, the Soviet Embassy was not idle. To the Dominion government, it addressed a note which was received on September 8. It read in part:

"A colleague of the embassy, Igor Sergeievitch Gouzenko, failed to report for work on September 6. It was later established that I. Gouzenka robbed some money belonging to the embassy and had hidden himself together with his family.

"The embassy of the U. S. S. R. asks the Department of External Affairs to take urgent measures to seek and arrest I. Gouzenko and to hand him over for deportation."

The Canadian Government requested particulars concerning the stolen funds. The Embassy made no answer. Instead, on September 14, it sent a second note, pitched to a higher degree of urgency. This message read, in part:

"The Embassy, upon instructions from the Government of the U. S. S. R., repeats its request to the Government of Canada to apprehend Gouzenko and his wife and without trial to hand them over to the Embassy for deportation to the Soviet Union."

By that time the Government of Canada had no intention of handing Gouzenko over to anyone. Subjected to the most rigid and searching tests to determine his sincerity and the authenticity of the documents, he had come through with flying colors.

The documents were no forgeries. Dozens of them were handwritten in Russian. Gouzenko said that they were the writings of Colonel Zabotin, Colonel Rogov, and Colonel Matinov. Investigators checked at different houses where these officers had been entertained. At one, a hunting lodge, a guest book was obtained. In it were the signatures of many Government and diplomatic officials who had been guests there—including these three men. A handwriting expert was able to state flatly that Gouzenko had brought genuine writings of the Soviet officials.

There were other tests as well. Gouzenko brought four copies of secret telegrams sent from London to Ottawa. They were dated but a few weeks before—August 24, 25, and 31. A quick check on the official Government files revealed that they were exact copies of highly secret matters supposed to be known only to the British and Canadian Governments.

The problem no longer was one of establishing the veracity of Gouzenko, but of rooting the cancerous intrusion of Soviet secret agents from the innermost channels of the Canadian Government. As quickly as a document was translated, it was filed according to category. The titles themselves were ominous—Atomic Weapons, Radar, Secret Explosives, False Passports—to mention but a few.

Never before in the history of espionage had such a carefully documented plot been presented to the victim in one package. There was almost too much evidence. The list of cover names alone for secret agents of Russian, Canadian, British, and United States citizenship ran to three printed pages.

By the 21st of September, the experts working under Inspector Leopold were ready to brief the Prime Minister.

The briefing officer began:

"Sir, the evidence establishes that a network of undercover agents has been organized for the purpose of obtaining secret information from employees and agencies of the Dominion Government. These operations were carried on by certain members of the staff of the Soviet Embassy under direct instructions from Moscow. All of these agents were known by cover names. The cover name for Colonel Zabotin, for example, appears to have been 'Grant.'

"The specific program of espionage for which Colonel Zabotin was held responsible were, first, the atomic bomb, its composition, its technological processes and drawings; second, a sample of uranium 235, with details concerning the plant where it is produced; third, the library of the National Research Council; fourth, the movements of United States troops."

Other objectives of the Soviet spies were then outlined. They covered such highly secret topics as V-bombs, electronic fuzes for shells, radar, a superexplosive known as RDX.

The Prime Minister spoke: "May I ask to what extent have these objectives been achieved?" The briefing officer kept his face wooden, his voice matter-of-fact. "Sir, there were no failures."

As the meaning of the reply sank in, the group of high-placed government officials sat in stunned silence.

"Am I to understand that some of the details of the atomic weapon have been disclosed?" asked the Prime Minister.

The briefing officer stepped forward with a manila folder. "Here is the file sir, with reference to Agent 'Alek.' Cable No. 241, sent to Moscow on August 9, appears to cover that point."

"To the DIRECTOR:

"Facts given by Alek. * * * The output of uranium 235 amounts to 400 grams daily at the magnetic separation plant at Clinton, the output of '49' is likely two times greater, some graphite units are planned for 250 grams each day. * * * Alek handed over to us a platinum with 162 micrograms of uranium 233.

"GRANT."

"Who is 'Alek'?" demanded the Prime Minister.

The briefing officer shrugged. "His identity has not yet been established, sir. Apparently he is a scientist close to the center of this work. According to cables 244 and 11955, however, 'Alek' should be in London on October 7 attempting to contact a Soviet representative there. I think you'll find these cables contain some interesting clues."

Cable 244 dated a few weeks previously, was from "Grant" to Moscow. It read:

"To the DIRECTOR:

"We have worked out the conditions of a meeting with Alek in London. Alek will work in King's College, Strand.

"Meetings—October 7, 17, 27 on the street in front of the British Museum. The time, 11 o'clock in the evening. Identification sign, a newspaper under the left arm. Password, Best regard to Mikel. At the beginning of September Alek must fly to London. Before his departure he will go to the uranium plant in the Petawawa district. He said that he must come next year for a month to Canada. We handed over $500 to him.

"GRANT."

Cable 11955, in reply, read:

"To GRANT:

"The arrangements worked out for the meeting are not satisfactory. I am informing you of new ones.

"1. Place: In front of the British Museum on Great Russell Street at the opposite side of the street. Alek walks from Tottenham Court Road, the contact man from Southampton Row.

"2. Time: Eight o'clock.

"3. Identification signs: Alek will have under his left arm the newspaper Times, the contact man will have in his left hand the magazine Picture Post.

"4. Password: The contact man, 'What is the shortest way to the Strand?' Alek, 'Well, come along, I'm going that way.'

"The DIRECTOR."

To the Prime Minister's group it was clear that the identification of "Alek" was a matter of the utmost urgency. Otherwise every security measure which had been erected around the atomic bomb's development and manufacture might be utterly valueless. Yet Prime Minister King considered that the matter was so delicate that it could be handled only by means of personal consultations between himself, President Truman, and British Prime Minister Attlee.

"It was a matter that could not be trusted to the cables," was the way he explained it later to the Canadian House of Commons.

On September 28, King left Ottawa. The following day there was a conference with President Truman in Washington. Here the broad outlines of the Soviet spy plot were disclosed. Then the Canadian Prime Minister boarded the liner *Queen Mary* at New York.

Prime Minister Attlee was at Chequers, his official residence. He had been advised of the urgency of King's trip, and invited King to come at once to see him. Before many hours passed, the Senior Commissioner of Scotland Yard was called to Chequers.

To Lt. Col. Leonard Burt, of the special branch of Scotland Yard, fell the task of identifying "Alek" and supervising the watch over the clandestine meeting which was to take place the next evening, October 7. Colonel Burt sent for Detective Inspector William Whitehead. Together they went over the clues presented by the Moscow cables.

One priceless bit of information was: "Alek will work in King's College, Strand."

"If he knows anything at all about atomic energy, the chances are that he is a physicist. Let us find out whether any of that particular faculty has been to Canada recently."

Burt and Whitehead went to King's College. The head of the physics department told them at once: "That would be Dr. May. He's been working with the atomic energy project in Montreal."

Burt thumbed through the pages of the faculty register, found an entry: "Dr. Alan Nunn May, University Reader, Stafford Terrace, Kensington, senior member of nuclear physics division, Imperial Chemical Industries, Ltd."

Was this the "Alek" of the secret Moscow cables? His picture showed a short, bald man with rather small eyes, metal-rimmed glasses, and mustache. That this mild-looking individual was in a position to threaten the security of the world seemed almost incredible.

Nevertheless, the next step was clear. Men were sent to Stafford Terrace, a quiet street of row houses, and soon hidden eyes were in position to watch the physicist. Arrangements were also made to cover the vicinity of the British Museum.

As the time approached for the meeting, the detail watching Dr. May could see him in an easy chair with pipe and slippers before the ground-floor window of his house. If he was concerned with anything more weighty than the book he was reading, he did not show it, for as the clock hand passed 8 he still had made no move. At the museum it was the same story.

As he received the reports from the two groups of watchers, Colonel Burt realized that, temporarily, at least, matters had reached a stalemate.

A message from Scotland Yard was sent to the Royal Canadian Mounted Police, who were instructed to inquire how closely Dr. May's travels had fitted into the pattern outlined for "Alek" in "Grant's" cable 241 to the director at Moscow.

Chief of the atomic-energy project at Montreal and Chalk River, where the Petawawa plant was located, was Dr. John Douglas

Cockcroft, a scientist of international repute. Dr. Cockcroft's records showed that Dr. May had not only made two visits to Petawawa, the second on December 3, but he had made several trips to the nuclear research laboratories of the Manhattan project at Chicago, where he had engaged in experiments with United States scientists. He had left for England within a few days after his September 3 trip to Petawawa and, as indicated in the cable, was scheduled to return for a month's work the following year.

No other scientist had followed the same schedule or was planning to return the following year. The inference was plain.

The information concerning Dr. May was sent to the headquarters of the Manhattan engineer district in Washington, D. C., where it was brought immediately to the attention of Gen. Leslie R. Groves.

One of the fundamental principles of United States military intelligence is that personnel on secret projects are entitled to know only as much as they require to carry on their work. Thus, months before, when the National Research Council of Canada had proposed that Dr. May be allowed to visit the United States for 1 month, the application had been placed before General Groves personally.

The general had sent for the file on Dr. May. It included the information that Dr. May had already visited the Chicago atomic-research laboratories three times, and that "his third visit occurred between September 25 and October 30, 1944. He carried on extensive work in collaboration with other scientists in a a highly secret and important new field. His work resulted in a research report in which he collaborated with an American scientist."

To Groves a fourth visit by May to the United States ran counter to security principles, for it would allow him to know too much of what was going on in widely separated projects. Accordingly, the answer had gone back—polite but firm—"No."

If vital secrets in the field of atomic energy still rest secure, much credit can be given to General Groves' decision to bar Dr. May. For as the Canadian Royal Commission of Inquiry has stated: "The Soviets failed to obtain details on the structure of the atomic bomb * * * only because there was no one in Canada who could tell them."

Meanwhile, in London, Dr. May was subject to constant scrutiny. Every move he made was duly noted and recorded. As the weeks passed it was apparent that he was either making no effort to comply with the Moscow cable, or had been warned to lie low. But if the spymasters were in no hurry Scotland Yard could match their patience with its own brand of dogged resolution.

Prime Minister King continued to explore the over-all political implications of the documents with Prime Minister Attlee and Foreign Minister Bevin. With the meeting of the Big Four powers scheduled to start in December, they appreciated that premature disclosure of the spy plot might imperil any change of harmony. So complex was the problem that King and Attlee decided to cross the Atlantic and talk with President Truman.

In retrospect, Moscow's reaction to this 3-day meeting is significant. While Truman, Attlee, and King were meeting aboard the naval yacht *Sequoia* anchored in the Potomac, the Soviets were celebrating the twenty-eighth anniversary of the Russian Revolution. Foreign Minister Molotov, in an 80-minute speech, bluntly said:

"It is not possible at the present time for a technical secret of any great size to remain the exclusive possession of some one country or a narrow circle of countries. We will have atomic energy and many other things, too."

When King returned to Ottawa, Attlee went along to learn at first-hand the newer factors in the case.

The first concern of the investigators had been to avoid alarming Colonel Zabotin to the point where he would warn the Canadian conspirators. Although the Russian military attaché knew that some documents were missing, it was felt that he would be unaware that Gouzenko had brought the cable file which had been handed over to him months before for burning. Another factor on which the investigators were gambling was Zabotin's fear of reprisal from Moscow. It was entirely possible that the colonel, fearful of his own fate, was minimizing the lost documents and was, in fact, reporting the incident as a "theft of funds" as the exchange of diplomatic telegrams indicated.

At any rate, it is a matter of record that throughout the months of September, October, and November, Colonel Zabotin and his associates acted as though nothing were amiss.

During the fall of 1945, considerable progress was made toward identifying the principals in the spy ring.

Among the documents was a mailing list on which Colonel Zabotin had tabulated everything dispatched by him to Moscow on January 5, 1945. Inspector Leopold realized that this was the master key to the entire network, for it showed not only the type of information sent but named the source.

No. 175 on this list was credited to "Nora." It consisted of "telegrams 10, questionnaires 3, photos 11." Gouzenko recalled that he had put the telegrams into code. He had been ordered to burn the notes, but, instead, had taken them from the safe; and they were now in the possession of the Canadian Government.

The notes were copies of secret cables received from England. Even today their contents are so important that they cannot be revealed. They concerned matters which belonged not exclusively to Canada but which had been entrusted to Canada by other governments. Unless the leak could be stopped, the relationship of Canada and friendly states might be compromised. The discovery of "Nora" was therefore a matter of high priority.

Fortunately, Gouzenko had learned her name—Emma Woikin. Concerning this he testified:

"Answer. All I know about Emma Woikin is that she became acquainted with Major Sokolov and he proposed to Colonel Zabotin to develop her (as an agent).

"Question. You were present, were you?

"Answer. Yes; I was in the room. Sokolov suggested that he make her a proposal to work as an agent—in October 1944. However, he developed her much sooner. She thought she could perhaps work as a stenographer or clerk in the commercial counselor's office. She said that she liked Russia and wanted to help Russia."

At the Canadian Ministry for External Affairs a check at the personnel office produced the file card on one Emma Woikin. It listed her as an employee of the Cipher Division since February 1944. Her superiors knew her as a quiet, hard-working clerk.

Her personal history statement revealed that she had been born in 1920 in Saskatchewan, of Russian Dukhobor parents. In 1943 she had passed the civil-service examination for stenographer. She spoke Russian as well as English, and was appointed to the Passport Division. Later she was placed in the Cipher Division, where she not only saw all the diplomatic telegrams, but was familiar with the code system itself.

The next day, when Emma Woikin came to the office, she found that she had been transferred back to the Passport Division.

"What is the matter?" Emma Woikin asked. "Is my work not satisfactory?"

"Oh, no, nothing like that—I think they are shorthanded at Passport, and they need an experienced girl like you."

In this manner the authorities hoped to plug the leak while at the same time concealing the extent of their knowledge. There were too many agents whose identity was still unknown to risk any move which might send them scurrying for cover.

While "Nora" was being sealed off, Inspector Leopold referred once more to the master key to the spy puzzle—the mailing list of January 5, 1945. Items No. 109 and 110 were marked "copy" and "abbreviated copy" of secret letters from the Canadian Ambassador at Moscow to Prime Minister Mackenzie King. "Elli" was credited as the source.

In addition, Gouzenko had brought with him a cable from the Director in Moscow to Colonel Zabotin, referring to "Elli."

"And who was she?" asked Inspector Leopold.

"Before I left the embassy I had a look at her file. Her name is Willsher—she works in the office of the High Commissioner for the United Kingdom here in Ottawa."

The British High Commissioner in Canada was Malcolm MacDonald, son of the former British Prime Minister, Ramsay MacDonald. He was shocked at the disclosure that one of his employees was under suspicion.

The only Willsher on his staff was Kathleen Mary Willsher, who, as Assistant Registrar, had access to all incoming and outgoing letters and telegrams and to all highly secret files. A woman in her early forties, she was quiet, soft-spoken, and had an excellent working record. In appearance she more closely resembled a pleasant-faced school teacher than a secret agent.

Since the need for secrecy was still so great that she could not even be questioned, the only course open to the authorities was to put her under surveillance and gradually change the character of her work until she was no longer in position to obtain important information.

With "Alek," "Nora" and "Elli" now identified and under scrutiny, Inspector Leopold ran down the mailing list to a group of names—"Back," "Bagley," and "Badeau." The "B" group had penetrated into the National Research Council, custodian of atomic energy secrets.

Fortunately, Gouzenko had brought with him from the embassy not only a document in which the group's activities were outlined, but a piece of paper, typewritten in English, at the bottom of which was the warning: "After studying burn it." Containing the secret instructions given to "Back," the leader of "B" group, by Colonel Zabotin's assistant, Lieutenant Colonel Rogov, it started as follows:

"The scheme of your group will be: Jan (Rogov): Back (nickname)—G. Lunan Badeau—Dornforth Smith Bagley—Ned Mazerall.

"You will know me (as Jan) but nobody else."

Inspector Leopold did not even have to consult an Ottawa telephone book to check on Lunan. In the file taken from the Soviet Embassy there was a dossier giving his address and occupation—correspondent for the military journal Canadian Affairs. One line of the dossier read: "Length of time in the net [1]—from March 1945."

To make the file even more complete there was a report from "Back" to Rogov, dated March 28, a few weeks after he had joined the "net." It reveals that months before Hiroshima the Soviets were alerted to United States and Canadian efforts to solve atomic-energy problems.

"Your written instructions are understood, and some preliminary work has been accomplished on the specific tasks set. Badeau in-

[1] The "net" was taken to mean the Soviet espionage organization.

forms me that the most secret work at present is on nuclear physics—bombardment of radioactive substances to produce energy. This is more hush-hush than radar and is being carried on at the University of Montreal and at McMaster University. Fuller details later.

"BACK."

There were other documents, two items in which stood out in bold relief. The first, in Rogov's handwriting, concerned "Badeau." It read:

"Badeau asks for permission to change to work on uranium."

The second item was another of "Grant's" cables to the director. It read:

"We have received from Badeau 17 top-secret and secret documents, English, American, and Canadian. Altogether about 700 pages. In the course of the day we were able to photograph all the documents. In the next few days we will receive almost the same amount of documents for 3 to 5 hours. I consider it essential to examine the whole library of the Research Council.

"GRANT."

The scope of the last project surprised even Inspector Leopold.

The inspector assigned men to check on the present whereabouts of "Back," "Badeau," and "Bagley," and to keep them under surveillance.

Lunan (Back) was found to be still at work as editor of Canadian Affairs. Since he was merely a contact man and had no access to secret information in the course of his own work, it was felt that it was not necessary to have his job changed on orders from above.

No one by the name of Dornforth Smith (Badeau) was known in the National Research Council, but there was a Durnford Smith, graduate of McGill University in mathematics and physics, who had been with the Bell Telephone Co. in Montreal for 5 years previous to joining the Council. Since his work gave him access to secret records, it was arranged to place him elsewhere.

Next to be sealed off was "Bagley," Ned Mazerall, who was found to be Edward Wilfred Mazerall, a bachelor of science in electrical engineering, and a member of the American Institute of Electrical Engineers. He had worked for the Canadian Westinghouse Co. and the Canadian Broadcasting Corp., and in 1942 he had joined the National Research Council in the development of radar. A tall, broad-shouldered man with a large head and an unruly shock of hair, he was married to a well-known Canadian concert pianist.

In various notes written by Lieutenant Colonel Rogov were entries which indicated that, on April 4, he had paid out money as follows: "Back"—$100, "Badeau"—$30, "Bagley"—$30. On May 8 there was another entry showing $100 paid to "Back."

The sums were so small that it was apparent that money had not lured the secret agents to act as they did. There was something far more insidious at work than mere treachery for pay.

Zabotin's mailing list provided a clue to the identity of one of the master minds behind the entire plot. There was the following significant entry:

"108 — Debouz — Notes — Decisions secret sessions of Parliament—1 Page."

There had been a closed session of Parliament on November 25, 1944, dealing with the redisposition of Canadian forces which would follow the collapse of Germany.

An elaborate cross-index system had been set up to keep track of the numerous code names which were creeping into the case. This involved the multi-copying of each document so that the clues under each name were brought together in one folder. Some folders seemed almost empty, others were straining at the metal binders. Into the latter category fell the dossier on "Debouz."

Inspector Leopold felt a kinship with the craftsmen of old who painstakingly arranged bits of colored stone and glass into a mosaic. He too was assembling fragments, seeking to form a picture of "Debouz." Among his fragments, the following items seemed to be the most promising:

The first was:

"To the DIRECTOR:

"Debouz was reelected for the second time as a member of the Federal Parliament. Thus from the Corporants there is one member.

"GRANT."

The second, a single line from a notebook maintained by Lieutenant Colonel Rogov, was:

"Fred Debouz—talked generally."

The third, from the torn page of the notebook which Colonel Zabotin had given Gouzenko to destroy by burning, was:

"Fred—Director of Corporation. Previously worked at the neighbors."

The fourth, another reference from the torn notebook:

"Contact in Washington with Debouz's person. To work out arrangements for a meeting. To give out $600."

The fifth, again from the torn scraps:

"Fred's Work—group in Montreal (activists)."

What was the meaning of all this double talk? Inspector Leopold asked Gouzenka. The Russian explained that the word "Corporants" in the first item was the code word for the Communist Party. The second item showed that "Debouz" was also known as "Fred." The third, containing the phrase "neighbors," showed that "Fred" had previously worked for the secret police. The fourth revealed that "Debouz" had been entrusted with a mission to the United States to make contact with an agent in Washington. The fifth showed "Fred" as the head of an active group in Montreal.

Given these interpretations, even the average Canadian newspaper reader could have solved the identity of "Debouz—Fred." There was only one Communist member of Parliament. He was Fred Rose of Montreal.

A short, peppery individual, Rose had come to Canada from Lublin, Poland, with his parents when he was 13 years old, and had obtained Canadian citizenship in 1926. He had joined the Young Communist League, become National Secretary in 1929, and visited Russia in 1930. In 1931 he had been convicted of sedition and had been imprisoned for 1 year.

Like his fellow Communists he at first bitterly opposed the war against Germany. He was ordered interned, but remained in hiding until September 1942, when he gave himself up. An advisory committee of prominent Canadians was appointed to review his case. Their report said:

"Although the committee was not impressed with his exaggerated opinion of his own importance, we nevertheless are of the opinion that he will follow the party line of supporting the war effort of Canada and that his liberation will no longer prejudice the safety of the state."

In view of what happened the committee's conclusions were too optimistic.

On October 6, 1942, Rose signed a promise not to participate in activities of the Communist Party of Canada, or any organization which it controlled. He swore that he would strictly abstain from communicating any information concerning the war. He further promised that he would do no act which might be of injury to Canada or its allies.

Hardly had his signature dried than he violated both the letter and spirit of his promises. Not only did he play a key role in organizing the B group of agents in the National Research Council, but he was linked to 14 other groups to whom he gave instruction and advice.

No move was made which might alert Fred Rose, M. P., to the fact that his dual role had been uncovered. He continued to appear in the House of Commons, to occupy his office in parliament building and to reside in his cozy flat with his wife and daughter. But his contacts were watched, and there was hardly a moment of the day or night when a plain-clothes man did not know where he was or what he was doing.

During this phase the identity of three of the principal members of Rose's so-called Montreal group was brought to light.

It must be realized that while Gouzenko had chosen the embassy documents with remarkable skill and judgment, he had never seen a single Canadian agent. He could never point to any person and say: "This is the one called so-and-so in such-in-such a report." Always the investigators had to seek their clues in the documents themselves. They relied on diligence in research.

The lead that started them on the trail of the first of the Montreal agents was an extract from Colonel Zabotin's notebook:

"Group in Montreal (activists).

"Gray: Head of a section of the Directorate for securing war materials for the Allies. He works well. Gives materials on shells and cannons."

The rest of the file on "Gray" was significantly thick and showed him to be a prolific source of secret reports on projectiles, guns, and explosives. Inspector Leopold found his best clues in two documents. The first was a cable in which Colonel Zabotin discussed the possibility of setting "Gray" up as a secret agent in the postwar period. The cable disclosed that "Gray" was a geological engineer and was earning a $4,200 salary in his present post.

On a slip of memo paper Inspector Leopold jotted: "Geological engineer—salary $4,200—probably branch chief in Department of Munitions and Supply." He pinned this to the second document, a page torn from a loose-leaf notebook. Handwritten in English, it outlined secret "Proceedings of the Ordnance Board." On the memo Leopold wrote: "Check for handwriting."

An RCMP plain-clothes investigator then waded through the files of the Ammunition Branch of the Department of Munitions and Supply. He found the original document, No. 31,719, in a secret folder of the Ordnance Board. The records showed that this document had been charged out to one Harold S. Gerson, a division chief. Gerson's signature matched the handwriting on the pages brought by Gouzenko from the Soviet Embassy.

Gerson was a native-born Canadian, of Russian parentage. He had been a successful geological engineer with numerous mining companies before the war. He was now chief of a division of the Department of Munitions and Supply, as Inspector Leopold had surmised. He was paid $4,200 a year.

When the investigators went to observe him they found a stocky, pipe-smoking man with curly brown hair, wearing metal-rimmed glasses. In appearance, he resembled a kindly faced university instructor. As in the case of the others in the ring, it was difficult to associate the pleasant, intelligent, self-assured personality of Gerson with the "Gray" whose record of conspiracy was outlined in the Embassy documents. He, like the others, was put under observation until such time as the signal was given to crack down.

The investigators went back to Colonel Zabotin's notebook and found the following:

"Foster: Englishman. Assistant to the superintendent of the Division of Distributing War Production at the Ministry of Munitions and Supplies. He has been giving materials on war supplies. (Ours.)"

Gouzenko pointed out the "'Ours' means that 'Foster' is a Communist. In other words, 'he belongs to us.'"

The man that the investigators found in the post noted by Zabotin was James Scotland Benning. He was a brother-in-law of Gerson, and had been recommended for his job by the latter.

Like the others, Benning was put under observation. Shortly afterward another interesting scrap of information came to light. One night mounted police plain-clothes men made a search of his desk. In an alphabetical list-finder they found this entry: "Fred 3-8605 4394." The numbers proved to be the telephone extensions of Fred Rose at his Ottawa apartment and his office in the House of Commons. This was an entry that Benning was to regret.

The investigators, as their work continued, were shocked to discover so many prominent men of high reputation involved in the plot. To those concerned with the safety of the State, the most sinister aspect of the entire network was that the Soviet agents were able to find intelligent and talented persons willing to betray their country.

This phase was so striking that Winston Churchill was moved to declare in the House of Commons: "Many countries seek information about the affairs of other countries—there is nothing in that—but the difference between the Soviet system and the others is that in the communist sect it is a matter of religion to sacrifice one's native land for the sake of the communist utopia."

Up to this point the investigators had comparatively smooth sailing. They were able to identify and bring under surveillance each of the code names they delved into. Now they were heading into rougher and deeper waters.

For example, there were agents in Fred Rose's "Montreal Group" whose cover names began with "G." One worked in a tank plant, one was owner of a drug store, one was a housewife married to a storekeeper. To this day they have never been located.

For 3 months the mounted police had explored the maze of clues relating to the spy ring and had uncovered an incredible amount of evidence. As it grew in volume Prime Minister Mackenzie King, with a weather eye to the stormy international scene, wondered how long he could continue to postpone action.

The first sign of trouble came during the first week of December 1945. Colonel Zabotin suddenly left Canada. He did not notify the authorities to whom he was accredited, and in New York the Soviet steamer *Alexander Suvorov* was kept at its dock until he scurried up the gangplank. The United States customs guards who saw him go aboard were the last people of record to have seen him alive. Later there was a rumor that he had died of "heart attack" shortly after his return to Moscow.

A few days later Soviet Ambassador G. N. Zaroubin made the rounds of Canadian Government officials. He said he was returning to Moscow for routine consultations. It was not good-by, only au revoir. But he never came back.

It was apparent that the Soviet officials were now aware of the use to which Gouzenko's documents were being put, and with the advent of 1946 it was becoming increasingly clear that events were approaching a climax. The Moscow Conference of Foreign Ministers had ended in a stalemate. On February 5, 1946, there was promulgated order in council No. 411, which placed the spy hunt in the hands of a royal commission of inquiry headed by two Justices of the Supreme Court of Canada, the Honorable Mr. Justice Robert Taschereau and the Honorable Mr. Justice R. L. Kellock.

A royal commission, while it is in session, is a completely independent body. Its findings are subject neither to review nor appeal. Its function is to conduct the investigation and to report to the governor in council. Unlike a court, it is the sole judge of its own procedure. It may receive evidence of any kind in its discretion. In this respect it is sometimes in a better position to ascertain facts than a court, which is bound by rigid rules concerning the admissibility of evidence. But a commission cannot enforce its findings. If, as a result of its reports, prosecution is resorted to, well and good, but the courts alone possess the right to punish.

Secrecy was still the watchword, as the slightest leak might imperil the success of the whole operation. However, on the morning of February 14, the counsel of the royal commission sent a courier to the Minister of Justice requesting the detention of a dozen of the persons whose activities the police investigators had traced. Although the facts of the arrests and the names of those arrested were to be kept secret, Prime Minister King realized that such widespread raids would not pass unnoticed. A public statement would be necessary.

To keep the record absolutely clear from the standpoint of protocol, the Prime Minister decided to have a talk with the Soviet Chargé at Ottawa, Nicolai Belokhvostikov, who, in Ambassador Zaroubin's absence, had taken over the Embassy.

Here are King's own words for what transpired: "I said that I was going to state before Commons that an unnamed foreign power had been receiving information, but I wanted him to know that it was the U. S. S. R. to which I was referring. For my own part I was quite ready to pay a personal call upon Premier Stalin in order to get an explanation of these extraordinary events."

While they conferred, the Mounted Police were moving into position. Early in the morning on the 15th they struck, swooping down on McGill University, the University of Montreal, the University of Toronto, the Foreign Exchange Control Board and the National Research Council. None of those arrested that day was aware that he had been shadowed for months.

Before a rapt audience in the House of Commons, the Prime Minister gave only a bare outline of what was in progress. "This government has information of undoubted authenticity which established that there had been disclosures of secret information to unauthorized persons, including some members of a staff of a foreign mission in Canada."

Across the Atlantic, in London, Col. Leonard Burt of the Special Branch of Scotland Yard decided to have a talk with Dr. Alan Nunn May, the "Alek" of the Moscow cables who had supplied the Soviets with uranium samples and atomic-bomb data.

"Are you aware, Dr. May, that there has been a leakage of information from Canada relating to atomic energy?"

Dr. May looked at him steadily. "That is the first I have heard of it," he said quietly.

"Do you realize that we know that you had an appointment with someone in London in that connection and that you failed to keep it?"

Dr. May did not answer.

Colonel Burt and Scotland Yard were not in a hurry to make an arrest, as it was still hoped that he would lead them to a second spy. Therefore, no action was taken at the time.

In Ottawa, the smooth efficiency of the Mounted Police concealed feverish activity. Much remained to be done. In the words of the Royal Commission, "The extent of the ramifications of the espionage organization and the identity of all its agents were not known on February 14. There were a number of agents designated in the Embassy records by cover names only, whom Gouzenko could not identify. It was of the utmost importance that the identity of as many agents as possible should be discovered, together with the method by which each functioned."

The most important phase of the questioning that went on day and night at Rockcliffe dealt with the motives of the suspected agents. Time and again the investigators sought to discover the "why" behind the case.

Most of the suspects were persons with an unusually high degree of education, and of marked ability and intelligence. Their motives, as laid bare in the course of the inquiry, are significant, not only to Canada but to the world.

There was no evidence that money played an important part. The evidence was overwhelming that the original motivation was a product of political ideology plus a program of psychological conditioning in study groups or Communist cells. The Royal Commission found that in the great majority of cases the motivation was inextricably linked with the courses of psychological development carried on by a secret section of what is ostensibly a Canadian political movement—the Labour Progressive Party (Communist Party of Canada). These secret development courses are much more widespread than the espionage network itself.

"It seems to be the general policy of the Communist Party to discourage certain selected sympathizers from joining the party openly. Instead these sympathizers are invited to join secret cells or study groups. The categories of the population from which secret members were recruited include students, scientific workers, teachers, office and business workers, persons engaged in any type of administrative activity, and any group likely to obtain Government employment.

"The object is to accustom young persons gradually to an atmosphere and ethic of conspiracy. The general effect on the young man or woman of secret meetings, secret acquaintances, and secret objectives and plans can easily be imagined. The technique seems calculated to develop the psychology of a double life and double standards."

Only in view of the foregoing can the real significance of the spy ring and its meaning be appreciated. Otherwise the sudden emergence of gifted intellectuals trafficking in state secrets does not make sense.

The behavior of Harold S. Gerson, the pipe-smoking professor, was typical of the group reaction to interrogation. He was confronted with the documents in his own handwriting which had been taken from the Soviet files. We have the testimony of Inspector Harvison for what happened:

"I asked Mr. Gerson if he recognized the handwriting and he said it looked very much like his. I asked him if he ever made notes from documents—if it was part of his duty to make notes. He said that it was difficult to define his actual duties, but that he had made notes.

"I then told Mr. Gerson that I was suspending the interrogation for 24 hours and that during that time I would like him to consider if, as a Canadian citizen, he was willing to assist his Government by supplying any information in his possession regarding Soviet espionage.

"The following day I asked Mr. Gerson if he had made any decision. He said that there were a number of personal problems connected with the decision, that he found it extremely difficult, and asked if I could give him until the following Saturday noon to arrive at a decision.

"On the Saturday noon he said he had made his decision. He realized that the picture ahead was very dark for him, that he had made mistakes. But he would not be able to live with himself if he gave the information that so-and-so had done such-and-such—if 'he put his finger on this man and that man.' "

Meanwhile, in Moscow, on February 20, 1946, Deputy Commissar of Foreign Affairs Solomon Lozovski invited Leon Mayrand, Chargé of the Canadian Embassy, to call at his office. The Soviet official launched at once into the reading of a two-page statement. The excerpts which follow should be

read with Gouzenko's Embassy documents in mind:

"Soviet organizations have become aware that certain members of the staff of the Soviet Military Attaché in Canada received from Canadian nationals certain information of a secret character which did not, however, present great interest for the Soviet organizations. This information referred to technical data of which Soviet organizations had no need in view of more advanced technical attainment in the USSR. The information in question could be found in published works on radio-location, etc., and also in the well-known brochure of the American J. D. Smyth, Atomic Energy. It would therefore be ridiculous to affirm that delivery of insignificant secret data of this kind could create any threat to the security of Canada.

"Nonetheless, as soon as the Soviet Government became aware of the above-mentioned acts, the Soviet Military Attaché, in view of the inadmissibility of the acts, was recalled from Canada."

The Soviet statement's attempt to minimize the importance of the information received was interesting. Disregarding the debatable point of whether there was a "more advanced technical attainment in the U. S. S. R." the fact is that an elaborate organization had been set up to obtain information.

Despite the claim that the information on atomic energy could be found in published works, the Royal Commission learned that none of the secret information had been printed at the time it was handed over. If it had been published it would not have been secret. The fact that the information was considered of such great importance by the Soviet espionage chiefs is probably a fair test of its value.

Many documents in the case were never released for publication, for the Royal Commission ascertained that "some of the information is so secret still that it can be referred to only obliquely and with the greatest care."

Next to the atomic bomb, the most vital work accomplished by the Western Allies in the technical field was radar. Many of the improvements are still in the top-secret category, and information of the greatest importance in this field was communicated by Soviet agents. Asdic—antisubmarine detection devices—was another important item. The Royal Commission noted that "much, and possibly all, of the information available in Canada on this subject has been compromised."

Another item of this type was the "V. T. Fuse," the amazing proximity fuse for artillery shells. The wiring details and manufacture are still secret, and although the fuse was first developed in Canada in 1943, the details of its manufacture are known only to the United States. This fuse is the electro bomb referred to in some of the Soviet documents, and one of the agents had passed along its wiring diagram.

A great deal of the information sought related to the postwar defense of Canada, the United Kingdom, and the United States. The information handed over by such agents as Benning and Gerson falls into this category—production data, location of industries, transportation, and planning, fiscal matters. Said the Royal Commission: "Parts of this information could be useful in connection with possible sabotage operations."

On March 2, 1946, the Royal Commission issued its first interim report, which lifted the curtain of secrecy long enough to describe some of the activities of Colonel Zabotin, Emma Woikin, Kathleen Willsher, Gordon Lunan, and Edward Mazerall. A few days earlier, in London, Inspector Whitehead of Scotland Yard had taken a spin up the Strand to King's College. He arrived as Dr. Alan Nunn May was concluding a lecture on nuclear theory. When the professor had finished Inspector Whitehead, who was waiting at the door, nodded to him.

"I have in my possession a warrant for your arrest," he said. "I will read it to you in a moment."

Dr. May pursed his lips. "Very well," he said. "I was expecting something like this."

During the months that had passed since his cover name "Alek" had first been linked with the traffic in atom-bomb secrets, the investigation had turned up other data regarding his activities. Confronted with these documents, Dr. May was hard pressed to explain not only his activities but his motives. Finally he agreed to make a written statement. In it he said:

"About a year ago while in Canada I was contacted by an individual whose identity I decline to divulge. He sought information from me concerning atomic research.

"I had given very careful consideration to the correctness of making sure that development of atomic energy was not confined to the United States of America. I took the painful decision that it was necessary to convey general information on atomic energy and make sure it was taken seriously. For this reason I decided to entertain the propositions made to me.

"At one meeting I gave the man microscopic amounts of U-233 and U-235. I also gave the man a written report on atomic research as it was known to me.

"The man also asked me for information about the United States electronically-controlled AA shells. I knew little about these and so could give little information.

"The man gave me some dollars (I forget how many) and a bottle of whiskey, and I accepted these against my will.

"Before I left Canada it was arranged that on my return to London I was to keep an appointment with somebody I did not know. I did not keep the appointment because I had decided that this clandestine procedure was no longer appropriate in view of the official release of information and the possibility of satisfactory international control of atomic energy.

"The whole affair was extremely painful to me and I embarked on it only because I felt that this was a contribution I could make to the safety of mankind. I certainly did not do it for gain."

Dr. May's humanitarian motives drew the following rejoinder from Mr. Justice Oliver:

"Alan Nunn May, I have listened with some slight surprise to the picture of you as a man of honor who has done only what you believed to be right. I do not take that view of you at all. How any man in your position could have had the crass conceit, let alone the wickedness, to arrogate to himself the decision of a matter of this sort, when you yourself had given a written undertaking not to do it, and knew it was one of your country's most precious secrets—that you could have done this is a dreadful thing."

A few minutes past 11 on the evening of March 14, Staff Sgt. René J. Noel, of the Mounted Police, knocked on the door of Fred Rose's apartment in Ottawa.

Rose was at the telephone, talking to a correspondent of a Toronto paper who was asking whether he had been arrested yet.

"No," Rose said, "I have not." He hung up, answered the knock on the door and was immediately taken into custody.

Although documentary and oral evidence linked Rose to many individuals in the spy network, he refused to testify before the Royal Commission or to make any explanation of his connections with the case.

From February until June 1946 the Royal Commission was in session. On June 27, after hearing scores of witnesses and reviewing thousands of pages of testimony, their startling findings were made public. In conclusion, the Commission pointed out that "We have seen only the small selection of Zabotin's espionage documents which Gouzenko was able to collect immediately before he left the Embassy. The documents outlined only the work of the espionage system of Colonel Zabotin, although the evidence discloses the existence of other parallel networks, some of which have been functioning for many years."

The matter of punishment was left for the courts of the Realm, and due to the complicated nature of the evidence against each individual it was decided that it would be more expedient to hold separate trials.

Some of the many persons traced by the Royal Mounted were acquitted on the ground of insufficient evidence; others pleaded guilty and still others were found guilty. These proceedings are still continuing. As of this writing the status of some of the principal cases is:

Name	Code	Tria	Sentence
			Years
Dr. Alan Nunn May.	"Alek"	Pleaded guilty.	10
Fred Rose	"Debouz"	Found guilty	6
Emma Wolkin	"Nora"	Pleaded guilty.	3
Kathleen Willsher	"Elli"	do	3
H. S. Gerson	"Gray"	Found guilty	5
J. S. Benning	"Foster"	do	5
D. G. Lunan	"Back"	do	5
E. W. Mazerall	"Bagley"	do	4
Durnford Smith	"Badeau"	do	5

Only time will reveal whether Gouzenko's documents will cause a change in the Soviet tactics of using a diplomatic establishment to recruit a fifth column in a friendly state. In this connection Gouzenko stated: "The last telegram asked about the natural resources that Canada could mobilize in case of war, her coal, oil, rare metals, and so on."

From the cold, dispassionate viewpoint of global strategy the interest of the U. S. S. R. in Canada is obvious. The Dominion lies on the forefront of the transpolar air route between the United States and the Soviet Union.

What About These Mergers?

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. O'MAHONEY. Mr. President, there has been great quickening of interest throughout the country in the bills which have been pending in the Senate and House to amend the Clayton Act so as to prevent monopolistic mergers. A very interesting article on that subject appears in the weekly magazine America under date of April 26, 1947, under the title "What About These Mergers?" I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT ABOUT THESE MERGERS?

(By Benjamin L. Masse)

(Eighteen hundred corporate mergers in 7 years (1940–46) works out at about one every day (on the 40-hour week). Father Masse agrees with Senator O'MAHONEY, of Wyoming, that this state of affairs will bear thinking about and that not enough thinking is being done about it.)

Toward the close of the Senate session on February 17, Mr. O'MAHONEY, of Wyoming, obtained the floor to advise his colleagues of

impending hearings on a bill before a subcommittee of the Judiciary Committee. The bill, he explained, aims to plug a loophole in the Clayton Act and help make the country safe for free enterprise. "Everybody talks about free enterprise," he began, "but precious few do anything about it. Everybody talks about competition and the desirability of maintaining it, but few of us seem to do anything substantial about it." And then, warming up to his task, he continued:

"Everybody agrees that the concentration of economic power is a menace to what we popularly call the American way of life, but the concentration of economic power proceeds year by year, month by month, and even day by day. There are appalling facts before us for consideration; yet they seem to make no ripple upon the surface of public attention."

The Senator was right, as the next day's newspapers showed. Although he spread the "appalling facts" on the record—1,800 recorded corporate mergers in manufacturing and mining alone between January 1, 1940, and December 31, 1946—not one of the five papers I regularly see even noticed the speech. It made not the slightest "ripple on the surface of public attention."

When you stop to think of it, this is an astonishing phenomenon in a country whose businessmen worship at the shrine of free enterprise and whose legislators are never too busy to spare time for the problems of small business. It is doubly astonishing these days when there is so much righteous talk in industrial circles about the huge labor monopolies which are strangling the country, and so much fear about the spread of collectivism abroad. You would think that this competition-conscious country would be exceptionally sensitive right now to the first faint signs of monopoly, that the press would be alert to expose and condemn the slightest tendency toward anticompetitive amalgamations, that politicians would be trust-busting up and down the Middle West as in days gone by, raising the specter of Wall Street.

But nothing of the sort is happening. Over the postwar wave of corporate mergers only a few warning voices have been raised on the public platforms and in Congress. Scarcely one important newspaper has spoken out against them. To the best of my knowledge not a single business group has instructed its lobbyists to raise the danger signal on Capitol Hill. Have we all succumbed to the semantics which Mr. Gromyko has been popularizing at Lake Success? Just as the Soviets prate about democracy and practice dictatorship are we preaching free enterprise and cultivating monopoly? Or are the fears which a few have expressed in recent months, notably Senator O'MAHONEY and Representative KEFAUVER, of Tennessee, just the figments of sincere but feverish imaginations?

About 1½ years ago the editors of Business Week took a good look at wartime mergers and found little reason for worry. "Today's consolidations," they reported, "have postwar readjustment rather than monopoly as aim." They found that typical objectives were entering new fields, safeguarding volume, diversifying output, and gaining new markets. And this comfortable, reassuring attitude seems general in business circles.

Before we sit back, however, safe in the knowledge that all is well with the good ship "Free Enterprise," it might be wise to make a quick survey of the situation. Business estimates of economic trends have occasionally been wrong in the past.

To begin with, we can distinguished three distinct types of mergers: The vertical, the horizontal, and the conglomerate.

In the vertical merger, one firm acquires the assets of another firm which is engaged in an earlier or later stage of the manufacturing process. For instance, the acquisition in recent years by seven basic steel producers of 87 percent of the steel drum and barrel manufacturing capacity; or the purchase of 87 percent of the tight cooperage capacity by the Big Four of the liquor industry.

The horizontal merger consists in the combination of two firms engaged in producing identical or nearly identical products. Some recent examples are the acquisition of the Canfield Oil Co. by Standard Oil of Ohio; the purchase of the capital stock of Rhodhiss Cotton Mills by Pacific Mills; the absorption of the Gilmore Oil Co. by General Petroleum.

The conglomerate merger consists in the acquisition by one company of the assets of another which is engaged in an unrelated business activity. This type of merger has become fairly common in recent years and is partly the result of the large accumulation of liquid capital by big war producers. A classic example is the acquisition of the Crosley Corp.'s radio and home appliance business, together with radio station WLW in Cincinnati, by Victor Emanuel's Aviation Corp., which controls the huge Consolidated Vultee Aircraft Corp. Incidentally, Consolidated Vultee is the result of a horizontal amalgamation of the Vultee Aircraft Corp. and Consolidated engineered by Mr. Emanuel several years ago.

From its very nature the horizontal merger is always monopolistic. Where two competitors existed before, one exists now. According to the United States Department of Commerce, 60 percent of the 1,800 recorded acquisitions in manufacturing and mining between January 1, 1940, and December 31, 1946, were horizontal mergers.

The vertical merger, while not so directly monopolistic in its effect, also tends to restrict competition. Now that seven basic steel producers have taken over 87 percent of the steel drum and barrel manufacturing capacity, they are in a position to narrow or destroy the market of the remaining 13 percent. Similarly, the Big Four in the liquor industry, by acquiring 85 percent of the tight-cooperage capacity, can deprive competitors of necessary supplies, or force them to pay monopoly prices. Such practices have not been entirely foreign to this country.

Even the conglomerate merger is not without some monopolistic effect, since it tends to concentrate economic power in fewer and fewer hands. While some foes of monopoly profess to see no danger in bigness as such, there is obviously a point beyond which bigness and the resultant concentration of economic power become a threat to free enterprise, and even to a democratic society. How long will people permit enormous economic power to be controlled for private profit by private groups? Ten years ago the records of the Bureau of Internal Revenue showed that one-tenth of 1 percent of American corporations owned 52 percent of total corporate assets; that less than 4 percent of them received 84 percent of total net profits. During the 20 years between 1919 and 1939, some 95,000 corporations were swallowed up by mergers, at an average rate, that is, of more than 450 a year. The rate last year was the highest since 1931, and the trend continues strong. How far can this process of concentration be permitted to go before it cries out for Government regulation and control?

It solves nothing to point out, as the editors of Business Week do, that the motives behind today's mergers differ from those which prevailed during the period 1898–1902, when the purpose was clearly monopolistic. Let us concede that businessmen are furiously combining now not to eliminate troublesome competition but to keep their volume high, to diversify their holdings, to acquire sales outlets, and for other legitimate objectives. The fact is that, regardless of intentions, the objective effect of many of these wartime and postwar mergers is to lessen competition, encourage monopoly, and promote a further concentration of economic power.

What is the remedy to this old and persistent threat to the American system of free enterprise?

Congress thought it had found one when it passed the Clayton Act in 1914. Section 7 of this law forbade the acquisition by one company of the stock of a competing company whenever the Federal Trade Commission found that the merger would substantially lessen competition or effect a restraint of trade. Behind the law was the theory that the best way to deal with monopoly is to stop it before it occurs, rather than to punish and attempt to destroy it after it has been consummated. Section 11 of the act empowered the Federal Trade Commission to order divestiture of any stock acquired in violation of section 7.

However, corporation lawyers soon found a loophole in the Clayton Act. They noted that, whereas the act prohibited the acquisition of a competitor's stock, it was silent about the purchase of a competitor's assets. Accordingly, all during the greedy and speculative twenties, businessmen, aided and abetted by investment bankers, proceeded with impunity to nullify the clear intent of the Clayton Act. In this they were assisted by the Supreme Court, which obligingly widened the loophole. In *Swift and Company* v. *Federal Trade Commission*, decided in 1926, the Court held in a 5-to-4 decision that the FTC was powerless to order divestiture of physical properties if title to the assets had been acquired before the Commission had instituted proceedings, even though the assets had been acquired by unlawful purchase of stock. A second decision by the Court, *Arrow-Hart and Hegeman Electric Company* v. *Federal Trade Commission*, tied the hands of the Commission more tightly still. In this case, which was decided in 1934 by another 5-to-4 decision, the Court held that the Commission could not order divestiture even if it had issued a complaint before the illegal acquisition of a competitor's assets. The Court required, in addition, that the whole process of causing the case to be tried, briefed, signed, and decided must have been completed before the accused had laid unlawful hands on the assets, else the divestiture order was improvident.

Regularly, year after year for the past two decades, the Federal Trade Commission has asked Congress to plug this loophole in the Clayton Act, but the Congress, though always professing great concern for small business and generous in appropriating money for it, has just as regularly refused. For a few weeks last year it seemed that the legislators were finally ready to correct the weakness in the law. Senator O'MAHONEY and Representative KEFAUVER introduced a bill in their respective Houses which would have effectively blocked the gap in the Clayton Act, and have given to the Federal Trade Commission all the power it needed to enforce it. The bills forbade the acquisition of assets as well as the stock of a competing corporation whenever the merger would substantially lessen competition. It stipulated further that all corporate mergers which concentrated more than 5 percent of the total sales of any business would be subject to Government review. Exempted were mergers where the combined assets of the corporations would be less than $5,000,000; or where the assets of the acquired corporation totaled less than $100,000. Although the House Judiciary Committtee reported the bill favorably, it never reached the floor. According to Business Week, the opposition of the National Association of Manufacturers and other business groups stopped the bill cold in the House Rules Committee.

Taking courage, perhaps, from President Truman's request for antimonopoly legislation in his state of the Union address last January, Senator O'MAHONEY and Representative KEFAUVER are trying again. From the new bills which they have introduced they

have eliminated several items which displeased business in last year's proposals. As the projected legislation stands now, it does little more than amend the Clayton Act by extending its prohibition against acquisition of stock in competing companies to acquisition of assets; that is, it merely plugs the loophole by which businessmen have evaded the clear intent of a law designed to prevent the growth of monopoly.

It will be instructive to watch what position the NAM and other business organizations take toward S. 104 and the companion bill in the House. Here is legislation aimed at fostering the free competition which these business groups praise. Here is legislation designed to prevent the monopolistic practices which they condemn. Will the business exponents of free enterprise rally to support these bills, or will they once again wreck them?

This much seems certain: if organized business defeats this well-intentioned legislative attempt to foster free competition, it had better offer the public some very sound reasons for doing so, together with an honest and acceptable substitute. In case the NAM and certain other groups don't know it, a good many people are inclined to believe that current business pleas for free enterprise and business criticism of labor monopolies are insincere. It won't take much more to convince them of it.

Improvement of Public Health

EXTENSION OF REMARKS
OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 24 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the April issue of the Kiplinger magazine entitled "Health Means Plans and Dollars."

This appears to me to be a most enlightening article which I believe should be available to those interested in improving the health of the people of our country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEALTH MEANS PLANS AND DOLLARS—WE MUST FIND A WAY TO MEET OUR CHALLENGING NATIONAL MEDICAL PROBLEM

United States medicine, which has devised brilliant treatments for many of our ills, is having a hard time prescribing for its most acute problem: how to make medical services available for all who need them.

There is wide agreement on the diagnosis: our medical facilities are badly organized and too expensive for most people. There is no general agreement on the right treatment, despite the universal interest in working out some solution. We are all potential consumers of medical services, and we are all affected by the health of our community. And our overburdened doctors need relief from a system under which they can't take care of all the sick, even with charity treatments.

Although the Nation's health cannot be put on a dollars-and-cents basis, employers should be concerned with the terrific inroads, largely preventable, which illness makes on production. Before the war between four and five hundred million workdays were lost annually from sickness—about 40 times the number lost through strikes. The loss of consumption power may be even greater.

Here is what's wrong in the judgment of the American Medical Association, individual doctors, lay experts and Government officials:

The traditional fee system of payment for medical services is too costly. Most people can afford emergency pills and treatment, but not preventive medicine or prolonged, catastrophic illness. Some estimates say about 20 percent of the population can't pay even for minimum medical needs.

There are not enough doctors, especially in rural regions, slums, and small communities. Many doctors are underpaid. Few have time to keep up with developments.

Hospitals and other facilities are too few, poorly distributed, often antiquated.

Medical research is haphazard. We spend a hundred dollars for research on infantile paralysis, which afflicts relatively few, for every 25 cents spent on mental disease, which afflicts millions and fills more than half the Nation's hospital beds.

Many people, particularly if they have no trouble meeting their own medical bills and deal exclusively with comfortably established city physicians, find it hard to accept so sweeping a diagnosis. But the clinical facts are disturbing.

According to the AMA, in 1940, most individuals and families with incomes under $3,000 needed help in meeting medical bills. That amounted to well over 75 percent of the population. People who borrow from small-loan companies need the money most often to pay medical bills.

For many an ailing individual the high cost of sickness poses the question of how much medical attention he can do without, and for how long. The grim consequences of such enforced self-denial showed up in prewar medical statistics, which brutally dispose of the notion that the United States is the healthiest nation on earth.

This country had higher infant death rates than seven other countries; higher cancer, heart, nervous, and mental disease rates. The average life expectancy at birth was higher in 4 countries; at 20 years it was higher in 8 countries; at age 40 in 11; and at age 60 in 12. The subsequent revelation that about 40 percent of young Americans were unfit for military service for medical reasons has hushed our big talk about national health standards.

It's not primarily the doctor's fault that protracted illness and preventive medicine are so expensive, although it is a fact that organized medicine, through the American Medical Association, has demonstrated a minimum of social awareness in facing the mounting medical crisis.

But the individual practitioner usually is too busy with his never-ending responsibilities to think about broader medical issues. He carries an appalling load. In most cases the family doctor has fully earned the respect and affection which millions of Americans have for him. He has a habit of quietly scaling down bills for needy patients, and carrying a load of charity cases without talking about it.

So many doctors have concentrated in the cities that demands on country and small-town doctors are proportionately higher. These small-community doctors are often the ones with poorest facilities, largest practices, and lowest incomes.

The main effort to bridge the economic gap between patient and doctor has been through voluntary group-insurance plans as a substitute for the fee system of payment. During the last two decades, many Americans have got partial coverage against sickness through one of these plans.

But they have three fatal defects: They don't offer adequate coverage, they have proved too expensive for lower-income groups, and they don't include enough people.

Like most commercial health-insurance policies, group-insurance plans tend to restrict services and to neglect thorough treatment. Some group plans provide only hospitalization for limited periods, but over half our medical bills are for treatment given outside of hospitals. Less than 5.4 percent of the population has insurance for physicians' services, and about 2.5 percent have complete home, office, and hospital coverage. Only one American out of four has any kind of health insurance at all.

Many of the people who have had experience administering group-health plans say that these are only a necessary stopgap in the absence of a national-health plan.

There are signs that the tide is setting in the direction of such a national program as a logical extension of social security. Opinion polls show a majority in favor of pay-roll deductions to provide national-health insurance. And in the last Congress, Republicans and Democrats joined to provide Federal funds for the construction of more hospitals and clinics, and for treatment and research in mental health and other fields.

Congress hasn't acted on the problem of providing medical services for those who can't afford them. But it may do so during the present session. Senator ROBERT A. TAFT, Republican, of Ohio, has revised his health bill, and reintroduced it, with the support of the AMA. Given the Senator's influence and the Republican desire to win votes from those who would benefit by the measure's provisions, chances for his bill look pretty good. Its main provisions:

Coordination of civilian Federal health functions in a new Federal Health Agency.

Appropriation of $200,000,000 yearly to assist States in providing medical care and hospital services for individuals and families unable to pay for them.

Cash contributions by States at least equal to the sum advanced from the Federal Treasury.

Approval of State programs by the Surgeon General, with appeal to a national health council in event of disagreement.

Enactment of the bill, according to its proponents, would probably make some basic medical services available to the poorest 20 to 25 percent of the population; opponents say only 10 percent.

Critics of the bill object strongly to a provision that applicants would have to prove their inability to pay. Too many States require a means test as proof of this inability to pay. This is a throw-back from the concept of social security to that of public charity. It seems needlessly humiliating, say the critics, that sick people should have either to exhaust their savings or stigmatize themselves as paupers, to obtain emergency medical care.

The Taft bill also minimizes basic public interest in good health for everyone. We do not maintain schools only for those who are too poor to go to private schools, nor libraries for those who are too poor to buy books. Why offer medical care to the indigent, and exclude middle-income families for whom, also, medical services are too expensive?

Another criticism is that the Taft bill, by providing only emergency relief, forestalls any attempt to combat disease on a Nation-wide scale. Some doctors think tuberculosis could be wiped out in the United States within a generation, syphilis within a shorter time. But this could be done only through a Nation-wide campaign, with services readily available to everybody.

One major political force interested in going beyond the provisions of the Taft bill is United States labor. With hopes of big wage boosts collapsing, union negotiators are now going down the line for fuller health coverage as well as cash benefits paid for by

employers. Management will be hard put to refuse this demand altogether.

In the next few years an estimated 8,000,000 workers are likely to get new or increased health protection as a result.

Senator TAFT's prescription, limited coverage for bottom-income groups, differs, of course, from the unions' proposal—full coverage for all union labor. But by one of the ironies of politics, both efforts may have the same long-run effect.

Once you provide basic medical care for 35,000,000 citizens under the Taft bill and for additional millions of industrial workers under union contracts, the objection to going the whole hog diminishes. The cost would be much cheaper if it were spread over the whole population. And coverage would be more complete. The financial and administrative burden of health and welfare clauses would be taken off private enterprises and placed on official agencies.

One proposal for such a program has been embodied in the administration-sponsored Wagner-Murray-Dingell bill. It is expected to be financed by a 3-percent pay-roll levy divided between employees and employers, plus a general appropriation for research and training.

Payments from this fund would be entrusted for disbursement to the Surgeon General, who would also set standards. But day-to-day administration would be left to States, local communities, and existing medical groups. Doctors would continue, if they preferred, to practice on the present fee system, with payments made to them out of the insurance fund. Doctors who wished to practice on a full or partial salary basis could do so. Those who wished to remain completely outside the system would be free to do so.

Patients could go to any general practitioner in the system. The doctor also would be free to accept or reject patients.

It's worth noting that the British Medical Association once fought a national health system based on compulsory health insurance just as stubbornly as the AMA does now. After a conservative government set one up anyway, the British Medical Association swung to support. One reason—doctors' incomes went up.

Like a number of distinguished medical men, some United States business leaders have come to regard a national-health program as a desirable extension of our present social-security laws. Executives like Charles Luckman, president of Lever Bros., Gerard Swope, president of General Electric, and David Sarnoff, of RCA, feel this way.

Total cost of a national-health program has been set at $4,000,000,000 yearly. That's about what we pay now, in doctors' bills, taxation for public-health service, and so forth, for such medical care as we get. Socially and economically, it would seem sensible to organize medical services for faster progress toward the goal of medical science, which is not just care in sickness, but positive health for the individual and for the entire community.

Survey of Ground-Water Resources

EXTENSION OF REMARKS

OF

HON. GEORGIA L. LUSK

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mrs. LUSK. Mr. Speaker, under permission to extend my remarks in the RECORD and include therein other material, I offer the following telegrams and article:

SOCORRO, N. MEX., *April 23, 1947.*

Hon. GEORGIA L. LUSK,
Junior Representative From New Mexico,
House of Representatives,
Washington, D. C.:

At the recent session of our legislature $10,000 annually was appropriated to this Bureau for cooperative work with United States Geological Survey in making a survey of ground-water resources of our State. In view of extreme drought conditions prevailing over entire State, we feel that survey of ground-water resources is urgently needed. We urge that every effort be made to restore to United States Geological Survey budget appropriations requested for ground-water survey.

E. C. ANDERSON,
Director, New Mexico Bureau of Mines and Mineral Resources.

LAS CRUCES, N. MEX., *April 23, 1947.*

Mrs. GEORGIA L. LUSK,
House of Representatives,
Washington, D. C.:

Report has reached us that appropriations for Ground Water Division of Geological Survey of Department of Interior has been almost completely eliminated. We feel that work of this division is of such importance to New Mexico and to the West that the cut should be vigorously protested. Ground-water resources are becoming increasingly important as sources of both irrigation and domestic water supplies and continuous study of ground water is essential. The Ground Water Division has an excellent record and has consistently made useful contributions throughout the entire country. We do not believe that it deserves the severe treatment that has been given it by the Appropriations Committee.

JOHN L. GREGG,
Elephant Butte Irrigation District.

A NATION BREAKS FAITH

It is hard to imagine a more tragic example of the breaking of faith than the failure of the United States Government to carry out its treaty obligations in connection with Navajo Indian education. Under the treaty of peace signed with the Navajos in 1868 the Government bound itself to supply this tribe with a teacher and a schoolroom for each 30 children. At no time have these ever been provided, and the situation now is that not more than one Navajo child in four can be in a schoolhouse. Of 20,000 children of school age, there are facilities for only 5,500 at the outside. Some 2,000 of these are in day or community schools, and 3,000 in boarding schools, although the latter were designed for a capacity of only 2,000. Some 500 more boys and girls are being educated by mission schools on or near the reservation.

Reports of the Office of Indian Affairs indicate that the median years of schooling for the Navajo Tribe is nine-tenths of 1 year, that 80 percent of the tribe are illiterate in the usual sense of that word and about 57 percent unable to speak the English language.

These conditions grow progressively worse owing to the rapid increase of the Navajo Tribe. There are estimated to be 55,000 of them now and they are increasing at a rate of 2 percent, or about 1,000 persons annually. There are said to be 17 percent more children of school age among the Navajos than in the United States generally, owing to this rapid increase.

Of 49 day schools on the reservation, 19 had to be closed for lack of funds. Just last week the closing of one of the boarding schools, that at Tohatchi, with 165 pupils, was announced.

A lengthy report has just appeared by Mary Watson, director of elementary education in New Mexico, and Gail Barber, director of arts and crafts of the State department of education, pointing up facts which should bring the blush of shame to every citizen of the United States. Their report was made after personal investigations arranged by Mrs. John J. Kirk, chairman of the State board of public welfare, in which they were joined by Arizona officials.

Besides citing the lamentable inadequacy of educational facilities, their report pointed to the poor economic situation of the Navajoes which they declared "is beyond the belief of the average American, and is rapidly approaching a crisis." Government reports, they stated, showed that the average per capita income of the Navajoes in 1940 was only one-tenth as much as that of the average American, being approximately $82 each compared with a national average of $861.

During the war the economic situation improved owing to 3,600 Navajo men and women entering the armed forces and 15,000 engaging in war work of various kinds. With the close of the war the investigators estimate that some $7,000,000, or 87 percent of all current income, has been lost to the Indians who "now return to the crisis of 1940."

From personal observation the investigators report large numbers of children turned away at various schools for lack of accommodations and overcrowded conditions at most of the schools both as to classroom and housing facilities. They commended in general the efforts of the educational department of the Navajo Reservation in doing the best possible with limited funds and facilities, but stressed the need for more community schools with dormitory accommodations for pupils from a distance.

"The atmosphere of the dormitories at boarding schools is reminiscent of a poor orphans' home of two decades ago," the report reads. It criticizes the dearth and inconvenience of toilet facilities, and cited as an example the Fort Defiance school where the only such available are in dormitories a block from the school. The report recommends adequate appropriations to build and maintain sufficient schools, the erection of suitable dormitories to convert day schools into community schools, the replacement and enlargement of condemned buildings at Shiprock, provisions for substitute teachers, and for school nurses.

"The boys and girls of the Navajo Reservation * * * are entitled to education considered essential in all other parts of the United States. They are entitled to such an education not only because of the promises of their treaty with our Government, but in their own right as promising young American citizens," the report concludes.

The Daily Independent unqualifiedly endorses the findings of this report and urges that every citizen and every civic organization get actively behind it in demanding that Congress appropriate adequate funds to correct this deplorable situation. A lot of money was spent unwisely on the Navajo Reservation during the highly theoristic Collier administration, but that does not lessen our responsibility for at long last waking up and doing the right thing now.

Franklin Delano Roosevelt: "How Blessed Is America That Out of Her Loins Came Forth This Great Son"

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. SABATH. Mr. Speaker, in all the noble tributes to our fallen leader,

Franklin Delano Roosevelt, few have been more eloquent than the sermon of Rabbi Gerstenfeld, of Washington, D. C., delivered over radio station WMAL.

I should have preferred to insert the full text of this beautiful threnody; its length, however, precludes that. Therefore I have selected paragraphs which, I trust, preserve the full meaning within the prescribed length of such extension, and under leave granted insert it in the CONGRESSIONAL RECORD:

This Saturday is the second anniversary of the death of the late President Roosevelt. Two years ago we gathered to pay homage to one of America's great sons. To a little cottage on a southern hill the angel of death had come on the very eve of the great victory for which this brave soul had given all the strength that God gave him. For 12 long years he had borne the burden that no other man had been fated to bear. He achieved his office in the most tragic time in the history of the West. The nations that had built the horizon of the world's freedom had forgotten the moral mandate of their heritage. The First World War had come to engulf the flower of its manhood, but an exhausted mankind failed to rise to the challenge of the future. Freemen beat their swords into stock shares and their spears into the pruning hooks of a vain harvest of desolation. The armistice was soon followed by the awful depression and the spawning of another world war. This young man, made strong by the facing of personal adversity, and with the vision of his great, generous heart, consecrated his life to the service of his country. The New Deal policy for the forgotten poor; the good-neighbor policy for the neighboring nations that were fearfully weak; the friend of world peace who never succumbed to the seductions of appeasement, up through the months of lend-lease, then the defeat at Pearl Harbor, and finally this war, his smiling countenance, resolute and unafraid, became for many the truest symbol in our day of the world's noblest courage, mankind's profoundest faith, and our loftiest hopes.

HOW BLESSED IS AMERICA

How blessed is America that out of her loins came forth so great a son. Even to remember his words uttered at each moment of moral crisis in the past is to bring new strength into our hearts. "The only thing we have to fear is fear itself," he said in his first inaugural, as he pleaded for the faith that would save us from the paralyzing terror. "We must quarantine the aggressor," he cried out when the shadow of aggression arose out of the foul gutters of the Old World. "The hand that held the dagger has stuck it into the back of its neighbor," he declaimed as would an ancient prophet, warning the sawdust Caesars of the retribution of a just God that lies ahead. He spoke of the four freedoms, freedom to speak, freedom to worship God in one's own way, freedom from want, and freedom from fear, and spoke of them in the very hour when the swastika flew over all of Europe—from the shores of the Atlantic to the far-off Acropolis and to the shadows of the ancient pyramids of Egypt; when the life lines of the world's freedom seemed about to be shattered forever. When voices of defeat and surrender arose even in the high places of this land, he said that tyranny was not the wave of the future and lashed at the cowards who would surrender the hope of the world's freedom. He rallied his people in a day of infamy; and as the Commander in Chief of this free land he had the genius to carry the struggle to the enemy, instead of awaiting the invasion of the foe. He led his people across the Red Sea of tragedy, in a black night of suffering, toward the foot of a great covenant of Sinai, a covenant of the righteousness of the morrow for which he had labored through the years. From Casablanca to Tehran, from Quebec to Yalta, this brave spirit who could not walk, but whose courage stalked across the earth, rallied the warriors and took counsel with the statesmen until the Caesars were in the dust and the Attilas fled to their mountain caves amidst the ruin of their plunder. The last citadel of the might of the enemy in Europe fell before the brave men of the world moving in as a wall of steel around the lairs of evil. On the outermost naked shingles of the world the devil-worshippers soon found their arms a snare and a delusion before the mighty will of the new weapons of free men who believed in the great God who has, and ever will lead men out of bondage.

WE PRAYED WE WOULD NOT FAIL

I remember the dark hours when his earthly remains moved on to its rest and we knew that the souls of millions on the face of the earth were moving on with it. The steel beat of the train that bore him through the darkness were the plaintive notes of a threnody of lament in the hearts of free men everywhere. We felt it in the sorrow-laden streets of silent men in this city, as they watched the flag-draped coffin. Amidst enshrouding grief there was a new gold star in every home and a bowed head before many an altar; as we prayed that we will be true to his vision. We prayed that we would not fail the peace for which he labored, for which he strove until his brave heart broke under the burden the call of God's duty had rested upon him. With millions laboring in our factories or fighting in the foxholes our hearts echoed the sacred words of the great Lincoln, at whose lonely side he will forever stand, that "It is for us the living to be here dedicated to the unfinished task for which they who have fought have thus far so nobly advanced. It is for us to be here dedicated to the great task remaining before us, that from our honored dead we take increased devotion to that cause for which they gave the last full measure of devotion."

HISTORY WILL BE WRITTEN

After the funeral had ended we knew that the final epitaph was still to be composed. It would be written by the free nations of the earth, by their responsible leaders and their responsive followers. It would be especially written by the American people and the men who are the chosen instruments of their decision. History can only be written by the survivors and too often—as after the last war—the survivors may be the weaklings, without any vision of the challenge of the morrow. The epitaph of history on the great saga of Franklin Delano Roosevelt, whether it will be the transvaluation easy with the morally feeble that will see him as too bold, or whether it will be the judgment of the great souls who will see in him the righteousness of our age pressing forward to new visions of the good and the true, the spiritual imperative of his moral vision, all that would be determined by the decision of the American people.

A JOSHUA NEEDED, STRONG AND OF GOOD COURAGE

All will now depend on whether the heirs of Roosevelt will, like unto Moses, be Joshuas, "strong and of good courage;" who will not turn from his standards, in the world of scripture, "to the right or to the left" and "go forward." Will they be opportunists, weaklings who will imitate his weakness or men of unflinching character who will be exemplars to his strength; or will they be covetous Achans who in selfish greed for personal spoil, for a mere mantle of Shinar, a few shekels of silver or a wedge of gold—will jettison all the cargo of ideals of the morrow for which we once hoped.

As we remember, from the theme of the Passover festival that ends tomorrow, the miracle of God's deliverance comes only to the faithful who resist the broken pledges of cruel Pharaohs, the faithful who renew their pledges to the future as they accept the moral logic of their vision with their own brave steps forward; the faithful who will be satisfied with the unleavened bread of pioneer pilgrims because they believe that man must be better than the Pharaohs we resist. It is only by that faith that we can cross the dark night over a Red Sea; and it is only in that moral strength that there will be faithful who will find the path out of the wilderness into a world of promise.

LET US, THEREFORE, BE VIGILANT

When I think of the plight of the Old World that flows directly from the political opportunism of men who once professed to fight the Nazis, and who will be as responsible for the havoc of the future as were the evil men whose hard hearts they had once pledged themselves to oppose; when I think of one former ally that has perverted the dream of a United Nations from an instrument of cooperation into a device of paralyzing dissension and interminable obstruction; and when I think of our other ally that has put all its ebbing strength at home into the reliance upon rotting reaction abroad until our heart is sickened by the brazen perfidy; when I think of the fragment of Old World Israel that is now left to whom the British have barred the gates of Palestine in violation of the pledges made according to the law of nations and the needs of humanity, then regardless of what legalistic jugglery they may use to confuse the average citizen, they have the blood of the innocent on their hands, even as if they were the henchmen of the Nazis. In the light of the sad facts of the abysmal plight of the innocent who should be liberated, who are caught in a death trap of the Old World with every avenue of escape cut off by the connivery of the blind who once spoke of resisting the Nazis, then one can already see that some in our midst will go down in history as the Achans, who forgot all the meaning of mankind's tragic pilgrimage and succumbed to the very paganism they had once opposed—all for the sake of a mere mantle of Shinah of personal glory or for a few shekels of selfish booty. We thus face the danger in this hour not only of the perfidy behind Russia's "iron curtain" and the infamy behind what has been called the British "silken curtain," but also of the corrupting normalcy behind the democratic forms that drape our own land. Thus in this very hour we face a resulting false boom in our midst, the high prices of the inflationary spiral of a strangling economy because of the witless amongst us, even as we face a false peace in the world—the peace that will be but a brief armistice before the atomic extermination of human civilization.

Let us, therefore, be vigilant in this hour not only for our military strength but for our moral commitments. If we are not to deny all for which we have fought; if we are not to make a profane mockery of all that freemen who faced the evil of our time once hoped; if we are to write a true and proud epitaph of honor upon the grave of our heroes—then now is the time for new Joshuas bearing a sacred covenant of the morrow, faithful Joshuas who are of moral strength and of good courage, true Joshuas who will not permit themselves or this blessed Nation by decision or default to be seduced to the right or to the left and sink into the dark sins of a tragedy-ridden Old World leading deathward. For now is the time we must lift high a divine covenant—now is the time we must take the path upward to a world of promise that righteous men with God's help must now make true. Amen.

Price Cut on Soap Products

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein a splendid telegram I have received from Lever Bros. Co., of Cambridge, Mass., informing me "in accord with President Truman's recent appeal" that this company, effective April 23, has put into effect "a price cut of 10 percent on all major soap products" of this company.

NEW YORK, N. Y., *April 23, 1947.*
Hon. JOHN W. McCORMACK,
Washington, D. C.:

Responding to President Truman's appeal for reduction of prices—a price cut of 10 percent on all major soap products of Lever Bros. Co., effective Wednesday morning, April 23, was announced today by Charles Luckman, Lever president, from Lever headquarters in Cambridge, Mass.

Products involved include Lux toilet soap, Lux flakes, Rinso, Lifebuoy, and Swan, while the price of glycerin was also reduced by approximately 10 percent.

Above-mentioned reductions follow a cut of 2 cents a pound in the price of Spry made April 10.

"This step is being taken because Lever Bros. Co., in accord with President Truman's recent appeal, is fully aware of the responsibility that rests upon American business to take effective measures in order to assure the economic well-being of the Nation," Mr. Luckman stated.

"We are not only willing but anxious to pass along to American housewives all possible reductions, even beyond the amount of any savings which may accrue to us by reason of the downward trend in the prices of raw materials," said Mr. Luckman.

These price reductions are being made despite wage increases granted to Lever employees during the past month.

LEVER BROS. CO.,
Cambridge, Mass.

The Greatest Things

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a poem entitled "The Greatest Things":

THE GREATEST THINGS

The best day—Today.
The best play—Work.
The greatest puzzle—Life.
The greatest thought—God.
The greatest mystery—Death.
The best work—Work you like.
The greatest mistake—Giving up.
The most ridiculous asset—Pride.
The greatest need—Common sense.
The best town—Where you succeed.
The most dangerous person—A liar.
The most expensive indulgence—Hate.
The greatest invention of the devil—War.
The most disagreeable person—The complainer.
The greatest secret of production—Saving waste.
The best teacher—One who makes you want to learn.
The biggest fool—The boy who will not go to school.
The greatest deceiver—The one who deceives himself.
The worst bankrupt—The soul that has lost enthusiasm.
The cheapest, stupidest, and easiest thing to do—Finding fault.
The greatest thing, bar none in the world—Love.

—*Author Unknown.*

The Housing Situation

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. ARNOLD. Mr. Speaker, a great many letters and petitions have been received relative to rent control, and the housing shortage. Recently I made a radio broadcast to the people in my district on this subject, which I should like to include in the Congressional RECORD. This situation is of vital concern to a vast number of people, many of whom feel that Congress could and should do something to meet the need for homes, especially among the veterans. My radio address follows:

Tonight from Washington I want to bring you an analysis of a situation that is not news—it's not new to anyone. In fact, it's old stuff. I refer to this housing situation. Few situations are as mixed up right now as the problem of housing. It affects the veterans that have returned from the war, the building industry, and the building investor. I know, too, that it affects many of you folks in the District. For that reason, I would like to go over the problem and try to bring to you a picture of just what is behind the entire mess.

Let's take a short look at the housing situation before the war and before Government control. Before the war over 90 percent of all new homes sold for less than $6,000.

Last year, 1946, which was a year of peace, half of all homes built during the year cost more than $7,500. Actually, there are not enough houses available now even for that price. Real-estate prices have skyrocketed in the face of an acute shortage of houses for sale and for rental.

The pity of the situation lies in the fact that at this moment Government regulations and controls are holding the construction industry down and New Deal red tape is preventing the builders of the Nation from constructing homes at the full capacity of the industry. People who would like to build find that it is just too expensive and complicated—and the situation has not been getting any better despite all the talk of housing programs, housing expediters, and subsidies.

Behind this shameful situation are various factors, all of which we Republicans have inherited from the New Deal. The first thing I want to go into is the labor trouble and its bearing on the current housing shortage.

Not so long ago the gigantic American industrial machine was producing the airplanes, engines, tanks, guns, and complicated fighting ships to supply the entire world for a Global War. Now, however, 2 years after the end of the war and with reconversion of industry accomplished in virtually every phase, the American industrial machine cannot get in gear to furnish the people of this country with homes. Here are some of the ridiculous bottlenecks in housing caused by labor trouble.

Under present laws this Government cannot force labor to do away with certain costly building methods. Much of the mechanical know-how developed and advanced during the wartime period cannot be used now because labor unions fear that it will eliminate jobs.

Industry right now is producing on mass scale complete units of plumbing and heating fixtures. Labor unions, however, can make you hire plumbers to take the units apart and reassemble them when you install them in your new house. This sort of thing has been upheld by the courts of this country under interpretations of present laws.

You can save money building your house by buying windows already painted and glazed ready for installation. Unions, however, can make you hire a painter to go over the unit with a dry paint brush, and you can be forced to hire glaziers to remove the window glass and replace it before it can be installed in your new home. You pay for the time and labor.

Prefabricated wall paneling can be purchased now that the war is over. However, getting it installed in a new house is another problem. Unions can make you hire plasterers anyway, even if you are using sheetrock wallboard which is an excellent substitute. If you refuse to hire plasterers, all work on your home can be stopped.

You can save much time and money by having your new house painted with a spray gun that is much more efficient than a painter. Unions won't let you do this, however. The union will not allow one man to do the work of several painters.

Your contractor might try to save you some money by purchasing panels with your inside wiring attached. Such panels are now available with the wiring done at the factory before delivery. Unions can make you hire union members to unwire the panel, and rewire it while you pay for the time and labor.

That is only part of the picture. In my opinion it is a sad commentary on a Nation that is as highly industrialized as our Nation is. The Republican Congress is now trying to correct this phase of the program through the Labor-Management Relations Act.

The second and other important phase of this situation is the problem of Government controls. I want to quote from a letter I recently read in a newspaper illustrating what the New Deal controls have done to many landlords over the Nation. This landlord wrote:

"My $6,000 houses rented for $45 monthly up to 1929 and gradually this rent was reduced until I was receiving $25 during the depression. The breadwinner of the family was earning around $125 a month while paying $25 per month rent. But all through the war the same breadwinner has earned $400 to $600 a month and still only paid $25 house rent.

"My $8,000 to $9,000 houses rented for $75 monthly up to 1929; they now rent for $40, with similar increases in earnings by the occupant.

"For the past 12 years the Government has entered into the building business and taken increased control, consequently private building contractors have had little inducement to invest their money in private residence construction. That, I believe, has a lot to do with the housing shortage."

That ends this landlord's letter and I believe it states the case very well. That does not mean I am against the tenant, however. You can understand what it will do to the building of homes to rent. The Government

should abandon all building and rental controls, get out of this business, and set the building industry free. I have continually tried to show by actual statistics that private enterprise has the potential to furnish the goods if they could throw off the yoke of Government controls. The bureaucrats who try to control the building business have had little or no experience in that field and the Government cannot furnish the public with the houses that can be turned out by private industry and yet the administration is continually demanding that controls be maintained. It is my belief, at this time, that this control over the construction industry is hurting all efforts of private builders to furnish the veterans and the public with homes. Government controls, just as heavy Federal taxes, are eliminating the incentive of investors to invest money and turn out the goods.

There is considerable conflict of views on legislation proposed in the House and in the Senate, in an attempt to remedy the housing shortage.

It increases the present building demand by encouraging all those who are now adequately housed to immediately borrow money for the purpose of building a new house, and it provides for Government expenditure of approximately $7,000,000,000 in the housing field, at a time when the national debt is taking six billion annually from taxpayers merely to pay interest on it.

Unquestionably, the removal of rent ceilings would do much to encourage and stimulate builders in the matter of providing additional rental properties, but with the ceilings on, certainly such builders cannot afford to take a chance on erecting rental property.

It is a well-known fact that the building industry has a potential capacity of housing in excess of a million units a year and that fact was demonstrated in 1925 when over a million homes were built. That could be attained this year or any other year without New Deal controls being maintained. As long as we have Government bureaus tinkering with the building business, just that long we will be short of houses.

The money is available to finance this housing. The Nation is in need of homes as never before in our history. Continuation of restrictions is destroying the ability of the industry to turn out the maximum number of homes. In my opinion, it is time we let the building industry and the building investor run their own business free from Government snoopers and meddlers and pave the way for a million homes yearly as was done in 1925.

The GOP and Its Record

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. REEVES. Mr. Speaker, every day the Republican Party reaffirms its obligation and pledge to the American people to bring about economy, efficiency, and sanity in the Federal Government. Toward these ends a sound and constructive legislation program has been formulated and is in process of enactment. The motives and political self-interests of those who oppose and obstruct the reduction of pay rolls and expenditures, the lightening and equalizing of the tax burden and the many other measures passed by the Republican Congress are well known.

Our responsibility is clear, and we shall not fail to discharge it. The progress made to date and the task ahead were excellently stated in an editorial in the Kansas City Times on April 21, 1947, the first day of the meeting of the Republican National Committee at Kansas City. The editorial is as follows:

THE GOP AND ITS RECORD

In their Kansas City meeting today and tomorrow members of the Republican National Committee will be able to gather valuable impressions of the Middle West politically and otherwise. This section does not pretend to be running the country or to have infallible views on what ought to be done. But it is not a rankly partisan section, it is rather independent in its thinking and its political support goes one way or the other accordingly.

Last year the Republicans made an excellent showing in the Middle West, as in fact in most other parts of the country outside the solid South. They will be able to retain this confidence as their performance goes this year and next. While they have nothing of a serious nature to be worrying about at this stage, they cannot be too cocky about the future. The party is on trial in Congress and in the States where it now has control.

Its leaders doubtless realize the fact. They need not be disturbed by the political sniping from the other side of the fence, because that can be expected no matter what the record they produce. In their program of economy they have aroused the fury of the entrenched Government bureaus which have been turning loose a heavy barrage of propaganda, while the opposition party naturally will make the most of any chance to criticize and to charge the GOP is divided in its own ranks and is unable to make good on its pledges.

All this the public will understand. It's simply a part of the political game. The proper answer is more than simply firing back. It is and must be the party's record itself. So far there is not so much to explain or defend in that record. In their new control of Congress, after 17 years, the Republicans have got down to business and done a lot of hard work. By necessity it had to be done quietly and through committees in the early months of the session.

Now the results are beginning to show up as the bills come out and action is taken. And the answer of the other side here cannot be mere opposition and rejection of what is submitted in the hope of political advantage. If the administration and its party in Congress assume that attitude they will be certain to lose just as the Republicans would be certain to lose if they rested their case simply on politics.

The party now officially represented in Kansas City faces its heavy responsibilities. They can be discharged by a firm continuance of the course that has been followed to date.

Reduction of Research Appropriations

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of April 20, 1947:

BUDGET CUTS OPPOSED—CONGRESS ASKED TO RECONSIDER PLAN TO SLICE RESEARCH FUNDS

(The signers of the following letter are distinguished members of the Harvard University faculty in the fields of the natural sciences, the humanities, and the social sciences.)

To the EDITOR OF THE NEW YORK TIMES:

Over a generation our Federal Government has steadily improved its facilities for collecting facts. Its rich harvest has been the envy of the world. Without facts at their disposal, neither Government nor business nor consumers can act intelligently.

The cost of gathering these facts is almost negligible compared to our $170,000,000,000 of national income, or the losses that might be incurred as a result of mistaken policy which might result from the unavailability of statistical information.

We therefore urge upon Congress a reconsideration of recent action drastically cutting appropriations for research, inclusive of fact gathering. We support Congress in its wise policy to cut public expenditures, so long as private spending threatens to be excessive, and inflation is the common danger. We also are sympathetic with Congress when it strives to eliminate duplication of statistical services or series, or to rid the country of any wasteful expenditures. A dollar spent by the Government should be well spent. We are, however, opposed to indiscriminate pruning, whether in the area of research or elsewhere.

A $170,000,000,000 economy does not operate without action by individuals. If these individuals are to act intelligently they must have facts relating to prices, employment, output, wage rates, trade, savings, expenditures, etc.—and on a national, regional, and local basis.

We therefore deplore, for example, the recent proposed cut in the budget of the Bureau of Labor Statistics from $5,500,000 to $2,400,000. Unless a large part of this cut is restored, the country will be deprived of many statistical series which are indispensable for policy making. We shall lose many times the savings to the Treasury; and posterity will lose part of its historical perspective. An interrupted statistical series is likely to be as dead for all time as a man whose heart stops beating for an hour.

We respectfully request Members of the Congress to reconsider their recent proposal to cut appropriations for research in departments of the Government.

Public Demands Reasonable Labor Legislation

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial which appeared in the Sunday Star of April 20, 1947, entitled "The Tide Is Strong." This timely editorial indicates that the people are insisting that Congress take action to create a balance of power between industry and labor. For too many years the situation has been one-sided. Today we have a manifestation of the pendulum swinging in the other direction. It is to be hoped that it will not swing too far at this time.

We must maintain the principles of justice and equity between these contending forces so that the public interest will be preserved at all times, insofar as it is possible.

THE TIDE IS STRONG

Critics of the House-approved labor bill are making the point that most of the American people do not know what the bill provides or what it may be expected to accomplish. This probably is true, but it by no means follows that the bill therefore is lacking in public support.

Here is a legislative proposal which reverses what has been a marked trend in the direction of conferring special favors on labor. In one stroke, it would sweep away many concessions won over the years and which have come to be regarded almost as inviolable "rights." Nevertheless, this bill was passed by a vote of 308 to 107—almost a 3-to-1 margin. Not even a majority of the Democrats could be enrolled against it, the Representatives from the South forsaking in droves the opposition stand taken by Minority Leader RAYBURN.

In the face of this, it is sheer whistling in the dark for the opponents of the bill to seek comfort in the assumption that a majority of the people do not support the bill because they do not know what is in it. For the best evidence that the people do support the bill is found in the fact that such an overwhelming majority of Representatives, seeking to please their constituents, voted for it. And if it can be inferred that the public supports the bill without knowing or caring what is in it, that should be even more ominous from the union point of view, since it would indicate that the tide of antilabor sentiment is indeed running strong and deep.

Of course, it would not follow from the mere fact of public support, or public indifference to details, that the House bill is a good bill. In its present form it is not a good bill, although it contains some provisions that are both good and urgently needed. It is to be expected, however, that a balance will be struck somewhere between the severe provisions of the House measure and the decidedly less drastic bill which has been reported out by the Senate committee.

Because the picture is so badly confused, there is little purpose at this time in speculation as to the nature of the bill which finally will emerge. But one thing is virtually certain. Some bill, and probably a relatively stringent one, is going to be passed. If the President vetoes it, it may not become law at this session. That, however, will only serve to postpone the day when new legislation will be finally enacted, for the temper of the peoples is such as to demand action. This being so, it is unfortunate that influential labor leaders persist in their blind opposition to any kind of legislation, for the inevitable result will be a law that is less sound than might otherwise have been the case.

A Foreign Country Is Not the Proper Forum To Debate American Foreign Policy—Stassen

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the Appendix I include a radio address given this morning in Washington, D. C., by George E. Reedy, nationally famous radio commentator over Station WOL and the Mutual network, wherein he discusses the deliberate refusal of former Governor Stassen to discuss our foreign affairs in a foreign country, and contrasts this admirable conduct with the present objectionable actions of Henry Wallace:

STASSEN VERSUS WALLACE

The screaming headlines over the speeches of Henry Wallace, in Europe, have obscured an important fact. It is that another prominent American is also touring the Old World. His trip, however, is in striking contrast to the barnstorming of our ex-Commerce Secretary.

The second American is Harold Stassen, former Governor of Minnesota, and avowed candidate for the 1948 Presidential race. Without endorsing his candidacy, he deserves to be congratulated for the dignity with which he has handled himself.

Throughout his tour, he has steadfastly refused to issue the headline-catching statements that would have put him on page 1. He has said that he is in Europe to learn and anything he has to say will be delivered when he returns to the United States.

Yesterday it was announced that Stassen had turned down an invitation to speak to England over the British Broadcasting Corp. radio system. He was offered the same amount of time that Wallace took to lambaste the foreign policy of this country.

Stassen's action represents the policy he has followed all along, and which many Americans wish that Wallace had followed. Had that wish been granted, the delicate negotiations of our State Department in Moscow might have been more successful.

The effect of the Wallace speeches is already reflected in the Soviet press. Reports coming back from Russia indicate that the Communists believe this to be a divided country, with Wallace a more popular political figure than President Truman.

This may or may not be wishful thinking, but the Russians are always willing to act on the basis of wishful thinking. And there is nothing they would like to believe more than the idea that President Truman's anti-Communist stand is unpopular.

Wallace has given them plenty of ground upon which to base that idea. He has painted the United States as a nation which is being pushed into imperialistic wars, against the will of its people—and against its own best interests.

In contrast, he has given the Soviet Union only one feeble slap on the wrist. That happened yesterday when he said that both the United States and Russia are pursuing a policy of toughness which canceled the aims for which their soldiers fought.

Had he pursued this line of reasoning throughout his European tour, the whole effect of his speeches would have been different. However, that thought has been injected into his statements only once, and then it seemed to be an almost grudging concession.

Possibly he wished to take the sting off even this mild criticism, for he coupled it with a proposal that the United States lend $15,000,000,000 to the Soviet Union. This, he said, would be a long step toward guaranteeing world peace.

Mr. Wallace's tour of Europe has hardly been profitable to the United States. Perhaps it would have been worth far more had he, like Mr. Stassen, kept his ears open a little wider—and his lip buttoned a little tighter.

Retirement Pensions of Postal Workers

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Brooklyn Eagle of April 21, 1947:

POSTAL WORKERS DESERVE LIBERALIZED PENSIONS

Sam Steinfeld has a wife and two children to support. But after 42 years of service in the Brooklyn Post Office he'll be eligible for a pension of only $1,200 under the present law. Mr. Steinfeld holds he can't keep his family going on that, and it isn't difficult in these days of rising prices to understand why.

Mr. Steinfeld is one of 2,700 borough postal workers who are asking that the postal pension law be liberalized to permit them to pay an extra 1 percent of their salaries into the retirement fund. They also are asking that they be permitted to retire after 25 years of service instead of waiting until they reach 60 years of age.

Mr. Steinfeld's story in the Eagle the other day was enlightening. Postal workers must labor until they reach 60 before they can retire, while most other civil-service employees may retire after 20 years of service, regardless of their age. Postal men and women get 10 days a year sick leave, compared with 15 days for other Federal workers. They get 15 days' vacation, while others get 26 days.

The demands of the Joint Conference of Affiliated Postal Employees are realistic and entirely legitimate. Certainly these men and women who toil night and day in one of our most essential services deserve more consideration.

Sanity and Steel

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Washington Daily News of April 22, 1947:

SANITY AND STEEL

(By Thomas L. Stokes)

The new contract between United States Steel and the CIO steel workers comes as a timely example of sanity, common sense and good will in the midst of the noisy confusion generated by extremists on both sides of the current labor controversy.

It was reached through the calm and orderly processes of collective bargaining, without histrionics.

Altogether it represented a victory for public opinion operating from a number of directions and through a number of channels to achieve a balance that still is the best hope of our system of checks and balances.

Steel is a leader in our economy. American public opinion recognizes that. So do management and labor in this industry. It was time for each side to make a showing

for itself as an example in other quarters. They rose to the challenge.

There were clearly discernible pressures on both parties. The more mellow and conciliatory attitude of the important sector of labor involved here reflected plainly the public reaction against some labor attitudes and dissatisfaction over strikes. This public reaction is manifest in the present legislative drive in Congress, though it is hardly likely that a majority of the public intended anything so harsh as the Hartley bill passed last week by the House, which hampers rather than encourages the collective bargaining process so successful in steel.

Labor leadership at the top sees the seriousness of this legislative threat. This certainly was influential in promoting the steel settlement, which case, significantly, was made on the eve of consideration of labor legislation by the Senate, where lies the hope of moderation.

The importance of the steel agreement, aside from the example in a basic industry, is that the head of CIO, Philip Murray, was a party to the negotiations on behalf of his steel workers' union. He was conscious of the importance of this settlement beyond this one industry. It comes, too, as another collective-bargaining trophy to hang beside those in the rubber and electrical industries.

On the management side, the steel agreement likewise represented definite pressures. It signified recognition of public awareness of the handsome profits netted by the steel giant along with other big industries. President Truman has emphasized this much of late, while labor has called attention to it dramatically by specific figures dug out by its research experts in connection with skyrocketing prices. Steel also is among industries cited in the speeded-up movement toward greater concentration of business and industry which is much discussed now, both in Congress and elsewhere.

The steel wage increase is not predicated upon a price increase, according to reports of the agreement. A price decrease had been agitated as an example to the rest of industry and widely rumored. It still might be possible, even with the wage increases. They are somewhat less than those that Bob Nathan, former New Deal economist, had argued (as a CIO consultant) were possible without price increases. His findings were vigorously challenged in industrial quarters.

The steel settlement will be welcomed generally for the hope it gives for maintaining balance in our economy and industrial peace. It may not be good news to extremists of right and left, who obviously had anticipated an era of industrial disorders which they could exploit, one side hoping to break down labor unions, and the other looking to general confusion, which serves their purposes.

The Labor-Management Bill

EXTENSION OF REMARKS

OF

HON. HUGH A. MEADE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1947

Mr. MEADE of Maryland. Mr. Speaker, I represent a district which contains large manufacturing, shipping, and allied interests, all of which may be vitally affected by the labor-management bill, and I am sure many of my constituents will be asking why I voted for this measure. I think I owe them a duty to explain my vote and to tell them what this bill means to me.

For several weeks I sat in on the hearings before the House Committee on Labor because, frankly, my knowledge of labor law was very limited and I wanted to learn everything I could about the existing law and this bill before I was called upon to cast my vote. I studied the bill carefully and read the committee's report, and I have listened to every word of debate in the House on the various sections of this bill. As a result of all of this, I was convinced this bill was in the interest of the large majority of working men and women, and I voted for it.

The enactment of comprehensive legislation to define clearly the legitimate rights of employers and employees in their industrial relations, in keeping with the protection of the paramount public interest, was imperative. I believe H. R. 3020 does exactly that. It prescribes the rights of all parties having an interest in harmonious industrial relations and requires that each party respect the right of the other.

During the last few years, the effects of industrial strife have at times brought our country to the brink of general economic paralysis. Employees have suffered, employers have suffered, and the public has suffered. I am fully convinced the enactment of this legislation will have the effect of bringing widespread industrial strife to an end and that employees and employers will again go forward together as a team, united to achieve for their mutual benefit and for the welfare of the Nation, the highest standard of living yet known in the history of this Nation.

1. STATEMENT OF PRINCIPLES OF THE BILL

H. R. 3020 asserts at the outset that it is a bill to prescribe fair and equitable rules of conduct to be observed by labor and management, to protect the right of individual workers in their relations with labor organizations and to recognize the paramount public interest in labor disputes that endanger the public health, safety, or welfare.

2. NEW LABOR BOARD

In an effort to improve administration of the Government's laws on labor relations, the bill would wipe out the National Labor Relations Board and would create a new Labor-Management Relations Board of three members who would exercise quasi-judicial functions only.

It would create an Administrator of the Board in an independent agency who would conduct the various prosecuting and investigative functions of the present Board. The Board now is prosecutor, judge, and jury.

Thus the new Board would only decide cases.

The Administrator would investigate cases and present evidence to the Board. The Board could decide only upon the weight of credible legal evidence.

The new Board would not be permitted to condone, first, strikes to compel employers to deprive employees of their rights under the act; second, illegal boycotts; third, violence; fourth, mass picketing; fifth, industry-wide bargaining; sixth, strikes against public health and safety; and seventh, dictatorial control of workers by unscrupulous union leaders.

I believe the appointment of an Administrator will separate the prosecuting and investigative functions of the National Labor Relations Board from the administrative functions. This is a decided improvement over the old set-up.

3. BARGAINING ELECTIONS

An employer could petition the new Board for certification of a collective-bargaining unit, the same as the union may now do.

In addition, the Board could entertain a request for such determination from a union representing at least 30 percent of the employees, or by employees themselves who represent 30 percent of the total.

A particular union in a plant by majority vote could have itself excluded from a larger, over-all union, which might be certified by the new Board as the proper collective-bargaining unit.

It seems only fair and just that the employer should have the right to petition for a certificate of a collective bargaining unit the same as the union, in order that he may present his side of the controversy. This section corrects one of the outstanding injustices of the Wagner National Labor Relations Act, as passed originally.

4. ENFORCEMENT

The new Administrator could not handle complaints of unfair labor practices originating more than 6 months previously. He would have to proceed on them within 6 months. The Administrator would execute the Board's orders.

If the Board was convinced that the law had been violated, it could deprive workers of their rights under the law. The obtaining of court orders would be normal procedure.

In deciding appeals from the Board order, the courts would not be compelled to comply with the Norris-LaGuardia Anti-Injunction Act.

Laws are made for the government of the actions of people. If the unions violate the provisions of the law, then they would lose the right to bargain and violations by individuals would result in the loss of an employee's status under the law. I believe this provision is fair and just.

5. NORMAL BARGAINING PROCESS

Both management and labor would be required to bargain collectively, either as set out in an existing agreement or as provided in the new law. For the first time, collective bargaining would be defined by law.

If there were no existing contract provisions, both parties would have to receive and discuss new proposals or counterproposals at not less than four separate conferences within 30 days after the first conference.

Before striking, notice must be given to the Administrator, who then would conduct a strike vote. Within 5 days, the union would give notice to employees of the issues in dispute and would allow reasonable time for the employer to make his position known.

The employees would have to vote, by secret ballot, on whether they wish to accept the employer's latest offer and whether to strike.

Collective-bargaining issues would include only wages, hours, and work requirements; discipline, seniority, and discharge within the bargaining unit; safety, sanitation, and health; and vacations and leaves of absence.

6. COMPULSORY UNIONISM

The closed shop would be outlawed.

But a union shop would be authorized under certain circumstances. Under the union shop, an employer may hire anyone of his choosing, but that person must become a member of the shop union within a given period, usually 30 days.

The bill would permit the employer and a union to agree voluntarily to a union shop only if the employees, by secret ballot, have selected the union as their bargaining agent and if the majority of all the employees, by a separate secret ballot, authorize the union to make the agreement, and if the agreement is not prohibited by State law.

An employee could be expelled from the union and therefore forced out of his job only for failing to pay fees and duties imposed upon the workers generally. Unions could not strike to compel employers to enter into such agreements, under penalty of loss of bargaining rights.

Under this provision an employer may select his own employees and the employee has 30 days to decide whether he or she cares to join the union. Unions may not cause the discharge of employees by discriminating against them. The agreement must be voluntary. Unions may not strike to compel employers to enter into such agreements. They are subject to the loss of bargaining rights if they do. It seems to me the whole theory of a closed shop is opposed to our ideas of liberty.

7. INDUSTRY-WIDE BARGAINING

The growing union practice of demanding bargaining on an industry-wide basis would be sharply limited through restrictions on the right of the new Board to approve a collective bargaining representative

Under the bill, the Board could not certify one union as the bargaining agent for workers of two or more competing employers and workers of two or more competing employers could not conspire together to strike at the same time.

But there would be two exceptions. One union could represent less than 100 workers of each of several competing employers if the plants are not more than 50 miles apart. Unions that represent workers of competing employers would be permitted to affiliate or associate together if their bargaining, striking, and other concerted activities are not subject to common control.

Then, too, the President would be authorized to seek injunctions against industry-wide strikes that imperil the public health and safety.

Had this law been in effect a month ago, it would have prevented the Nation-wide telephone strike. I firmly believe industry-wide bargaining is monopolistic—is against public interest and should be outlawed. Differences between labor and management can be more easily adjusted locally than on a Nation-wide basis.

8. ESSENTIAL INDUSTRY STRIKES

Injunctive relief and cooling-off periods would be provided to cope with strikes that imperil the public health and safety.

Whenever the President should find that a labor dispute results in or threatens to result in "the cessation or substantial curtailment of interstate or foreign commerce in transportation, public utility, or community services essential to the public health, safety, or interest," he must ask the Attorney General to petition a Federal court for a temporary injunction. The courts would be empowered to grant such injunctions, without regard to the Norris-LaGuardia Act.

After an injunction is issued, the parties for 30 days must "make every effort" to reach an agreement. At the end of 30 days, the new board would require a secret ballot to determine whether the workers want to accept the then current offer of their employer.

If the dispute could not be settled in that manner, the Secretary of Labor would so notify the Chief Justice of the United States Court of Appeals for the District of Columbia, who, with an employer and an employee representative, would undertake to reach a solution. Within another 30 days, they would have to report. Within 15 days thereafter, the Board would be requested to take another secret ballot on this three-man report.

If this proposal were rejected in the secret ballot, it would mean the end of the official Government peace-making machinery and the temporary injunction would be dissolved.

Surely there can be little question on the part of fair-minded people that strikes which violate or affect public health and safety should be prohibited by law. Think of the untold damage and added suffering brought about in the recent explosions in Texas because of the delay in getting help to that stricken area. Much of this is directly attributable to the fact that they could not get telephone calls through to nearby city fire departments, to doctors, nurses, hospitals, and to relief crews experienced in handling this type of catastrophe. Immediate telephone service would certainly have saved many of the lives lost in this tragic explosion.

9. UNFAIR LABOR PRACTICES

The bill would reiterate the usual unfair labor practices on the part of an employer, such as interfering with selection of a bargaining agent, would prevent employers from agreeing to the dues check-off system unless each worker had agreed to it in writing, would forbid him to enter into a closed-shop agreement, and then would establish a set of unfair labor practices by workers and their unions.

Under this heading the union could not direct or call a strike unless at least a majority of those voting on the question have, after the membership has received due notice of proposed balloting thereon, authorized such strike; could not seek the closed shop; would be required to effectively bargain with the employer; could not collect initiation fees of more than $25, except with Board approval; could expel a union member for nonpayment of dues, for disclosing information of the union, for participation in a violation of a bargaining agreement, or for being a member of the Communist Party or advocating the overthrow of the Government by force; could not force an employer to violate the new law; would be compelled to conduct a secret ballot on questions involving strikes, fees, nomination and election of officers, and so forth.

This section unquestionably places the employee and the employer on an equal basis so far as unfair labor practices are concerned. I believe this is only fair.

10. FOREMEN AND SUPERVISORS

By definition, the new Board would be prohibited from setting up a union to represent supervisory employees.

This section of the bill is an example of the old adage, "One cannot serve two masters." It would be an utterly impossible position in which to place a man—he would be paid by his employer but he expected to go along with the union of which he was a member. I am convinced the committee acted wisely in prohibiting unionization of foremen or supervisors.

11. FREEDOM OF SPEECH

It would be specifically permissible for an employer to express his own views or opinion, either in written or printed form, if that expression "does not by its own terms threaten force or economic reprisal."

With free speech guaranteed to every American citizen under the Constitution, it seems unfortunate that this section should have been necessary in any legislation.

12. ROYALTY PAYMENTS

The bill would forbid an employer to pay royalties, taxes, and other exactions to unions in the guise of welfare funds or otherwise.

This section speaks for itself and was brought about by Mr. Lewis' demand for a 5 cents a ton royalty for a welfare fund for miners. Although that fund now contains several million dollars, not one dime was paid out of it to the widows and children in the recent Centralia coal-mine disaster.

13. BOYCOTTS AND SYMPATHY STRIKES

The calling, authorizing, engaging in or assisting of any sympathy strikes, jurisdictional strikes, monopolistic strikes, or illegal (secondary) boycotts or sit-down strikes would be forbidden.

I believe that all workmen should have a right to strike but not unless their own local union is directly involved. For instance, why should the teamsters union refuse to deliver merchandise to a factory on strike over matters of no concern to the teamsters union? We had an example of that in Baltimore last year.

14. FEATHERBEDDING

Strikes or other "concerted interference" designed to compel acceptance of "featherbedding" practices would be forbidden. Such practices, elaborately

defined, would forestall the James C. Petrillo radio and music work stoppages, for instance. Surely every reasonable person agrees that it is high time a stop was put to such racketeering practices.

15. UNIONS CAN BE SUED

For participation in any of the many enumerated "unlawful concerted activities," unions could be sued for damages in the Federal courts. Since an individual, corporation or company may be sued, then I see no reason why an exception should be made to a union if it is in violation of the law of contract, or other statutes. This section was brought about by the flagrant violation of the law of contract by union officials.

16. CONCILIATION

The bill would establish an independent Office of Conciliation, and the duties of which would be to encourage labor and management to make and maintain collective bargaining agreements on wages, hours, working conditions. But neither side would be compelled to accept a recommendation of the director of the service or any of his conciliators.

I am convinced this is a step forward in the settlement of strikes or any differences between labor and management and that an independent conciliation office can do a much better job than one operated under the jurisdiction of the Department of Labor.

17. ANTITRUST LAWS

The bill would remove the exemption labor organizations now have from the antitrust laws when, acting either alone or in collusion with employers, they engage in unlawful restraints of trade.

Again, I believe that all persons should be equally guilty under the law whether it be an individual, a corporation or a union, since they all claim equal protection under the law.

18. UNION REPORTS

Unions would be required to make annual reports to the Secretary of Labor which would contain receipts and disbursements, the names of their principal officers and their compensation, and a copy of their bylaws and constitution. Individuals, corporations, and companies are forced under the revenues acts to disclose this information, but since union funds are tax free, they have never before furnished this information to any governmental agency. I believe it right and proper that they should. I also think that every member of a union is entitled to know what his dues are used for—how much the union officials are paid and what becomes of the profits on the huge funds they have accumulated, which run into millions of dollars.

I have talked with many of my constituents about this bill; many of them belong to unions, some because they believe in unions, others because they have to belong to a union to hold a job. A large majority of them were in favor of the Hartley bill, and I feel sure that within a few months most of those who work for a living will be thanking Congress for having freed them from the threats of men who made the passage of this corrective legislation necessary in the public interest.

Legal Executions

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. HUBER. Mr. Speaker, I recently introduced a resolution proposing an amendment to the Constitution relating to the abolition of capital punishment in the United States. The editorial which I am inserting in the RECORD today contains one of the most powerful arguments against this barbaric practice which I have ever read. I am hopeful that the Judiciary Committee will arrange for hearings on this resolution in the near future.

The editorial follows:

[From the Union County Times, Lake Butler, Fla., of April 11, 1947]

MEMORY MARCHES ON

(By D. L. Whitehurst)

Years do a lot to a man.

It all depends upon whether the individual's mind figures they take something, or leave something.

Last week when I was down the State I met a bright newspaperman whom I have known for several years.

He had recently witnessed his first execution. When I told him I had recently acquired the Union County Times, he expressed astonishment that he did not see me at the execution.

He seemed to think because Lake Butler was only a few miles from Raiford that I should have dropped in.

I did not tell him so, but I, too, have seen men die by the legal execution route—many times. I did not tell him, either, that I have never been in the habit of dropping in on planned deaths.

There is something about death by premeditation that reaches out and slips the icy fingers slowly across my brow. I will see no more planned executions.

I have seen men doomed to die in the sunshine of tomorrow spend the night before peering out into the vast darkness of midnight—a blackness as void as the eternity into which the hangman's rope would soon jerk them. I have seen them in the calm of the day's dawn await the firing squad with a face that was as white as the hand of death that awaited in the courtyard.

I have seen them march the last steps, some firmly, some wobbly. I have seen them eat heartily of their last meal and I have watched their lips silently move as the priest, or minister, urged God to forget that they had destroyed with their hands what He had once molded from clay. I have seen them spin at the end of the rope and I have watched the drawn face of the paid executioner writhe, for he knew that he had blundered, and down there in the gallows pit a man was dying life's most horrible end—slowly strangling.

Some of those events passed by my curtain of life nearly 40 years ago but today when they come rolling out of the mildews of memory they sizzle and fry and crackle and explode with the vividness of a wet power line.

I did those things in line of duty. It is too bad now that when I think of warm, welcoming, growing Houston, Tex., that I first must march out the two men I saw die there—by planned execution. It is too bad I cannot think of a quiet little town in the soft hills of north Missouri without hearing a murderer of four say, "The Lord is my shepherd, I shall not want." It is too bad I cannot think of beautiful Salt Lake, cuddled in the valley and guarded by the Wasatch Mountains, without again hearing a voice, speaking for its last earthly time, "Good bye." When I think of wind-swept, sun-burned Nevada my mind won't let me look at the State's blue skies, nor ponder in the great silence of the desert, because out there is nothing for me but a gray little vault where I watched the Nation's first person die legally of lethal gas.

My young newspaper friend does not know it but I gained nothing and lost much by my experiences with execution. I might suggest to him if he ever wants to solve the old mystic problem, "from whence came ye and whither traveleth your soul" he should not see too many executions.

Know Your Enemy

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an article by Jacob Simpson Payton, which appeared under date of March 27 in the Christian Advocate.

It seems to me as we consider the many conflicting ideologies and philosophies inimical to our free democratic government the enemy of strong drink should properly be included in the list.

KNOW YOUR ENEMY

(By Jacob Simpson Payton)

As seen from Capitol Hill, the woods are always full of public enemies. Usually they are real, but occasionally some are imaginary. Congressional voices, like those of bygone town criers arousing sleepers at the midnight hour because of lurking savages, are constantly heard. Present warnings are against inflation, national bankruptcy through Federal extravagance, monopolistic practices of labor and capital, and Communists in Government posts and elsewhere. And, of course, surmounting those and all other threats is the anxiety shared by everyone over the slow progress toward atomic control.

Congress is almost entirely silent about another enemy within our gates. Reference is to the liquor traffic. At this writing, 9 weeks after our Federal lawmakers took the oath to support and defend the Constitution against all enemies, foreign and domestic, only a few of the 531 Members of the Eightieth Congress have voiced any protest against the bold, steady and deadly advance of the liquor front against American homes, schools, and churches.

While Democrats and Republicans may not confess it, they know that during the 13 years since December 5, 1933, the situation has gone from bad to worse. Evidence of this was presented recently before a congressional committee. Guy W. Pearson, District tax collector, cited figures to show that while Washingtonians set an all-time record during 1946 by consuming 5,521,000 gallons of whisky, champagne, and wine of 14-percent voltage, the indications are that this current year the amount will be exceeded by a half-million gallons. And beer is not included among the intoxicants by which thousands of residents of the Nation's Capital are being drugged, brutalized, and destroyed.

When a people wishes to retrieve its lost ground, a prime requisite is to know the enemy. On January 16, 1920, the liquor traffic was declared a public enemy and was banished from the land. During the 13 years of its sentence, it was not idle. It packed Congress with wet Senators and Representatives, intrigued with bootleggers and gangsters in order to discredit the eighteenth amendment. It bribed law-enforcement officers and went to the social register for names of sponsors who unwittingly yielded to the inducement to be kind to tigers. For 13 years the former outlaw has been at large making increasing depredations upon America's dearest treasures.

Today he is more strongly entrenched than ever before. Congress allows this enemy to continue this public pilfering of morals and health for a price, which is revenue. Such servility is as reprehensible as was ever the payment of tribute for immunity to the Barbary pirates. Moreover, the foe is being aided and abetted by a growing number of parents who really have no respect for the monster, but prefer to become the slaves of fashion at the cocktail hour rather than avoid the example that may lead to the enslavement of their children by strong drink.

Americans had better know their enemy. The distiller and the brewer are literally making life unsafe for millions. That is not a scare line which once called down upon fanatical drys the ridicule of the wet gentry. It is an established fact verified by case-hardened investigators, by the Federal Bureau of Investigation, by medical societies, and by scientists. Of course, we must bear with some of those who overwork the scientific approach. Yet from them we learn that in America there are 3,000,000 excessive drinkers, that 750,000 of them are confirmed alcoholics and that the rum-soaked aggregation was responsible for 7,000 deaths in automobile accidents last year.

The makers, venders, and dispensers of intoxicants may be identified not only as America's chief contributors to crime, but as the Nation's biggest swindlers. They rule supreme in the buncombe belt. Where else will one discover another advertiser who is able to put such lying adjectives into print or on the air, or such false portrayals about his wares into pictures? Never once do the distillers or the brewers mention what their product has done for the derelict on the park bench, the criminal in his cell, the wife in the divorce court and the children in the orphanage.

Because of revenue paid to the Government, the liquor barons have come to regard themselves as among Uncle Sam's chief benefactors. Their blood money never exceeded $2,500,000,000 per year. It should be remembered that the distillers and brewers never offer any service to their customers. Instead they turn over to the taxpayer to support all human wrecks of their own creation. The truth is that if Uncle Sam were obliged to send money to ransom present day Americans whom strong drink has led captive, the amount would be double that paid into the Federal Treasury by the victimizers.

The grave apprehensions held by many prior to repeal that the liquor traffic could not be trusted have proved correct. How gullible Americans were in that day can only be realized by reading the request for repeal by the President, the debates in Congress and the public press and then by comparing them with present conditions. The tragedy was that when prohibition had broken down under plotters and bribetakers, there should have followed a system which has proved worse. The saloon has come back with evils even better camouflaged than before.

During the first month of this year, 1,695 liquor licenses were granted in the District of Columbia. Such a number would have staggered belief a few years ago. And all this in the Nation's capital, where we were promised saloons should be no more if only we would allow the closed distilleries and breweries to resume work.

Americans who hope for relief from the contaminating influence of intoxicants certainly should not lose sight of the man who makes them. He is a destroyer. Know your enemy.

St. Ann's Church, Morrisania, N. Y.

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. POTTS. Mr. Speaker, St. Ann's Church, of Morrisania, in the county of Bronx, State of New York, is a historic site. It should be declared a national historic site.

HISTORY OF ST. ANN'S

Though the Church of St. Ann's of Morrisania is but 100 years old, the history of the land on which it stands, and of the family whom it commemorates, who owned the land by royal letters patent from King William III, dates back 250 years.

Originally, the Morrises came from Wales in 1633, the elder branch of the family, the lineal decendants of the first Morris, consisted of three brothers, Lewis, William, Richard, sons of Col. Lewis Morris.

Richard Morris, the youngest of the three brothers, was the first proprietor of Morrisania in the year 1670. Both he and his wife died there in 1672, leaving one child, born October 15, 1671, the first lord of the manor of Morrisania. History tells us that Morrisania was first part of the County of Westchester, but by an act of the legislature in 1783 was added to New York County.

The name Morrisania is derived from the Morris family, the first part meaning lords and patentees under the Crown; the term "ania" being in general use in the latter part of the seventeenth century. At the time of the Dutch discovery it was styled Ranachque, a name given to it by the Indians, who seem to have resided principally on the shores of the East and Harlem Rivers.

The royal charter of King William III, erecting Morrisania into a township and manor, was given to Lewis Morris, the 8th of May, 1697. The charter distinctly states that the quantity of land was 1,420 acres. However, he had already possessed 800 acres through barter with the Indians which made between two and three thousand acres. Thus it is noted that he was owner of a large part of what is now Bronx County.

LEWIS MORRIS

In St. Ann's Church there is a memorial window on which is inscribed the following:

Gen. Lewis Morris, eldest son of Hon. Lewis Morris and Catherine Staats, born at Morrisania, April 8, 1726, where he died January 22, 1798. He served in the Army of the Revolution as also did his three sons, Lewis, Jacob, and William, and he was one of the signers of the Declaration of Independence. His wife was Mary Beekman Walton, who died March 11, 1794.

Josiah C. Pumpelly, historian Empire State Society, Sons of the American Revolution, in an article published in Americana, August 1914, has this to say:

He declared that the act requiring him to give additional supplies for the King's troops was tyrannical and unconstitutional and this act caused him to be chosen, after the battle of Lexington a delegate to the provincial convention, held at the City of New York, April 22, 1775.

He was a Representative in Congress from New York and in the legislature of his State as a member of the assembly and displayed undaunted spirit and untiring zeal, and while ably assisting in organizing and equipping the militia in which organization he rose to the rank of major general.

GOUVERNEUR MORRIS

Maj. William Pierce, a Delegate from Georgia to the Constitutional Convention held at Philadelphia, May 17, 1787, had this to say of Gouverneur Morris:

Mr. Gouverneur Morris is one of those geniuses in whom ever species of talent combines to render him conspicuous and flourishing in public debate. He winds through all the mazes of rhetoric, and throws around him such a glare that he charms, captivates, and leads away the senses of all who hear him. With an infinite stretch of fancy he brings to view things when he is engaged in deep argumentation, that render all the labor of reasoning easy and pleasing. In connection with the establishment of a State constitution he advocated the abolishment of slavery. So that in future ages every human being who breathes the air of this State, shall enjoy the privileges of a free man.

PILGRIMAGES

People from all parts of the United States visit St. Ann's. Schools, historical associations, and patriotic groups make pilgrimages to this blessed American shrine. Groups, from time to time, numbering from 600 to over 1,000 people have visited the tombs of the "Signer" of the Declaration of Independence and the "Penman" of the Constitution of the United States.

The following important pilgrimages to St. Ann's of Morrisania have been made: Daughters of the American Revolution, Colonial Dames, Grand Army of the Republic, Spanish War Veterans, Veterans of Foreign Wars, Sesquicentennial Delegation from the State of Pennsylvania who placed a marker at the tomb of Gouverneur Morris. In addition to these, the American Legion of Bronx County, in conjunction with Gouverneur Morris Post No. 1209, have been memorializing Constitution Day in a public ceremony within the walls of St. Ann's.

In the year 1925 the Historical Society of the State of New Jersey placed a bronze tablet in the church in honor of the first governor of the State of New Jersey. On this occasion Governor Moore was present, accompanied by the chief justice and justices from the courts of the State of New Jersey.

ST. ANN'S HONORED DEAD

Capt. Richard Morris (1672): An officer in Cromwell's army. First proprietor of Morrisania.

Col. Lewis Morris (1691): An officer of Cromwell's army. Part owner of Morrisania. Member of Governor Dongan's council.

Judge Lewis Morris (1746): First Lord of the Manor of Morrisania. First native-born Chief Justice of New York. First Governor of New Jersey.

Hon. Lewis Morris (1762): Member of the Colonial Assembly. Judge of the High Court of the Admiralty. One of the judges of Oyer and Terminer.

Gen. Lewis Morris (1798): Member of the Continental Congress. Only signer of the Declaration of Independence from New York City. Served in the American Revolution with three sons as commander of the Westchester Militia, Continental Army.

Judge Richard Morris (1810): Chief Justice of the Supreme Court, State of New York. Member of both houses of the legislature. Champion of the adoption of the Constitution of the United States of America.

Hon. Gouverneur Morris (1816): Member of the Provincial and Continental Congress. "Penman" of the Constitution of the United States of America. Author of the clause in the New York State Constitution providing religious freedom. Washington's Minister to France during the French Revolution. Projector of the Erie Canal.

Lt. Col. Lewis Morris (1824): Aide-de-camp to Gen. Nathaniel Greene.

Capt. William Walton Morris (1832): Aide-de-camp to Gen. Arthur Wayne. Thanked by Congress for gallantry on the battlefield.

Judge Robert Hunter Morris: Member of both branches of the New York Legislature. Justice of the Supreme Court. Mayor of New York for three terms. Delegate to the Constitutional Convention of 1846. Governor of Pennsylvania.

Maj. Gen. William Walton Morris (1865): Veteran of Florida, Mexican, and Civil Wars. Promoted for gallant and meritorious service at Palo Alto, Resaca de la Palma and in the Civil War.

Maj. Gouverneur Morris (1868): Veteran of the war with Mexico.

Gouverneur Morris, Esq. (1888): Pioneer in railroad building. Founder of St. Ann's Church. First supervisor of the town of Morrisania.

Commander Francis Morris (1883): Veteran of the Civil War. Engaged in both attacks on Fort Fisher. Executive officer of the U. S. S. *Tennessee*.

Col. Lewis G. Morris (1900): Member of the War Committee, Westchester County, 1861–65. Instrumental in organizing the Sixth New York Heavy Artillery. President of the New York State Agricultural Society. Member of the First Vestry of St. Ann's Church.

Annie L. Morris (Fordham) (1848–1933): Distinguished wife of Fordham Morris. Interred in the Fordham Morris vault. Benefactor of St. Ann's Church.

Capt. Lewis Morris, Marine Corps, United States Navy (1867–1940): A distinguished physician who served in the American Navy. A benefactor of St. Ann's Church whose memorial chimes will ring a message of inspiration to the people living about old St. Ann's.

Mrs. Lewis Gouverneur Morris (1935): Distinguished for her interest in public-welfare projects and particularly in the care of little children.

Hon. Fordham Morris (1842–1909): Enlisted September 10, 1862, as second lieutenant and served with great distinction during the Civil War. He took part in all major battles and was discharged June 28, 1865, as first lieutenant by reason of regiment mustered out of service. Elected to Lafayette Post No. 140 on October 8, 1884.

Danger in Reduction of Davis Dam Appropriation

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. MURDOCK. Mr. Speaker, several times during the debate on the Interior appropriation bill today I have expressed deep concern over the unwise cut in the suggested appropriation for continuing work on Davis Dam on the Colorado River. The budget estimate was $18,000,000 for this item and the committee puts in $6,200,000 in the bill before us. To me there is no justification for such a cut, at least none has yet been given me. The chairman tries to lay the blame on the President's freeze-order policy, but the Presidential freeze-order policy did not apply to construction on Davis Dam. I know from visits there several months ago that work on it was carried right along according to schedule.

Why is this so important? It is because we are under treaty obligation with Mexico to build that Davis Dam by 1950, or within 5 years after the ratification of the Mexican Water Treaty. What if we do not keep that obligation and build the dam? In that case our Government will have abrogated the treaty and it will no longer be binding. No doubt there are some in this country, and undoubtedly some in Mexico, who would be glad to abrogate and destroy the recently adopted water treaty with Mexico. What would result? One result would be that water conditions between the two countries would be the same as if no such treaty had ever been entered into between them. And what would be the harm or danger in that situation?

This water treaty with Mexico which was entered into 2 years ago was intended to settle international water problems on both the Colorado River and the Rio Grande River. These two important international streams have numerous and serious problems which have disturbed relations between the two countries for many years. These problems were not easy of solution and perhaps no one is fully satisfied with the solutions in this treaty. However, it takes two to make an agreement. To abrogate this agreement is to open up all those problems again. Mexico has asked for twice, yes, three times as much water out of the Colorado River as this treaty gives her. If this country breaks the agreement she will renew her former demands. In the light of all the historic circumstances, in that case, Mexico would very probably get more water than she formerly demanded.

I want our Nation's interest in Colorado River water safeguarded as it is now by this treaty. Also I want our interest in the Rio Grande safeguarded as it is by this treaty. I believe this treaty arrangement concerning water is as good as we could have obtained some years ago and better than we would ever be able to obtain by negotiation again. We tamper with this Mexican water treaty at our great risk. Our national loss without this treaty could be enormous. If we abrogate that treaty by failure to comply with the treaty and to build Davis Dam by 1950 America stands to lose heavily. Saying nothing about our keeping our treaty obligations, there is no economy in playing with this reduction from $18,000,000 to an utterly insufficient $6,200,000.

How To Cut Prices

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 23 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, I have received a copy of an able address delivered by former Gov. Alf M. Landon, of Topeka, Kans., at a meeting held in Kansas City, Mo., on April 22 under the auspices of the Republican National Committee. I ask unanimous consent to have the address printed in the RECORD.

I have an estimate from the Public Printer, which indicates that the manuscript of Governor Landon's address will make two and one-half pages of the CONGRESSIONAL RECORD, or one-half page more than the two printed pages allowed under the rule without a statement of cost, and that the cost will be $177.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today we are living under a Congress that does not owe its election to the slush funds of the Federal Treasury, city gangster machines, or the leftist PAC.

That Republican Congress has gotten away to a splendid start, both in transacting the business of the National Legislature and in returning to the principles on which the perpetuity of the Republic is dependent. The character of government is equally as important as is its direction.

The present Congress is giving a tone to government—almost new—in contrast to following the dangerous New Deal methods of irregular short cuts to legislation.

For the first time since 1933 public affairs are being conducted by the Republican Congress as they must be, if those affairs are to be handled in accord with the liberal principles of genuine representative government.

I mean with its committees giving all sides full and fair hearings—with department heads compelled to reveal their policies to the American people through those committee hearings—and thorough discussion and consideration on the floor of the Congress.

Our country lost its moorings and for years was adrift in a storm of spectacular, irregular short cuts and undemocratic procedure in the transaction of public business. It is but natural for people to become thoughtlessly impatient with the slow visible progress in the return to normal and essential methods of representative popular government. All they see is the surface stuff.

People miss all the labor and time required to investigate and correct the labyrinth of

New Deal regulations forced on the country contrary to the intent of past Congresses.

Understandably, people are anxious to see the Republican promises of the preelection period translated into laws. We want taxes reduced, the national debt cut, a balanced budget, definite reductions of Federal expense agencies and employees, labor laws that will provide for genuine collective bargaining. But most citizens do not realize the arduous and tedious preliminary work which must be done by Congress before needed reforms can be enacted. They do not realize how much New Deal underbrush must be cleared away or how much bureaucratic rubble must be removed before actual work can begin on the construction of sound laws to replace the jerry-built flimsies of the New Dealers. An infinite amount of study, research and surveying has already been accomplished by this Republican Congress. I have no doubt the public impatience will fade rapidly as the fruits of its diligent efforts ripen into honest, fair and workable laws. I am confident that the American public will be quick to salute this Republican Congress as its membership translates the promises of last November into the performance of this summer.

The New Deal bureaucrats are doing their best to "smear" and handicap this Congress by refusing any cooperation on their part. The campaign now going on against the Congress is more than a partisan fight. It involves two distinct philosophies of government. The Republicans are reaffirming their belief in the soundness of government by law. The New Deal bureaucrats still seek a government by men—specifically, their men.

The Republican Congress is showing its ability to curb successfully the totalitarian liberals who had taken us so far down the road to national socialism.

A few years more of unrestrained totalitarian planning from the top down—from Washington bureaucrats infiltrated with communism—and the Soviet would have been warranted in saying to the rest of the world—Look, the United States of America is sick unto death with the weakness inherent in all republics. They cannot save themselves. How can they save you?

The liberal institutions of America and the world owe a great deal to the Republican Congress, as it goes steadily and patiently about the hard work of rebuilding stone by stone the edifice of our Republic.

The mere election of a Republican Congress was cheering and stimulating to liberals the world over.

Today, if a Democratic President would really join a Republican Congress in effecting an about face, on the path leading to the abyss of national socialism that has engulfed so many democracies of the past and present—he would give the world new evidence of the incomparable force and vitality of our great and glorious Republic.

Of course, Mr. Truman has not openly and frankly confessed the mistakes of the omniscient New Deal, nor has he admitted that he is in opposition to the control of this Nation by the leftist bureaucrats.

And it may be that in the end the totalitarian liberals will prevail in the struggle now being waged for control of the administration authority.

Today, President Truman's real political beliefs remain enigmas to the New Dealers—the Democrats—and the Republicans alike. A confused American people cannot at the moment determine whether Mr. Truman will come down the home stretch in 1948 riding a left-wing horse but wearing the right-wing colors.

Our people hunger for courage, clear-thinking, plain talk, and a consistent course of action in the country's leadership. As evidence, we note that President Truman's national popularity rose to a peak shortly after he took office and apparently turned his back to the New Deal. In the months that followed, his popularity rating dwindled steadily, as his behavior contradicted his apparent early stand. After the November elections, when the Republicans gained control of Congress, he expressed his desire for national cooperation and bipartisan unity. Again, he seemed to be returning to his original Presidential position. Up went his popularity rating among the people of his country. They were encouraged when he took his strong stand against communism, within and without our land, and formulated a clear cut and firm foreign policy. The Republican Congress is supporting that foreign policy in the interests of national unity and bipartisan cooperation for the Nation's welfare.

The President will have to take his stand shortly on domestic policy, when he will be confronted with congressional enactments providing for sizable tax reduction and substantial payment on the public debt—and other bills which express anti-New Deal basic principles of government. Cutting Government expense, of course, breaks the heart of the "call me liberal" totalitarian New Dealers. The New Deal, struggling for its existence among real Democrats, is not for any cutting down of government. Its philosophy is for more government, not less—for more Government spending and more taxation.

It is obvious that we cannot undertake the heavy burdens the President's new foreign policies call for without drastic retrenchment here at home. We may have to give up, even if temporarily, services Government should render. It is past time to take stock. Government, the same as any individual, should estimate the cost of any project.

If the President's new foreign policy is to succeed, America must be a sound financial mooring post for the rest of the non-Communist world to tie to.

Will President Truman go along with the Republican Congress on the domestic policies espoused by that body of patriotic, sincere Americans? Will he cooperate with the chosen representatives of the people on the home front, as they are supporting him in foreign policy? Will he hew his way out of the governmental wilderness created in the past 14 years by power greedy, selfish bureaucrats? Their lust for dominance, contempt for individual rights, and disregard of the constitutional processes of government first prostituted the principles of the Democratic Party, and then came close to wrecking the greatest of the world's nations. Will he be courageous and forthright enough to join with the Republican Congress in the interest of national unity and bipartisan cooperation on the home fronts, or will he continue to yield to the power and pressure of the New Deal totalitarian leaders? Their influence now seems sufficient to keep him wavering on domestic affairs. On the answer to that question rests the answer to this country's progress or decline in strength, well being, and advancement in the critical months ahead. A Republican Congress, by building a strong America, is laying the foundation for the success of President Truman's new foreign policy.

We Republicans claim to be the hope of free enterprise and of a financially solvent Republic.

If the Republican Party wants to preserve our country from depression and totalitarianism, and to prove it is not just an agency for the ultra-rich, it now has its chance.

High prices of today are more dangerous to free private enterprise than the Communist Party of the United States has ever been.

About a year ago, we spent a lot of time telling the people that the OPA of wartime was not suited to a free peacetime economy, and it is not. However, instead of disbanding the price control agency on a gradual basis as Congress intended, it was turned loose suddenly by a Presidential veto. A riot of increased prices was the natural and inevitable result.

However, enough time has now elapsed to enable private industry to get back to sanity. But the adjustments in prices are not being made as almost every industrialist and producer will admit privately they should be. The snowball rolling down the mountain has built up into such an avalanche that everyone is afraid individually to try to turn it aside.

Higher wages demand higher prices—higher prices give labor the basis on which to demand still higher wages. And the price structure continues to build up and up until people are wondering if the only cure is to let the avalanche crash into the next mountainside.

That, I believe, is where a Republican Congress can come in with some very timely help in this emergency. Industry needs some encouragement in order that it may apply the wisdom which it possesses and has gathered in the past year.

Up to now all that President Truman has done about prices is mostly conversation. It seems to me the issue is that President Truman believes that he is dealing with a problem that the Government is powerless to solve except through the pressure of public opinion, and the indirect weapons available to the President.

In attempting that he gives the nod to a new wage increase drive by labor. Thus he clears the way for another round of postwar inflation.

I am attempting to offer a definite plan of action. Frequently in the past months I have urged the Antitrust Division of the Justice Department to investigate these prices. Now I propose that the Congress can do something concretely helpful about it.

First, I think it is time for business leadership as a whole to get over the idea that we have to have a boom and bust business trend in this country. I know, of course, that we are never going to be able to have a business trend run absolutely smoothly. There are always going to be periods of readjustment. With wise management, however, these readjustments should take place in more or less one industry at a time, not in the entire economy all at once. But, in my judgment, we are going to have great difficulty getting this kind of a good working economic system if a major portion of business management continues to think in terms of large profits now because no telling what is going to be the situation a little bit hence, and in consequence they must start protecting themselves. The steel industry is a good example. This industry has always been known as a prince and pauper industry. During the period of good times it has made very large profits, and then in bad times it has suffered substantial losses. But I cannot see any reason why this has to be the case. To argue that there can't be anything other than a prince and pauper situation in the steel industry seems to me much like arguing that there can be no stabilization of employment in a particular industry. For a long time that was a fairly widespread view in business. In recent years, however, it has been found that by study and cooperation a perfectly enormous amount could be done in the way of employment stabilization. Sometimes this can be done within a company all by itself through a better arrangement of its production schedule. In other cases it was necessary for different industries to mesh their activities together, with the result that when one was up high on the employment level the other was low, and vice versa. I think it is time for business management as

a whole to start planning on good times more or less indefinitely into the future. Sure that means taking some risk, but so does everything else in business.

At the moment if we could get business management to start planning on the basis of continued good times far into the future, it could do wonders in the way of adding a substantial stability. It would mean that a business could establish prices today which would yield it a profit margin which over the long pull is adequate to attract capital to the industry. It would mean, from the point of view of the public, that business management itself was now saying that it has unlimited confidence in our system of individual enterprise and in our ability to make it work successfully and continuously in the public interest. It would mean that business management would be showing a united front to the public which said, in effect, we are willing to take the same gamble on the future that everyone else has to take. In a word, it would mean, that business is saying to the American public that we are setting prices which give us a fair return on the assumption that business is going to continue to be good—not setting prices which yield such a rate of return that we can ride through the next great storm that may hit us. Let's get rid of the storm psychosis. Let's reveal not only to ourselves, but to the whole world, that we have a system in which we have genuine confidence. There is no reason that we should not keep our economic system on a reasonable, even keel.

Now such an attitude on the part of business management as a whole would not mean that every business organization limited profits to some percent which you or I might think is fair. Granting we are going to use individual enterprise, there always will be some companies, and some individuals, who make more than seems reasonable to the rest of us. That is true in the bottom of a depression. It is, in a very real sense, a price which we pay for the right of freedom—the right for a man to go into business and try to make a larger return on his capital than if he bought Government bonds or some other perfectly safe investment. The public interest would not be served by attempts to eliminate these high profit spots in our economic organization. On the contrary, such elimination would mean the destruction of the individual incentive and opportunity that are the life blood of our economic organization. What we need is to make sure that we keep competition alive so that these excessive profit positions have to be temporary, because some other producer will come along and knock the profits down to a more reasonable level. Granting that we keep the antitrust laws in good shape and well enforced, and granting further that business will take a broad, optimistic position on the fundamental strength of our economic system, we never will have enough of these excessive positions to cause the Nation undue worry.

A second point that I would like to drive at management is that it should get rid of its "follow the leader" psychosis. Today this is probably most evident in connection with wages. I am sure that you are familiar with this. Recently one of the companies in the textile industry gave an increase and within almost a matter of days, a comparable increase went through the entire industry. In the steel industry everyone today, as you well know, is pretty much sitting around waiting to see what United States Steel does. If United States Steel gives, say a 10 percent increase, we will see the same kind of an increase given throughout the steel industry. And this increase will be given regardless of the profit position of the individual company.

This "follow the leader" idea seems to me to be basically unsound. If it continues to grow, it will tend to give us the same kind of an impossible situation that has been one of the curses of England for the past generation. Over there with industry-wide bargaining it became a simple matter for employers and employees to agree not to make a technological improvement. It became a simple matter because one company knew that it didn't need to make the additional investment to get the technological improvement because none of his competitors could make the improvement either. The upshot of all of this has been that productive efficiency in England is distressingly low, as compared to what we have in this country. In my judgment it will be fatal to the progress of this country if we fall into that error. I think every business management should say in effect, I just don't care what my competitor is going to do; I'm going to do the thing which will give me the greatest productive efficiency. I'm going to pay the wages which seem to me to be fair and best. I'm going to price my products at the lowest level I can in order to yield me what I think is fair. In other words, I am going to be a real competitor, not just a member of the herd. Such a policy does not mean that we have competition between management to force wages down. It can just as well mean the exact reverse, as witness the fact that it was Henry Ford in a highly competitive industry who lifted his wages far above those in other companies. He did it—not by following a leader—but by deciding what was best from the point of view of his individual company, and if the others didn't like it that was just too bad.

In my opinion, industry-wide pricing, industry-wide almost anything, is bad. It goes contrary to the basic principles that the different companies within an industry should operate independently. Let's get rid of this war-born, industry-wide approach to our problems and settle down into a good independent, competitive basis. Furthermore, if industry is going to stick to industry-wide pricing it cannot kick on industry-wide bargaining by labor.

On the side of labor what needs to be done is pretty obvious. We are never going to get a declining price level against a rapidly rising wage rate. I believe that we have the right to ask labor to take the same kind of a gamble on the future that we ask business management to take. The real wages of American labor—wages in terms of what they will buy—are far above what they were in the prewar level. Of course, they are not as high as we would like to see them, and they are not as high as we ultimately will get them through technological progress. But when you increase wages without having a corresponding increase in productive efficiency, the inevitable result is an increase in prices. This was shown so clearly last year that the labor leaders must know that it is true. Another round of wage increases will not help labor—it will merely increase prices again and hurt labor and everyone else. If, instead of demanding another substantial round of increases, labor will hold fast and let us get our economy back onto a sound, productive, competitive basis, not only labor but everyone else will benefit. Approximately eighty cents out of every final consumer's dollar represents wages back through the productive process.

On the side of Government, it seems to me that there are three broad constructive steps that could be taken. First, it needs to support legislation which will get rid of the present monopoly aspect of the labor situation. Unless this is done—it will be impossible to get rid of the "follow the leader" attitude on the part of business, which I just mentioned above. Such corrective legislation will not be—must not be—antilabor. It should be no more antilabor than the Sherman Antitrust Act was antibusiness. The latter was antibucaneer, and it has not been enforced as it should be. What we need in labor legislation is anti-labor-buccaneering correction, and with industry antimonopoly correction.

Second, the Government needs to overhaul its monetary policy, or more accurately, see to it that the Federal Reserve System stops following policies which are inflationary in the highest degree. In 1946 we had an increase in the money supply and bank credit which, measured by peacetime standards, was perfectly fantastic. Yet the Federal Reserve never so much as lifted its fingers to hold this expansion in check. The argument in support of this policy is that unless money rates are continued at an artificially low level through Federal Reserve policy, the interest charge on the public debt will increase. If there ever was a case of being penny-wise and pound-foolish this certainly is it. In order to save a little bit on the carrying charges of our public debt, we are endangering the price structure of the whole Nation and thereby undermining the value—the real value—of the entire savings of our people.

Third, it seems to me that it is about time that the Government get itself straightened out on what it is doing to prices. It comes with ill grace for an administration to complain about the rising cost of food when the administration itself is piling up millions of bushels of potatoes to let them rot, and otherwise supporting this and that commodity which are part of the standard diet of the American people. It also comes with ill grace for an administration to blast others about the price trend when through the way it is handling its purchases of grain, and other materials for relief, it is encouraging speculation and driving prices to substantially higher levels than an orderly buying program would necessitate. Granted, the administration doesn't know how much it is going to have to buy for relief purposes. But when it does engage upon a program, it must have some idea of its magnitude. It would permit the markets to know what this is, the markets could adjust themselves in an orderly manner. Instead, the wheat speculators have just had a high time. I am not suggesting that we eliminate or curtail our relief program. But I think that in the interest of honesty, the administration has a responsibility for letting the American public know what the effects of its program is on prices—let the public know that we cannot ship one-third of our wheat supply out of the country without its having an effect upon our cost of living—that we cannot put through and continue one price support program after another and still expect prices to go down.

Fourth, Congress can tackle the cost-of-living situation by bringing leaders of industry and leaders of labor into hearings that will check this "follow the leader" folly. Congressional authority over tariff rates and excess profits—which it should not hesitate to use by drastically lowering the first and taxing the second, if necessary—is a powerful weapon to encourage industrial and labor leaders alike to work together toward a sensible price structure that will halt this spiral of dangerous inflation.

Of course, the thing that will bring prices down best is increased production. But that is being held back by uncertainty as to the entire range of Government policies. Both the President and the Congress have the obligation to clear up that situation forthwith.

If the Congress and the President show producers that they have had enough of New Deal crack-pot schemes of managed currency

and permanent deficit finances, that because we live in a streamlined machine era the old-time tested economic laws are not changed, the outlook for economic stability and lower prices will be materially improved.

If our Government—and that means both the President and the Congress—will do all it can do in establishing beyond any question of doubt a permanent, sound, fiscal policy, balance the budget, make a substantial payment on the national debt, lower taxes, tighten up on credit, make sensible tariff adjustments, maintain a fixed and sound monetary policy, control the personal power of arrogant bureaucrats over labor and industry alike—all that acting together would have a corrective influence on the cost of living.

If there ever was a time when we need statesmanship on the part of labor leaders and industrial leaders alike, this is that time. Unless we get some of this economic statesmanship and some political statesmanship another planned economy—another OPA—is inevitable.

Because permanent economic planning by government is incompatible with freedom does not mean that the elected representatives of the people cannot function successfully in an economic crisis.

Russia is waiting hopefully for another "bust" when she confidently expects us to succumb to totalitarian economic planning and control of everything—including labor.

Without abandoning the principles of our American Republic for any Marxism called "New Dealism," "Kienism," or "Stalinism," we can look to the Republican Congress to meet the present greed of inflated prices.

All of us in a high-standard-of-living economy are interdependent upon one another. Each of us provides a market for the goods and the labor of others. That is why nothing less than some statesmanship, or at least a sense of responsibility, by each group in its dealings with all others will give us full production, an ample market, prosperity, and a reasonable security. It is needless to say that if the various groups do not exercise such a sense of responsibility the relentless force of events or the Government will. And neither of these is apt to be as enlightened or as fair as we would like.

Alfred D. Stedman Answers Wallace

EXTENSION OF REMARKS
OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 25 (legislative day of Monday, April 21), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entiled "Alfred D. Stedman Answers Wallace," from the St. Paul Pioneer Press, of April 20, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALFRED D. STEDMAN ANSWERS WALLACE

Two silent figures loom in the background of the competition between America and Russia for leadership of the world. They are the United States farmer and consumer. Their influence has extended to and beyond the Moscow Conference. In many parts of the world they are helping to tip the balance in America's favor.

Together, these figures are enabling America to fight the hunger that grips many peoples. The United States farmer has produced food and the United States consumer is sharing it with those peoples on an unequalled scale. While Russia finds herself able to help little, American food is relieving starvation at her very doors.

America's prestige, therefore, is rising while Russia's is falling. Thus the American farmer and consumer are shaping history.

The big question is whether they are shaping it for better or for worse. Is it right for America to bid for world leadership against Russia with food, as with other supplies and prestige and power?

That question is being raised by Henry Wallace and others. It is not the size of the relief that is challenged by those of the Wallace school. They would send abroad more instead of less relief. What they denounce is the use of relief to strengthen this country's hand in dealing with Russia. They urge that relief distribution be based strictly on need alone. They want an international agency to do the job. And they condemn the United States Government for allowing the demise of UNRRA, which had that function.

So a clear issue is drawn as to the right or wrong of this country's present relief policy as it affects the United States-Russian relations. That issue deserves to be faced frankly by the American people now.

The true answer does not grow out of any emotions for or against Russia. It grows instead out of actual experience in handling food relief.

That handling at first was fitted, to the widespread satisfaction of Americans, into the pattern of one world. Food from this and other countries was distributed, not directly by them, but for them through the United Nations organization, UNRRA.

Relief was to have been just one of several implements of the plan for a united world. A second implement was assurance to peoples of their democratic right to establish governments of their own choosing. A third was the Potsdam pledge of economic unity for Germany, so that food could move from the big producing region in the Russian zone to other zones. A fourth was to have been real cooperation to make the United Nations work. The UN was to have a police force to give it potency. Finally, there was to have been an end of intrigues, either within Russia to upset her, or by Communists fomenting disorders outside to extend her sway.

Such was the plan for one world. What changed it? Here's the story based on official records and reports of facts by the most authentic news organs in the world:

Relief has been used repeatedly to implement not one world but a split-up through an aggressive spread of communism. Russia's satellite, Yugoslavia, took huge supplies of America's food, while the Communist press denounced this country and Yugoslav gunners shot down American fliers. Friendly Americans, distributing United States food for UNRRA in the Ukraine, were spied upon day and night.

Russia sent wheat afar to France for a flaming welcome by the Communist press that paid small heed to American shipments. Near home Russian demands intensified starvation, notably in Rumania and Austria.

Instead of the pledged economic unity of Germany, the continued division bars food and coal shipments from Russian-occupied Germany to the United States-British zone. The resulting misery in that zone is used by Communists to stir up trouble there and to hamstring vital functions such as coal mining and transportation. The United States and Britain thus are forced to keep pouring in money and supplies, some of which in effect are diverted to Russia as reparations.

And Russia has blocked progress of the United Nations by multiple vetoes. She has turned against the plan for a UN police force. She has frustrated negotiations in Korea. She has helped thwart democratic elections in Rumania and Poland. Her satellite forces tried by revolution to seize control of Greece. She obstructed the plan for effective policing against sudden warfare by atom bombs. She seized and held for blue printing B–29 planes of America, her ally. She spied upon atom work in Canada. And now her demands are for outside bases and resources that could be strategic springboards for a war of conquest.

Such are high lights in the story of the set-backs suffered in the struggle for one world. Mr. Wallace now lays the blame for disunity upon the United States Government. His proposal in his own words is for "a world crusade in the name of the brotherhood of man."

But to work in practice a rule of unity must abide by its own first principle. It must apply to all. And after due allowance for United States fallibility, the record shows that repeatedly American cooperation has been set at naught by Russian noncooperation. Mr. Wallace should be directing his plea for unity to the government chiefly responsible for the disunity, which is Russia.

Then is hope of unity gone? Or is there still chance for genuine adoption of the pattern of one world?

There's no complete assurance, no absolute guaranty that some sudden aggression won't upset the peace of the planet.

But certainly there is a chance of unity that is real enough and good enough to strive for. That chance exists because this country and most others still adhere without wavering to the aim of achieving one world through the United Nations. The western nations will never attack Russia nor molest her at all within her own borders. They can give her full assurance of security at home.

Also the chance exists because this country is now and for the past year has been standing firmly against the Russian course of disunity.

This stand is taken because the Russian course, if not resisted, surely would wreck the United Nations. The stand is taken because the successive concessions to Russia were in effect rewarding her for disunity. It is taken because this country's experience with Germany showed how surely appeasement of a totalitarian power leads to repeated aggressions and finally to disaster.

What has happened since this country's switch from appeasement to firmness? This firmness puts a stop to America's subsidizing of disunity. The United States serves notice that while this split continues it will supervise its own relief. It will see that United States relief supplies are not used to bolster communistic regimes, are not accredited falsely to Russia, are not reshipped to her as reparations, and are not looted, or diverted to black markets or sold to finance secret police.

And Russia, while cooperating only in spurts, is less aggressive, less menacing than she was before firmness replaced appeasement. Russian troop concentrations today are less formidable than they were in Europe. The threats of arms by communism to Greece and Iran and Turkey have noticeably waned.

Russia at length may become convinced that disunity does not pay and that cooperation does pay. Then she may reach a decision to throw in her lot with the United Nations, not just for diplomatic maneuvering, but positively and continuously and definitely.

For America to strive firmly to bring Russia to such decision is not easy. But still it offers the only path now visible to one world.

A Letter to Congress

EXTENSION OF REMARKS
OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Army Times:

A LETTER TO CONGRESS

The files of Army Times are laden with quotations from many of you—particularly those of you who are veterans—promising before election to wage a relentless fight in Congress to make certain that the veterans of World War II were treated fairly and justly.

Since that time you have been most successful in lining the pocketbooks of thousands of America's manufacturers and industrialists, business and professional men, and wholesalers and retailers with fat profits derived from your haste in ending price controls.

What are you going to do for the veterans?

You have poured out money lavishly—but not necessarily foolishly—for foreign relief and foreign loans, and soon you are going to pour out hundreds of millions more—eventually, billions perhaps.

What are you going to do for the veterans?

You have favored the economy-minded rich; you appeal to the tax-minded corporations, and even now you are flirting with the rent-minded landlords.

What are you going to do for the veterans?

What about terminal-leave bonds in cash? Wasn't that a campaign promise? What about lifting the ceilings placed so unjustly on the earnings and subsistence of on-the-job trainees? Wasn't that one of the first things you promised to do after you got to Washington?

What about higher—at least adequate—subsistence allowances for veteran-students? Didn't you promise them an education in return for the lost years they gave to the job of making it possible for you to be where you are today?

Sure, the war is over. Most of the boys are home. The glory is gone. And you've got to cut back on Government expenditures. But must you always begin and end economy drives with the veterans?

It was you, Congress, who raised prices. It was you, Congress, who bowed to the building industry and refused to give this country a decent and well-planned housing program that would put veterans into homes instead of hovels. It was you, Congress, who tied up the terminal-leave pay veterans had coming to them in nonnegotiable, 5-year bonds.

Do you pay businessmen and farmers the cash subsidies they have coming to them in bonds?

Can you pay your rent, buy food, buy clothing, or pay your bills with bonds?

Something has got to be done. The cost of living is a minute-by-minute, day-to-day threat to the very existence of millions of veterans and their families. The housing shortage is a disgrace and a crime and you constantly turn a deaf ear to the pleas of the veterans. Living conditions among veterans attending school under the GI bill are impossible, the task of studying and maintaining a home on less money a month than you collect for 2 days' work is beyond reason.

Since the first of the year, mainly because of a law you passed hastily and without consideration, the Veterans' Administration has taken $14,000,000 in cash out of the pockets of veterans and it intends to take another $32,000,000 in the weeks ahead.

Is this the measure of America's gratitude to the veterans?

Where are those 83 veterans of World War II among you who promised so glibly that this time the veterans would not be forgotten? Have they, too, become stooges for the rich, the economy-minded, the tax-conscious, the landlords, the profiteers?

You are giving the answer. Every day, every week, every month of the Eightieth session of Congress that passes makes more indelible the impression that your words and promises mean nothing. Many of you are playing a game, a game of hide-and-go-seek with veterans' legislation. Stalls, delays, technicalities, rules, procedure, every trick of the politican is being used to prevent vital and urgently needed veterans' legislation from being brought to the floor of Congress for a vote.

Are you afraid to vote? It looks that way.

The veterans need money to tide them over the difficult days you brought upon them by ending price controls and refusing to act sensibly in the housing crisis. Give them their terminal-leave pay in cash.

The veterans need to make a decent living while taking on-the-job training to become skilled mechanics. Lift the ceilings on their incomes—give them something with which to combat high prices.

The veterans in school need higher subsistence allowances if they are to continue their educations and profit by the millions already spent in their behalf. Raise those allowances enough to put a little food on the table.

Get busy on a plan for a national housing program. Give the fellows who lived too long in the foxholes a place to lay their heads—a home.

All of this can be done in the space of a few days, weeks at most.

The price to the country will be nothing compared to the price you—Congress—are exacting from our veterans in suffering, want, hardship, and discouragement.

It's up to you.

HAROLD G. STAGG.

Billy Williams and George Hoage—Perfect Public Servants

EXTENSION OF REMARKS
OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MACKINNON. Mr. Speaker, they paid tribute the other evening in Minnesota to two of the best public servants that any State ever had. I refer to Billy Williams and George Hoage, who for the past 42 years have faithfully served the State of Minnesota.

If any of you have ever had the occasion to call upon the Governor of Minnesota you met these two fine gentlemen who have served under 12 Governors since 1905 when the present Capitol in St. Paul was first opened. They have been the Governors' aides during all these years and I never knew a Governor of our State who did not regard these remarkable men as two of the most valuable assets of the State of Minnesota. There was never a Governor, regardless of political affiliation, who ever thought of dismissing them for they were above politics. They served the State. They always gave the same gracious reception to the humble caller as they did to the one of high estate.

In a short time George Hoage will retire, and Billy Williams will continue for a few more years. The Governor's office in Minnesota will not be the same without them. They are perfect public servants. Your life would have been richer if you had known them.

The President's Middle East Policy

REMARKS
OF

HON. FRANK A. MATHEWS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MATHEWS. Mr. Speaker, this morning I bring to you the final answer to the question I have been asking people: "What do you think about the President's proposal regarding Greece and Turkey?" Later on, with your permission, I would like to make a 1-minute summary of the results of this experiment.

Having interviewed people in many walks of life, I thought it might be well, as a final answer to this thing, to interview a man who will have something to do with the final say in the matter; so, Mr. Speaker, I talked to a Congressman about this. I must confess I had some idea of the views of this gentleman before I talked with him, but I have such a high regard for his views on Government spending that I quote to you his answer to me:

To my colleague FRANK MATHEWS, the gentleman from New Jersey, I want to say that I believe you are rendering great service to our country in relating your interviews with people in every walk of life on the subject of aid to Greece and Turkey. You are informing the Congress what the people actually think on this issue.

It is proposed to give away $400,000,000 of the taxpayers' money to these foreign countries, without first asking the permission or having the approval of the people who must pay the debt. Then we must tax the people—your constituents and mine—to pay this debt incurred without their permission. My dear colleague, that does not seem right, does it? In view of the fact that they already have a $269,000,000,000 debt saddled on them, it seems only right that the people who must foot the bill should have a say as to whether we are to give away millions and millions to other nations of the world under the guise of charity.

We always have kept our nose out of other nations' affairs. Why not do that now? It smells of oil to me—more oil than charity.

Why should this Government maintain a King and Queen of Greece who do not have a drop of Greek blood in their veins? Why meddle in their Government? Would we want the Greeks to come over here and tell us what kind of a government we should have? The United Nations was set up to take care of situations like this and do the very thing the President of the United States suggests this country do—bypass the UN. Why such a procedure? It implicates the

expenditure of many more millions. It is a dangerous precedent.

A sound America will stabilize the world, but a bankrupt America will pull us all down.

Be wise and economize.

Where will you get the money?

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of April 23, 1947:

ECONOMY OR CHAOS?

On March 1, 1946, the National Labor Relations Board had a backlog of 3,875 unprocessed cases. On March 1 of this year, the backlog amounted to 5,225 cases—an increase of more than one-third. This is to say that the Wagner Act is being only partially administered. A great hue and cry would arise, no doubt, if the NLRB were to declare frankly that it could not keep up with its case load and would therefore limit its administration of the act, say, to the States east of the Mississippi or north of the Mason and Dixon's line. That it is now, because of a shortage of personnel, unable adequately to discharge its congressional mandate is painfully apparent. If the cut in its appropriation ordained by the House is sustained in the Senate—almost 50 percent less than the President's budget estimate and 10 percent under the present appropriation—it will be forced to reduce its staff by about 50 persons and, as an inevitable result, will fall still further behind in its work.

This is an expensive form of economy. The Board, like a court of law, has a statutory obligation to process cases brought before it for action; and it has small control over the number of cases filed with it. It is an instrument for the orderly adjudication of disputes or violations of the law which would otherwise dislocate the national economy. As Chairman Herzog, of the NLRB, told the Senate subcommittee in charge of Labor-Federal Security appropriations, "Delays in the processing of cases impair the effectiveness of the (Wagner) act by prolonging employer-employee tension and uncertainties. Further, delays often lead to strikes which prompt application of the judicial procedures of the Board would prevent. * * * Not only may impatience at the Board's slowness in handling organizational issues lead to self-help in the form of strikes, but delays in handling complaint cases often build up employer liability for back pay. In cases where elections are delayed, all parties—labor and management alike—are subjected to tensions which promote unrest."

The goal of economy which the Republican Members of Congress have set themselves is, of course, an important one. It cannot be attained without a substantial paring of the President's budget, which must necessarily entail the sacrifice of some desirable governmental services and activities. But the monetary saving must be weighed in terms of the sacrifice. In this instance it seems to us a form of saving that may prove dangerously costly. We can scarcely afford to carry unadministered or inadequately administered laws on our statute books. It can scarcely be considered economical to promote industrial chaos.

Turkey's Role in World War II

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the New York Herald Tribune:

TURKEY'S ROLE IN WORLD WAR II—AN OBSERVER RECALLS HOW NATION RESISTED AXIS PRESSURE

To the NEW YORK HERALD TRIBUNE:

As the question of Turkey's role in the Second World War seems to be the subject of much discussion, and particularly of controversy, at once prejudiced and ill-informed, I beg that you extend the hospitality of your columns to the views of an American who spent the entire war period in Istanbul. These views are unequivocally to the effect that Turkey's part in the war deserves our commendation and gratitude, for the following reasons:

1. Turkey was a bastion of defense in our war against Germany and Japan and her stand aided materially in bringing it to a successful conclusion. If Turkey had gone over to Germany the whole Middle East would have been lost. The vital supply route through Iran to Russia would either have never operated at all or would have been cut. The Persian Gulf, the Suez Canal, vital lines of communication, vital sources of oil supplies, would have all been taken away from us. The vista of appalling consequences stretching from Europe, northern Africa, through Russia and the Middle East to the Far East is nerve-shaking even in retrospect.

2. The Turkish bastion did not fall because the Turks—leaders and people—never lost their nerve. Living in Turkey during most of the war was like living on a smoking, growling volcano. We on the Bosporous were only 20 minutes flying time from German airfields in Bulgaria. So strong was the belief in the imminence of a German attack that thousands of persons were evacuated from Istanbul in the spring of 1941. In the autumn of that year it was known that the Germans had everything prepared for an invasion, even to the painting of signs for guideposts for use on roads through Turkey and to Baghdad and to Cairo. The Turks were resolute in their determination to resist attacks and were unshaken by German menaces.

3. The Turks turned a deaf ear to German blandishments when it seemed most advantageous to forsake the British alliance and go over to the Germans—at a time when it seemed that the Germans couldn't lose. There were pro-Germans in Turkey, as there were in every country, but whatever fifth column there may have been made little impression on the firm pro-Allied sympathies of the Turkish leaders and the majority of the citizens. It is true that Pan-Turanian fanatics dreamed of uniting the Turks of a dismembered Russia with those of the Turkish motherland, but decisive measures were taken to suppress this anti-Russian faction and nothing was heard from them after 1943.

4. Turkey did not become an active belligerent because the British and Americans could not spare the munitions and equipment necessary to give offensive power to the Turkish Army. The British and American Chiefs of Staff were opposed to Turkey's entry when Russia urged that she come in early in 1944, because it would have resulted in an inevitable slow-up of the Pacific and Italian campaigns and of the invasion of France and would have reduced the equipment which Russia herself needed to insure mobility for her great armies in her offensive campaigns. Probably Turkey was in error in not declaring war on Germany later in 1944, but her army staff were honestly convinced that the Allies had not fulfilled their promises in the matter of modern equipment, without which the Turkish forces would not have been able to carry out the offensive task expected of them.

5. Turkey did trade with Germany during the war, but, as she was almost completely dependent in 1941 and 1942 on Germany for the marketing of her vital exports, her economy would have broken down and her defensive military strength would have been seriously impaired if she had cut off all commercial relations with Germany. This would have resulted in a serious weakening of the Allied position, as a strong Turkey was essential to the success of the Mediterranean and African campaigns.

6. Turkey was not a war profiteer, all of Moscow's invectives on this score notwithstanding. Of course, she suffered infinitely less than Greece and perhaps less than any other country which was an active participant. Of course, there were many businessmen, industrialists, landowners, and speculators who got rich more quickly than was seemly in a world in distress, but what country was without its shameless profiteers? The mass of the Turkish population, however—the wage earners, officials, teachers, and others on fixed salaries—suffered great privations due to the fivefold rise in the cost of living between 1939 and 1945. The Turkish people thus made a not insignificant sacrifice in the common cause of freedom.

7. We should not forget that Turkey was one of the first countries to commit herself to a stand against Nazi aggression, when in 1939 she signed treaties of alliance with Great Britain and France.

8. That Turkey wished for and did her best to promote friendship with Russia is indubitable. We have only to remember that (a) she negotiated a treaty of alliance with Russia in the summer of 1939. Instead of signing, the Russians turned their backs on the democracies and signed the infamous pact with Ribbentrop. (b) When Russia was fighting the heroic and critical battle of Stalingrad the Turkish Government assured the Soviet Government that any attempt by the Germans to turn the Russian flank by attacking the Caucasus through Anatolia would be resisted. (c) The Turks repeatedly expressed their desire to renegotiate a treaty of friendship and neutrality after Moscow had denounced that of 1925. Russia, on the other hand, despite her promise given in 1941 that she had no claim on Turkish territory, put forward in June 1945, her now famous demands for the cession of Kars and Ardahan and for military bases in the Dardanelles area. It should be said in this connection that Russia's so-called proofs that the Turks actively aided the Germans by allowing the passage through the straits of German ships of war were thin evidence, indeed, to bring to the support of so serious a charge.

In conclusion and by way of summary, let me express my conviction that one of the psychological factors which were decisive in turning the tide against Germany was Germany's realization that the Turk is a tough and resolute fighter. This was enough to make her pause and reconsider her plans for overrunning the country. Is it far-fetched to say that this factor may well have saved Russia and ourselves? In any case, it is not an exaggeration to say that Turkey's part in the war was a helpful and a not inglorious one.

AN AMERICAN RESIDENT OF TURKEY.

NEW YORK, *April 10, 1947.*

A Great New Library

EXTENSION OF REMARKS

OF

HON. FRANK A. MATHEWS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MATHEWS. Mr. Speaker, someone once said that age is not so much a matter of years as of mental attitude. Applied to an institution, this is particularly true.

Princeton University, located at Princeton, N. J., in my district, is an example. Celebrating its two hundredth anniversary, it expects to complete in June 1948 its unique $4,000,000 Harvey S. Firestone Memorial Library.

A library is like a residence. The exterior structure supplies protective shelter to books in the one case and to a family of human beings in the other. But this structure is mere housing. What goes on inside determines whether the one is a mere storage space for books, the other just a house; whether one is a vital factor in true intellectual development, the other a social unit of moral and spiritual strength.

Of course there is nothing unique about a university building a library or in spending $4,000,000 for that purpose. The outstanding departure of the Harvey S. Firestone Memorial Library from traditional library building, implying a central core of book stacks surrounded by offices, seminars, and reading rooms, is the abandonment of any distinction between storage and nonstorage space and with the elimination of all barriers between books and the users of books.

The building will consist of six stories and is unusual in concept among libraries in that it has been planned from the inside out to implement the aims and needs of Princeton's philosophy which emphasizes individual instruction and independent work.

Plans call for a book capacity of 1,800,000 volumes and seating accommodations for about 1,875 students. These figures triple the book space and quadruple the number of reader accommodations now available in the Chancelor Green and Pyne Libraries which were completed in 1873 and 1897, respectively, when Princeton's undergraduate enrollment was less than a third of what it is in 1947.

A distinctive feature of the building is the achievement of unprecedented adaptability in function through the use of the modular plan of construction, meaning a building made up of units of space uniform in size, equally illuminated and ventilated, and interchangeable as to function.

The basic unit of space in the Firestone Library measures some 18 by 25 feet, a bay convenient for seminars, for book stacks, or, by a combination of two or more units, for large conference rooms. With a uniform ceiling height and with movable interior partitions, space for human occupancy and space for book storage become interchangeable.

In accordance with the principle of the humanistic laboratory, a library conducive to individual study, the building will contain more than 660 individual cubicles, or carrels, for undergraduates and graduate students. A student's carrel will be his private research office in the library, located in the midst of the book stacks, where the volumes immediately pertinent to his field of concentration are located.

The floors, measuring approximately 350 feet east and west and 225 feet north and south, and providing some 4½ acres of interior space, will house the principal bookstacks and most of the carrels and departmental areas. Each of these three floors will accommodate about 500,000 volumes as well as offices, seminars, conference-lounge rooms, and other study areas.

From the broad base, which is being built of reinforced concrete, rises a superstructure of three additional floors, covering a much smaller floor area and being surrounded in part by terraces formed by the roof of the base floors. The superstructure and its tower, the latter emphasizing the main entrance and building up composition with the chapel, will employ structural steel.

Although the stack floors are below the entrance level, the northward slope of the library site, together with a reverse terrace south from Nassau Street, provides a naturally lighted north wall. The lowest level will have natural light on the entire north side. Nearly half of the perimeter of the floor above will have outside light and three-quarters of the perimeter of the floor above that.

The dangers of institutionalism and of an atmosphere of regimentation on the stack floors have been met by the development of browsing alcoves scattered throughout the book-storage area. The alcoves, intermixing reading space and stack storage at convenient intervals, may be regarded, Dr. Boyd explained, "as oases of light, color, and attractive furnishings in the midst of a regimented stack, giving relief to its severity."

The library, when ready for occupancy, will add two new phrases to the campus lexicon, for on the stack floors there will be two distinctive kinds of seminars, "talk rooms" and "work rooms." A "talk room" will be for graduate seminars held under professional guidance, while a work room, in effect a miniature library of basic research materials, will be intended solely for research.

From the circulation desk on the first floor will radiate the wings of the building, housing a reference reading room, a reserve book room, the exhibition gallery, manuscript and treasure rooms, special collections, and the library services.

One of the rooms on the main floor will replace as nearly as possible the library of the College of New Jersey as it was in the eighteenth century. This room will contain the desk of John Witherspoon, Princeton's sixth president, together with several hundred volumes from Witherspoon's library as well as those from the libraries of Aaron Burr, Jonathan Edwards, and other early Princeton leaders.

Among the great collections that will be sheltered on the top three floors will be the Gest Oriental library of 100,000 volumes, the Morton L. Parrish collection of first editions of Victorian noveltists, the Philip Ashton Rollins collection of western Americana, the Grenville Kane collection of Americana, the Robert Garrett collection of 10,000 volumes of Arabic manuscripts, the graphic arts collections, the William Seymour Theater collection, the Woodrow Wilson collection, and the philatelic and numismatic collections.

A good library affords a miraculous opportunity to reasoning human beings to advance their education by beginning where others left off, with a minimum waste of time and avoidance of the uncomfortable pains of too many courses in the hard school of experience.

To make the best out of a good library, the facilities for research are of vital importance. In this latter feature, the Harvey S. Firestone Memorial Library excels.

Princeton University is demonstrating a far-sighted and progressive policy in this project.

Brooks' Courage

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, April 25 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Brooks' Courage," appearing in the Illinois State Journal of Springfield, Ill., on Friday, April 18, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BROOKS' COURAGE

United States Senator C. WAYLAND BROOKS, Republican stalwart from Illinois, displayed a soldier's courage Wednesday when he criticized the proposed Greco-Turkish $400,000,000 aid program as leading to countless Pearl Harbors and Bataans around the world, as well as national bankruptcy. BROOKS spoke not only as a representative of Illinoisans in the Senate of the United States, but as a veteran who has been under fire in war, who knows what war in its bitterest phases is.

The Senator appended to his criticism the explanation that he held no truck with Communists or communism, which at least pretends to oppose the aid program, but WAYLAND BROOKS need not have taken time out for that. All of Illinois knows he is as militant an opponent of communism as lives. Nor will anyone in Illinois misunderstand.

BROOKS' prime interest is to conserve American strength. He knows, and so does every other informed Illinoisan, that unless we remain strong, we shall become an impotent target in the not distant future for whatever nation or influence chooses to take us over. History on that point is immutable.

There is another angle. A growing number of Americans are beginning to suspect

that the paraded Russian and communistic opposition to the Truman doctrine is camouflage. It isn't the wish of communism that Uncle Sam conserve either his muscles or his resources. Communism wants us weakened, at least to the point of vulnerableness to communistic conquest. They could, and would if it served their purpose, blatantly wave the flag against an aid program such as is contemplated, just for the purpose of insuring its adoption.

BROOKS' position is in the interest of American security. He maintains we cannot pour out arms and substance and stay out of trouble. The historic sequel of that argument is, we never have.

Italy in Danger

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

ITALY IN DANGER

(By Edgar Ansel Mowrer)

Recent reports reaching this writer from Italy are alarming. Not only are the Communists gaining in strength but the majority of the divided Socialist Party, under the honest but stupid Pietro Nenni, are helping them.

Ex-Fascists and ambitious malcontents of Giannini's Average Man (Uomo Qualunque) Party are also growing. In foreign affairs, this party is nationalist and cynically ready to cooperate with anybody who will help them. They dislike communism but dislike democracy even more.

The west-oriented or democratic parties still nominally control the government. Most people think that in an election held now under the shadow of the unjust Big-Four decision giving Istria to Yugoslavia and internationalizing Trieste, communism and fascism would eat even more deeply into Italy's weakened politic.

Nobody can properly blame the Communists and the Fascists. Both are acting according to their natures. Italy pretty well fulfills the conditions that Communist theorists consider prerequisite to revolution. Communist Leader Palmiro Togliatti is a hardened, intelligent conspirator so well thought of by the Communist fathers in Moscow that he has been made strategical leader of the Communist Parties in all western Europe. The strategy—as everywhere the Communists do not yet dare an open insurrection—is the "patriotic line" and a common front with other "democratic" (meaning pro-Russian) parties. Given the humiliation of defeat and loss of really Italian territory and the physical misery now prevalent throughout this poor and overpopulated country, the growth of communism was a foregone conclusion.

Some revival of fascism was also doubtless to be expected.

But that communism and fascism should have grown so quickly to their present proportions is due, in my judgment, to the short-sighted policies of Britain and the United States. Looking back, one can see clearly how when we prevented the armed revolution that would have buried the worst Fascists and permanently converted the others, we prepared the ground for a new bid for power by some new Mussolini.

Our support of the King, Prince Umberto and Badoglio cost us the confidence of many democratic Italians. The choice of the ultra-businessman, "Admiral" Ellery Stone as chief military authority, cost us a lot more.

Failure to keep western Istria and Trieste safely Italian was a minor democratic disaster.

Underestimating and undercrediting the Partisans who fought consistently and well on our side was another.

Probably the greatest of our mistakes was in overplaying the Vatican. Most male Italians—it cannot too often be said—are both Roman Catholic—and consistently anticlerical. By this I mean they revere priests in churches and resent priests in politics.

There was some reason for our backing the church. Once the Italian Government collapsed, the church was the only reliable concern left. But by giving preferential treatment to a confessional organization to which more than three quarters of all Americans do not subscribe, we alienated large numbers of Italians and drove them into the arms of Moscow.

It should have been our task to bring socialists, democrats and old-fashioned liberals together with the Christian Democrats. When the test came, the Communists, whose only principal is subservience to Moscow, voted for renewing the Lateran Pacts that made Catholicism the state religion. The Socialists, by voting against, widened the gulf separating them from the Christian Democrats.

Italy can yet be saved. At long last, the United States has an Ambassador, James Clement Dunn. Whether this pious American Catholic can bring all the anti-Communist, anti-Fascist groups together remains to be seen.

The American Senate is helping by what looks like a flat refusal to ratify or even discuss the peace treaty with Italy until there is a satisfactory treaty with Austria. The Senators are insisting that our military evacuation of Italy (disarmed by the peace treaty) shall not precede Soviet evacuation of Austria—the necessary prelude for Soviet evacuation of Eungary, Bulgaria, and Rumania. It is believed that left to themselves, the Yugoslavs will hardly dare to jump an internationalized Trieste or move into Venice even if invited by Togliatti.

Pro-Moscow conspirators are clearly aiming at making Italy a second and larger Greece. It is up to us to prevent them.

Certainly, nothing could be more futile than an American security investment in Greece and Turkey if we are going to permit all Mediterranean security to be undermined in Italy.

Government by Wish

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, April 25 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Government by Wish," appearing in the Chicago Daily News of Friday, April 18, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT BY WISH

Of all the arguments that have been advanced in support of Greco-Turkish intervention, the weakest is that we must proceed if only because President Truman has proposed it. Otherwise his prestige would be damaged, say the supporters of this "loan."

Senator BROOKS attacked this, pleading forcefully in his address opposing the Middle East adventure. Advocates of the $400,000,000 commitment admit that it is only the beginning. At what point, if any, will regard for national self-interest permit us to say "No" to Mr. Truman? Is ours a government of checks and balances, or merely one of drafts and deficits?

Senator BRIDGES disclosed that the State Department is still exerting pressure to obtain for the Russians another $25,000,000 of lend-lease, including an oil refinery. Can't somebody tell the left hand that the right is trying to "stop Russia"?

Income-Tax Legislation

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington (N. J.) Examiner of April 21, 1947:

SMALL FRY CARRY THE LOAD OF UNFAIR INCOME-TAX LAW

Income-tax legislation always has been class legislation and there is no apparent disposition on the part of the present Congress to make it any less so.

Most glaring of its inequities is what it does to the average man, woman, and child working for a living, and the way it discriminates against them as compared to the higher-bracket taxpayers.

This has become even worse since personal and dependent exemptions have been cut to the point where no one will attempt to argue they are comparable to the exemptions granted the big businessman and financier.

Joe Goat, married, two children, annual income $3,000, is taxed about $140, all or most taken painlessly from his pay envelope without him ever having had the use of it. There are no slick operations or manipulations he can resort to for the purpose of going off tax-free or reducing his payment substantially.

Joe Grab, married, two children, annual gross income $300,000, may get stuck for a sizable chunk of tax money. He may, if his lawyers and auditors are slick enough, get by with about the payment Joe Goat makes, maybe without any payment.

Even if he pays $150,000 tax, he pays it at the end of his fiscal year, after having had the use of the money to make more, to save him from borrowing at interest, or to set up investments that might reduce the size of his ultimate tax.

SPECIAL ALLOWANCES

Joe Grab is most likely deriving income mostly from use of his capital. He has allowances for operating expenses, losses, etc., all legitimate; all, also, allowances that leave the door open for tricky operations to reduce the tax.

Joe Goat likewise is a capitalist. He invests in his job the only important capital he has, the productive years of his life. This is subject to deterioration with use, but he gets no allowance for that on his income tax.

Joe Goat has legitimate expenses. If they are incurred directly on his job, he gets a

tax allowance for them. Otherwise no allowance. He has losses, caused by strikes, sickness, unemployment. These are income losses. He doesn't have to pay tax on the money he would have made but didn't. Neither is he allowed, as Joe Grab is, to deduct these losses from the money he did make, thereby reducing the tax.

The $300,000 man probably needs several automobiles in his business. One or more of them can be used for getting him to and from his office, and for other personal purposes, and the cost can be deducted from taxable revenue. The $3,000 man, if he has a car or not, gets no allowance for getting to and from work, or for other personal transportation.

NICE SYSTEM

Joe Grab can have his wife on the pay roll. Her income is deductible from his taxable gross, if she pays tax on it at a considerable saving over what he would have to pay. The fact that her salary pays for the upkeep of his domestic establishment, including education of his children, entertainment and vacations, can give Joe Grab a virtual tax exemption for these outlays.

All expenses of the $3,000 family must be paid out of Joe Goat's taxable income, with no deductions for them.

There are other expenses Mr. Goat is liable to incur that are a legitimate part of the cost of investing his only capital—his ability to earn a living. Included in these are clothing, laundry and similar expenses that are necessary if he wants to hold his job, but could be much less if he had a different sort of job. He gets no deductions for them.

Joe Grab can have a doctor and a dentist and a chiropodist and a masseur and a physical instructor and a psychiatrist and a garage mechanic and a few other specialists on his pay rolls as necessary adjuncts to his plant or office. Their services can be available, without cost to himself and his family—another form of income tax deduction from living expenses.

Looked at from any standpoint, the income tax does not fall in equal proportion on rich, poor and in-between alike; nor on the just and the unjust.

There is too much leeway for the smart guy, if—and he usually is—he is in the upper brackets.

There is an unfair share of the burden on the low-income individuals and families.

A reasonable start on wiping out the inequities would be to exempt all income up to what Government economists fix as a minimum existence income level—around $2,500 for Joe Goat and his family at present prices.

The House Labor Bill

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Daily News of April 25, 1947:

THE HOUSE LABOR BILL

The omnibus labor bill passed by the House of Representatives by a vote of 308–107 forbids jurisdictional strikes and secondary boycotts, requires open financial reporting by labor unions and makes them financially accountable in the courts, defines unfair labor practices by unions as well as employers and authorizes the Government to obtain a 75-day injunction against a strike in public services or utilities which would "threaten to imperil" the public "health, safety or interest."

These objectives of the House bill are in keeping with the abuse of its power of which labor has often been guilty in the last decade. The heavy House majority which approved them reflects strong sentiment in the country for greater regulation of the giant labor unions which have so altered the political and economic balance of power in the United States.

Their very size and influence require the open responsibility of labor unions in their financial operations. The very effectiveness of the technique of the strike makes jurisdictional strikes, which represent no actual wage or welfare demands on the workers' part, intolerable. Strikes in an industry vital to the national interest last year twice brought our industrial processes almost to a standstill.

Had the House sought actively to write a law which would curtail labor's excesses, the Nation could look forward to a period of health and security in its industrial life. But the Republican-dominated House chose otherwise. It chose to make basic labor legislation a purely political issue and to wrap up constructive objectives with a whole-hog-or-none assault on union labor which, if it were written into law, would open up the most turbulent period in labor-management relations the country has known.

It will not be written into law, even without the certainty of a Presidential veto. The House bill has no chance of passage in the Republican controlled Senate, where much less punitive labor measures have failed of approval in the Labor Committee headed by Senator TAFT. Passage of the House bill merely ensures a split in the Republican congressional leadership which the House, had it sought to curb admitted excesses in labor's power, could have avoided.

Indian Affairs

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include my statement to the Subcommittee on Appropriations, Interior Department, appropriation bill, 1948, Indian Affairs, February 28, 1947:

Mr. Chairman, I appreciate this opportunity to appear before your subcommittee. My interest in Indian affairs is naturally greater than that of most of my colleagues. I grew up in the Choctaw Nation. Some of my warmest lifelong personal friends are Indians. There are probably more Indians in the congressional district which I am honored to represent than there are in any other congressional district in the United States. Most of the Choctaw and Chickasaw Indians, two of the greatest of the Five Civilized Tribes, reside in my district. Members of these tribes have played an important part in the development of the State of Oklahoma. They occupy positions of leadership in practically every community in my district. Many of them have attained high positions within our State and Federal Governments. They have served honorably and with extraordinary distinction in the great war that has just been won.

I would like to call the committee's attention at this time, to a matter about which many persons outside of Oklahoma are under a misapprehension. The former wealth of the great Osage Tribe has led many to believe that Oklahoma Indians are fabulously wealthy. The fact is, with respect to the Choctaw and Chickasaw Tribes that but very few may be considered prosperous. On the contrary there is widespread poverty among these fine Americans. Except for Government schools like Wheelock, Jones, and Carter, and mission schools, such as Goodland, there are many Indian children who would not have the opportunity to get even an elementary education. These schools have been able to take care of Indian orphans and Indian children whose parents live so far from public schools that they are not able to attend the ordinary State schools. It should be remembered that these are boarding schools which are attended by growing children, some of them very young. The rising cost of food makes it imperative that adequate appropriations be made to insure that these children may have proper nourishment.

There is an urgent need for new buildings at some of these schools. I hope that these buildings can be constructed as soon as possible, and that the old and inadequate structures may be replaced with more modern ones. But in all these matters we are only asking that essential things not be neglected.

Likewise, except for the hospital facilities that have been established, many Indians would not be able to receive the medical and hospital care which they require. The Indian hospital at Talihina, Okla., has experienced a 300-percent utilization increase since the beginning of the last fiscal year. It takes care of more than 100 tuberculosis cases, and considerably more than 100 general hospital cases. In addition to this, it handles hundreds of out-patients. This hospital is desperately in need of sufficient funds to do the job, and such funds should be provided.

These institutions serve not only Indians residing in southeastern Oklahoma, but members of the Five Civilized Tribes and many other tribes throughout the country. The Federal Government has, through the years, rendered assistance along these lines, not only because there has been a need for it, but also because of a solemn obligation which has grown out of our various treaties with the Indians under which they moved from their original homes to settle in Oklahoma. I regret to say that the Federal Government has not lived up to all of its treaties.

Mr. Chairman, I therefore hope that the various services which have been made available to the Indians by our Government will not be neglected during the coming fiscal year. I know there is a widespread desire and need for economy in Government, and I am one of those who believe in rigid economy. Accordingly, I am not asking the committee to consider appropriations not contemplated in the budget. I feel, however, that this program is too important to be neglected.

At this point I think it will be well to point out that the Indian service exists for the Indians and not for the departmental officials. I feel, therefore, that if reductions are made in the budget in the Indian service, they should be made with respect to the overhead, and not in connection with services for the direct benefit of the Indians themselves. In this connection, I should like to call your attention to the fact that branch offices of the Indian service have been established at various communities to serve Indians directly. This is as it should be. The vast majority of Indians are unable to take up their problems with distant offices, whether regional or national. Agencies located near their homes and communities will do more for the Indians than offices located at some remote headquarters. I, therefore, plead with the committee to allow

sufficient funds to keep intact all local contact offices in southeastern Oklahoma.

I do sincerely hope your committee will see fit to recommend sufficient appropriations to provide adequate funds for the health, education, and other services which the Government has heretofore seen fit to furnish our Indian population.

Farm Bureau Members Split on CVP Land Policy

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. MILLER of California. Mr. Speaker, the matter of the retention of the antispeculation clause in the reclamation law is one of great importance to the people of California. A very illuminating article pertaining to this subject was published in the San Francisco News under the date of April 9, 1947, which reads as follows:

FARM BUREAU MEMBERS SPLIT ON CVP LAND POLICY

(By Vernon O'Reilly)

The growing bitter dispute between a segment of the membership of the California Farm Bureau Federation and its policy-making board of directors over the latter's opposition to the 160-acre limitation in the Central Valley was underscored today in a letter from C. A. Talbott, of Turlock, to J. J. Deuel.

Mr. Talbott has been a member of the CFBF for 30 years. Mr. Deuel heads the organization's utilities department. He has been an active opponent of the Bureau of Reclamation program and bitter antagonist of application of the 160-acre limitation to CVP.

DISCONCERTING

The Turlock man held it "disconcerting * * * to find the California Farm Bureau Federation carrying the ball in this fight for the Pacific Gas & Electric Co. and the State chamber of commerce against the small farmer and the returned veteran."

"This reclamation law with its 160-acre limitation," he wrote, "has served the interests of the farm-home owner for 45 years and now the CFBF has suddenly discovered the technicalities which will make the Bureau of Reclamation, using your own words, 'The economic master of CVP for years to come.' "

PREFER BUREAU CONTROL

"I opine that the people, when they review the past 45 years' operation of the bureau * * * would prefer, if they had the facts, to have it the 'economic master' of CVP than to have CVP controlled by the P. G. & E., Southern Pacific, Standard Oil, Kern County Land Co., Miller & Lux, Boston Land Co., Tejon Ranch Co., and about 150 other corporations and individuals that own approximately 1,500,000 acres of land in the San Joaquin Valley."

He charged Edson Abel, irrigation attorney who speaks for the CFBF at many hearings on reclamation matters, "falsely represents this (160-acre limitation) program as confiscatory."

"I will make a present of $5,000 to the California Farm Bureau if you can prove the reclamation law, as it now stands, has ever confiscated, or can confiscate, one dollar's worth of any man's property," he continued.

CHALLENGE PRESENTED

"I challenge you or anyone to show any instance in the 45 years during which the reclamation law has been in force when it has operated to the detriment of the common people it was enacted to serve."

Mr. Talbott further criticized Mr. Abel for representing himself in the Crittenden committee hearings at Sacramento recently as speaking for 45,000 California farm families, in testimony opposing the 160-acre limitation.

"I am a member of a State-wide committee which has circulated thousands of petitions in the past 2 months requesting retention of the 160-acre limitation," Mr. Talbott wrote. "On these petitions we have secured, by honest representation, the signatures of thousands of Farm Bureau members who were and are very vociferous in their support of the 160-acre limitation and in their denunciation of the CFB for its opposition thereto.

"I therefore challenge your right to testify that you represent 45,000 farm families or any specific number of farm familes. You do have the right to say you represent the directors of the CFB.

"However, those directors have never tried to ascertain the will of the membership on this matter. On the contrary, they have endeavored with some degree of success to mold the opinions of the members.

"Not once to my knowledge, and I have a wide acquaintance in many parts of this State, have the directors sought full and unbiased opinion."

Mr. Talbott's challenge to the Farm Bureau merely placed in writing verbal challenges of like tenor which have been voiced at hearings in various parts of the State within the past year.

Control of Predatory Animals

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. LEA. Mr. Chairman, I am in sympathy with the general purposes of the Appropriations Committee to reduce expenses of the Federal Government. We now have annual appropriations beyond what the country can expect to carry over any long course of years. Now, while times are flush and the Treasury is receiving a large income, is an appropriate time to begin the reduction of our national debt by substantial payments.

However, we must regard the Government as a going concern whose normal and necessary functions should be kept in a healthy condition as a best means of meeting our obligations. I regret that the committee found it necessary to cut the appropriations proposed for predatory animal and rodent control from $1,000,000 to $750,000 for the fiscal year 1948.

For many years, as a Representative from the West, I have consistently endeavored to support an increased efficiency of the efforts of the Government to cooperate with local interests in carrying on the fight for predatory-animal control against coyotes, wolves, mountain lions, and bobcats.

These animals range over vast areas of the public domain and national forests, as well as over private lands of the West. It has never been possible for private industry to combat the depredations of these animals adequately.

It is recognized by all who are familiar with the situation that the Federal Government is properly an active participant in this program of conservation of the livestock industry. In some instances, the public lands on which these animals are propagated and range, constitute one-half, or nearly one-half, of the domain of some Western States.

Our State and local interests have matched Federal funds and contributed very substantial additional funds in carrying out this program. Unfortunately, during the war the suppression of these predators became more difficult.

The high-paid labor market attracted coyote trappers into other more profitable fields of activity. For the same reason, trapping by private trappers fell off substantially. The result was an increased crop over great areas of the West.

It is said that in some instances the loss due to predators has amounted to as much as 15 percent of the annual lamb crop on sheep ranges.

The Fish and Wildlife Service, which now has charge of the predatory program of the Government, has worked in cooperation with various State livestock associations and individuals in combating depredations by these animals. However, this agency of the Government has been handicapped because of the greater expense of operations on account of the greater cost of both labor and material.

So this sum of $750,000 will be a very substantial aid, but it does not have a comparable effective power to that which a similar sum would have provided 10 years ago.

The increase of these predatory animals, due to the war situation as above indicated, has increased the current necessity for protecting the livestock industry, and the burden of the work is also increased by the decreased purchasing power of the funds appropriated for that purpose.

I am not voicing a complaint against the Appropriations Committee, which has consistently given a substantial support over the years to afford this protection to the livestock industry. I do hope, however, that further consideration will convince the committee that even under an economy program a larger appropriation is now justified and necessary.

Conciliation Service

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial which appears in the Washington Evening Star of April 25, 1947:

CONCILIATION SERVICE

One provision of the House and the Senate labor bills which deserves more careful consideration than it seems to have received is that which takes the Conciliation Service out of the Department of Labor and sets it up as an independent agency.

The reasons for this move are obscure. One theory seems to be that since the Department of Labor is charged with the duty of representing labor, a subordinate agency of the department cannot function fairly in a mediatory role. Another argument is that the present set-up brings the Government into labor disputes in a partisan role.

Actually, however, no evidence has been producer to show that the Conciliation Service has functioned either as a prolabor or as a political agency. On the contrary, there is much testimony on the record from spokesmen for management and labor that the service as currently constituted has functioned impartially and effectively. One of the few recommendations upon which the President's labor-management conference of 1946 could agree called for "reorganization of the United States Conciliation Service to the end that it will be established as an effective and completely impartial agency within the department." The reorganization of the service within the department has taken place, its effectiveness is attested by the settlement of more than 13,000 disputes last year, and there is no complaint of partiality. So why take it out of the Labor Department?

Another proposed change which deserves more scrutiny is the provision for a 60-day waiting period before a labor contract can be abrogated. At best, the usefulness of this is dubious, and many experienced negotiators believe that it actually makes more difficult the adjustment of disputes. In any event, it is a point which should get more attention during the Senate debate than it has received in committee.

A final point, but an important one, has to do with funds for this agency. The Conciliation Service has been doing a good job. But Congress now is considering a reduction in its funds and a complete revamping of its organizational structure. With the prospects for future industrial harmony being none too good, the legislators would be well advised to look a little more carefully before they take this leap.

Industry and Labor Betrayed

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. REED of New York. Mr. Speaker, I am inserting in the RECORD, under unanimous consent, as part of my remarks a statement by Mr. C. B. J. Molitor before the Ways and Means Committee on April 24, 1947. This presentation of facts by Mr. Molitor shows clearly the extent to which American laborers are being injured, in fact sold out, by our State Department.

The statement follows:

Our little industry employing approximately 7,000 skilled workers, has appeared before this committee in opposition to the extensions of the Trade Agreements Act in 1940 and again in 1945. On both occasions we have pleaded for just such an investigation as you have very wisely instituted. We have opposed and now oppose continuation of this program which has resulted in "one-way reciprocity." It is time that we calmly take a look at the record to judge just how this wide delegation of congressional power has been used.

Due to the intervention of war, but relatively few American industries have been injured seriously up to the present as a result of tariff reductions effected under trade agreements. You can be certain, however, that with the return of normalcy many more industries will be very seriously injured and most particularly those employing greater numbers of American workers in their production, textiles being a most notable example.

Again, and again, and again have we been told that trade agreements reduce trade barriers and increase American employment. Let us see how much substance there is to that contention.

Our industry was beyond question very seriously injured and was being snuffed out of existence in 1938, 1939, and 1940, as a direct result of the trade agreement with France in 1936. The fall of France in June 1940 saved us. I hesitate cluttering the record with the details of our difficulties and their causes. Believe me the evidence is preponderantly conclusive and it was made a part of the record of this committee then considering the extension of this act in 1945 at the request of Congressman JENKINS.

But, despite the imperiling of the industry through tariff reductions in the previous French and British agreements the ax is about to fall again. Laces are listed in both the contemplated agreements with France and the United Kingdom, for still further reduction in rates. These further reductions are being considered notwithstanding the fact that a substantive provision of the Trade Agreements Act provides that the President may reduce United States tariffs whenever he finds as a fact, that they are unduly burdening or hindering the foreign trade of the United States.

Though neither time nor complete data have been available to me, I have discovered some very irregular procedure in negotiating these trade agreements as well as after their negotiation. Let us once more survey the circumstances preceding the trade agreement with France which has caused our industry so many difficulties.

While we were carrying on preliminary negotiations with the French Government, preparatory to working out specific details of the agreement, the French raised their tariffs on American products avowedly for bargaining purposes. Mr. Cordell Hull acknowledged that fact publicly. He then stated that we may not bargain on tariffs in the light of such circumstances. Time passed and bargain we did.

We reduced our tariffs while France reduced her tariffs to the extent of but part of the increases which had been effected for bargaining purposes.

But that is only the beginning. The French franc was valued at 6.6 cents on the effective date of the agreement, namely June 15, 1936. In 4 months to the day, the franc was devalued to 4.6 cents and by the end of 1939, to 2 cents. It is now 0.84 cent. Article XI of the French agreement states:

"In the event that a wide variation occurs in the rate of exchange between the currencies of the United States of America and France, the government of either country, if it considers the variation so substantial as to prejudice the industries or commerce of the country, shall be free to propose negotiations for a modification or to terminate this agreement in its entirety on 30 days written notice."

As a result of this very violent currency devaluation, French laces landed in the United States—duty paid far below prices in France in 1936—without duty. In effect we had even less than free trade, we were in effect subsidizing French products entering our ports.

Of course, as has been the customary practice, the State Department did not invoke the provisions of article XI. The chairman of the Committee for Reciprocity Information in 1939 acknowledged off the record our difficulties, but advised us that it was diplomatically inexpedient to take action. Our little industry was being made the sacrificial lamb at the altar of diplomatic expediency.

Under the agreement, France granted us so-called most-favored-nation treatment. But, let us see what that phrase means. The French have a three-column tariff. Under the agreement many of our exports which were previously assessed under the intermediate and maximum rates of their bargaining tariff, were reduced to the minimum rates afforded many other countries.

But, in 1937 and 1938, the French Government raised their minimum tariff rates far beyond the maximum rates existing on the effective date of the agreement, and have repeatedly raised them ever since.

One needs no more outstanding examples than the actions of the French Government in the assessing of their tariffs, to be convinced that trade agreements have not reduced French trade barriers. I shall quote the French tariff rates on American gasoline as an example of what actually has been occurring since our trade agreement with France in 1936.

The French tariff on American gasoline, which was formerly one of our large exports, was 3 francs per 100 kilograms. Under the bargaining tariff it was raised to 63.20 francs. Under the treaty it was 63.20 francs. In 1938 it was raised to 157 francs. On February 1, 1945, it was raised to 300 francs. On September 1, 1946, it was again raised to 1,200 francs, or 40,000 percent of what it was before our so-called reciprocal trade agreement.

Are our industries to be further imperiled in the reduction of their tariffs to obtain a reduction in the French tariff on gasoline that has been increased so greatly and so frequently?

What is more, through economic expediency, the French Government has signed one bilateral trade agreement after the other in the past 2 years, most notable of which are those with Belgium, Sweden, Czechoslovakia, Argentina, and Russia. France has not been alone in that procedure, as Norway, Sweden, Finland, Denmark, Belgium, the United Kingdom, Poland, Russia, and Switzerland have negotiated bilateral agreements in the past 18 months with almost every other country in Europe, and as well with many Latin-American countries. These are prior obligations that cannot be changed through trade agreements.

I have just referred to the French raising their tariffs for bargaining purposes. That procedure seems to have become common practice. I shall read excerpts from articles in the press preceding negotiations for an agreement with Argentina. The secrecy surrounding preliminary conversations relative to that agreement can but make one wonder.

A front-page headline of the New York Times, August 24, 1939, reads: "United States and Argentina plan trade pact, Welles discloses—long preliminary talks ease difficulties."

A headline on the twenty-fourth page of the same edition reads: "Argentina begins to check imports."

The article reads:

"One of the most drastic cuts is under the heading of typewriters and cash registers used here, the total imports of which in the first quarter of 1940 may not exceed 20 percent of

imports of the same period of this year. Automobiles and machinery can be imported in the first quarter of 1940 up to the same value as imports for the first 3 months of this year, but all imports under this heading will be at the new rate of 20 pesos to the pound sterling instead of the old official rate of 17."

The article further states:

"The announcement made today in Washington by Sumner Welles, of negotiations for a trade treaty, broke a secret that had been kept carefully at the United States Embassy here, although at semiofficial sources it has been admitted that undercover conversations for several weeks had been leading up to formal negotiations for the final draft of the treaty."

It is of particular interest to note that three of the items listed among those for which Argentina was considering concessions were cash registers, typewriters, automobiles.

On February 26, 1947, Argentina completely embargoed importations of refrigerators, a typical American export.

In event that it is thought that these activities are past history, I shall bring you up to date. As you are aware, we are at present negotiating trade agreements with 17 countries at Geneva.

Relative to those agreements, I shall read to you an article appearing in the New York Times of February 16, 1947. This is a cable from Brussels, Belgium, on February 15, 1947:

"PARLEY ON TARIFFS FACES DEFERMENT

"Most countries in Europe are elaborating new schedules of duties as a basis for bargaining. This work is incomplete."

Same old deal. We are to be hoodwinked again just as we have been for 13 years. In the cases of France in 1936 and Argentina in 1939, we were hoodwinked with the full knowledge of our Department of State. Even little Paraguay, while negotiations for a treaty were pending, adopted a surcharge on all imports of 6 percent.

We signed a trade agreement with Mexico effective January 30, 1943, with the customarily avowed purpose of reducing trade barriers. That country has consistently effected hundreds of tariff increases on American products. I shall read a few headlines from our Foreign Commerce Weekly:

"March 23, 1946: Import duties (Mexican) increased sharply on various textiles and hosiery. Increases range from 150 to 172 percent.

"February 2, 1946: Import duties (Mexican) doubled on a large number of items: Automatic pencils, fountain pens, electric wire, radio cabinets, cigarette lighters, etc.

"March 22, 1945: Nylon hosiery duty (Mexican import) raised 300 percent from 1 peso to 4 pesos per pair.

"August 18, 1945: Mexican import tariff duties on wool have been substantially increased—duty on wool tops raised 280 percent."

I could continue indefinitely to cite to you additional instances to prove conclusively that the Mexican Government has not been convinced of the need for reducing her trade barriers by this program of ours.

Under date of July 29, 1946, the Mexican Government established a commission for the control of foreign trade. It is well to note the thinking of other nations which seems to be in direct conflict with our objectives. I quote the principal stated objectives of this Mexican foreign trade commission.

"1. Protection of national production.

* * * * * *

"3. Protection of industries with due regard for repercussions on related branches of industry.

* * * * *

"5. Permission to import raw materials semimanufactured and manufactured products only when these do not exist in the country or exist in insufficient quantities or when they are necessary for the development of a domestic industry."

There, in my opinion, is sound realistic principle.

We negotiated a trade agreement with the United Kingdom in November 1938, when the pound sterling was valued at $5.05; 4 days after and even before the treaty was effective, Great Britain devaluated the pound to $4.65. It is now $4.04.

War intervened too soon to judge the true effects of the duty reductions and concurrent currency depreciation as this agreement was effective on January 1, 1939. But, before war changed the situation a good many of our industries were beginning to feel the impact of competition of products from the British Isles. The operations of the sterling bloc before and even after our agreement made the British agreement in effect a joke. No less an administration stalwart than Dean James Landis has publicly stated that no importer within the sterling bloc could import any American products unless such products were not made by sterling bloc countries.

Today there is almost no freedom of trade within the British Empire.

Despite our agreement and as well, despite the provisions of our loan, the United Kingdom currently has been pursuing the same tactics. Mr. Snyder recently "slapped them on the wrist," but it is interesting to note that they did not change the objectionable provision in their bilateral agreement with Argentina, whereby funds were frozen for purchases within the sterling bloc.

I do not criticize the British Government for their operations of the Sterling Block and for their empire preference tariffs. I admire their customary realistic approach to their problems. I pray that some day we in America may practice some realism as well and stop preaching the nonsense that trade agreements are the panacea for all the ills of world trade and will insure world peace. It is high time that our State Department learned the facts of life relative to world trade.

When we realize that the regulation of foreign trade by all the other nations of the earth is predicated on economic necessity and with a view to national security, we shall stop being naive in the belief that this one-way reciprocity of ours is going to change the actions of the other nations.

This program of ours cannot possibly be successful in the next decade, at least.

Take a look at Europe. We have within the Russian orbit, Latvia, Estonia, Lithuania, Czechoslovakia, Yugoslavia, Bulgaria, Romania, Albania, Austria, Hungary—and only time and the Politburo can name the others. There surely can be no freeing of trade within those nations; Russia will see to that.

On the other hand, we have the many countries of sterling block and empire preferences within the British Dominion. The United Kingdom would commit economic suicide if they abandoned these two trade procedures. You can be certain that she will not do that. In fact, Sir Stafford Cripps stated, at Geneva a few days ago, that Britain must continue empire preference tariffs.

Let us survey the situation in Latin and Central America. At Chapultepec we were soundly rebuffed in our suggestions of eliminating tariffs and practicing free trade within the Americas. Our neighbors to the south very wisely and again realistically stated their insistence on protecting their existing and contemplated new industries. Some of their actions which I have quoted, indicate their intentions. At Geneva the representatives of both Chile and Brazil recently frankly confirmed those intentions.

Asia holds out no great hopes of effectuating this program. India who has empire preference tariffs has been feverishly industrializing and has been rigidly controlling its imports and currency. China is in the throes of civil war which may last for generations. It will take Japan many decades to return to economic normalcy. Korea and Manchuria are in the Russian orbit. In addition to these areas, we find nation after nation resorting to state trading under socialism, communism, and authoritarianism. The question naturally arises, which are the countries whose trade barriers we possibly can reduce? I believe the answer to that question is self-evident. In pursuing this ephemeral objective we are consistently jeopardizing the jobs of our American workers whose standards of living are the highest, by far, of all the nations of the earth.

If there was evidence of one burning desire on the part of the American public last November, it was to return to democratic processes of government. Our country has issued a mandate to the Executive and to Congress to rid them of bureaucratic, unconstitutional controls. The Constitution has placed in the hands of the Congress the important power of levying tariffs. It is their duty to see that they are properly and equitably administered. It is time that Congress again assumes its obligations and divests us of this unconstitutional delegation of power.

However, it has been often stated that repeal or a weakening of this act would cause serious repercussions to our attempts at insuring the future peace of the world. I question the validity of that contention. However, the intensive propaganda disseminated by the State Department and others, currently, has, no doubt, created just such a thought, as it was so intended, in the minds of the many member governments of the United Nations.

As a result, Senators VANDENBERG and MILLIKIN have agreed to compromise provisions to eliminate the possibilities of imperiling American industries through tariff reductions in future trade agreements.

We have currently heard repeatedly from them, as well as from the proponents of this act, of the great benefits of so-called escape clauses to be incorporated in future trade agreements, patterned after that clause in the Mexican agreement. Let us not be lulled into acceptance of such assurances. There has been no evidence in the past of any desire to invoke these escape provisions; and this power still remains in the same hands. The interests of our industries under current tariff procedure will ever be subordinated to diplomatic expediency and international pressures.

Furthermore, suppose we grant as an assumption that escape clauses will be invoked in future trade agreements. How about the existing agreements under which tariff rates have already injured American industries? What is to be done about them?

Escape clauses have been a part of almost all agreements written to date, principally those provisions making changes permissible due to currency depreciation. I defy the Department of State to show one instance in which they have been invoked in 12 years, despite very violent currency devaluation.

Recent statements in the press report that Mr. Truman will give serious consideration to recalling tariff cuts in future trade agreements if they imperil American industry. He and his predecessor have had that power since 1934. Again, I defy him to indicate one instance in which he has acted to save an American industry.

If it be determined essential that trade agreements be negotiated in the future and if their proponents within the administration are sincere in their oft-expressed desire to insure the future of threatened American industries, I offer the following suggestions for adoption:

1. A mandatory automatic provision for the immediate invoking of compensatory tariffs to adjust any devaluation of currency exceeding 10 percent.

2. A mandatory provision requiring the President to adjust United States tariffs to equalize landed costs of foreign products with American selling prices of like or similar articles whenever it shall be found upon investigation of the United States Tariff Commission in public hearing, that an established American industry is being injured or threatened because of duty reductions made in any trade agreement. Such hearing shall be called at the request of such American industry.

3. Restore the application of the provisions of sections 336 and 516 B of the Tariff Act of 1930 to items, the duties of which have been reduced or bound in trade agreements. The restoration of section 336 will effectuate my second suggestion.

The restoration of section 516 B will grant to an aggrieved industry the constitutional privilege of litigating matters arising out of trade agreements.

4. Make it obligatory that the State Department publish the specific items of a tariff paragraph that are to be negotiated and the contemplated reductions in tariffs, prior to public hearings preceding trade negotiations. Only with that knowledge can an industry present to our negotiators relevant facts in defense of their future welfare.

I offer these recommendations as a realistic approach to the political as well as the economic phases of this problem. We are most unalterably opposed to reciprocal trade agreements as enacted in the 13 years of the existence of this act. They have not reduced trade barriers except our own tariffs.

That statement has been confirmed by Mr. Willard L. Thorp, Assistant Secretary of State for Economic Affairs, on March 17 last. Before the World Conference on Mineral Resources, he stated that world-trade barriers are far worse now than before the war and that international trade pacts had failed. He further stated "much of the world's trade today is carried on within a framework of specific quota restrictions. These, obviously, are likely to be much more harmful than tariffs." That, from the lips of one of our chief proponents of trade agreements. And we have been jeopardizing our industries through tariff reductions for 13 years to accomplish that.

Never before were truer words uttered than those of Senator HUGH BUTLER, when he recently stated that the reciprocal trade-agreement program was a "gigantic hoax on the American public." A gigantic hoax, indeed, it has been. Mr. Thorp's remarks acknowledge the bankruptcy and futility of this program. As a matter of record, there is ample evidence of a lack of a sincere desire on our part to reduce trade barriers of other nations, except those of the United States.

Our State Department was fully aware of the fact that France raised their tariffs prior to specific negotiations for bargaining purposes. The secrecy preceding the news exposure of preliminary negotiations with Argentina had, in my opinion, sinister significance. Except in the single instance of our objections to Sweden's bilateral trade agreement with Russia, we have remained mute while practically every nation with whom we have negotiated trade treaties have effected bilateral agreements, have invoked exchange controls, import quotas, import licensing, application of varying currency values to various nations, continuous increases in their tariffs, embargoes, internal taxes, and surcharge taxes on our imports and devaluation of currencies, all contrary to our agreements. This program is bankrupt. How much longer must we pursue it?

Unless one is possessed with a fanatical desire to destroy our standards of living for which we have worked so diligently, or to effect social revolution, it just does not make sense.

In view of the many acknowledged evidences of the infiltration of disloyal forces within our Government, it is well to question the purposes of our continued advocacy of reduced tariffs and in fact, free trade. For let us remember that the founder of communism, Karl Marx, categorically indorsed free trade. He stated that free trade broke up old nationalities and hastened the social revolution.

You are to be soon confronted with consideration of our participation in an International Trade Organization. We firmly indorse such participation but we unalterably oppose participation in the contemplated organization as proposed in the so-called preliminary redraft of a charter for an International Trade Organization, as published recently by our Department of State. That is a plan for world collectivism, which may well sound the death knell of American free enterprise and delegates to an international authority the control of our economy.

It is a pity that such a document has been promulgated. There is such obvious need for an organization to aid in the encouragement of world trade procedures that no argument need be advanced to prove the case for it. Why the gentlemen within whose province it was to phrase the contemplated charter, have vitiated its possibilities of acceptance by attempting, in one fell swoop, to cure all of the economic ills of the world, is beyond comprehension. To study with you the 89 articles incorporated in this charter would require weeks instead of minutes of your time. There are, of course, many beneficial proposals that should be a part of any International Trade Organization that may be ultimately adopted.

Due to restrictions of time, I shall confine my remarks to but a few of the most objectionable articles.

Under chapter III, article 2, on employment, we may well transfer the right to jobs for workers to the dictates of an international authority. That article provides, in the event that our own domestic measures do not accomplish "effective demand and employment," they "should be supplemented by international action." There we have pregnant possibilities for a world WPA, CPA, or OPA.

I refer you to chapter IV, article 12, paragraphs I, II, III, and IV. Under those provisions we shall have agreed to furnish to any member nation, in fact any business entity or any private individual within any member nation, within our power to do so, the capital, materials, equipment, advance technologies, trained workers, and managerial skill necessary for the establishment within that nation of any industry which is now existent in the United States.

Due to our wage rates, which are exceedingly higher than those of the rest of the world, we have been compelled to develop technologies which in some industries have made it possible to export their products to the rest of the world on a competitive price basis. In the cases of other industries, those technologies have made possible competing with foreign products in the United States, despite tariffs insufficient to equalize wage differentials.

Such a provision, together with our current program to reduce our tariffs further, can do nought but bring economic chaos and reduce our standards of living to the average mean-low world standards.

Let us not believe for a moment that the gentlemen of our Department of State, have not in mind the serious fulfillment of that provision.

With Export-Import Bank funds they have already been doing just that. We have constructed one of the most modern steel plants in Volta Redondo, Brazil, with United States funds, technologies, materials, equipment and managerial skill. A huge and most modern textile plant has been constructed in Mexico under the same circumstances. Our State Department has been quite vociferous in announcing their plans for the continuance of this procedure.

Under chapter IV, article 24, provisions are set forth for so-called "reciprocal and mutually advantageous negotiations" for reductions in tariffs, in other words, trade agreements.

You have already heard from me on that question, but under this article, something new has been added. We are to be coerced and intimidated into reductions in our tariffs at the request of any member nation. If we do not see fit to reduce our tariffs, say on laces, at the request of the French Government, they are empowered to lodge a complaint with International Trade Organization. If the member governments sustain their complaint, ITO may withhold from us any of the tariff benefits which we shall have obtained under trade agreements negotiated under this article. This is not only tariff writing by coercion, but an invitation to international log-rolling and will set up irritants that can well be inimical to the basic objectives of any international trade organization.

Under article 24, we are now negotiating 17 trade agreements with 16 countries, at Geneva. How any results can be expected from such complicated procedures, is beyond my ken. Sir Stafford Cripps, chairman of the British Board of Trade, has currently stated that nothing like it has ever been attempted in the history of the world, except in the Tower of Babel.

From the Conference of British Empire Nations, held prior to the Geneva Convention, has come the inference that if the United States did not agree to reduce its tariffs on cotton and woolen textiles by 50 percent, there was no need for those nations to go to Geneva.

There you observe, is the first indication of tariff writing by intimidation. Here we have a nation, who through necessity, I admit, is practicing the most rigid control of her foreign trade, attempting to coerce the United States into further tariff reductions, and we practice today the freest trade of any nation of the world.

Under chapter VII, entitled "Inter-Governmental Commodity Arrangements," we shall indeed give away our birthright. I quote article 3:

"To provide, during the period which may be necessary, a framework for the consideration and development of measures which will have as their purpose economic adjustments designed to promote expansion of consumption or of a shift of resources and manpower out of overexpanded industries into new and productive enterprises. To fortify and augment those contemplated actions we find in article 52, paragraph 3, second part, the following:

"Such agreements shall be subject not only to the principles set forth in this chapter, but also to any other requirements which the organization may establish."

The commodity dictators of ITO can well regulate our domestic production and employment under that provision, which is contrary to the very principles of our Republic and in defiance of the mandate of the American public on November 5, last.

I pray that Congress will adopt a charter for an international trade organization, but one divested of such provisions as are so inimical to our heritage of freedom.

Department of Labor Appropriations

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks, I include herein an editorial which appeared in

the Milwaukee Journal of April 15, 1947, entitled "Mr. Schwellenbach's Protest." This editorial very properly criticizes the action of the majority members of the House subcommittee handling the appropriation for the Department of Labor, and characterizes that action as "irresponsible and false economy." It seems to me that it is appropriate to insert this editorial at this time because of the general interest which was engendered by the action of the majority.

The editorial follows:

MR. SCHWELLENBACH'S PROTEST

Secretary of Labor Schwellenbach seems justified in his complaint against the way the House and its appropriations committee dealt with the Labor Department's appropriation. The House did not vote to liquidate the Labor Department, as some labor leaders are charging, but it certainly moved to cripple it.

The Department of Labor is one of the smallest in the Government. It employs about 6,700 persons. Its operations budget, approved by President Truman and the Budget Bureau, was $31,850,000. The House Appropriations Committee slashed this by $12,000,000 and the House itself pared another $1,000,000—to come from the Bureau of Labor Statistics fund. The total budget cut would be 43 percent.

Schwellenbach has told the Senate that if the House budget were approved, he would have to discharge 2,800 persons and make a drastic cut in services to the public. The Bureau of Labor Statistics, he said, would have to change its monthly consumer price index to a quarterly basis, discontinue retail food-price indexes for a number of cities, and drop monthly national reports on employment, hours, and pay roll. The Conciliation Service would be left without directing heads.

The Employment Service budget was cut 80 percent. Schwellenbach said this would necessitate elimination of all aid to State employment services and leave the bureau little more than a bookkeeping agency. The Division of Labor Standards would have to halt its program of industrial safety promotion. The Wage and Hour Division would have to reduce its regional offices and cut its inspection force by 25 percent.

There is undoubtedly room for cuts in the Labor Department budget, sizeable ones. It does seem, however, that the House used the cleaver rather than the paring knife. The result would seem to be some irresponsible and false economy. After all, reliable labor statistics, strike conciliation, and betterment of labor standards, benefit industry and the Nation as well as labor.

It will be well if the Senate treats the Labor Department budget with more reason and less emotion than the House apparently did. The country needs an efficient Department of Labor, now if ever.

Playing Politics?—David Lawrence Calls on President To Be Realistic

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. KNUTSON. Mr. Speaker, in last evening's Washington Star appeared an article by David Lawrence entitled, "Politics Seen Dealing Blow to Economy," which I sincerely hope came to the notice of President Truman. I also hope that he took the article to heart.

Mr. Speaker, the country demands labor legislation and tax reduction and the Congress will give heed to these demands. Already the House of Representatives, under its able leadership, has passed an excellent labor measure, also H. R. 1 to reduce personal income taxes. We have faith that the Senate will be equally responsive to popular demand and that both measures will receive Executive approval.

Mr. Lawrence's able and understandable analysis of the situation follows:

POLITICS SEEN DEALING BLOW TO ECONOMY—TRUMAN REASONING ON WAGES AND TAXES CALLED CURIOUS

(By David Lawrence)

Something curious is happening to the reasoning processes of the Truman administration—something that may result in a serious blow at the American economy.

The administration, on the one hand, is saying that it would be inflationary to reduce taxes and put extra money into the pockets of the people and, on the other hand, it is encouraging wage increases which also put extra money into the pockets of certain workers and is saying nothing about this inflationary trend.

The tax reduction is spread straight across the board, affecting all people, while the wage increases affect a small segment where union pressure or political influence of the administration causes an uneven application of the wage-increase idea.

The Congress last year passed a law creating an Economic Council and experts have been appointed to it, but the political views of the administration seem to have pervaded the so-called economic theory that emanates nowadays from the Government. The argument against tax reduction while encouraging wage increases is a case in point.

RECESSION IS IN SIGHT

Most serious, however, is the fact that high prices are not being really remedied. In many instances industries cannot reduce prices even if wages are kept at present levels. Other industries where the labor cost is the paramount factor will find it necessary to increase prices if wage increases are forced on them by unions.

A recession is in sight but union labor leaders, aided and abetted by President Truman's misguided remarks, are slowly but surely threatening something more serious than a recession. Already many companies which had high profits in 1946 are finding their profits absorbed by high costs of materials. Already, also, many companies which have the capital available to use for new equipment and for expansion have stopped their buying because they cannot pay the high prices involved either in equipment or materials. Such prices cannot, in various instances, be reduced because the labor cost will not come down.

It had been hoped that the increased wages would mean increase in output per man and that in this way price reductions could be brought about. But the increase in output per man-hour has been alarmingly small since VJ-day and the disappointment that has swept industry over the failure of labor to cooperate in increasing output is noticeable.

ISSUE TO BE FORCED

It looks now as if wages will not be revised downward as they were in the recession after World War I and that the union pressure will be adequate to maintain high wage scales. This ultimately will mean a tremendous unemployment roll for America. Companies will force the issue by laying off men and insisting on higher output per man.

The rise of unemployment will be more serious this time than it was after World War I because the wages paid now are higher in total and the cut in family income will be felt more acutely. Employers, however, who have to meet expenses will have no alternative but to cut down their number of employees. This is already happening in some industries.

President Truman's responsibility for the debacle will become clearer as unemployment grows. For he has supported the unionized group's wage demands and compelled the unorganized workers and persons on State, city, and Federal pay rolls, who have had no commensurate increases in income, to foot the bill. These people cannot continue to buy, and that will be one of the factors in the eventual drop off of retail sales in various communities.

The economy is out of balance because the politicians, led by the President, have put it out of balance. All the political speeches denouncing business and encouraging wage groups to ask for more pay at the expense of the other groups in the community will not erase the facts when they emerge—as they certainly will before the end of 1947.

Why Export Our Pay Rolls?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. REED of New York. Mr. Speaker, I am inserting testimony offered before the Ways and Means Committee in opposition to the free trade reciprocal trade agreements. Those who are opposed to bartering away our markets to the detriment of our economy may well read this testimony of Mr. Arthur Besse, president of the National Association of Wool Manufacturers, before the Ways and Means Committee, April 25, 1947:

There are a number of circumstances in connection with the negotiations for the multilateral trade agreements and the formation of an international trade organization which strike one as exceedingly curious.

One is the fact that the United States delegation, which appears to believe that these devices will prove of substantial aid in developing backward countries and in rebuilding war devastated nations, appears also to consider it necessary to bribe other nations to join an international organization set up ostensibly for their benefit. We induced England to support the idea of an international trade organization with a loan. We are now seeking to induce her to reduce her Empire preferences by offering reductions in our tariff rates. We go about the world sowing the seeds of what we mistakenly think is "good will" by trying to induce or coax nations into doing things they will not do of their own volition. We solicit members for an international trade organization by offering freer access to our American markets and proposing restrictions which at least appear to give other nations the means of protecting themselves against competition from our exports.

Another curious fact is the haste to conclude new reciprocal trade agreements at a time when there are no bench marks to indicate normal price levels and no data on which to base a judgment of the adequacy

of existing tariffs either of the United States or of other countries. There are no impediments to international trade today except the scarcity of goods to trade. But our State Department insists on cutting tariffs which it believes may be impediments a few years hence when economic conditions become more stable. How can this be done under delegated powers which provide that the President must find as a fact that certain barriers are unduly burdening and restricting foreign trade at the present time? And why the haste anyway? Could it be because certain people feel future conditions are apt to show that our tariffs are already too low, and they, therefore, wish to commit us to foreign nations now in the hope that we might hesitate to denounce an international agreement once it has been accepted.

Another very curious aspect is the different emphasis on international trade which is characteristic of our State Department representatives according to the audience which they address. In the United States, the emphasis is on exports. We are led to believe that the United States is to have more and more exports; we are to get rich supplying everything to everybody, whether they have the means of paying for it or not. There are to be a few more imports but not enough to disturb any American industry.

But observe the change in emphasis when the benefits of a trade agreement or an international trade organization are explained to foreigners. The foreigner is to have easier access to our markets; we are to remove the barriers that may prevent the foreign producers from sending vastly increased quantities of goods to this country. We want a little something in return, of course, but have indicated that we will not be too technical over the adoption of quotas, exchange restrictions, and other devices which might serve to invalidate concessions which foreign countries may accord us. We provide in the International Trade Organization Charter that if the monetary reserves of other nations are threatened, they may adopt restrictions to exclude our exports; and that if other nations wish to embrace state trading, they may exclude our products by the use of quotas or import licenses. We further stipulate that we will not seek by trade action to frustrate the purposes of the articles of agreement of the International Monetary Fund. We thus, in effect, agree to prevent our nationals from promoting a drive for exports since, if such a drive were successful, it would make dollars scarce abroad and thus frustrate the purposes of the fund.

Our aims, as explained to the citizens of this country, seem somewhat different than they do when they are set forth for the enlightenment of the representatives of foreign nations.

This inconsistency perhaps springs not primarily from an intention to deceive, but rather from the fact that our State Department does not fully comprehend some of the essential factors governing trade between nations.

The Department appears to make two very fundamentally incorrect assumptions: The first is that international trade is an end in itself. The second is that tariffs serve no useful purpose, were adopted in error, and should be abandoned.

The thesis that international trade is an end in itself was clearly developed by Mr. Clayton in his testimony before the Senate Finance Committee on March 20, 1947. Here is what Mr. Clayton said:

"Chapter III (of the ITO Charter) relates to employment. This chapter gives recognition to the fact that trade may be seriously affected by changes in the level of business activity and employment in important member countries. In recognition of the importance of this fact, members obligate themselves to take action designed to achieve and maintain full and productive employment and high and stable levels of effective demand within their own jurisdiction."

Note the curious thinking here. Full and productive employment and high levels of demand are not to be promoted for their own sake but because international trade may be adversely affected if the level of business activity and employment should decline. Mr. Clayton seems to believe that it is not business and employment which are important but international trade. I cannot believe that one who makes such a statement has a carefully-thought-out concept of international trade.

Mr. Clayton's preoccupation with the mere volume of foreign trade is evident throughout his testimony. He said:

"The abolition of quantitative restrictions will do more to bring about the expansion of our trade and the trade of other countries than any other single step that can be taken in the field of commercial policy."

And in speaking further of quantitative restrictions states:

"I would only add by way of general comment on these provisions that only by the expansion of international trade to the maximum extent of every country's ability to do so can these balance-of-payments restrictions be gotten rid of. It is only as countries in financial difficulty are able to export and obtain foreign exchange that they will be able to relax the restrictions imposed for balance-of-payments reasons."

It is evident that Mr. Clayton believes that if international trade can only somehow be made big enough, the present economic inequalities between nations will be wiped out. Recent history proves him wrong, and logic would seem to indicate that mere volume of trade is no answer to the world's ills.

Mr. Clayton's ideas are the same he expressed in 1945 when the trade agreements amendment was before this committee for consideration. At that time, he envisaged an export trade of ten billions. It is now running at the rate of more than thirteen billions, and none of the advertised benefits of increased volume are in evidence. In fact, it is freely admitted that never before in the history of the world have so many barriers to trade existed. Most of these barriers are those raised by foreign nations. They have not been raised in retaliation for the Hawley-Smoot tariff as some of our so-called economists insisted was the case with the barriers of the early thirties.

These new barriers were developed as a means of self-preservation, which, of course, was the purpose of like barriers in the thirties. To worry too much over these barriers is to worry over the symptoms and ignore the cause.

No matter how many barriers you may remove nor how much you may increase the aggregate of the international swapping of commodities, the cause of unbalanced foreign trade remains untouched. So long as the productivity of the United States exceeds that of the other countries of the world the other nations of the world must retain barriers limiting their purchase of our goods; otherwise they will not be able to pay for the goods with which we may supply them. It does no good to rail about the barriers. The only way you can provide for freer trade is to reduce our standard of productivity or increase the productivity standards of the rest of the world.

We certainly would not want to reduce our productivity standards, so the obvious thing is to help in raising the productivity standards of other countries. But we do not do that by asking them to reduce tariffs so we can make goods for them. The right method would be to let them erect barriers against the importation of our goods so that they could develop their own production. And those barriers would presumably continue until the other countries had developed their production to a point which was roughly on an equality with our own. The point at which these foreign barriers could be removed would be the point where they were no longer needed, which, of course, is equivalent to saying that their removal would not increase international trade in the slightest. This illustrates a point which seems little understood, namely, that the only barriers which can safely be removed are those the removal of which will be substantially without effect.

A case in point may be found in the last annual report of the Australian Tariff Board. The board stated that Australia might be able to offer substantial reductions of duties on a wide range of British goods because the Australian costs of production are now much closer to British than before the war and "manufacturers who in 1939 would probably have been unable to compete with British supplies without protection now seem able to do so." In other words, now that a reduction can be made without affecting trade, Australia is willing to make it.

Mr. Harry Hawkins, of the State Department, falls into the same error when he says that the object of the International Trade Organization and the reciprocal trade agreements is to "squeeze out the excess water" in tariff rates and cut those which are unnecessarily high. If one can be sure that a tariff is unnecessarily high, there can be no logical objection to a reduction; but, if the reduced rate is still high enough to accomplish its purpose, the State Department does not secure the increase in foreign trade which it so ardently desires.

Mr. Clayton shows the same lack of realism when he says that the record discloses no instance of an industry which has been hurt by the operation of the Reciprocal Trade Agreements Act and further, that no industry will be hurt. Mr. Clayton is not quite correct about the record, but it is correct to say that not many industries have been hurt. This fact may be attributed to the war, however, and not to the alleged care with which tariff reductions have been made. By the same token, foreign producers have not yet been helped by the reductions made pursuant to these reciprocal trade agreements.

In saying that domestic producers have not been hurt, Mr. Clayton is saying, in effect, that foreign producers have not been helped. I find it difficult to understand how he justifies the use of the phrase "tried and proven system of tariff reductions under the reciprocal trade agreements." If it is true, as Mr. Clayton claims, that previous reductions have had no effect on domestic producers, what is it that has been proved? The fact of the matter is that you do not help a foreign producer unless you give him a part of our domestic market, and you cannot give a foreign producer a part of our market without taking it away from our own producers.

This is where the tariff comes in. A tariff is not, as Mr. Clayton seems to believe, an abomination; it is a device to reserve certain parts of our market for our own producers. It may be that we are producing things in this country which we should give up producing here and buy abroad; but, if there are such items, nobody in the State Department has publicly told us what they are. And we cannot go on whittling away our tariff structure unless we want to face the prospect of losing those industries which the tariff was designed to promote.

From Geneva comes word that underdeveloped countries insist that they must maintain tariff protection "while they industrialize their economies." That industrialization must, of course, continue to be protected unless it progresses to a point where it equals our own. In the same way, certain industries in this country must continue to be protected if we want to keep them. These are industries, such as the one with which I am connected, which do not lend themselves

to extensive mechanization. These industries, whose products have a relatively high manpower content, cannot compete with low-paying producers abroad without some tariff protection. No decision has been made that we no longer want these industries; in fact, the matter has not even been discussed. And yet the State Department negotiators are in Geneva prepared to give away the tariffs that have made it possible for us to retain these industries.

Mr. Clair Wilcox stated at the opening of the conference in Geneva that "the United States had sent its delegation to the conference, prepared for bargaining, armed with lists of commodities upon which it is willing to lower tariffs. What he did not say was that the lists also show how great a cut the delegation is prepared to make in each of the items on the list of commodities. Our delegation is willing to lower tariffs. The delegation has no possible knowledge of what the effect of such cuts will be. Obviously, they will have little effect at the moment. But what their effect will be 3 or 5 years hence no one knows. And all this is done in accordance with Mr. Clayton's theory that the more international trade the better. If the tariff cuts now contemplated do result in increased imports—which can be their only purpose—those imports will be at the expense of our own producers of the items to be imported. And who benefits? Presumably the exporter of some product that is made by some industry that has produced or wants to produce more than is needed for our own consumption. But should the State Department be allowed to exercise the authority to say that we must provide for the export of Hollywood movies by cutting back our textile production; that we should promote the export of burly tobacco by a reduction in our output of pottery; or that it is essential to export automobiles even though we have to take chemicals in exchange and thereby restrict our chemical industry?

It appears certain that the State Department officials are completely unsympathetic to the idea of tariffs, if indeed they understand them at all. Their statement that they realize that we cannot adopt free trade immediately certainly suggests that they would like to if they dared.

Mr. Clayton said before this committee on March 26 last that "ground was lost during and after the war" in the checking of foreign barriers against United States trade and that that ground "can be regained only through prompt and vigorous action along the same lines as those followed in the trade agreements program in the past." This is a confession that, despite the concessions which we made in our tariffs, things are worse now than when we started to cut our own rates in the 30's.

But it is also a confession that Mr. Clayton does not realize why foreign nations have resorted to trade barriers. It would appear that he does not appreciate that because of economic dislocation foreign countries have erected these barriers as a means of self-preservation. England has not recently increased the duty on tobacco because her Government believes the British smoke too much or because the Government wants to grow tobacco in Cornwall but because the government wants to use its dollar credits for other more important purposes. I admit it is tough on our tobacco growers, but it sounds intelligent from England's point of view. On the other hand, England's high tariff on optical products is not due to a fear that her people will spend an excessive quantity of dollars for American-made kodaks or for German field glasses, but is for the express purpose of protecting her own optical industry, which England believes is important to maintain. That also sounds intelligent to me.

It is, I believe, equally intelligent to maintain certain industries in all countries, including the United States of America. And I certainly do not believe we should give away our tariffs, which are the means of maintaining certain of our industries, unless we first decide that those are industries we should dispense with.

If Mr. Clayton is sincere in telling our industries that no one will be hurt, he cannot be sincere in explaining to other nations the virtues of expanding world trade and in promising them easy access to United States markets. He cannot give the same market to foreign nations that he promises our own producers they will be allowed to keep.

Through the impractical nature of the proposals for an international trade organization and through the continuance of the so-called reciprocal trade-agreements program, we are building up another mirage of promises and setting the stage for future disappointments. Just as we promised the world democracy and freedom from want, we are now promising them economic salvation through world trade. It is, I am afraid, another mirage. Economic salvation can come only through production. Trade is not a stimulus to production; it is production which is a stimulus to trade.

I have had the privilege of appearing before this committee on each occasion when the reciprocal trade agreements amendment has been up for renewal. I am here today not to completely restate my views on foreign trade but rather to make a single point. That point is important because the proposals of the State Department contemplate a continuance of the reciprocal trade agreements program as an integral part of the International Trade Organization. If incorporated in the charter for an International Trade Organization as now proposed and approved by the Congress, section B of chapter V would provide for an indefinite extension of the trade-agreements program, now scheduled to terminate in June 1948.

The trade-agreements program is a mistake; it should not be continued. In essence, this program seeks to induce other nations to give concessions which they are loath to make in return for concessions we offer to them. And the concessions we accord them are bound either to be less valuable than the foreign countries have been led to expect, in which case they are dissatisfied, or more serious in their effects on our producers than we intended, in which case we will have to withdraw them by invoking the escape clauses.

The agreements cannot be of any particular benefit to foreign producers unless our tariff rates are cut to a point where our domestic producers surrender a part of the United States market to foreign competitors. That is something we should not consider unless there are certain of our own industries that Congress believes we can afford to dispense with. That is a frank statement of the problem before you.

More Cities Cut Prices 10 Percent as Newburyport Plan Gains Momentum

---

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. BATES of Massachusetts. Mr. Speaker, this plan has attracted Nationwide interest. A report has been made of the success of the plan by Dorothea Andrews in today's Washington Post.

I am sure that the report will be of tremendous interest to everyone in respect to lower prices to the consumer public. It follows:

NEWBURYPORT STORES JAMMED AS PLAN BOOSTS SALES 30–200 PERCENT

(By Dorothea Andrews)

NEWBURYPORT, MASS., April 24.—There has not been so many people here since the circus.

They have been coming in all day from all around to take advantage of the Newburyport plan—to see if it actually works. They are housewives and businessmen and the curious. They are flocking into local stores at such a rate that they make normal Saturday sales look like poor business.

A checkup showed just how much Newburyport business had picked up. Stores representing various business classifications checked their traffic and increase in dollar volume over a normal Thursday with these results:

Men's clothing, 100-percent increase in both;

Women's clothing, 200-percent increase in both;

Department store, 110-percent increase in dollar volume, 100-percent increase in traffic.

EVERYTHING PICKS UP

Hardware, 45 percent in dollar value, 38 percent increase in traffic.

Drug stores, 75 percent traffic, 46 to 60 percent in dollar value.

Jewelry, 55 percent increase in traffic, 40 percent in dollar value.

Specialty, 78 percent in dollar volume, 60 percent in traffic.

Children's stores, 75 percent increase in dollar volume, 55 percent in traffic.

Filling stations—two stations checked reported biggest increase in traffic and dollar volume since 1936.

Grocery store, 35 percent increase in volume and in traffic.

Even cocktail lounges reported a 30 percent boost in drink sales.

You can't find anybody around who doesn't know what the Newburyport plan is—and that goes for the merchants in the nearby towns who are even now in the process of deciding whether they will adopt it or not.

Take Amesbury, 3 miles away, for instance. The plan just went into effect there yesterday. A housewife went into a shoe store and asked for a pair of shoes. The merchant found her a pair she liked and quoted a price.

WAIT FOR MARK-DOWN

"O. K.," she said, "and how about the 10 percent off?"

"That starts tomorrow," he said.

"I can wait until tomorrow," was her reply.

One woman in Newburyport today from Hampton, N. H., bought a pair of white shoes for her small daughter. "They were only $3.65 with the 10 percent off, and I grabbed them," she said.

At the consumer end there is already no doubt that Newburyport has made a hit with its plan.

John Swanson, who conceived the idea in the first place, feels it already has had this effect:

"Anybody who comes out today and announces a price increase—brother, he's on the spot right now."

Newburyporters believe public pressure in the surrounding area is mounting for adoption of their plan. Already a representative of the Essex County Associated Boards of Trade has come to town with a request for full information on the plan. In the surrounding area, the cities of Lynn, Beverly, and Lawrence have sent specific queries. Other Essex County towns are expected to act on the trade board's information.

Meetings are being held or being planned to take some action on the plan—it is not something merchants in this area can afford to ignore.

One of the most hopeful signs for success of the plan came today, with the first replies of local suppliers, queried on their cooperation in the plan.

Two auto accessory firms—the first to reply—both pledged their cooperation. One firm ordered a 10-percent discount to any store in any community which adopted the Newburyport plan, or any similar price rollback plan.

The American Optical Co. has pledged a 10-percent across-the-board cut in its prices. So has the Norwalk Tire Co. The Eagle Mattress Co. has pledged 10-percent cuts to any store that cooperates in the plan.

Hyannis, Mass., has adopted the plan. Inquiries have come from Selma, Ala.; Gary, Ind.; Wayne, Mich.; Burlington, Vt.; Lansford, Pa.; Oldtown, Maine; Swarthmore, Pa.; Hingham, Malden, and Hudson, Mass. The National Association of Dealers wants full information on just how this plan works.

The snowball is gathering momentum. Aptly enough, at the Unitarian Church here, this week's public message is an old Chinese proverb:

"The man who removed the mountain began by carrying away the small stones."

There are all kinds of symptoms here of success for the Newburyport plan. And the men who have put that plan across—the men who haven't even had time to say "hello" to their wives for the last 4 days—are convinced that the plan will work anywhere.

"All you need is the cooperation of five men, in five different classifications of business. When they come in, nobody can afford to stay out." And that's what they are telling the people from all over.

"Everybody has been 'bellyaching' about prices," said Swanson today. "The retailer and the jobber weren't doing anything, and manufacturers were waiting to see what labor would do. And all the time the consumer has been getting madder and madder.

"Now, Newburyport has this plan. It proves to me that the average merchant is more concerned with the Nation's welfare than with immediate profits. And so ought everybody to be."

The Newburyporters are sure that everybody is. Over in Amesbury, they're asking them to call it the Newburyport-Amesbury plan.

"Too late for that now," they say.

And over in Haverhill, they can't seem to make up their minds because some of the merchants are still mad about what happened last Saturday. They decided to have a holiday because it was April 19. And then some of the stores stayed open anyhow. So the other stores had sales on Monday to make up the difference. But the Newburyporters believe the merchants there will patch up their difference and get on the ball soon.

Late today this belief was borne out when it was learned that some independent merchants in Haverhill already had adopted the Newburyport plan, and that a meeting, scheduled for next Monday has been moved up to tomorrow to discuss all elements of the proposal.

Where Karl Marx Went Wrong

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I desire to call to the attention of the Congress and the country the following transcript of an interesting and informative broadcast recently delivered by former Congressman Samuel B. Pettengill over the network of the American Broadcasting Co.

The sound sense and the accents on Americanism which high light this broadcast are so important and impressive that it would be well if Mr. Pettengill's comments on this subject could be read by every school and college student in America.

We hear so much about "What's wrong with America" that it is both refreshing and reassuring to read this candid commentary on "What's right with America." Mr. Speaker, we can never hope to make America synonymous with Utopia but as we proceed toward that goal, as we unceasingly should and must, let us not lose sight of the multitudinous advantages which are already ours. Above all, let us not discard the formula which has made us great as we seek to evolve procedures for making us even greater.

The transcript follows:

WHERE KARL MARX WENT WRONG

Now that the whole Nation is talking about the Communist threat to the country—at home and abroad—it seems a good time to ask what is really wrong with Marxism.

It was 99 years ago that Marx and Engels wrote the Communist manifesto which began with the words, "A specter is haunting Europe, the specter of communism." This sounds like today's newspaper. That was 1 year before gold was discovered in California; before the covered wagon began to roll across the plains. Please keep this date in mind. It is significant to what I shall say.

A little later, Marx, in London, wrote Das Kapital, the bible of the Communists and Socialists. As a reporter, Marx was accurate. The conditions of the workers in England a century ago, as he points out, were very grim. Women pulled canal boats along the towpath with ropes over their shoulders. Women were harnessed, like beasts of burden, to cars pulling coal out of British mines. In the textile mills, children began to work when they were 9 or 10 years old, and worked 12 to 15 hours a day. It was said that the beds in which they slept never got cold, as one shift took the place of the other. It was said that they were machines by day and beasts by night. Tuberculosis and other occupational disease killed them off like flies.

Conditions were terrible. Not only Marx, but other warm-hearted men, such as Charles Dickens, Ruskin, and Carlyle poured out a literature of protest which was read around the world.

On his facts, Marx can scarcely be challenged. But his diagnosis was wrong and, therefore, the remedy he prescribed was wrong also.

PREACHED GOSPEL OF HATE

Marx said these terrible conditions were due to greed, exploitation, the theft by the owners of the mines and mills of the "surplus value" produced by the workers. That was his diagnosis and therefore his remedy was to preach the gospel of hate, of the class struggle, of the redistribution of wealth, of the confiscation of property, and its ownership and management by the state, which always means the politicians.

Now, if that diagnosis and remedy were, and still are, in the main, correct we have no business fighting communism—either in Greece or in the United States. We should advocate it. It becomes mighty important to ask whether they were correct.

The diagnosis of Marx was partly correct. "Man's inhumanity to man" has always been a factor in human affairs. Greed can never be defended whether in business or government. Sympathy for the underdog will always have its work to do. Always, certainly, in Communist Russia—with its forced labor camps and human slavery.

Greed and exploitation are not cured by socialism. Stalin and Molotov live like oriental potentates with state dinners that would make Nero and Caligula green with envy. All this, in the name of the downtrodden proletariat.

But greed was not the main reason for the conditions which Marx described. If all the wealth of the owners of the mines and mills had been redistributed to the workers, it would have relieved their condition but slightly, and for but a little time.

So, the class struggle, as the remedy for these conditions was wrong. What was wrong? What was the real trouble?

LOW PRODUCTIVITY AT FAULT

It was the low productivity of the workers, and, as workers can be paid only out of production—whether in England a century ago or in Russia today—wages must be low and hours of work long when production is low.

Production was low because tools and equipment were poor, because human backs had to do what slaves of iron and steel do today here in America, because capital had not been accumulated to buy better tools, because freedom had so recently emerged from centuries of feudalism that the inventors and scientists and businessmen had not had a chance to dream and to plan. They have had that chance today here in America.

Listen! In 1940, before war increased our production, it was estimated that electric power alone in this country was performing work equal to the labor of half a billion men—500,000,000 men—working 8 hours a day. This is equal to nearly 10 times the total human labor force employed in America and 50 times the number employed in manufacturing, and that leaves out steam power and gasoline power and windmill power, with their tremendous contribution for increasing the productivity of workers and lifting burdens from human backs.

Is it any wonder that America outproduced the world in this last war? That wages are higher here than anywhere in the world?

While Marx preached the gospel of hate and the class struggle, America gave the green light to the Edisons, the Whitneys, the Burbanks, and the Fords.

James Watt, the inventor of the steam engine which revolutionized the modern world, and those who followed him in the competitive struggle to make a better engine and sell it for less, did more to take women out of the coal mines, and off the towpaths of the canal boats, more to take children out of the factories, than all the Socialists and Communists and politicians of the world combined.

CAPITALIST HELPED WATT

Yet Watt would be an unknown name today if one of these despised capitalists, a man named Matthew Boulton, had not risked $150,000 on Watt's invention. Would he, by the way, have dared to take that risk under today's taxation?

One measure of the progress of civilization is the mechanical horsepower and tools which supplement human labor. The steam engine did more to outlaw slavery, both in England and America, than all the political humanitarians put together. The laboratories do more for mankind than the legislatures.

Please understand me. Welfare legislation has its place. There must be laws to require safety appliances in coal mines—and they should be enforced, whether private owners or the Government runs them. There must be laws to require fire escapes from factories

and hotels. There must be laws to require the inspection of milk and meat. There must be laws for honest weights and measures. Otherwise, some men would risk death to human beings to make a greater profit.

I do not disparage such legislation at all. I endorse it as part of the responsibility of modern government.

I simply point out that if modern America were to go back to the same tools and horsepower that we had when Benjamin Franklin was trying to capture lightning from the sky our production of wealth would at once go down 90 percent, wages would go down in proportion, hours of labor would increase the limit of human endurance, and nothing that government, or humanitarians, or labor unions, or Karl Marx, could do would prevent it.

I mentioned the discovery of gold in California in connection with the Communist manifesto of 1848.

LACKED PROPER TOOLS

With pick and shovel and the pan with which men washed gravel from gold, did not men work long hours then for a meager return, or none? Did not they sleep in filthy cabins, live on jerked meat, and were covered with lice?

If you saw that great motion picture, The Covered Wagon, you will recall the scenes of terrible toil, of men and women and children pulling the wagons across rivers, and the trackless desert, and over the Continental Divide. Families, on foot, pushed hand carts from the Mississippi to Salt Lake.

Yet were those conditions due to greed and exploitation? No; they were working for themselves. What was wrong? Poor tools. The plow of the pioneer was a wooden plow, constantly breaking, constantly needing repairs. In a newspaper yesterday I saw a picture of a wooden plow used in Greece today.

Up in Vermont where I was raised, on land then worth $2 an acre, a man back in my great grandfather's time dug some iron ore out of a hill. He put 100 pounds in a bag on his back and walked 80 miles through the wilderness to sell it to an iron foundry in Troy, N. Y., and then walked home—an infinite expenditure of human energy for an insignificant return.

What was wrong? Greed? Exploitation? The class struggle? No. He was working for himself. There was no relationship of employer and employee. No one was stealing the surplus product of his labor. He got all of it—and it was little, indeed.

What was wrong? Why did he have to work so hard for so little? Poor tools. Today the steam engine, in the form of the modern locomotive, could move his 100 pounds of iron ore 80 miles for 4 cents—or a ton, 1 mile, for 1 cent. Railroads, paved highways, motortrucks, and automobiles have solved his problem, and will do it even better in the days to come if we stay American.

Let us say that James Watt, and the man who financed him, were not humanitarians. Let us say they put their brains and money together in a common enterprise for the profit motive. What of it? Was the result good or bad? Did they take the women out of the coal mines, or did Karl Marx with his gospel of hate and the class struggle?

What did the profit motive do? It made Watt and his partner, and all who followed them, work to make better engines and offer them at a lower price to get the market from their competitors.

Was the result good or bad? The profit motive is just as honorable and useful to mankind as the wage motive. Both can be pushed to excess. But, both do infinite good.

The wage motive prompts men to become skilled and efficient so they can produce more and earn more, and because they do, all of mankind benefits.

The profit motive prompts men to make better tools, to cut costs, to sell cheaper, and again all of mankind benefits.

The radio, that sold only 25 years ago for $300, now sells for $30, or less, and a better radio.

COMPETITIVE EFFORT NEEDED

Has the result of the competitive struggle in the world of radio been good or bad? The result has been good—humanitarian, if you please.

It brings the news of the world, good music, and discussion of public affairs to the remotest farmhouse, to people on their sickbeds. It was not many centuries ago when starvation was a common occurrence, even where 90 percent of the people lived on land—even in England.

Was the conquest of starvation a humanitarian thing? What conquered it? Who conquered it? Karl Marx? No.

The time in the field required to raise a bushel of wheat in America has gone down from 60 hours of human labor in 1830 to 2 hours or less in 1930. What did it? The steel plow, the tractor, the harvester, better seed, the conquest of insects and plant diseases, and cheap transportation. American wheat now feeds millions today in the Europe that is adopting the philosophy of Karl Marx.

Aluminum was so expensive in 1870 that Napoleon III of France had an aluminum table set for state dinners, more valuable than gold. Today aluminum is found in the American kitchen.

No, my friends; Karl Marx did not have the answer. He lifted no burdens from human backs. The answer is in free enterprise, kept competitive by antitrust and other laws. The answer is not in the class struggle. The answer is in the cooperation of inventor and investor, and manager and the worker with his "know how." The answer is to substitute slaves of iron and steel for the strength of human backs. The answer is constitutional liberty, which sets men free and says that what any man honestly makes is his "to have and to hold."

Wages can be paid only out of the product, and the larger the production the higher the wage. The more money that is invested in horsepower and equipment the more capital that is put to work, the less children and women and men have to work at killing toil.

Let's not divide mankind today in the struggle of classes. Let's unite men. In union there is strength. In harmony there is hope. Cooperation is Uncle Sam's middle name.

SAMUEL B. PETTENGILL.

High Cost of Food

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial from the Washington Post of April 21 fairly expresses some of the factors involved in food prices, but not all of the factors by any means:

HIGH COST OF FOOD

F. E. Berquist, economist for the Congressional Joint Committee on the Economic Report, concludes that in general price advances have more than compensated for increases in wages and other costs. "This is confirmed," Mr. Berquist says, "by the very sharp rise in farm income and the markedly improved profits performance of both incorporated and unincorporated business." This recognition of the fact that many farmers as well as industrialists could afford to sell their products at lower prices at once raises the question whether any constructive steps can be taken to reduce prices.

As we have previously pointed out, some large business concerns have considerable leeway in determining their own selling policies and may decide that it is good policy to lower prices as a means of courting good will and helping to counteract dangerous inflationary forces. But it would be a sheer waste of voice to appeal to millions of individual farmers to take less for their products than buyers are willing to pay. Moreover, there are always marginal high-cost farmers who just about break even and would be forced out of production if prices were lowered. It is, therefore, easy to understand why Government spokesmen prefer to stress the importance of reducing prices of manufactured goods and soft pedal the evils of excessively high food prices which constitute the largest single item in family budgets.

However, mounting criticism of the Government's support-price program for farm products has put Secretary of Agriculture Anderson on the defensive. He is undoubtedly right in declaring that, at present, support operations are exerting comparatively little effect on living costs, excepting potatoes and a few other items. For the current prices obtained by farmers for wheat, and other grains, cotton, and livestock are well above the general support level of 90 percent of parity. Furthermore, Secretary Anderson contends that had it not been for consumer subsidies and support prices, which encouraged an expansion of output, food costs would be far higher than they are today.

Sustained high domestic demand, coupled with Government buying for foreign relief, coming at a time when supplies on hand were extremely low, has been a prime cause of the recent sharp rise in grain prices. On the other hand, price support encouraged overproduction of potatoes last year and resulted in the loss by rotting and deliberate destruction of millions of bushels of potatoes. The estimated cost of this one support program is $80,000,000. It is a foretaste of what may lie ahead should farm prices begin to drop within the next 2 years, and support prices once more have to be extensively relied upon to take unsalable crops off the market. Passage by the Senate of a bill providing price support during 1947 and 1948 for domestic wool at the 1946 level also shows that the Government's price-lifting program has not become an anachronism.

Since the Government is pledged to support farm prices until 1949, it may seem futile to emphasize the inconsistencies of its price policies. But it is important for the public to understand that the price-support program is a factor to be taken into account in considering the future course of agricultural prices. While there probably is not much that the Government can do at present to combat high prices of foodstuffs, it can do a great deal to avert price bulges by careful timing of its own purchasing programs. For the rest, we can only hope that bumper crops at home and improvement in agricultural conditions abroad will eventually bring relief from the pressure of excessively high food prices.

Mr. Berquist can find out, if he wishes to be factual, that some major food products already have had a reduction in prices. In fact, one of the dairy products had an OPA ceiling price, which was the selling price, of 45 percent more than the present support price.

Milk in Wisconsin has dropped $1.25 to $1.50 per hundredweight in price at the very time the producer was called upon to pay 20 percent more for what he buys. Maybe the farmer should pay more and more for what he buys and

take less and less for what he sells, but if this formula is put into operation one can expect to see another 5,000,000 people drift from the farms and small towns into the cities.

If the milkers in California are now receiving $245 per month and asking for an increase of $55 per month, just exactly who is going to reduce the price of milk to the consumer?

Secretary of Agriculture Anderson surely does not need to be on the defensive as this editorial states. When the people have the facts they have evidence that the support prices do not necessarily mean high prices. If properly administered, support prices can mean an adequate supply of food at fair prices. If a product has a support price of $1 a bushel and the consumer pays from $2.50 to $3 per bushel for the product there are most assuredly price-effecting factors involved of more importance than the support price.

A desirable approach for lower prices would be for the advocators to promote a reduction in their own salaries before they become too emphatic in their suggestions to lower the hourly wage of other people.

The recent 5-cents-per-pound drop in cheese prices and 4-cents-per-pound reduction in butter prices, advocated and caued no doubt by President Truman's speeches of late, put certain dairy farmers in a position of receiving below Steagall support. Can it be that President Truman is going to extend the "fur farmer formula" wherein American fur farmers are brought to the brink of ruin by the policies of the present administration? So long as the wool in a suit of clothes costs $3 and the suit costs $100 in the market place other factors than farm prices must have consideration.

Gagging America's Voice

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. MUNDT. Mr. Speaker, an editorial from this morning's edition of the Herald Tribune of New York City discusses a problem which is of vital concern to all of us—what is to be done about America's publicity program abroad? It is becoming increasingly clear that the United States must take effective and practical steps to let the people of foreign countries—especially those behind or near the iron curtain of Russia—know the truth about America. We must help them get the facts about the way freedom works in the United States, about our ideas and our ideals, and most important of all about our plans and our prayers for world peace. The American picture must not be painted in Europe by the Red portrait painters of Moscow.

Mr. Speaker, the final and official report from the Appropriations Committee on our so-called American cultural-relations program has not yet been made. I doubt that it will be as disturbing as the Herald Tribune editorial suggests. However, we all realize that there is no basic legislation upon which the program administered by Assistant Secretary of State William Benton has been constructed. Under the terms of the new Legislative Reorganization Act, it is expected that the regular legislative committees of Congress will write all authorization acts and the Appropriations Committees are to be confined to determining the amount of financial appropriations. Thus it is clear that basic, directive legislation is imperative if the United States is to have the publicity program abroad which it requires.

Last summer our House Committee on Foreign Affairs favorably reported a legislative bill authorizing the development of a foreign information service for our State Department. Congress adjourned before action on this legislation could be completed. It is my hope that we may soon hold hearings on another bill to achieve this objective and that it may receive favorable and early action. In the meantime, it may be necessary for the Senate, which operates under less strict procedural rules than the House, to make temporary provisions for the continuance of our publicity program abroad. This program has made some serious errors, to be sure, in the early days of its development and much is still to be required from the standpoint of the type of personnel on Mr. Benton's staff both at home and abroad. However, these errors can be corrected and the personnel should be strengthened by the appointment of sturdy Americans who are proud apostles of our way of life. The big objective must not be abandoned because of mistakes made on the first stretches of the long trail to the summit. Mr. Benton can help mightily by correcting the deficiencies now existing. Congress must do its part by supplying the finances required to continue this important peace-promoting service.

The following editorial indicates the growing appreciation which exists for the possibilities and potentialities of our foreign information service:

GAGGING AMERICA'S VOICE

A certain element of mystery surrounds the action of the subcommittee of the House Appropriations Committee which has let fall the economy ax upon the neck of Mr. William Benton, Assistant Secretary of State; which has lopped huge sections out of the Office of International Information and Cultural Affairs; which has moved to silence the short-wave "Voice of America" and to quash other efforts to tell the world about the United States through the media of radio, libraries, motion pictures, the graphic arts and foreign information services. The details of this mayhem are not to be revealed until next month. Representative TABER, chairman of the full committee, professes to know nothing about the action. There are discrepancies in the available accounts of just what has been done. But there is apparent agreement in the belief that unless the Senate comes to the rescue the information program will be eviscerated precisely when it was beginning to do some good. It seems an odd way to run a government, or, indeed, an economy program.

Mr. Ilya Ehrenburg and the Kremlin's press officers have just given impressive evidence that the short-wave broadcasts to Russia have been getting somewhere. This information program is, indeed, the only possible means by which in the present facts, American ideas can be communicated to the Russian people. The Senate has just voted overwhelmingly for the Greek-Turkish aid program, which makes sense only as an expression of American democracy on the international stage and makes it imperative that American democracy should be able to speak with its own voice upon that stage. Our whole foreign policy is committed to a course which renders a sound information policy essential; and so it is at just this point that an appropriations subcommittee decides to cancel the whole thing, destroy the organization, and silence the broadcasts in the interests of economy. It is a queer kind of economy to wreck a basic policy for which nearly every one recognizes the need and so to deprive the Nation of an arm which is increasingly important to the peaceful fulfillment or its aims in the modern world.

Prices and Profits

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 25, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, with all the cheap political claptrap that our New Deal friends have injected into the tax proposals and fiscal policies of our Nation, I wish to submit the following editorial from the New York Times of Sunday, April 20, 1947:

PRICES AND PROFITS

Corporate profits in 1946 and early in 1947 were at record high levels. On several occasions labor spokesmen have attributed this rise in profits to increases in prices. The Legislative Reference Service of the Library of Congress has recently completed an analysis which shows that price increases were only a minor factor in the attainment of these profits. According to this study, "had it not been for the repeal of the excess-profits tax and the tax-credit carry-back provision, net corporate profits in 1946 would have been less than in 1945."

This conclusion is amply supported by the available facts. Thus, estimated corporate earnings before taxes in 1946 were moderately lower than in 1945, and about 20 percent below the wartime peaks reached in 1943 and 1944. As a result of the repeal of the excess profits tax, however, profits after taxes were 20 to 30 percent higher in 1946 than in the 3 preceding years. Undoubtedly price increases did contribute to the higher profits for some companies. But on an over-all basis, tax reductions and increasing volume seemed to have been the major contributing factors.

The Library of Congress study also examined Philip Murray's contention that $7,700,000,000 of these profits could be used for wage increases and still leave profits at twice the prewar level without the necessity of increasing prices. Attention must be given to indirect wage costs in the form of higher costs of materials as well as to the higher direct wages paid, in considering the impact upon prices. Even more important, however, is the fact that profit dollars as well as wage dollars create jobs. In the words of the study:

"If $7,700,000,000 were taken from corporate net profits, business investment would be reduced by at least that much and probably by much more. Although this is entirely

ignored by Mr. Murray, we can say with some assurance that when business investment expenditures fall off, we risk business depression as much as when consumer expenditures fall off."

Actions that result in a shift of spending from one group to another do not add to total purchasing power. On the contrary, the process of shifting may be a sufficiently disturbing influence to reduce the over-all total volume of expenditures, as suggested in this comment.

Just exactly who must assume the responsibility for prices? The present Democratic administration introduced and promoted legislation last year to reduce the excess profits. Why did we not hear about the low-income groups then? Who encouraged greater and greater expenditures? What administration said that 25-percent increase in wages could be paid without affecting prices?

The present administration is giving rather rough treatment, however, to certain farm groups. This is correctly named the "fur-farmer formula." What is the "fur-farmer formula"? That is the one, first, where the administration sends a mission to a foreign country to invite imports; second, where the administration does not invoke the provisions of the Antidumping Act; third, floods the domestic market; and, fourth, the result is ruinous prices to the domestic producers.

There is not much use of this administration encouraging a new business, but it may go out and ruin it, the same as they have the fur-farm business, which is also a small and a comparatively new business. The "fur-farmer formula" for the weak and added protection to the strong. For example, President Truman, within the past few days, placed quota No. II now on cotton imports as they apparently forgot this kind of cotton when quota No. I was put on cotton imports. Cotton is an important crop—reporting one-tenth of the national farm income at times.

Then President Truman, also within the past few days, removed the quota on silver-fox pelts. It was a generous quota and there was no apparent reason for removing it.

President Truman may be opposed to quotas, but the new cotton-import quota shows that he is only opposed to them when they are north of the Mason and Dixon line.

The taxes the Government collects from fur farmers in 1946 will be mighty small.

Statements of Representative Lindley Beckworth

EXTENSION OF REMARKS
OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include statements of my own which appeared in the CONGRESSIONAL RECORD for June 7 and 12, 1946, and December 12, 1944:

TERMINAL LEAVE FOR ENLISTED MEN AND LETTER ENDORSING BECKWORTH'S BILL—H. R. 1160

(June 7, 1946)

Mr. BECKWORTH. Mr. Speaker, on December 18, 1943, I introduced a bill (H. R. 3875) to provide terminal leave for enlisted men. On January 8, 1945, I introduced H. R. 1160, a slightly modified form of my first bill. The national legislative committee of the American Legion endorsed my bill H. R. 1160. Several Members of Congress and I appeared before the House Military Affairs Committee urging the passage of the terminal-leave legislation. I include at this point the endorsement of the American Legion:

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMITTEE,
Washington, D. C., October 24, 1945.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: We are, as you know, vitally interested in your bill, H. R. 1160, which provides terminal leave to enlisted men in the same manner as is now given to officers, except that it also provides that the compensation to which the soldier is entitled shall be paid in a lump sum, which, of course, is a very good idea.

Demobilization is taking place at such a rapid rate at the present time that unless this is enacted into law quickly it is not going to benefit very many GI's.

It does not seem to me as though it is a very controversial issue and that the House Military Affairs Committee could make up its mind very readily as to how they feel about it. We shall appreciate very much if action can be had on this matter.

Sincerely yours,

JOHN THOMAS TAYLOR,
Director, National Legislative Committee.

I was one of 218 Members of the House to sign the petition—the two hundred and eighteenth signature was obtained April 17, 1946—which authorized the bringing of the legislation to the floor of the House. I shall vote for the legislation today.

For some time I have had a bill before the Congress that would give all World War veterans and widows of World War veterans pensions not less in amount than those now received by Spanish-American War veterans. I shall continue to urge in the future this legislation. Note the position of the American Legion, Department of Texas, concerning my present bill, H. R. 360. I quote from a letter written me May 19, 1945, by Mr. Harry E. Rather, department adjutant, the American Legion:

H. R. 360 is the very important legislation which sounds like the kind of legislation that you are always sponsoring, LINDLEY. We know that we can always depend on you. We are delighted that you are back in the harness and on the right side, as usual.

I quote part of a letter I received from Mr. Rather after he resigned his work with the American Legion, dated January 22, 1946:

"Appreciate your every courtesy, many, many times. Your cooperation was everything that I could want and expect and I shall miss you but I know that you can be counted on being in there doing your part in every worth-while matter. We who know you are proud of you and your record."

I quote part of a letter written December 31, 1945, which I received from Mr. Joseph M. Stack, commander in chief, Veterans of Foreign Wars of the United States, Kansas City, Mo.:

"I have the page from the CONGRESSIONAL RECORD reprinting your remarks and the various communications you have received in connection with your activities in behalf of veterans and their dependents, and I wish to express my appreciation for your efforts along this line."

On January 3, 1945, I introduced H. R. 361 which would make eligible a World I or II veteran for a pension, if that veteran could not qualify for Government or private employment, the nature of which required only reasonable physical standards.

In March 1945 I introduced H. R. 2492 to permit direct sales of surplus property to veterans; many veterans have complimented my bill; in my opinion it practically would have solved the problem of making sure that veterans receive the surplus property they need. Too, I have personally sought to aid many veterans in their individual efforts to obtain surplus-property items.

On June 21, 1945, I introduced H. R. 3526, which would extend the GI bill of rights to widows of veterans and the wives of certain totally and permanently disabled veterans.

On June 26, 1945, I introduced H. R. 3592; this is a bill to help concerning housing problems for veterans. This bill, be it noted, was introduced some 6 months before the real effort to meet the veterans' housing problems got under way in the Congress. I quote from a letter written me November 27, 1945, by Mr. Harry E. Rather, department adjutant, the American Legion, Department of Texas, concerning my effort to help our veterans obtain houses:

"We know that we can depend on you to do everything you possibly can on the housing situation, which is most critical."

The CONGRESSIONAL RECORD will show that I was one of the Members of Congress, although we were in the minority at times, that supported every effort to provide housing for veterans.

Last year, October 1, 1945, I introduced H. R. 4219, a bill that would permit a man or woman in service to carry his immediate family with him at Government expense to the place where he was stationed, where practicable, even outside of the United States; too, I provide that the Government will furnish adequate housing for such families; this legislation will do for enlisted men that which has for a long time been done for some of our officers. I am glad to note recently that the Army and Navy are beginning to carry out this objective which I sought to attain by my bill.

As I have told and written a number of veterans who have mentioned the question of paying our veterans a bonus, I favor paying our veterans a bonus. To this end I have worked and shall continue to work diligently.

LETTER TO MARTIN THAMES

(June 12, 1946)

Mr. BECKWORTH. Mr. Speaker, under unanimous consent to extend my remarks, I include a letter in the CONGRESSIONAL RECORD:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 12, 1946.

MR. MARTIN THAMES,
Henderson, Tex.

DEAR MARTIN: I recall your letter of May 17. It is true on February 23, 1939—51 days after I became your Congressman—I voted to fortify Guam; I voted for the Selective Service Act and the extensions of the act; the first extension passed the House by only one vote—a vote, according to President Roosevelt, the Secretary of War, and General Marshall—which saved the Army of the United States. I voted to arm our ships; I voted to permit our ships to go to any place conducive to the success of our war effort—this measure, although backed strongly by President Roosevelt, passed by only 18 votes, 3

weeks before Pearl Harbor. In the 7½ years I have served you in Congress I have voted for every measure to strengthen and keep strong America. I have supported all legislation coming before the House to bring about an enduring peace, and all legislation providing for the participation of the United States in this effort. On September 21, 1943, I voted for the Fulbright resolution; on June 7, 1945, I supported and voted for the Bretton Woods agreement. On December 18, 1945, I voted for the United Nations Participation Act. I have voted for every measure—including terminal leave, housing, surplus-property preference for veterans legislation—to aid and raise the compensation and pay of all veterans, their widows and dependents, our men in service, and their dependents.

I am the author of H. R. 2349—now a law—to adjust the pay status of warrant officers. On December 18, 1943, I introduced H. R. 3875 to provide terminal leave for enlisted men; on January 8, 1945, I introduced H. R. 1160, a slightly modified form of my first bill, which was endorsed by the American Legion; I was 1 of 218 Members of the House to sign the petition which authorized the bringing of the legislation to the floor of the House. I had 14 first cousins in service—7 overseas; 1 was an officer, 13 were enlisted men. I might add neither had an independent income to sustain his dependents while away and neither had 3 or 4 years of a term of office to which to return. I have responded to every request of veterans and their widows and dependents to represent them before the Washington Board of Veterans' Appeals; I have supported the Committee to Investigate Un-American Activities, and all legislation to eliminate subversive elements; I was the author of H. R. 4817—now a law—to strengthen our immigration laws. I have worked to prevent delays; I have worked sincerely to help prevent inflation. I have endeavored to aid and I have supported all legislation to assist our farmers, aged, blind, crippled, unemployed, and those who toil, our independent and small businessmen, and our boys and girls endeavoring to attend school.

In the 7½ years I have been your Congressman, Congress, with the exception of some 6 months, has been in session all or part of every month. I have been at my post of duty, which is exactly what was requested of the membership of Congress by our Commander in Chief, President Roosevelt, the Secretary of War, and the Secretary of the Navy. Yes; I have been at my post of duty just like each of the 21 Texas Members of the House is at his post of duty, just like every Member of the 435 Members of the House and 96 Members of the Senate is at his post of duty.

I have had 9½ years of legislative experience—7½ years in a wartime Congress dealing with war and postwar measures. I might add I have served on seven committees in Congress. I am the sixth ranking Democratic member of 27 members of the House Interstate and Foreign Commerce Committee, the only committee on which Speaker RAYBURN served and the committee of which Speaker RAYBURN was chairman when he became majority leader and later Speaker.

Always I'm glad to hear from you; write me any time. I always shall be grateful for your friendship. Call on me any time.

Your friend,

LINDLEY BECKWORTH.

TEN-MAN TEAM

(December 12, 1944)

Mr. BECKWORTH. I wish to extend my remarks and include in the RECORD the title of an article and excerpts from the same article which appeared on page 8 of the Dallas Morning News, July 12, 1944. The article follows:

"TEN-MAN TEAM LED BY MAN HE BEAT FIGHTS BECKWORTH IN DISTRICT 3

"(By David Botter)

"GLADEWATER, TEX., July 11.—An in absentia candidate without platform figures as a leading contender for the Third Congressional seat from Texas in the primary campaign of LINDLEY BECKWORTH for a fourth term.

"Instead of a personal campaign, ——— will be backed by a team of 10 top-ranking east Texas political leaders and attorneys who will stump the district in his behalf.

"BECKWORTH, who upset dope in 1938 by vanquishing the veteran Morgan Sanders, of Canton, and a group of other leading office-holders with more political know-how, is the principal campaign issue.

"Sanders, the man Beckworth defeated; Judge Merrit Gibson, of Longview, one of the leading forces which delivered the uninstructed Democratic delegation to Chicago from the State convention in Austin, May 23, and first public advocate of free electors from Texas; Jim Strong, of Carthage; Jack Price, of Longview; W. N. Jones, of Mineola; W. Edward Lee, of Tyler; Carroll and Leslie Florence, of Gilmer; Judge W. R. Hughes, of Longview; and Vernon McDavid, of Henderson.

"They will stump the district consisting of eight counties in the East Texas oil-field area, alleging that BECKWORTH has done nothing for the district in Congress and that the area lacks representation.

"BECKWORTH'S platform for reelection shows that he has supported every war measure submitted to Congress, that he advocated fortification of Guam, and has come on down the line in support of the full war program, including endorsement and support of the GI bill of rights.

"The apple-cheeked Congressman, who won election to Congress after one term in the State legislature, went into office the hard way. Lacking sufficient funds for a costly campaign, he used his own personality and his own contacts to win the race from a field.

"He used a loud speaker and toured the side roads, talking with farmers, running his own race against the field. He had his family's assistance. His father, O. J. Beckworth, was his constant adviser and assistant in that race.

"A member of the powerful Interstate and Foreign Commerce Committee of the House, BECKWORTH'S work in recent months has been concentrated in two subcommittees of this group, one dealing with investigation of brand names and newsprint, and another working on civil aviation matters.

"The Congressman is running on a strong war effort platform and cites his record in that connection.

"In addition, ———, of Longview, an attorney, is making an anti-Beckworth campaign; ——— is running his campaign from his office using postal cards to contact people. The cards are provided for friends who wish to mail them to others.

"Counties in the district are Upshur, Gregg, Van Zandt, Rusk, Smith, Wood, Camp, and Panola. Smith, Gregg, and Rusk form a majority of the district in voting strength.

"The result of the above-mentioned race was that BECKWORTH received in the first primary a clear majority over both his opponents; he carried seven of the eight Third District counties, the exception being Gregg County, the home county of his two opponents; the former county and district official, who had held three offices in Gregg County, received 3,745; BECKWORTH 3,380, a difference of 365."

Intervention in Greece

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1947

Mr. BENDER. Mr. Speaker, as a part of my remarks, I would like to include the following article in the Fortnightly Commentary, published by Arnold Bernhard & Co., Inc., of New York:

INTERVENTION IN GREECE

A day after this letter goes to press, President Truman will address Congress on the subject of American intervention in Greece. We are of the opinion that even if the United States should establish an anti-Communist regime on the Greek flank of the Dardanelles, Russia would not immediately go to war. But American commitments in Greece, if they are to achieve their purpose, would have to be followed by commitments in other parts of the world, and such extensive undertakings would weaken capitalism in the American sphere. In so doing they would prove to be self-defeating.

American investors are deeply concerned over taxation. Taxation far more than Communistic infiltration is threatening our way of life. Lest this opening sentence be interpreted as an expression of sympathy for the poor millionaire who is forced now to get along without an extra yacht, let it be stated at the outset that the problem of the rich in this day and age is not lack of money to spend. Faced with enormous inheritance taxes and little possibility of retaining income under existing income tax schedules, the rich man finds it easier to spend money today than at any other time in history. If he does not spend his money, his government will. He has every inducement to waste capital and no incentive to save it.

The function of rich people is to accumulate capital with which to produce more goods for poorer people to consume. That they have done so here is proved by the fact that America has the highest standard of living in the history of the world. That they will not be able to do so much longer is proved by the fact that anyone who accumulates income over $100,000 a year, whether for investment in business or personal spending, must pay back about 87 percent in personal income taxes. Under the conditions, the only large capital that is likely to be accumulated is that which the Government takes in the form of taxes and invests in the form of State-owned enterprises, or that which is accumulated by already established companies. In the absence of all possibility of new competition, these established companies gradually develop into national cartels that in one way or another must be integrated into the Government. In short, under existing tax rates, capital formation will in time become the function of either the Government itself or of industrial cartels integrated into the Government. This is the socialist organization toward which we are blindly moving.

It is against the background of American tax crisis that the proposed intervention in Greece takes on added significance. No one could be naive enough to imagine that the United States of America could gain permanent possession of a flank on the Dardanelles, Russia's only outlet to the Mediterranean, for $250,000,000. The cost will come much higher than that, not only in terms of the commitment in Greece but also in the collateral undertakings in the Near East, in

Europe and in Asia—wherever, in fact, the Russian expansion will have to be bottled up if the new foreign policy is to carry through.

The investor can find no prospect of tax reduction in such a foreign policy. The question he must answer is whether he has a better chance to resist Communism by strengthening capitalism or by aiming a gun at the Russians.

THE SHIFT OF BRITISH POWER

The No. 1 fact of life to hold onto in this maelstrom of postwar political readjustment is that the British are shifting their empire. They are moving out of Asia and east Europe to consolidate in Africa and the Near East. Their great adventure is the chance of developing an Arab world and exploiting Africa. From a speculative standpoint, it seems to be good strategy. Britain has neither the economic sinews nor the firepower to hold India and the Far East or to defend Australia and New Zealand. Her land-based planes probably could hold Africa. There she could obtain raw materials produced with cheap labor to be processed in England for export at a profit to Britain. By agreement with either the United States or Russia she might be able to share the rich oil fields of the Near East, whence would come the oil to power the air force and fleet that would defend the African empire. The Arabs offer a brilliant opportunity, for they are a people of great ability and no organization. Their political life is a jigsaw of feudal rivalries. Their economy is totally undeveloped. Their unity lies in their common Semitic race and in their Catholic Moslem religion, which tolerates no racial discrimination within the legions of the faithful. A relatively small force could balance the powers of the rival Arab potentate while the traditional Anglo-Saxon respect for the other fellow's religion would permit the strengthening of religious ties. A certain amount of industrialization, carefully planned so as not to compete with British industry, might in time be developed.

The big danger to the British scheme is that the Russians may inject themselves into the Near East and North Africa before the British are able to carry their plans for Africa and the Near East to fruition.

It is here that the next American move becomes decisive. If the United States takes up the position in Greece that the British army is evacuating, the burden of defending the British sphere in Africa and the Near East in its formative period falls upon the United States. Not only is Britain's African Empire then protected, but Britain is in a strategic position later on to shift her alliance toward a Russia exasperated by American obstruction. Once Britain's African and near eastern empires are established she would have stock in trade—Arabian oil that could be shared with Russia, and foreign markets in the Balkans and in Asia that might advantageously be shared with the Russian cartels on some basis mutually satisfactory to the two socialist governments. The exclusion of American goods from European and Asiatic markets would naturally be required, since England's production competes in export with America's.

The British shift out of the Far East and eastern Europe into Africa and the Near East, and her political reorientation from the American orbit to the Russian will not come to pass in a day. Britain has still to use up her American loan. She can import only from America, because only America is rich enough to export at this time. But in the long run Britain's interests will dovetail with Russia's more closely than our own and her political alinement with Russia is therefore probable. To think thus may shock the sentiments of many good people. But in the game of power politics, which for four centuries has found England waging wars against Spain, France, Russia, and Germany with complete impartiality, there are no scruples but only interests.

THE DEVELOPMENT OF RUSSIAN POWER

Until only a few years ago Russia was an agricultural country with practically no industries. In order to build up her industries—her capital—Russia must keep her current consumption down. That imposes a low standard of living upon the people and requires stern government. It will be difficult for the regime to carry out its program of capital formation—just as if we were to levy heavy sales taxes in order to build TVA's—and at the same time retain its popularity. Therefore it would be quite natural to expect the Russian Government to act like any other government which functions without strong popular encouragement: to emphasize the foreign threat in order to preserve internal unity during a difficult period.

At the same time, the Russian Government is desirous of expanding its sphere of influence to contiguous territories for three reasons: (1) For defense through buffer states, (2) for space in which to build up complementary trading areas, (3) for outlets to the sea.

How then will the Russians react if the United States should formulate a foreign policy that has as its obvious purpose control of the flanks on Russia's only warm-water outlet? Imagine, for a moment, that the United States of America were a landlocked nation without Atlantic or Pacific seaports and that our only outlet to the Atlantic was through the Mississippi River and the Gulf of Mexico. Imagine then that Russia, disapproving the Alemán regime in Mexico, decided to intervene with arms and money to unhorse Mr. Alemán and substitute a regime sympathetic to and in close collaboration with one of the totalitarian governments, let us say the Argentine. Even without the Monroe Doctrine, America would spring to arms.

To Russia the American decision to take over Greece must be a particularly bitter pill to swallow, because not only is it a threat to Russia's security as well as her expansion but it comes right after the Russians gave their approval to America's claim for control of the militarily strategic Pacific islands. The Russians must think that we Americans want the whole world, including their back door.

The upshot cannot be favorable for the United States. The Russians will be resentful and even more suspicious than in the past. They will close ranks at home, more willingly suffering a low standard of living in order to build up their industrial potential for defense. They will look to Britain as an ally, even as a partner in the development of oil fields in the Near East, and to the exclusion of the United States.

Almost surely the Russians will not go to war over Greece at this time. Rather, like Germany, they will wait until their industrial potential for war—possibly for atomic war—will be fully developed, at which time they can break the American Maginot line around the Mediterranean as easily as the Germans broke it in France. That kind of a line is more dangerous as an illusion than as a weapon.

THE DEFENSE OF THE AMERICAN WAY OF LIFE

The essential quality of capitalism is this: That it is an economy governed by a free market in which prices, demand, and supply are at liberty to reach an equilibrium without government intervention. Under pure socialism, prices and supplies are determined by the government and the demand is regulated by rationing.

The free economy is clearly the more efficient except during periods of deep maladjustment when, the socialists assert, the people are free only to starve. Economists of the Keynes school reply by proposing that the general level of business activity be controlled through compensating government investments, so that, though the market for specific goods remains free, the purchasing power of the people as a whole is held within tolerable limits of fluctuation.

In every instance where the people themselves have had a chance to choose between an economy that has a degree of free determination and an economy of complete government regimentation, the people have always shown a strong preference for the free economy. Since this has been so wherever the two systems came into conflict, it may be concluded that sooner or later the Russian people will themselves insist upon a greater degree of freedom in their country.

To this the foe of Russia replies that there can be no freedom of choice in that country. That is true today. That is not true of tomorrow. Today the Russians must tighten their belts to produce capital enough to build up their income. Once they have forced through their industrialization—a process which the Russians are attempting to complete in a generation, though other nations have required centuries—they will be ready to live.

The Marxist theory does not contemplate abrogation of personal liberties. To say that it does is to misrepresent. The Lenin theory of taking the leap from an agricultural economy to an industrial economy in a single life span does contemplate dictatorship. But it is a temporary dictatorship and it is worth noting that the goal of personal freedom is not lost sight of. The Russians today are spending about five times as large a percentage of their national income for education as the British and about twice as much as the Americans. Illiteracy has been greatly reduced. No conspiracy of tyrants, determined to deprive people permanently of their liberty and individualism, would sacrifice so much for public education.

The Russian people have a sincere admiration for America and American achievement, as attested by the dispatches of many responsible men who have visited Russia. Why, then, is it necessary to prove to them at the point of a gun that our way of life is superior to their own? Especially so when pointing the gun requires that we weaken our own way of life?

It is necessary to be practical. There must be some lines within which the contest for men's loyalties can be fought out by force of example. We are not yet such a perfect race that we can eliminate power politics altogether. But in the practical application of power politics, the first rule is not to bite off more than can be chewed. The natural—the practical sphere—in which to prove the superiority of capitalism and individualism is North and South America and the islands of the Caribbean and Pacific. These happen also to be the territories that the United States has traditionally defended. The area is large enough to be economically self-sustaining. Yet one imagines that if any responsible government authority advocated intervention in South American political and economic affairs, he would be denounced as an imperialist by the very same people who shout isolationist at anyone who is reluctant to see American control of the government of Greece.

There is not such a vast gulf between the Russians and ourselves that we could not live together in peace in our own parts of the world. It is implicit in the Russian program to relax the present regimentation of the individual's life. When that happens the difference between us will be no greater than that between us and the Socialist state of Great Britain.

The contest of capitalism versus communism will then get down to a question of which works better. That could be settled without warfare. It would seem to be the part of wisdom for America to strengthen capitalism by removing as many as possible

of the controls that make it unworkable, such as tariffs, cartels, subsidized prices, labor monopolies, and income taxes that prevent constructive enterprise. Nobody is going to stop the expansion of communism by sticking a $250,000,000 thorn into the side of Russia. Communism will be stopped by something that works better. Russian Communists are men. They have the same love of God and their fellow men that other people have. They can learn, but they will not be taught at the point of a foreign gun. Nor will they learn to admire the capitalist economy unless we capitalists see to it that it works. We have more to do in North and South America than on the flanks of the Dardanelles.

The danger to Americans is not the activity of Communist agents but the deterioration of capitalism itself. Sensing our own weakness we look for a foreign devil to blame it on. But this is self-deception. Communism would have no chance at all in a world, or even in a part of a world, in which capitalism was working. Rome did not fall because of the power of the barbarians but because of the weakness of the Romans. In weakening capitalism in order to contain Russia by naked military force, we do not defend ourselves intelligently.

J. H. Leib Victorious in Fight to Eliminate Caste System in Army Cemeteries

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MUNDT. Mr. Speaker, on Wednesday of this week, Secretary of War Patterson announced that hereafter all veterans of the armed forces will be accorded the same consideration and honor when they are laid to rest in a Government cemetery.

This week's directive brought to a gratifying conclusion a controversy which has been waging for over a year in an effort to stop the caste system that has existed in the national cemeteries of this Nation. Many of us have long felt that when that greatest of all levelers—death—makes its appearance, all distinctions among our heroic dead should disappear. Each has then given equally of himself in the cause of his country, because each has then given his all.

At this time, I desire to present some interesting facts on the history back of his new War Department order. Something over a year ago my colleague the gentleman from South Dakota [Mr. CASE] inserted in the CONGRESSIONAL RECORD a statement by J. H. Leib, then legislative director of the AMVETS, in which Leib went into detail concerning the discriminations existing in our national cemeteries in a report entitled "Is There a Caste System in Arlington?"

On April 28, 1946, the Washington Sunday Star featured a long front-page story under the heading, "Military caste system divides officers and GI's even in death—Separate sections of national cemeteries are provided—Arlington marker sizes differ." In this article, pictures were carried showing how officers and enlisted men were buried, how they were separated in the cemetery, and how their graves were marked.

This was followed by a resolution adopted by the American Legion national executive committeee on June 12, 1946, calling upon Congress to wipe out the existing discrimination in the assignments of burial plots. The campaign to eliminate the continuance of the caste system posthumously gathered momentum and was endorsed and urged by individual posts of the American Legion, Veterans of Foreign Wars, the AMVETS, and others. Secretary of War Patterson's directive of last Wednesday is in wise conformity with this year-long campaign.

In concluding the issue, Secretary Patterson released the following statement as it appeared in the Washington Evening Star of April 24, 1947:

PATTERSON ORDER ENDS CASTE SYSTEM BURIALS, SEGREGATION OF GRAVES

The so-called caste system in the burial of the Army's officers and enlisted men in national cemeteries today is a thing of the past.

A directive by Secretary of War Patterson at the same time ended racial segregation in national-cemetery burials.

The order issued yesterday applies to future burials in only the new sections of military cemeteries now being developed because of the large number of veterans for whom graves must eventually be provided. It ended the traditional policy which caused the segregation of the graves of enlisted men and officers, white and colored.

The new procedure means a general may be buried beside an enlisted man, a practice that is common in the American cemeteries overseas.

EXPLANATION ISSUED

An explanatory statement issued by the War Department said:

"In accordance with a directive issued today by Secretary of War Robert P. Patterson, no distinction will be made in location of graves and burial facilities for deceased officers and enlisted men in new sections of national cemeteries. The policy providing uniform burial facilities without distinction as to rank or race of deceased veterans will be effected progressively as new sections are laid out.

"Burials in remaining grave sites of established sections of national cemeteries will continue under present policies until these sections are filled.

"Because of the large number of veterans entitled to burial in national cemeteries, a material expansion of cemetery facilities has become necessary. For the present this will be accomplished largely through the establishment of new sections in existing national cemeteries. Post sections will be authorized in national cemeteries to serve nearby garrisons where it is impractical to establish military cemeteries within the military posts."

United States Gets Into Cash Trade

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, April 25, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article appeared in the Toledo Blade recently and, because of the hearing on the fur industry held April 17 and 18 by the Special Fur Committee, it should be of particular interest at this time:

UNITED STATES GETS INTO CASH TRADE
(By Paul R. Leach)

WASHINGTON, March 29.—American exports to Russia are now on a cash basis.

The postwar flood of food, machinery, and other nonmilitary supplies sent to the Soviet Union by lend-lease and by UNRRA is drying up.

Total lend-lease aid to Russia through the war years and up to this month amounted to nearly $12,000,000,000. Settlements are yet to be made between the two countries, although nearly all other lend-lease beneficiaries have made arrangements to clear the books.

In 1946 the United States exported $352,097,000 worth of all kinds of supplies to Russia. Of this, $152,081,000 went through lend-lease in meeting final commitments, UNRRA gave $136,770,000 to White Russia and the Ukraine, and private relief accounted for $10,663,000. Russia paid cash for $52,583,000 worth of goods.

About one-third of the dollar volume went into food. No food shipments have been made since December 31.

Purely military shipments by lend-lease ended with the war except for munitions in the pipe line of preparaton for export or on the way Many of the manufactures, machines, and such like that Russia has been getting since VJ-day, however, can be classed as usable in upkeep of a military establishment.

During the war Russia was given tremendous numbers of weapons—15,000 planes, 7,000 tanks, 8,218 antiaircraft guns, to name only a few—many of which presumably are still usable.

While we were shipping the $352,097,000 worth of supplies in 1946, imports to the United States from Russia totaled $100,635,000. Of this, $67,558,000 represented raw furs. This import figure is four times any prewar year's buying from Russia.

Lend-lease and UNRRA shipments have declined steadily.

In January, the only month's figures available for 1947 at the Department of Commerce, we shipped $24,671,462 worth of goods, of which UNRRA supplied $5,698,000 and lend-lease $4,724,000. The remaining $14,249,462 was in cash purchases by Russia, four times the monthly average of cash purchases in 1946.

February and March statistics are to show UNRRA and, lend-lease reaching the zero point, all exports then being for cash. The wind-up lend-lease shipments of the last year are to be paid for in 30 years on the basis of 90 percent of cost, plus transportation.

Half the Russian cash purchases have been and are now for machinery and trucks. Oil, metals, manufactures other than machinery, and textiles and fibers account for most of the remainder.

The Soviet Union never has spent much of its dollar cash here for food, preferring to use it for the sort of items it is buying now and can't get otherwise.

The United States may be getting into cash trade, but according to my arithmetic the cash imports were 100 millions, and the cash exports were 52 millions, and Uncle Sam will run out of cash with too much of this kind of trading.

The fur-farmer formula put in operation by the present administration consists: First, send Government emissaries to a foreign country to invite imports; second, allow dumping on the American market like the $238,000,000 1946 fur imports; third, remove the quota on imports on the only fur—silver fox—that even had any import duty whatsoever to protect it. The present administration

is evidently trying to extend this fur-farmer formula to other branches of agriculture; fourth, put the producer on the verge of ruin; this is to be followed by sending out propaganda to women's clubs on the wonders of reciprocity, New Deal brand. The New Deal brand of reciprocity is honeycombed with deceit and dripping with deception.

Frontiers of Aviation Law

EXTENSION OF REMARKS
OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. McCARRAN. Mr. President, last Friday, April 25, it was my privilege to address the Aviation Law Institute, sponsored by the American Bar Association through its committee on aeronautical law, and the Milwaukee Bar Association, in Milwaukee, at the dinner honoring President Carl Rix, president of the American Bar Association. My subject was Frontiers of Aviation Law. I ask unanimous consent that the address delivered by me on that occasion may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a distinct honor to have the privilege of addressing the first aviation law institute ever held in the United States. It is all the more an honor because this dinner in turn honors one of the most able lawyers of this Nation, your own Carl Rix, president of the American Bar Association.

It has been my privilege to know Mr. Rix quite well for a number of years, and I, with you, salute him for the lifetime of service which he has given to the improvement of law in this Nation.

With the recent shift in the political picture, Wisconsin's very capable senior Senator, ALEXANDER WILEY, and I, exchanged positions as majority and minority leaders of the Senate Committee on the Judiciary. The Judiciary Committee of the Senate has never operated, in my time, on a partisan basis. My good friend, Senator WILEY, has not changed that policy; and he and I continue to cooperate quite closely on all matters which come before the committee. I am happy indeed to bring with me his personal greetings to all of you, and his special good wishes to his very personal friend, Carl Rix.

Most of you who are present at this dinner have participated throughout the day in an aviation law institute which has dealt with existing law and legislation in this field. Tonight I want to take you with me a little beyond the existing picture for a look at the frontiers of aviation law.

Because aviation is relatively a new art and a new industry, the great body of aviation law still is statutory. It has been the duty of the Congress, and it still is the duty of the Congress, to probe beyond the present to chart the future path of civil aviation in this country. When I first came to the Senate the nearest thing we had to a basic law for civil aviation was the Air Commerce Act of 1926. The development of civil aviation during my 14 years of service in the United States Senate has far exceeded our fondest dreams. It has been my privilege to have participated in the drafting, sponsorship, and formulation of the Federal legislation which made this development possible. It is from this background that I come to you tonight to talk of the frontiers of aviation law.

Aviation law is indeed a quicksilvery field. Yesterday we may have thought we had charted its frontiers; that we had platted a map to enable us to say that aviation law is concerned with this and that; that these are its problems; that it encompasses such and such concepts; that it goes here, but stops there. And then aviation engineers solved new problems, and new horizons were ours to conquer. The useful range of aircraft was extended from a few hundred miles to the entire length and breadth of the globe. Today every spot on earth is within 60 hours of Milwaukee by air carrier. Our whole thinking in the field of aviation law has been forced to change quickly, as the great technical achievements of World War II advanced aviation to undreamed-of accomplishments.

You to whom I speak have witnessed the change of precedent after precedent, in the legal field, as aviation developed. I cite merely one example—the insurance field. There the courts in the early years of aviation held that every person who took a flight as a passenger in an airplane was "participating" in aviation, so recovery for death or injury to such a passenger was barred under a standard clause in insurance policies excluding coverage of persons "participating" in aviation. Today, in State after State, such precedents have been overruled as the courts hold this same language does not exclude passengers, the courts reasoning properly that only the pilot actually participates in aviation under present-day circumstances. As one court has aptly said:

"In adapting the general principles to the newest mode of transportation, it is not altogether 'putting new wine in old bottles.' Although the same principles must obtain and be applied, the law of aeronautics cannot be completely synchronized with the law pertaining to other agencies, for it must be modified to meet the traffic problems of the novel method."

So we have had changes in both technical and legal fields which have greatly affected aviation law. My purpose tonight is to sketch for you a few of the fields in which I believe the frontiers of law must be extended to meet the present and future needs of civil aviation.

The Civil Aeronautics Act of 1938 has been on the statute books less than 10 years, but already it is outmoded in many respects, and inadequate in others. That is true in spite of the fact that, when it passed the Congress, it was the best law we could get at the time. We knew then that air transportation was to become a major force in our Nation, both in time of war and in times of peace, but we did not foresee by any means all of the problems which would develop in such a few short years.

The 1938 act was 4 years in the making. The first draft was introduced on March 26, 1934, as S. 3187 of the Seventy-third Congress. Even while the legislation was "in the mill," new developments made changes necessary; and during the 4 years I prepared and introduced no fewer than nine separate bills on this subject, each a complete redraft of the previous bill. The bill which finally became law was S. 3845 of the Seventy-fifth Congress.

I understand that you have heard something of the Civil Aeronautics Act of 1938 in your discussions today. My concern tonight is not with the existing legislation so much as with the frontiers to which it should be pushed, to pattern an act for the proper regulation and development of the future of civil aviation. The urgent need for amendment of the present law has been apparent for several years. On March 20, 1944, I presented a bill—S. 1790 of the Seventy-eighth Congress) to completely rewrite all Federal legislation for civil aviation; to codify and bring up to date existing aviation legislation; to bring into one act those unrepealed provisions of the Air Commerce Act of 1926 which many people do not realize are still the law of the land; and to write into law the necessary legislative provisions which experience has indicated will be necessary for the future development of aviation in this country. This bill, with some refinements of language, was reintroduced as S. 1 in the present Congress.

To detail all the changes in language and substance which nearly 10 years of operation under the Civil Aeronautics Act of 1938 has indicated are necessary would require much time. I commend the bill to your study, and I point out a few highlights: New provisions for the granting of experimental route certificates, without the present lengthy certificate hearings, so as to encourage new enterprise in developing a truly Nation-wide air transportation service; the re-creation of an independent civil aeronautics authority and an independent air safety board; new economic regulations for contract air carriers; and a new grant of authority providing control, for the first time, of the rates and fares of our air carriers when operating in foreign air transportation.

You will find by a study of this bill that it contains language extending the frontiers of aviation law to hitherto uncharted fields, some of them fields in which Federal officials now claim the right to pursue an unfettered path, often in conflict with the policy of the Congress.

For example, in 1946 the CAB and the State Department, in the so-called Bermuda agreements; stretched the language of the existing act to the point of claiming that various sections of that act authorize an executive agreement whereby important air rights of this country were bargained away to England. These primarily administrative officials went so far as to agree that the international civil aviation organization could control rates of our air carriers in foreign air transportation in any case where England would not agree to the proposed rates suggested by our air carriers. If you will pause to recall that we are outvoted in the international civil aviation organization by at least 42 to 1, you can see where this policy, if widely followed, would leave us in the race for international air transportation business. At the same time CAB and the State Department agreed to give England certain air rights in this Nation, such agreement being in direct conflict with specific provisions of the existing act. To top this both CAB and the State Department then claimed these gifts of rights and controls, to throttle our civil aviation down to where England wants us to be, were an "executive agreement," and so not subject to review by the Congress or anyone else in authority.

It is full time to extend our aviation law frontiers to the point of preventing such bureaucratic bargaining away of our national rights. To accomplish this, I have introduced a bill (S. 11) providing that:

"No agreement with any foreign government restricting the right of the United States or its nationals to engage in air-transport operations, or generally granting to any foreign goverment or its nationals or to any air line representing any foreign government any right or rights to operate in air transportation or air commerce other than as a foreign air carrier in accordance with the provisions of the civil aeronautics act of 1938, or respecting the formation of or the participation of the United States in any international organization for regulation or control of international aviation or any phases thereof, shall be made or entered into by or on be-

half of the Government of the United States except by treaty."

Much as I realize the need for changes in our basic aviation law, I am not content that those changes should be made administratively. The subject is far too important to be allowed to slip away from control by the Congress, which alone has the right, and the power, to determine national policy.

The pace of the world is geared to transportation, and aviation is the instrumentality which will set the future pace in foreign trade and in the passenger field. In the fight for the air markets of the world our country must not come out second best. In our thinking, therefore, the frontiers of aviation law must be projected upon this world-wide picture and we must, within the constitutional framework of the Government of the United States, chart a pattern which will bring us to the forefront and keep us there.

That is why, in 1944, I proposed putting the entire facilities of the air transport industry and the full weight of the Government of the United States back of a single community company to carry the flag of the United States on the airways of the world. Our national security and our future as a trading nation depends upon maintaining our leadership in international air transportation. The only way to maintain that leadership in the face of growing competition by foreign nations is by consolidating all our resources in the air to meet and surpass that competition. United we stand, divided we fall.

The entire facilities of all air carriers of this country, devoted to foreign air transportation, are valued roughly at $100,000,000. Not long ago England, at a time when she was so desperate for money that she was forced, so she said, to negotiate a loan of approximately $4,000,000,000 from this country, made available to her chosen instrument in the aviation field $600,000,000 for the sole purpose of assuring domination of the airways of the world. No single line in this country, when it must compete with other air lines on the same routes, can secure and expend so vast a sum as $600,000,000. The French have announced an initial subsidy of $40,000,000 for Air France. The Dutch employ the simple expedient of making up each year the annual deficit of their national air line, KLM. Only the united strength of all factors in our national transportation industry, with the full backing of our Government, can compete on an equal footing with the other governments of the world, each of which operates only through one nationally sponsored and financed line in the field of international air transportation.

Recent financial and other troubles of our air carriers illustrates and underlines the picture I paint. We cannot afford financial or other failures which cause our air carriers to fall behind in this race. Our future—the future of our whole Nation—is too dependent on our success. The price of failure could well mean eventual extinction. We dare not fail. What though we have never had such an air line created by law before? Is it not time that our aviation law frontiers are pushed out into hitherto uncharted fields so that we can win in this race for the air markets of the world? I, for one, think so, and I know that many of my colleagues in the Senate hold the same view. Senators WHITE, BREWSTER, and MCMAHON have just joined me in sponsorship of legislation to accomplish this purpose. By consolidating all of our air carriers, operating internationally, into a single community company, and giving our domestic air carriers, our steamship lines, and our railroads a stake in the success of the consolidated company, destructive rivalries between American air carriers abroad will be avoided and at the same time we will present a united front against the competition of foreign government air monopolies. We must meet the chosen instruments of Great Britain, France, Holland, Belgium, Russia, and other foreign nations on an equal basis in the postwar competitive race for air supremacy, and to do that we must fight fire with fire.

In the field of taxation the frontiers of aviation law are even now the subject of intense exploration. In 1944 the Supreme Court of the United States held, in the case of *Minnesota* v. *Northwest Airlines*, that a Minnesota county in which the Airlines' executive offices were located could tax all of the planes of that great air line, which at that time operated from Chicago to the Pacific coast. Maintenance bases were being operated at the time of the court decision in five States, and now with the recent authorization of operation into New York, many more maintenance bases have been established.

When this case reached the courts, precedent offered 2 rules from which to choose—the "ship" rule and the "railroad" rule. Under the "ship" rule which the court adopted, the home port may properly tax all of a carrier's planes. Under the "railroad" rule carriers would allocate taxes among the several States through which or in which planes might operate, based on the proportionate value of the planes found to have acquired a taxable situs in each State. The airplane is, of course, vastly different from the steamship and a railroad, and it seems to me that an entirely new theory of taxation should be worked out to meet its needs.

It is true that, pursuant to a congressional resolution, a very exhaustive study and report to Congress was made by the CAB as a result of the Supreme Court decision to which I have just referred. In general the report recommended creation of a Federal board to prevent the States from imposing discriminatory or multiple taxes on airlines. I have refrained from acting upon the recommendations made in the report to Congress because it seemed to me that it recommended too much Federal dictation to the States and too little in the way of constructive thought toward the solution of this very important problem. My final conclusions have not yet been formulated, but I am at present thinking along the line of a solution to this problem by State legislation; State legislation under which the peculiar characteristics of airlines and air travel, and the peculiar problems which they involve in the way of State police and other assistance of various kinds, will be taken into consideration.

Perhaps a formula based upon aircraft arrivals and departures, revenue tons handled, and revenues originating in each State would be a start in the right direction. Where a plane merely flies over a State for a few minutes without landing, I am not prepared as yet to say that the State should share in taxes levied on the airplane.

The lawyers of this country, and the members of the American Bar Association in particular, should lend their combined efforts toward a solution of this very important problem. I earnestly hope that it can be solved without superimposing a complicated Federal administrative board upon the States. It is important to the future welfare of our aviation industry that, in extending this particular frontier of aviation law, the evils of multiple taxation in this field should be avoided by the creation of taxation machinery specifically designed for air transportation; which will, at the same time, insure to each State its fair share of tax revenue from this source. Aviation is entitled to a fair ride, but not a "free" ride in this field of taxation.

While arguing for more complete coverage of airport problems in the bill (S. 3845) which became the Civil Aeronautics Act of 1938, I had occasion to say to the United States Senate on May 11 of that year:

"We look at an airplane in the air and we say what a wonderful thing it is. We see it passing overhead and think that is all there is to it, a magnificent structure, a great piece of technical mechanism. But that plane must go up from some point and it must come down, and the landing fields from which it rises and to which it goes are just as important as is the mechanism itself which goes through the air. The landing field is as much a part of the aviation industry and as much a part of the science as is the mechanism which passes from one landing field to another. Indeed, there is nothing more essential, from the standpoint of safety in the air, than safe and adequate places on which to land and from which to take off."

The airport is indeed the keystone of all aviation development. The glamor of the technical and mechanical phases of airplanes has far overshadowed the role of an airplane's first requisite—an airport. Without airports aviation is nothing. I compromised, in the Civil Aeronautics Act of 1938, on a provision for a study and report on the airport problem, in lieu of the more comprehensive provisions I wanted; and it took 9 years after that to get basic Federal airport legislation. Last year the Congress passed and the President approved a Federal airport act. We now have a national airport plan, provided for by Federal law, with $500,000,000 in Federal funds authorized for expenditure on this plan, in cooperation with States and cities.

But the Federal Airport Act, though an important aid to the growth of civil aviation in this country, has not extended the airport law frontier as far as it must go in this direction. If we are to be an airborne nation, in the same sense that we are now sometimes referred to, because of our development and use of the automobile, as a nation on wheels, we must have thousands of new airports; we have, in truth, barely scratched the surface of our airport problem. Just think of how few our airports are, in comparison with our paved roads. Undoubtedly new legislation will be needed, to keep our development in this field abreast of technical achievements.

In another respect, also, the Federal Airport Act may need amendment; and you, as lawyers, and especially as men who worked with me in successfully putting across the need for a Federal administrative procedure act, will be interested in this. Only a few months ago I found it necessary to protest the action of the Administrator of Civil Aeronautics in attempting to write into the Federal Airport Act, by bureaucratic decree, in the nature of regulations, virtually every power denied him by the Congress in the act. Instead of waiting for the Congress to move the frontiers of the act for him, he sought to lift himself by his own bootstraps. Others protested, as I did, and the result was retraction by the Administrator of his more extreme proposals. But the need for more adequate and definite control of such attempts, in the future, prompts me to make a mental note that if and when a revised Federal airport act is drafted, it must contain specific language to prevent such an abuse of discretion. I should like to hear from you, as lawyers, with regard to any ideas you may have for improvement of the Federal Airport Act. As a lifelong member of the legal profession, I know from experience that it is when actual cases arise that defects and needed improvements in legislation become most apparent. Let me know of any defects or needed improvements which your experience reveals, as I would welcome your cooperation.

I have sketched for you a brief review of how some of the frontiers of aviation law have been, or must be, extended to meet some of the future needs of civil aviation. I have not touched upon all the major problems to which these frontiers must be expanded. Within the time here available to me I could not do so.

For instance, I mentioned contract air carriers; well, what of the nonscheduled problem in general? There one finds a whole multitude of problems which the CAB is attempting to cover by economic regulation, in a manner contrary to the intent of the Congress when it adopted the Civil Aeronautics Act of 1938. As lawyers you are familiar with statements such as a recent one from the United States Supreme Court that the intention of the lawmaker constitutes the law. Yet on this frontier the CAB is perverting general language to a specific unintended result. There is a problem to challenge you as lawyers.

The bill to revise and restate the civil aviation law of this country, which I mentioned earlier (S. 1 of the present Congress) attempts to further define the respective jurisdictions of the Federal and State governments in the field of civil aviation. The overlapping of these jurisdictions should be avoided, so far as possible, to prevent duplication and waste of effort. This is a problem that is crying out for solution, and here again the cry represents a challenge to the lawyers of America. States, in the field of aviation, often have laws which are in many instances a crazy-quilt patchwork of statutes rather than well-rounded and up-to-date legislation for the aviation field. There is need for vision, for order, and for logic in this delicate field of intergovernmental relationships. It is up to you to chart the frontiers of aviation law in this, as yet, uncharted field.

I could go on and on telling you of aviation and its problems. When one has lived as long with a subject as I have with aviation law, it is most difficult to terminate a discussion of one's ideas for the frontiers of the future. After years of wrestling with this subject, I most heartily welcome your mobilization of the 40,000 members of the American Bar Association for the task of solving the many legal problems which exist in this field.

We in America find ourselves with airplanes operating all over the world. Both domestically and international air transportation our airplanes are second to none. The technical frontiers of aviation have been or are being conquered. It is up to us, the lawyers of America, to conquer the legal frontiers of the aviation field. Man-made laws will govern the future of aviation—it depends upon those laws, and those laws depend upon us. I feel certain that the lawyers of America will rally to this task and see to it that the frontiers of aviation law are adapted to the air age in which we now live.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 25 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, an able and interesting address by former Senator Warren R. Austin, now United States Representative to the United Nations, was delivered on April 19, 1947, before the American Society of Newspaper Editors, Statler Hotel, Washington, D. C. I ask unanimous consent to have the address printed in the RECORD.

An estimate from the Public Printer indicates that the manuscript of former Senator Austin's address will make three-fourths of a page more than the two printed pages of the RECORD allowed under the rule without a statement of cost, and that the cost will be $195.25.

There being no objection, the address was ordered to be printed in the RECORD as follows:

The proposed United States program of aid to Greece and Turkey has caused the American people to engage in a searching examination of United States foreign policy in relation to the United Nations.

This debate has brought to the surface many doubts and fears about the future of the United Nations and about United States foreign policy toward the United Nations. It has also made apparent that the true nature of the United Nations and of the acts and policies necessary to sustain America's vital interest in its success are widely misunderstood.

The editors of America therefore have been given a special opportunity by this debate to help the people find the truth. I am grateful that you have given me this opportunity today to express to you with greatest frankness my own beliefs as to where the truth lies. I hold these beliefs with deep conviction not only as United States representative at the seat of the United Nations but as an American citizen whose 16 years in the United States Senate were devoted principally to measures that I believed would strengthen the security of the United States.

I shall begin with what I believe to be the misconceptions and misunderstandings revealed by the current debate. It is not possible to deal with the doubts and fears about the future unless there is first a common understanding of what we are talking about when we use the term "United Nations."

All of you will recall the wave of enthusiasm for the United Nations that swept the country after the San Francisco Conference. The ratification of the Charter by the United States Senate was by a vote of 89 to 2.

That was the summer of victory in Europe and victory over Japan. Establishment of the United Nations was also a victory for peace. But, unlike the military victories, it was not a final victory. Establishment of the United Nations was only the first battle. Too many people thought of it as the last act, instead of the first, in a long campaign to establish permanent peace by building a system of collective security. Too many people were inclined to say that the problem of peace had been settled and need trouble us no more.

Out of that misconception, carried over to the present, have arisen some of the demands that the United States turn over to the United Nations such difficult problems as the situation in Greece and Turkey. There are those who seem to believe that the United States can somehow escape its own responsibilities by transferring them to the United Nations. This is to think of the United Nations as something separate and apart from the United States and other member states.

Of course, the United Nations exists only as the collectivity of its individual member states. It is only by the policies and the acts of the member states, acting either individually or collectively, that the United Nations Charter can be carried out. The United States cannot bypass its responsibility to use its own strength and resources to uphold the Charter, whether it acts inside the organs of the United Nations or outside of them.

There are others who have asked that we turn over the program of aid to Greece and Turkey to the United Nations because they believe that we weaken the United Nations by acting individually. This is a fair complaint and one that has troubled many sincere and intelligent Americans who deeply believe in the United Nations. It deserves and has received the most thoughtful and careful consideration from members of the administration and of Congress.

So far as it concerns the charge of bypassing the United Nations, this complaint has been answered, I believe, by the action of the administration in reporting to the Security Council on the program while it is still in the tentative stage of a proposal, and by the amendment introduced by Senator VANDENBERG and approved by the Senate.

Beyond this point I believe that those who would turn such a program wholly over to the United Nations at this time have failed to take into account the evolutionary character of the United Nations and the present stage of that evolution. They tend to think of the United Nations as a complete, a finished creation.

The United Nations is, in fact, far from a finished creation. It is in the early stages of its development.

The framers of the United Nations Charter recognized this evolutionary character of the world organization and made provision for the early stages of its development in a number of particulars.

First, and most important, the Charter did not vest in the United Nations responsibility for making the peace treaties. Article 107 of the Charter provides:

"Nothing in the present Charter shall invalidate or preclude action, in relation to any state which during the Second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the governments having responsibility for such action."

In accordance with this provision, the Big Three, at Potsdam, established a separate organization for making the peace—the Council of Foreign Ministers.

The principal purpose of this provision is clear. It was to give the United Nations time to develop its organization and prepare itself for assuming the responsibilities of keeping the peace after the peace was made.

The provision is an example of the farsighted political wisdom and sane and realistic appraisal that are so necessary in these days of impatience and tendency to hysteria. The time of peace making is bound to be a time of difficulty. Until the peace settlements can be completed the differences in interest and ideology among the major Allies, particularly between the Soviet Union and the western powers, are in their most acute form. These differences have to be adjusted or settled by face-to-face dealings among the major powers concerned. The United Nations will inevitably find it difficult to exercise all its functions until these differences are adjusted or settled.

Let me give you an example. Until special agreements are concluded between the Security Council and the member nations the peace forces called for by the Charter cannot be brought into existence and the Security Council, therefore, cannot take enforcement action against an aggressor. Progress can and should be made now in securing agreement on the principles and framework of these agreements, but until the peace treaties are completed, and the major powers know what military commitments these treaties will entail, it will be difficult to determine how large the peace forces should be.

Another aspect of the Charter that points to the evolutionary, developing character of the United Nations as it stands today, may be found in 'ts economic provisions. The Charter recognizes that the structure of collective security is an arch founded at one end upon political cooperation and on the other end upon economic cooperation.

Cooperative action in the direction of reducing and removing the economic and social causes of war is coordinated by the Charter under the Economic and Social

Council of the United Nations. But the Charter provisions contemplate that most of the concrete, operation responsibilities will be borne by specialized agencies composed of member states and operating in specific fields. Each specialized agency comes into operation only through ratification by the member states of separate agreements establishing them and defining their powers. These specialized agencies in turn, are to be related to the Economic and Social Council by special agreements concluded between them and the council.

Here, again, you will readily see the evolutionary, developing character of the United Nations. Its whole economic structure is still in its earliest stages of creation. It may continue to develop and evolve by a process of trial and error, of natural historical growth, for as long ahead as we can foresee.

What is the present status of this structure in relation to the reconstruction of those parts of the world devastated by war and those other areas that must be developed if the standard of living of the American people and other peoples is to be preserved and raised? Organizations of a primarily advisory, technical and research character are functioning in the fields of labor, agricultural, and civil aviation and agreements have been signed by them with the Economic and Social council. This is also true of the United Nations Educational, Scientific, and Cultural Organization.

But what about capital investment in reconstruction and development? And what about agreement on the rules of the game to expand world trade? These are the economic keystones of the arch of collective security.

The International Bank for Reconstruction and Development and the International Monetary Fund are in being, but they have not yet begun to exercise their functions. No loans have been made. Agreements with the Economic and Social Council have not yet been concluded.

On the other side, the side of international trade, the Preparatory Commission of the International Trade Organization is now holding its second session in Geneva. The charter of this organization has not yet been adopted and concurrent negotiations toward the first all-round reductions of trade barriers have only begun.

The new patterns of economic cooperation that are being worked out in Geneva and Lake Success and Washington are immense undertakings that may have decisive consequences for the future peace and prosperity of the world if they are successful. There is no magic formula by which the hard political and economic realities can be skipped over in their development. They will take time and patience and persistence in the building, just as every other part of the structure of collective security.

I remind you that it is less than 18 months since the Charter of the United Nations came into force. If you will think of 18 months in the perspective of history rather than in the perspective of the editor facing a daily dead line I think you will agree with me that great progress has been made in a very short time upon so monumental a task as the organization of the world for permanent peace.

That conclusion does not, however, alter the fact that the United Nations is necessarily at present in a very early and incomplete stage of its development, in its economic functions as well as in its political functions.

Here again, this fact has a direct bearing upon the proposed program of aid to Greece and Turkey. Pending the peace settlements, pending the full operation of such agencies as the International Bank and the prospective International Trade Organization, it is essential that the United States, as a member of the United Nations, exert its full political and economic influence in support of the objectives of the United Nations wherever and whenever events call for it. In some cases that may be done to best advantage through the machinery of the United Nations. In other cases where the machinery is not yet complete, or where political wisdom indicates such a course, it may be done in other ways—bilaterally, or multilaterally, depending upon the circumstances. There is nothing wrong with bilateral arrangements that are in accordance with the Charter. They are being made every week between various members of the United Nations. Such agreements as those contemplated with Greece and Turkey can result in strengthening the United Nations and in speeding up the process of its development.

I shall return to this point later. I wish now to refer to still another and vital aspect of the evolutionary character of the United Nations.

The same summer that saw the victory over Germany and Japan and the ratification of the United Nations Charter witnessed the dropping of the first atomic bombs. The United Nations Charter does not mention atomic energy but its provisions point the direction in which the answer to the problem of atomic energy is to be sought in its relation to the over-all task of building collective security. The Charter does not set up a system for the regulation and reduction of armaments but it assigns the responsibility for developing such a system jointly to the Assembly and to the Security Council. Until such a system is established the structure of the United Nations cannot be complete.

A beginning has been made in the atomic energy and disarmament resolutions adopted by the General Assembly during its first session, in the work of the Atomic Energy Commission and in the establishment of a parallel Commission on Conventional Armaments.

Effective and enforceable systems of international control of atomic energy and conventional armaments are fundamental to the development of collective security under the United Nations. They require the utmost in persistence and patience in negotiations leading to their establishment. Because agreement has not been secured in a few months on so great and revolutionary a development in international relations is not a valid reason for despair.

Progress has been made. We have covered the first mile of the long journey and we are going forward, not backward. It is indeed remarkable and a cause for confidence that we have been able to cover the first mile at all so soon after the end of the last war and before the peace settlements have been made.

This brings me back to the doubts and fears about the future of the United Nations and about United States foreign policy to which I referred at the beginning of this talk.

These doubts and fears arise primarily from concern over the possibility of East and West cooperating successfully together. They therefore concern the basic premise of the United Nations, which was conceived and established as a world organization and not as an alliance of one part of the world in opposition to the other part.

The policy of the United States as expressed last fall by President Truman is to support the United Nations with all the resources that we possess. That policy was not lightly undertaken. The United States embarked upon that course as far back as January 1, 1942, when the United Nations declaration was signed. It has been followed consistently ever since.

In recent months we have heard increasingly the voices of those who would abandon this policy for one reason or another. Acts and policies of the Soviet Union, the missionary zeal of Soviet communism, the prolonged deadlocks between the Soviet Union and the western powers in the Council of Foreign Ministers, the repeated collisions between East and West in the United Nations, have all contributed to these rising doubts and fears about the United Nations.

They have resulted in such demands as those for the immediate abolition of the veto, as if the abolition of the veto could solve the basic problems between us and the Russians. There are demands for world government, with or without the Russians. There are echoes of the old head-under-the-bedclothes isolationism, dismissing the United Nations as futile but offering no alternative.

So long as the United Nations exists, the disagreements and rivalries of the world can be contained and conciliated within its framework.

The alternative is to destroy the United Nations and to split the world into two or more rival camps, possibly setting a course to war.

In these circumstances, if the United Nations did not exist, it would have to be created. The fundamental premise—universality—upon which the United Nations was conceived is in every way as sound and applicable today as it ever was. Improvement in detail of operation is possible and is hoped for.

Let me remind you that the Soviet Union is structurally and idealogically the same today as it was during the war. The differences of viewpoint between us were as wide then as they are today. There was in fact far less negotiation and intercourse between the western powers and the Soviet Union throughout the war than there has been since the war ended.

Even when the Soviet Union had its back to the wall and the German armies were at the gates of Moscow it was virtually impossible even to talk about plans for coordinated military activity, let along to reach agreement. There were only two occasions during the war—at Tehran and at Yalta—when there was any meeting between the Soviet and American Chiefs of Staff.

In spite of the desperate need of the Soviet Union for American military equipment, it took a whole year to organize the flow of lend-lease supplies through the Persian Gulf area, partly because elaborate transfer arrangements had to be made in order to cross from one side to the other of the iron curtain between the Soviet and Anglo-American zones in Iran. American ferry pilots were not allowed by Russia to deliver lend-lease fighter planes from Alaska across the Bering Sea to the Red Air Force even at the most critical moments of the war for Russian survival. Instead, tedious negotiations had to be completed for Soviet pilots to ferry these planes and most of the planes so sorely needed on the eastern front did not arrive until long after the decisive battle of Stalingrad.

I recall these matters because they illustrate the suspicion and distrust that separated our two great countries throughout a war in which we were both fighting for our lives against a common enemy. Is it any wonder that negotiation of the peace settlements and cooperation in the development of the United Nations has proved and continues to prove to be immensely difficult?

Today, in contrast to the war years, there is virtually continuous negotiation between East and West in the Security Council, the General Assembly, the Economic and Social Council and the Council of Foreign Ministers. In the Military Staff Committee representatives of the Chiefs of Staff of all five great powers are doing on almost a daily basis what was never once done during the war itself: Sitting together around the conference table, exchanging views and working on common problems.

It is of course true that many disagreements on vitally important issues have not

yet been resolved. Some disagreements may not be resolved for years to come. But it is not true that no progress has been made. Agreements between East and West—unanimous agreements—have been reached on many matters, including the most basic matter of them all—the charter of the United Nations itself.

The veto has been held up before the world as a demonstration of the futility and weakness of the United Nations. I call to your attention a significant development. It is a development that demonstrates the power of the General Assembly to influence the policies of nations. From February to September of last year the Soviet Union exercised its veto nine times. Public opinion was aroused. The matter was placed upon the agenda of the General Assembly and was fully discussed there. No recommendation was made to change the unanimity rule, but the Assembly did urge that every effort be made to insure that the unanimity rule not be used in such a way as to impede the Security Council in reaching a decision promptly.

Since last September the unanimity rule has been undergoing a modification in practice. Only once since last September has the veto been used. On at least seven other occasions a permanent member has abstained from voting on a proposal of which it disapproved rather than prevent passage of the resolution by use of the veto. On six of these occasions the abstention was by the Soviet Union and one by the United Kingdom.

This practice of voluntary abstention is in addition to the principle already provided for in the charter that a party to a dispute must abstain when the Security Council is acting to conciliate the dispute.

It is true that even parties to a dispute are not required to abstain when the question is one of enforcement action. I do not wish to become involved in an analysis of the veto problem, but I do wish to point out that any nation that exercised the veto in an attempt to protect itself or another nation from punishment for an act of aggression would be violating its obligations under the Charter. It would be nullifying the Charter. It would in effect be engaging in an act of rebellion against the United Nations. There is no constitution that can be written that can prevent an act of rebellion if the will and power to rebel are there.

So serious a violation of the Charter would never be committed by any member nation unless it had sufficient support among other member nations to make such a challenge with some prospects of success. The answer to the veto in such circumstances therefore lies not in amending the Charter but in the policies and strength of the member nations. If they make clear that they are prepared to act together in defense of the Charter, veto or no veto, no nation will dare to embark on a course of aggression.

Too much attention has been given in public discussion to the possibility of an act of rebellion against the Charter by a great power and too little attention to the practical measures that are being taken or prepared every day toward preventing such a contingency from ever arising.

The whole structure of the United Nations and all of the different aspects of the effort to build collective security are aimed at preventing such a contingency from ever arising. To say that the unanimity rule paralyzes the United Nations is to ignore the facts. There is no veto anywhere in the United Nations or its related specialized agencies except in the Security Council, and even there it is severely limited in its application.

The Security Council has already begun to prove its powers to conciliate and to moderate international disputes, regardless of the veto, in such cases as Iran and Greece. It has proved its power to take by unanimity such important acts as approval of the United States draft trusteeship agreement for the Japanese-mandated islands.

No veto can stop the General Assembly from recommending that the member states join in any action which the Assembly sees fit to recommend. No veto can block the operations of the Economic and Social Council or of its commissions, or of the International Bank, or any other of the specialized agencies. The whole vast effort to build the basis of lasting peace is being carried on every day and no one nation could stop that effort if it would.

I turn now to another aspect of the difficulties between the east and west. The Soviet Union is not now a member of any of the United Nations specialized agencies except the Preparatory Commission of the World Health Organization. This hesitation of the Soviet Union to participate in one of the most important phases of the work of the United Nations has been regarded by some as further evidence of the impossibility of a meeting of east and west. I believe this to be another extreme conclusion that does not take account of all the evidence. The Soviet Union is an active member of the Economic and Social Council and of the various commissions dealing with such important matters as human rights, freedom of information, economic reconstruction, and development. Furthermore, the work of the specialized agencies can be and is already being carried on effectively without the participation of the Soviet Union, for the benefit of those nations belonging to them.

I make no predictions for the future, but I believe that the hesitation of the Soviet Union to participate fully in this phase of the United Nations is merely another reflection of the great differences between the economic and social systems of the East and West, and that in the long run considerations of elementary self-interest will cause the Soviet Union to join these organizations, just as they have caused it to participate in other United Nations activities. This will be the more likely as the Soviet Union becomes convinced that the purpose of these United Nations activities is not to impose any particular economic system upon any country but to enable different systems to do business with each other on a fair and equitable basis for all concerned.

What then are my conclusions?

First. Great as the difficulties are now and may continue to be, the course of world-wide cooperation in the building of a world-wide collective security system through the United Nations is the only course that will enable any nation—the Soviet Union and the United States as much as any other—to face the future with hope.

Second. In our attitude toward the United Nations we must never forget its developing and evolutionary character nor the special responsibilities and corresponding opportunities of the United States as the strongest nation in the world to contribute to that development and influence its direction. No veto, either inside or outside the United Nations, can stop progress in the direction we wish to go, provided that we use firmly and with justice the power that is in our hands.

Third. We must use our political, military, and economic strength to the full in support of the charter and in the development of a system of collective security. Such acts as the proposed program of aid to Greece and Turkey and the assumption of a strategic trusteeship over the former Japanese mandated islands will be demonstrations to the world of the intention and ability of the United States to act in defense of peace. They will fortify faint hearts and convince doubters of where we stand. They will therefore advance the cause of collective security. In the field of economic action, we must also act to invest American capital in world-wide economic reconstruction and development and to exert American influence to the full in the reduction of barriers to an expanding world trade, and in the development and use of United Nations agencies for economic cooperation.

Fourth. We must press on for the development of effective, enforceable systems of international control of atomic energy and conventional armaments. Both are essential to collective security. We must never give up trying to secure unanimous agreement upon these issues. In the meantime we must maintain our own military strength. If we fail to do so we shall weaken our own influence and therefore diminish the chances of agreement. Few acts could be more damaging at this stage in history to the cause of collective security and of ultimate disarmament than ill-considered reductions in our budget for national defense or failure to establish a universal military training system.

Fifth. We must make sure that America continues to be a symbol of freedom and fair dealing for all the world. In our relations with the Soviet Union as much as with any other country we must demonstrate by our acts that we do not desire to dominate or threaten any nation or to interfere in its own chosen way of life. We desire to act in defense of the freedom and security of all nations, large as well as small, and to live in friendship and mutual respect with every nation so long as it does not interfere with the rights of other countries or the liberties of other peoples.

The Legal Challenges of the Atomic Age

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, the text of an address which it was my pleasure to deliver before the annual banquet of the Law School of the University of Wisconsin in Madison on Saturday, April 26.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LEGAL CHALLENGES OF THE ATOMIC AGE

I am indeed grateful to have the opportunity to address this distinguished assemblage.

I find myself in a challenging position, faced by classmates of 40 years ago and by Justices of the Supreme Court—who, I might almost say, on occasion "would not listen to reason" in the past when I appeared before them; and by judges and governors and senators of the future.

Now, if ever, I should like to reminisce for a few moments with old classmates. And, too, I would like to "tell the Court" one or two things for which I won't be held in contempt.

For the younger lawyers, perhaps, I may be able to say a few words that may help to inspire these embryo statesmen and jurists in the wonderful profession they have chosen.

Now, my friends, just how would you face a situation such as this? Way back when we were kids on the campus, we were taught

to face our problems with faith unbounded. Anyway, I am grateful that the situation doesn't restrict my freedom of expression, as the court has done in the past. So here goes.

This is a homecoming to me. I am grateful that after 40 years, I am able to comrade with old friends and enjoy the privilege of making new ones. I have been indeed blessed.

HUMILITY BEFORE OUR PROBLEMS

At the start, I might recall for the benefit of the young barristers present, this incident told by one of the old practitioners who taught us. We used to ask questions that the professor couldn't answer, and, accordingly, some folks indicated surprise at his apparent lack of knowledge. I remember this explanation from the teacher:

"A lawyer isn't one who always knows. If he always knows, he is either a darn fool or a darn liar, and he will make a poor counsel. Don't be ashamed to say 'I don't know.' In fact, you will be fortunate if you know even after you have spent time to look up the proposition."

That advice, I believe, is more pertinent today than ever before. In years of practice, the successful practitioner finds that while some folks seemed surprised when he doesn't know, and says that he would be glad to look the matter up, he also discovers that what this old professor said was true. It is a fact that a lawyer or anyone else who always knows the answers is generally an unsafe person to follow, and folks usually find him out to be unsafe.

SPIRITUAL WITHDRAWAL FROM DAY-TO-DAY PROBLEMS

Here is another suggestion which came to us in law school years ago. It follows the idea of a recent psychologist, but it was given many years ago. It is this: Every day, take at least 15 minutes apart from your work and profession. Lose yourself in reading the greath truths in the Bible, in listening to good music, in reading good books or poetry, as President Wilson did. Do your Boy Scout good deed. In other words, get apart from your law and you will be a better lawyer, because such action clears your brain and you will be better able to see your way. By seeing your way, an old practitioner said, you will be able to see the issue clearly and then prepare your case accordingly.

This same wise counselor gave us three other vital guideposts for life:

(a) Develop a sense of humor. Be able to laugh at yourself and with other people.

(b) Develop a good disposition. It oils the wheels of everyday life, making for friends and clients and saves you from resentment and jealousy.

(c) Seek common sense (which includes faith). It will solve more problems than mere ability or great talent.

Man does not live by bread alone, and wise is the lawyer who realizes that he doesn't live by or for his law business alone.

RESPECT OF CALIBER OF LEGISLATORS

Wise is the lawyer, too, who respects those who have attained judicial position, or others in public office. I know it is easy sometimes for someone to question the caliber, for example, of men in the law-making branch of Government. I am not referring to questioning the caliber of any one man but rather the caliber of legislators as a whole who seem at times to fumble the legislative ball, to be slow of action, and to have other faults.

It is still easier to doubt the caliber of any one given man. On this point, I remember that several years ago, a couple of Senators were talking and one stated: "I wonder how so-and-so (and he named a Senator) ever got to the Senate." The man referred to was an unassuming fellow, talked little, apparently accomplished little. The other Senator answered: "You can't tell by the splash a frog makes, how far he can jump."

My friends, the truth of the second Senator's observation was later proved. When a very significant matter came up for discussion, the unobtrusive legislator took the floor, talked quietly and outlined the subject with few but adequate words, and sat down. In other words, he had said everything there was to say on that question and had said it brilliantly. There were no verbal pyrotechnics on his part. He demonstrated then how he came to the Senate.

It seems to me particularly important that we in the legal profession be the first to respect our brothers in the law-making branch of Government and be the first to recognize the value of quiet, conscientious work in the Halls of Congress, regardless of political faith. Again, I am not referring to any one man, but rather to the principle—to standards which I believe we might all follow—standards of sincere labor, of unassuming toil.

Those standards are, I believe, common sense ones.

What the Senate needs and what business needs and what every segment of our society needs is good judgment or, as Dooley called it, common sense. And, as Dooley said of common sense, "they call it common but it's the scarcest commodity on the market."

WORK OF SENATE JUDICIARY COMMITTEE

Common sense is what we try to use on the Senate Judiciary Committee.

It has been suggested to me that you might like to get a view of the activities of our committee. Consequently, if no one will accuse me of devoting too much time to a subject with which I am personally concerned, I will make a few comments concerning the committee.

To begin with, the committee was 130 years old on December 10 of last year. Of course, the members of the committee are all very young and vigorous, but at least the committee itself has an historic and impressive background.

EFFECTS OF REORGANIZATION

Under the Legislative Reorganization Act, the Judiciary Committee is concerned with some 18 specific subjects—subjects such as Federal courts and judges, constitutional amendments, bankruptcy, patents, immigration, unlawful restraints of trade, civil liberties, claims, revision and codification of statutes of the United States, and so forth.

I am told that under the Legislative Reorganization Act of 1946, the jurisdiction of the committee in terms of the number of bills considered has skyrocketed 600 percent.

Despite the fact that there are 15 standing committees of the Senate, almost one-third of the bills introduced to date funnel to this committee.

Prior to the Reorganization Act, the Committee on Claims had 13 Senators, the Committee on Immigration had 14, the Committee on the Judiciary had 18, and the Committee on Patents had 8. That makes a total membership of 53 Senators, but under the present set-up the membership on the committee has undergone a kind of legislative dehydration and has been reduced to only 13 lawyers, despite the fact that the jurisdiction has been tremendously increased. (Of course, 13 lawyers arguing together can probably make about as much noise as any 53 laymen.) You will observe, too, that we have an odd number so that we can ultimately arrive at a decision.

At times it may appear that we are in the situation which is reported to have prevailed on an occasion when a circuit judge impaneled a jury consisting of 12 lawyers. After hearing the evidence in the case, the jury retired to consider their verdict. After the jury had been in deliberation continuously for 48 hours, the judge became impatient. He sent a messenger to the jury room inquiring as to the status of the jury's deliberations. The messenger returned with the following report: "We are in our fourth nominating speech for foreman."

There are five standing subcommittees and several special subcommittees which we have found essential to efficient production-line committee procedure.

WORK ON PORTAL-TO-PORTAL BILL

The committee has considered a number of extremely important measures. Portal-to-portal legislation—a legislative dike against the economic chaos of a $6,000,000,000 flood-tide of suits—for example, has been one of the most important measures to emerge from our committee. As an illustration of the amount of hard-hitting, day-to-day work necessary to produce an involved bill of this character, I might point out that the subcommittee on this proposal held some 35 meetings, 15 of which were necessarily night sessions. There were 11 days of hearings, and the full committee met 8 times to consider the subcommittee reports.

In addition to all of the foregoing, the conferees of the House and Senate found it necessary to meet for a half dozen sessions. The hearings on this bill ran to 828 pages of solid type. Probably it was no more than proper that in its consideration of portal-to-portal legislation the subcommittee itself constantly worked unpaid portal-to-portal overtime sessions.

I mention all of the foregoing only to illustrate the extent of the legal spadework involved in producing a bill of this character. What is infinitely more important is the degree of sincerity and understanding which any committee endeavors to bring to a given problem such as the portal-to-portal problem.

Another noteworthy measure which passed the committee was the constitutional amendment seeking to limit the Presidential tenure.

This amendment, incidentally, has since been ratified by approximately one-third the States necessary for final ratification, including Wisconsin.

HANDLING OF OTHER BILLS

Another important and very involved measure which was initiated and passed by the Senate Judiciary Committee was the First Decontrol Act of 1947. In this connection, I might point out that the committee is currently engaged in a further study of the Alice-in-Wonderland maze of wartime and emergency controls, regulations, powers, and authorities which may be terminated. Fortunately for all of us, we do not have the time here today to discuss the many categories of bills which are pending before the committee, but I can point out in passing that a number of them deal with important constitutional amendments and others affect virtually all of the jurisdictions under the committee which I have previously mentioned.

WORK IN SCREENING NOMINATIONS

Of course, another function of the Judiciary Committee is to pass on the nominations of United States attorneys, United States marshals, United States district judges, and even United States Supreme Court Justices.

It may be of some interest to the young law graduates here today to know that these appointees to Federal judgeships particularly are screened with a great deal of care by the committee. A Federal judge, like Caesar's wife, must be above suspicion. It has long been a strong belief of mine that the American Bar and the various State bar associations should be consulted with reference to the judicial qualifications of candidates for such an important lifetime post, and consequently, if I may again be pardoned a personal reference, we initiated the policy of securing the comments of the American Bar Association and of the various State bar associations with reference to the various

judicial nominees. It has also been the policy of the committee to require an FBI investigation of such candidates.

Aside from a complete soul-searching scrutiny as to the legal learning and the integrity of the individual concerned, the committee likewise has been very concerned with the political philosophy of the nominee. I qualify this by saying that I do not mean the political philosophy of the nominee in the narrow terms of party labels but rather in the broader terms of what the nominee's political, social, and economic beliefs are as they relate to our constitutional system and to our judiciary.

I trust that all the embryo lawyers here today will bear in mind that they may some day be candidates for a Federal judgship and that nominations for such high office will undoubtedly involve a close scrutiny of their college activities, including reports on any moot court night sessions which may have been conducted at Picnic Point.

Accordingly, it may be appropriate to suggest to all aspiring young potential judicial nominees here that they live a life of circumspection and decorum on the campus.

COMMON SENSE IN FACING OUR CHALLENGES

I believe that advice is just the sort of common sense on which I have previously commented. Our big problem is, of course, to apply common sense to the tremendous challenges we face in this atomic age.

I need not point out to you, who recognize them so well, the responsibilities which have been placed upon our country in this new era that we have entered, following the historic utilization of atomic energy at Hiroshima and Nagasaki.

The legal profession—more so I believe than every other profession—is confronted by the dynamic realities of this age—realities which require it to become, as never before, a constructive force for good, for domestic and international understanding, for domestic and international encouragement of the forces of progress and liberty.

Just how may the legal profession meet the challenges of the atomic age? I should like to list but a few simple means. More will occur to you, I am sure.

1. Higher standards for the individual practitioner

The most obvious one occurs to us all.

It is the practice of our profession with higher standards than even the splendid ones that we have practiced before with a keener sense of our ethical responsibilities, with a respect for our colleagues and for our judiciary to which I have already alluded.

2. Availability of legal sources

It seems to me that a second way by which we may meet the challenges of the atomic age is to insure the ready availability of our legal sources. I believe that both layman and lawyers have often confronted the fact of the vast disorganization of our legal references. They are scattered among innumerable sources and because they are scattered, our own work is slowed down, often undergoes needless duplicate checking, and the layman feels a still greater sense of confusion before the profession of law than he would otherwise feel.

In order to assure the organization of sources of law, I have taken several steps, as chairman of the Senate Judiciary Committee. I have, for example, introduced Senate Joint Resolution 69 for the preparation of a new edition of the Annotated United States Constitution. The last such edition was prepared in 1938. In its over 1,000 pages were to be found the interpretations of the Supreme Court of each clause and paragraph of that document, which you will remember Gladstone called the most wondrous work ever struck off at a given time by the brain and purpose of man.

3. Repeal of legal deadwood

Another step which I have taken is to introduce bill S. 1120. This bill would repeal some 53 obsolete laws. Subsequent bills which I will introduce will seek to repeal as many or more obsolete laws in one swoop. It will be ideal if we can possibly repeal at the rate of a law a day or two laws or more a day, as the case may be, for as long as this Congress is in session.

My over-all purpose is, of course, to begin to clear our statute books of the vast amount of legal cobwebs which delay efficient legal work.

Toward this objective, I have invited the cooperation of all of my colleagues in the Senate and House and all of the executive agencies in locating other statutory deadwood and in cleaning it out.

I feel sure that I can count on the able support of the American legal profession and, in particular, of the American Bar Association in this endeavor, based upon previous reports to me and warm assurances of eager assistance.

Need for House Cleaning

Repealing obsolete laws is no mere negative activity; it is constructive in that it reveals the core of current law free from the surrounding mass of outdated statute.

Too long have we been so intent on passing laws, with the result that we have often completely lost sight of obsolete statutes which have grown in number to staggering proportions. I believe it should be the continuing responsibility of our executive agencies to winnow out outdated statutes within their jurisdiction and report them to Congress for repeal.

I have always felt very strongly that the particular function of the Committee on the Judiciary is not merely to grind out new laws which are necessary. It should also be the function of the Judiciary Committee to initiate a thorough legislative housecleaning. This I propose we do, beginning now.

This attempt to houseclean our statute books is not the first such attempt, but I, for one, propose to follow it through to the limit of my ability.

Lack of Laws' Coordination

The average practicing lawyer today must devote an extraordinary amount of time and energy in search of the law. The Federal Statute Law is lodged within the pages of 59 heavily bound volumes and a sixtieth volume is ready for binding.

These volumes, the Statutes at Large, are today the basic Federal statutes available to the public. They have continued in substantially the same form down to the present time and contain in chronological order all public acts, resolutions, private acts, and treaties. Publication of those books did not begin until 1845.

A formidable barrier to the successful solution of law problems is presented by Federal law, as administered, to the extent that the task of finding the correct statute to fit a point in a case is very difficult. Each succeeding session of Congress adds confusing numbers of statutes and increases the burden.

4. Need for codification of United States law

Actually the remedy for this disorganized and burdensome state of Federal law lies in an enacted codification, the fourth device by which we can be adequate to our challenges. Statutes must be assembled and codified so that order, coordination, and logical sequence will result where there is now only disjointed bulk and obscurity.

The dean of law at one college last year rightly asked whether a nation could call itself truly civilized when its law could not be located, much less stated by experts.

The Congress has taken no action to enact a general codification of the Federal laws since 1874. By the act of June 20, 1874, the Revised Statutes of the United States were authorized to be published and the first edition was officially published on February 22, 1875. Section 8 of the act stated that the revision was to be legal evidence of the laws and treaties therein contained. By act of March 2, 1877, a new edition of the Revised Statutes was authorized but not enacted, and this edition was published on February 18, 1878. Thus, the Revised Statutes are the only complete enacted codification of the Federal law in existence.

Separate Codifications

Separate fields of the law have been codified, such as are exemplified in the Criminal Code, the Judicial Code, the Internal Revenue Code, the Nationality Act.

United States Code

The United States Code, a codification of the general and permanent laws of the United States in force December 7, 1925, was authorized by act of Congress June 30, 1926. The compilation of this code was a tremendous task—ably accomplished. It has served a noteworthy purpose, and has been invaluable to the lawyer in his search for the Federal law.

By the terms of the act, however, as found in section 2 (a), the matter set forth in this code are only prima facie, the laws of the United States. It still remains for the lawyer to prove the statute upon which he rests his case, should there be a failure of judicial notice or objection to the admission of matter set forth in the code. That points out one of the shortcomings of the United States Code as it is now constituted. The remedy again is a complete codification and recognition of all Federal statutes as the law of the land as of a date certain to be designated in the creating act.

Future Judiciary Committee Action

It is my hope that the Committee on the Judiciary some time before the end of the year will be able to make some conclusive recommendation to the Senate respecting the complete codification and legislative recognition of all Federal statutes.

5. Coordination of legal work

The fifth great means by which I believe the legal profession can be adequate to the challenges of this atomic age, is through the coordination of the finest legal talent in public and private life, of National, State, and local Governments, in order to insure an interrelated harmony of national, State, and local law.

During the Seventy-ninth Congress I introduced a resolution for the creation of a Federal-State Relations Committee. I expect to reintroduce this resolution. I do not know if it will pass, but I feel that if it can help in a small way to indicate the vital interrelationship of our so-called levels of government, the need for them to iron out conflicting sections of tax law, to take an example, then it will have served its role.

I believe that the record of our State governments, in particular, in cooperating in legal coordination is one to be applauded and vigorously encouraged, but we know that there is still vast room for coordination of legal effort.

Insofar as possible we want domestic problems to be solved at the State and local levels rather than at the national level.

6. Legal emphasis on decentralization

I have referred now to phase 6 by which the legal profession can meet the challenges of the atomic age: It is to devise adequate laws by which the trend toward centralization in government may be halted and reversed. From every quarter there are claims that local and State laws on given problems are inadequate. In many cases they are, but the answer to their inadequacy is not the passage of Federal legislation that will attempt to deal with 48 disuniform States—disuniform economically, politically, racially,

religiously, socially—but improvement in State and local legislation so that it fulfills the standards of the atomic age.

There is no reason why anyone in these times should expect that a millenium can be brought about through legislation from Washington, D. C. The grass roots of America have enough wisdom and common sense to handle their own problems, assuming particularly enlightened leadership in State capitals.

I hope that we may be excused our pardonable pride when we say that it is to our State capital of Madison that the people of Wisconsin have always looked and should always look primarily rather than to the National Capitol at Washington for assuring the continued progress of our State.

This seems to me particularly true as we look forward to our centennial next year—a centennial which I feel certain will be not a mere historical review, splendid as that objective is, nor a mere taking of pride in the record that we have made so far, but the inauguration of a new era of progress and plenty in industry and agriculture for the Badger State.

CONCLUSION

Gentlemen, I want to thank you for your patience in listening to the somewhat extended comments on this variety of legal subjects involved in the general challenges to us in the atomic age.

It has been a pleasure to submit these comments to you, and one which I will long remember with other memories of contact with members of the bar throughout my years as a law student and as a practicing attorney.

Being present with so vast a number of distinguished jurists and jurists-to-be, I feel renewed confidence that America's legal profession will indeed be adequate to its challenges.

The Indian Question

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, in the issue of the New York Herald Tribune of March 2 last appeared an article by Mr. Ansel E. Talbert discussing the Indian question. As this is such an important question in my State, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIAN WAR HEROES LEARNING WHITE MAN HAS SHORT MEMORY—MUCH OF THEIR LAND TAKEN FOR MILITARY USES, TRIBAL LIFE DISRUPTED BY CONFLICT, THEY FACE ECONOMY DRIVE TO CUT HEALTH AND EDUCATION SERVICE

(By Ansel E. Talbert)

Friends of the American Indian are more fearful for his progress today—despite his brilliant war record—than at any time during the last quarter century.

It was within this period, with the aid of improved Federal health, educational, and other services, that the Indian ceased to be the vanishing American and became the fastest increasing racial group in the United States. In 1924 there were only 250,000 Indians in the Nation, today there are more than 340,000, and the full-bloods have been increasing more than 1 percent a year.

During the decade before World War II, the Indians' total holdings of land ceased to decline and for the first time since the landing of the Pilgrims, began to increase. The per capita income and general economic status of the Indian grew better yearly.

Today, however, there are influences and conditions which it is feared may reverse the trend. Students of Indian life say that the war caused the greatest disruption in 100 years. Many Indian families moved to centers of war industry where serious overcrowding and inadequate educational facilities prevailed.

The shortage of gasoline and transportation during the war made it necessary to close a number of schools for Indians. More than 500,000 acres of land passed out of Indian ownership during the war to be turned into air bases, gunnery ranges, and bombing-practice areas.

During the last few days in Washington, Senator WILLIAM LANGER, of North Dakota, who heads the United States Senate's Civil Service Committee, has attacked the entire Indian policy of the Government.

For reasons of economy, Senator LANGER, an indefatigable foe of appropriations for national defense in the past, now proposes to cut appropriations for the Office of Indian Affairs. He would eliminate the Indian tribes from Federal supervision and aid and thrust the problem of Indian progress back on the States.

By coincidence the matter comes to the fore at a time when the American Indian is being congratulated for his superb war record and when the War Department is considering the formation of units of native scouts in Alaska and of special military units of Aleuts in the Aleutian Islands. A short time ago when this correspondent was visiting Adak, Col. A. M. Guerney, commanding officer of United States troops there, informed him the Aleuts were "the best sailors in the world."

Colonel Guerney disclosed that on the basis of performance of native Aleuts in taking all kinds of craft into isolated harbors regardless of weather, he had recommended the formation of a special Aleut unit to aid United States operations in the Aleutians.

There is nothing new in the courage of the American Indian in warfare and his usefulness to the Army and the Navy. The United States Military Academy at West Point had its first full-blooded Indian graduate early in the last century and a number have graduated since. One of the South's military leaders in the Civil War, Brig. Gen. Stand Watie, was a full-blooded Cherokee commanding Texas troops.

FATHER AND SON KILLED

The first American general killed in combat during World War II was Maj. Gen. Clarence L. Tinker, of Osage-Irish descent. General Tinker, who spoke the Osage language fluently, was killed June 6, 1942, leading a flight of Army Air Forces bombers against the Japanese at Midway. His son, Maj. Clarence L. Tinker, Jr., was killed in action a year later leading his fighter squadron in north Africa.

One of the Navy's outstanding air commanders in the Pacific, Admiral Joseph James Clark, whose fast carriers struck the Japanese islands of Iwo Jima and Chichi Jima in the Bonins during the final assault on the Japanese Empire, is of Cherokee extraction.

One of the most active American guerrilla leaders in the Philippines during World War II was Lt. Col. Edward Ernest McClish, a Choctaw, who graduated from Haskell Institute for Indians in 1939 and from Bacone College 2 years later.

Sent to the Philippines in 1941, Colonel McClish was in the hospital recovering from wounds when the American forces on Luzon and at Corregidor surrendered. He escaped and organized a guerrilla army of Americans and Filipinos on Mindanao, which by September 1942 consisted of 300 soldiers with 150 rifles and 4 machine guns.

By the spring of 1943 this force had grown to an entire division, the One Hundred and Tenth, with a full-strength regiment in each of the three eastern provinces and a fourth started. He joined forces with several other guerrilla groups and participated in 350 encounters with the Japanese before contact finally was made with General MacArthur's forces invading the Philippines.

Two Indians won Medals of Honor, the highest award for valor, during World War II. They are Lt. Ernest Childers, a Creek, and Lt. Jack Montgomery, a Cherokee. Thirty-four won the Distinguished Flying Cross.

In the spring of 1945, besides officers, there were almost 22,000 Indians in the Army, almost 2,000 in the Navy and more than 700 in the Marine Corps. Private First Class Ira Hayes, a Pima of Arizona, was one of the six marines who raised the American flag on the summit of Mount Suribachi, on Iwo Jima.

NAVAHOS IN FORTY-FIFTH DIVISION

Oklahoma's Forty-fifth Division, which fought in Sicily and Italy, had many Indian volunteers in its ranks. Its communications men were Navahos, who were able to keep secret, without coding, battle orders given by radiophone through the use of their native language. The Germans, Italians, and, so far as has been determined, everybody else, found the language incomprehensible.

In addition to the military, the Indian has made many contributions to modern civilization, including tobacco, rubber, potatoes and corn; Indian medicines in general use include quinine, cascara, witchhazel, and arnica. Many students hold that the form of the American government was suggested to Jefferson and its other founders by the Iroquois Confederacy, which was in existence for two centuries before the American Revolution.

A number of organizations interested in the welfare of America's original inhabitants are organizing a fight against any cut in expenditures for health and educational facilities for the Indians.

Their leaders are of the opinion that the Indian has shown what he is able to accomplish in many fields if he gets a chance and they are determined to see that he get it.

Program of the Congress

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. IVES. Mr. President, on April 25, in New York City, an address was delivered by the distinguished junior Senator from Connecticut [Mr. BALDWIN] before the Yale Engineering Association. Not only was it a splendid address, but it dealt very directly with the problem which is now before the Senate. I have asked permission of the Senator from Connecticut that it may be placed in the RECORD. Having obtained his permission, I now ask unanimous consent that the address be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to be with you. I know something of the speakers who have addressed this association in the past and so consider myself distinctly honored to be asked here tonight.

We, in the United States Senate, have had some vexing and serious problems to consider in the past 4 months. I believe the record so far has been a good one. We have kept a schedule equal to that of most preceding Congresses, though we may not have equaled the speed acquired during certain periods of the 1930's when legislative bills hardly slowed down in their rapid circle from the White House to the Capitol and back to the White House.

We have passed some 30 bills of minor importance to the Nation as a whole and several bills of major importance.

In my opinion, if this Congress accomplished four tasks wisely, its record will be outstanding. If, before the end of the session, we have provided substantial reductions in Government expense and so reduced taxes. If, by the end of the session, we have provided legislation that will actually get houses built. If we have substantially contributed to the maintenance of world peace, and if we have contributed to industrial peace by farsighted, objective legislation that will increase production and so lower prices, we can leave Washington feeling the American people are satisfied with a job well done.

I had planned to talk with you tonight about certain aspects of each of these four major issues—and I shall do so briefly—but in view of the fact that we are now dealing with labor legislation, I would like to concern myself largely with that question.

Most of us pledged before the elections in November that we would do all in our power to reduce Government expenses and taxes. Let me assure you here, tonight, that reversing a 15-year trend of free and easy Government spending is not a simple task that can be accomplished overnight. Trying to find and eliminate needless Government services and unnecessary Government employees is a little like trying to pin down a drop of mercury on a waxed floor. Particularly when, as in this case, the mercury is not inclined to be cooperative. However, I do believe we will be able to accomplish some substantial initial steps in the right direction. To do that, however, we will need the cooperation of all the American people. There is, whenever the question of an appropriations reduction comes up, a tendency for the group immediately affected, to insist, and even demand, that that particular appropriations not be touched. The same group may be clamoring for a drastic general cut in spending. This factor does not add to the ease with which reduction of Government expense is accomplished.

Insofar as maintaining the world peace is concerned, perhaps the major test in this session has already been encountered in the question of aid to Greece and Turkey. This question opened our eyes to a good many facts. The reaction of many people was, that, in some way, the United Nations, should handle the matter. Unfortunately, I believe we had all been oversold on the United Nations. By that I do not mean we had been oversold on its necessity or its great possibilities. We had been oversold on its powers. We did not realize, until this question came up, that in such a crisis the United Nations is hampered by a lack of funds, a lack of effective machinery, and the existence of the veto power.

I believe the original statement of the proposal, to some degree, improperly ignored the United Nations. Senator VANDENBERG'S amendments effectively changed the spirit of that original doctrine.

It has been curious to watch the strange reversals of opinion in this country on this question. It has been curious to watch the strange alliances the argument has created. Some of those people who most violently castigated isolationism in 1939, and particularly after the collapse of the Russian-German pact, are today most vociferous in their demands that the United States should not meddle in foreign countries. Then there are those who still believe, as they always have, that isolationism and appeasement are possible.

It was also interesting to observe the objections to the policy of the United States in the United Nations Security Council. Russian representatives insisted that the matter should be referred to the United Nations. Yet, as I recall, Russia followed a program almost identical to this one in Yugoslavia, Poland, and other countries, and so far as I recall, did not refer the matter to the United Nations in any instance.

While I am firmly convinced that we must, and can, deal peacefully with the Soviet Union, I believe we must draw the line somewhere. We cannot retreat all across Europe allowing and condoning what in effect is an aggression, an aggression of an ideology not wanted by most of the peoples involved.

This action has made clear the necessity for immediate strengthening of the United Nations. If we are to give lip service only, to that organization, then we must build and spend immediately in preparation for another war. Will it require another war to teach us the necessity of strong international organizations? Being the most powerful nation in the world today, we have a particular responsibility to see that the United Nations is more than a figurehead for peace. We have an obligation to make it a working machinery for peace. We cannot make it that unless we give it powers and authorities that will make its effective operation possible.

I can assure you that the Senators who passed this bill for aid to Greece and Turkey were a sober, thinking, worried group. I was particularly impressed in watching, one day, a huddle of Senators talking most informally, on the floor, ignoring for the most part Senate formalities and, so far as I could see, entirely ignoring individual interests. One of the men involved had lost his son in this war. Another had been in the midst of the fighting himself. In that discussion there was no question of developing private oil interests; there was no question of getting more votes in the next election; there was no question of propping up the Greek King or an undemocratic Turkish Government; the only question each man had in his mind was, "Which way lies the best hope for peace?"

I believe this bill was passed in the solemn unselfish belief that this way is the best hope for peace. This Greco-Turkish crisis has proven that one's responsibilities are really only beginning.

The third major issue about which we are concerned is housing. For more than 2 months I have, myself, been concerned with a housing bill which I am about to introduce in the Senate. As a result of long conversations with builders, veterans, housing experts, and plain citizens, I am acutely aware not only of the serious housing shortage among veterans but the great difficulty of solving that shortage. Almost everyone I talked with knew at least two or three ways that houses could not be built, but very few could offer any constructive program. My own bill provides a Federal-State subsidy. I have not arrived at that plan lightly because I do not like spending large sums of the taxpayers' money. But I see no other way of providing houses to be rented or sold at prices the veteran can pay. This emergency is the result of a long period of inadequate building. It is not to be solved so easily as the meat shortage or the shortage of white shirts. I am not sure that my bill is the best that could be evolved. I am sure that it will build houses.

Discussion has now begun in the Senate on a labor bill which may turn out to be the most controversial issue before this session of Congress. I would like to briefly go into the history of labor relations before discussing the bill.

Prior to 1900, the matter of labor legislation was not a leading national issue. Our country was still expanding. It had not reached its present status of great industrialization. Consequently, disputes between labor and management were largely local affairs, though already the pursuit of collective security had begun under the Knights of Labor and the growing American Federation of Labor. Strikes were not unknown. Some, like the Pullman strike, were reminders to the Nation of the growing dissatisfaction among the laboring people.

Strikes that were called during this early period of American unionization were bitter and bloody. It was such strikes as the Danbury Hatters strike, the Homestead strike, the miners strike in 1919, and the Pullman strike, that gave birth to some of the bitter differences between management and labor which have not been forgotten to this day. Those were the days of simple and direct remedies. Federal troops and injunctions, combined to break labor's demands for proper working conditions. In some cases, these strikes turned into, what in effect, were small civil wars, and like the Civil War, they were slowly, painfully forgotten. No permanent solution was reached. Management felt that labor was becoming unreasonable and must be suppressed—by force. The struggle only made labor more determined to win regardless of the cost.

The Clayton Act of 1914 sought to ease the difficulties by defining labor as not being a commodity and hence not subject to injunctions under the antitrust acts. The courts succeeded in defeating the purpose of the bill.

In addition to the injunction, Federal troops and the courts, employers had other weapons to prevent union activity—black lists, espionage, and yellow-dog contracts. Under such conditions, labor stiffened its determination. Membership grew until by 1920, unions had gained considerable strength in industries such as mining, construction, printing, and railroads. But by and large, labor organizations were still weak.

Between 1920 and 1930, prosperity in this country caused a reduction in the membership of trade-unions. That decline continued through the early years of the depression, until by 1930 the total union membership was estimated to be not much more than 2,500,000.

It was not until the Norris-LaGuardia Act, which in effect stopped injunctions against normal union activities, that unions began to flourish.

The public had become aware that the labor problem was a public problem. Soon the Wagner Act, or National Labor Relations Act, was enacted to prevent employers from intimidating, interfering with, or discriminating against employees because of union activity, and to put the obligation to bargain on the employer. Then the Fair Labor Standards Act outlawed child labor and set minimum wages and hours for work. This policy of encouraging labor and unionism has brought the strength of union membership to somewhere near fifteen million. This recent period in our industrial history has created labor as a power of great political, social, and economic significance in this country. Again, the struggle has not been a peaceful one. Any such rapid growth is likely to bring with it certain abuses. Together with their power in dealing with employers, has come the union's power over

the members and the power to injure innocent bystanders.

Our problem and our purpose should not be to destroy the rights labor has won. Rather, the purpose of labor legislation should be to prevent powerful unions from using that power to commit injustices against their own members and, against the community, against industry.

I have heard a lot about the mandates handed down in the last election and I am sure you have. I believe the mandate from the people was simply a desire for a change from conditions they did not like. Among other things, they believed that high prices and shortages were being caused, to some degree, by labor disputes that were interrupting production. They hoped that new labor legislation would help correct this situation.

But not all of us mean the same thing when we talk about labor legislation. There are some who, in speaking of adequate labor legislation, mean no legislation guaranteeing labor's rights, or at least no more than we had in 1920. There are others who, in speaking of adequate labor legislation mean maintaining exactly what we have. There is a third group, and I think that includes most of us, who, in thinking of labor legislation, think in terms of sound, long-range planning which excludes entirely the radical desires of either of the former groups.

I have had people tell me that we should repeal the Norris-LaGuardia Act, repeal the Wagner Act, and repeal the Fair Labor Standards Act, so that we could have industrial peace. If we did those things, I am sure we could have industrial peace for a time—at the point of guns. I am not prepared to see rights of any group in this country so treated that they can be kept peaceful only by force. A forced peace is no peace. There are those, on the other hand, who have told me we must not touch any of our present labor laws. Yet many of them will admit that certain unions and certain union leaders have taken advantage of those laws to the harm of the general public. Again, I do not propose to see this country allow any group to so use its monopolistic strength that the welfare of public good is frustrated.

I believe, rather, we have to work toward constructive legislation that will have in it none of the violent swings that occurred between 1920 and 1947. It is time that management recognize certain rights and privileges of labor and of the public. It is time, also, that labor recognize certain rights and privileges of management and of the public. I am optimistic enough to believe that we can provide industrial peace if we quit swinging to violent extremes.

These past 15 years have changed this country, and don't forget, that these 15 years have changed all of the country. The public has become more aware of the problems of labor. To try to return to the 1920's would, I am sure, be most unsatisfactory except to those pessimists who live in the dream world of bygone days—while waiting for their Maker to relieve them of the pain of realities.

Now, as a purely practical matter, let us see what would happen if we decided that we should enact, in this session of Congress, labor legislation that sought to repeal most of the gains labor made during the past 15 years.

If such a bill passed the Congress, it would then go before the President of the United States. The President would, very likely, veto the bill. It is unlikely that a veto would be overridden. The net result would be no change in our labor legislation. That effect would defeat our purpose and satisfy no one. If, on the other hand, such labor legislation did by some chance become law, what would the result be? Labor has had a heady taste of freedom and an overdose of power. Does anyone suppose that the laboring people of our country would return quietly to the place they held in society 25 years ago without protest? The result would rather be a wave of strikes and industrial warfare such as we have never seen in this country. Production would come to a halt. Shortages would increase. Prices would skyrocket. The people would violently object. The net result would be that in 1948 a new set of laws, even more unpalatable to management than the existing ones, would be quickly put on our lawbooks.

Those are the simple facts of this case. Without taking either side, any practical man should realize that an employer who believes he can put labor back to where it was 50 years ago is deluding himself, wasting his time, and heading for further labor trouble. He is contributing to his own loss of rights and to an eventual increase in labor powers.

We have an opportunity now to deal with this problem realistically. We have an opportunity to stop the violent swings of labor legislation. Let us consider some of the conditions that appear to require correction. Before blanketly condemning these corrective measures, I hope both labor and management will carefully scrutinize the specific provisions. If both object, perhaps the bill is indeed promising.

Certain practices that grew out of the Wagner Labor Relations Act received particular attention from the public. One of these was the closed shop. Both jurisdictional strikes and secondary boycotts have caused ill feeling, particularly since the actual relationship between the management and the employees of the company directly involved has nothing to do with the strike.

Demands have been made that industry-wide bargaining be outlawed; mass picketing be made illegal; supervisors be barred from collective bargaining rights; that union shops be outlawed; that injunctions be permitted; that all Communists be barred from unions; that strikes in public service industries be made illegal, and so on.

Comparatively few people, with whom I have talked on this matter, have been able to make specific criticisms of proposed legislation or specific suggestions for better legislation. This is most unfortunate because in building up farsighted, progressive legislation to keep labor-management peace, and so allow greater productions, we have to examine specific legislation. We cannot deal in generalities.

Let us consider, briefly, the bill agreed on by the Senate Committee on Labor and Public Welfare. I don't agree with this bill in all details, but I do believe it is a long step in the proper direction. I do not believe the President could conscientiously veto it, and I do believe it would stop certain abuses on the part of certain unions and leaders without disturbing the fundamental rights and privileges of either labor or management.

In this committee bill, the right of collective bargaining is reaffirmed. Certain procedures are outlined and certain methods of selecting representation are prescribed. The National Labor Relations Board is maintained with certain changes—seven members are provided instead of the present three. The review section is abolished but will—in effect—be reestablished under each of the seven members. The purpose of this is to prevent the review section from becoming a policy group. An independent Federal Mediation Service is created. In this bill, industry-wide bargaining is not mentioned. Industry-wide bargaining is favored by labor, and in many cases by management, and has existed for many years as a stabilizing influence in some industries. The whole problem will require considerable additional attention and thus may quite properly be further reviewed by study committees established under this bill. To make geographical limitations in bargaining is hopelessly arbitrary as any competent economist knows. The Senate bill effectively postpones strikes or lock-outs, which affect the public health or public safety, by permitting injunctions for a minimum period of 75-days during which the case can be mediated. The court may continue the injunction longer. The unfair labor practices of employers, as contained in the Wagner Act, are reiterated with certain additions and changes. But certain employees' practices are also made unfair labor practices. The employee is not allowed to interfere with the employer in his selection of representation for the adjustment of grievances or for collective bargaining. The employees or unions are prevented from refusing to bargain, from engaging in secondary boycotts, or from attempting to persuade an employer to discharge an employee who has been denied union membership for reasons other than nonpayment of dues. The closed shop is made an unfair labor practice, but a union shop is permissible if a majority vote of all the employees favor it. Jurisdictional disputes are effectively handled by the provision that required the National Labor Relations Board to settle such disputes immediately. No employer, under this act, is required to deal with organizations of supervisors for purposes of collective bargaining. Free speech is guaranteed for employers. Unions are made suable for violations of contracts. Unions must make certain reports to their members. A House-Senate Committee for the study of labor-management relations is established.

This bill deals effectively with the principal objections to labor unions' misuse of power. I believe it will serve to lessen industrial strife, and so will serve the public good.

There has been entirely too much loose talk, in my opinion, about curbing labor, stopping power-mad leaders, wrecking unions. This kind of talk is of an inflammatory nature that has no place in sound considerations. We are dealing, here, with human beings. More than that, we are dealing with American citizens, men that you and I know and live with. If we pass any legislation that will drive them to violent action by the punitive nature of its provisions, we are doing this Nation and ourselves a disservice. I have said before, and I say again, to you here, that we should rather be thinking about constructive, objective legislation designed to reduce strikes, rather than to incite trouble. We cannot return to the 1920's, but we can make constructive additions in the legislation of the 1930's designed to equalize the obligations of labor and management. It seems to me that this Senate bill does that.

If we pass legislation that we are aware the President will veto and that we are aware will not be passed over that veto, we will have created a great political issue, but we will not have served well the American people, because we will have left them, so far as labor legislation is concerned, in the same condition we found them in November 1946.

Maine Mother of 1947

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have incorporated in the RECORD certain newspaper items and an editorial dealing with an event which is of supreme interest and gratification to a Member of this body,

the senior Senator from New Hampshire [Mr. BRIDGES]. The mother of the Senator from New Hampshire was chosen as "Maine Mother of 1947." This distinction, which has come to the Senator's mother, emphasizes the fact that in Maine we might be said to have three Senators representing us, the third being Senator STYLES BRIDGES, who was born in Maine, who received his education there, and to whose mother has now come this unique distinction.

I also ask unanimous consent to have incorporated in the RECORD a brief statement concerning Mrs. Alina F. Bridges.

There being no objection, the newspaper items and the statement were ordered to be printed in the RECORD, as follows:

Mrs. Alina F. Bridges, of West Pembroke, Maine, was recently named as Maine Mother of 1947 and, as a result of this honor, was considered for the title of American Mother of 1947, an award made annually by the American Mother Committee of the Golden Rule Foundation.

Mrs. Bridges was born in West Pembroke, Maine, September 14, 1875. Upon the death of her husband, Earle L. Bridges, when the eldest child, STYLES BRIDGES, was but 9 years of age, she supported the family and provided for their future education, supplementing the income from their small farm by teaching school. Mrs. Bridges taught in the village school in West Pembroke for 22 years and taught 8 more years in the Pembroke schools before her retirement when she reached 60 years of age. Mrs. Bridges still retains her residence in West Pembroke, although she now lives through the winter months with her daughter, Miss Doris Bridges, in Milton, Mass. Her three children are STYLES BRIDGES, United States Senator and former Governor of New Hampshire, Miss Doris Bridges, a graduate of Farmington State Normal School, Boston University, and Columbia University, who is presently head of the English department of Milton High School, and Dr. Ronald Bridges, president of the Pacific School of Religion, at Berkeley, Calif., and national moderator of the Congregational-Christian churches.

Since her retirement, Mrs. Bridges has maintained an active interest in community and church affairs.

[From the Boston (Mass.) Daily Globe of April 15, 1947]

BRIDGES' MOTHER NOMINATED FOR HONOR

WEST PEMBROKE, MAINE, April 14.—Mrs Alina Fisher Bridges, 71, named by the Golden Rule Foundation today as its Maine nominee for American Mother of 1947, taught school here for 30 years and reared three children, two of whom have become known nationally.

Her sons are United States Senator H. STYLES BRIDGES, representative of New Hampshire, and Ronald P. Bridges, president of the Pacific School of Religion at Berkeley, Calif., and national moderator of the Congregational-Christian Church.

Mrs. Bridges' daughter, with whom she now lives, is Doris Bridges, head of the English department at Milton (Mass.) High School.

Mrs. Bridges' husband died when her elder son, the Senator, was 9 years old, and she began teaching in the village school to augment her meager income from the family farm. She retired about 10 years ago.

[From the Manchester (N. H.) Morning Union of April 15, 1947]

SENATOR BRIDGES' MOTHER CHOSEN AS MAINE MOTHER OF 1947

The last-minute withdrawal of her name by the woman selected as New Hampshire's candidate for American Mother of 1947 was expected last night to mean that the Granite State will be without a nominee this year. Mrs. Hugh Berquist, of Meredith, State chairman for the Golden Rule Foundation, stated that she did not think there was time to make an alternate selection.

Meanwhile New Hampshire can share some of the honors with Maine, since the candidate chosen for that State is Mrs. Alina Fisher Bridges, 71, of West Pembroke, the mother of United States Senator STYLES BRIDGES, of New Hampshire.

[From the Quincy (Mass.) Patriot Ledger of April 15, 1947]

HONORED BY MAINE

Now a Milton resident is Maine's nominee for selection as the American Mother of 1947. She is Mrs. Alina Fisher Bridges, 71-year-old mother of United States Senator STYLES BRIDGES and Miss Doris Bridges, head of the English department at Milton High School, with whom Mrs. Bridges now makes her home at 36 Pine Grove, Milton. Another son is Dr. Ronald P. Bridges, president of the Pacific School of Religion at Berkeley, Calif., and national moderator of the Congregational-Christian Church. Mrs. Bridges, who taught school and brought up her three children after their father died, was named today as Maine's American Mother of 1947.

[From the Bangor (Maine) Daily News of April 15, 1947]

PARENT OF UNITED STATES SENATOR CHOSEN 1947 MAINE MOTHER—FIRST NOTIFIED BY NEWS

Mr. Alina Fisher Bridges, 71, retired West Pembroke school teacher and mother of United States Senator STYLES BRIDGES, of New Hampshire, has been named the 1947 Maine State Mother, it was announced last night by the Golden Rule Foundation in New York City.

IT'S WONDERFUL

First notification of the signal honor reached Mrs. Bridges at her daughter's home in Milton, Mass., last night, through a telephone call made to her by the Bangor Daily News. Mrs. Bridges has been spending the winter with her daughter, Miss Doris Bridges, who is head of the English department at Milton High School.

"It's very wonderful," exclaimed Mrs. Bridges. "I don't know what to say. I'm overcome. It's—well, it's just wonderful. That's all I can say. I had no idea I was even being considered."

In addition to the Senator and Miss Doris Bridges, she is the mother of Dr. Ronald Bridges, president of the Pacific School of Religion in Berkeley, Calif., a prominent churchman and civic leader. He is moderator of the Congregational National Conference.

Those who know Mrs. Bridges in West Pembroke and, in fact, all who know her can easily understand why she should have been chosen as an outstanding mother. Her husband, Earle L. Bridges, died when the eldest child, STYLES, was only 9 years old and she supported them by teaching school.

She was able, moreover, to maintain the old family home in West Pembroke and to give the children an opportunity to acquire educations and get started on their successful careers.

Mr. Bridges was operating a general store in West Pembroke when he died. It previously had been conducted by his father. Mrs. Bridges took a position in the village school where she taught for 22 years. She taught 8 more years in Pembroke schools before her retirement when she reached 60 years of age.

A friend in Eastport, who has known her for many years, declared last night that Mrs. Bridges was typical of the "finest of American school teachers and of American mothers." She won both the respect and popularity of her pupils during the many years she taught six different grades in the village school.

Her daughter is a graduate of Farmington State Normal School and also has degrees from Boston University and Columbia University.

[From the New Hampshire Morning Union of April 16, 1947]

PERFECT TRIBUTE

Selection of Mrs. Alina Roxiana Bridges, STYLES BRIDGES' mother, as Maine Mother of 1947, an honor that makes her a nominee for American Mother of 1947, is mighty appealing to New Hampshire people. So is the comment of Robert Peter Tristram Coffin, Bowdoin professor and Pulitzer prize poet. Mr. Coffin remembers that Mrs. Bridges was "left a widow in straitened circumstances in one of our tiniest and out-of-the-way villages, far from opportunities of any kind; her children have made their marks high in the annals of America."

Thus is tribute paid to a mother's love and guidance, a perfect tribute.

National Defense

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, in a recent issue of the Santa Fe New Mexican appears an open letter, addressed to President Truman, by C. Andrade III, of Dallas, Tex., discussing a rather novel provision for national defense. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered printed in the RECORD, as follows:

MR. CITIZEN PROPOSES SUPREME UNITED STATES DEFENSE COUNCIL

OPEN LETTER TO PRESIDENT TRUMAN

In view of the serious charges made against the Communists and the U. S. S. R. by such outstanding authorities as J. Edgar Hoover, ex-Governor Earle of Pennsylvania, ex-Ambassador Bullitt, and others, I feel that drastic action should be taken for the defense of the United States.

We have had one experience in fighting gangsters and they do not fight according to the Marquis of Queensbury rules. I agree heartily with everything ex-Governor Earle says. Before we could call Congress and declare war against the Soviet Union this Nation could be obliterated.

I propose the immediate formation of a supreme national defense council, to be headed by yourself with every member of your Cabinet on this council and an equal number of Republicans. A committee should be appointed consisting of three Republican Senators and three Republicans from the House of Representatives to select the names of the Republican members of this council. All members of the council, including your Cabinet as well as the Republican nominees, must be confirmed by a majority vote of the House and Senate.

This council should be vested by Congress with the authority to take any measures the council by two-thirds vote might deem advisable for the safety of the United States from any threat from any nation.

If we just sit by playing this diplomatic game with Russia gaining a point here and giving one there until they have the bomb fully developed, we are just putting off the inevitable day until they have sufficient atomic weapons to destroy us.

The supreme national defense council should be able to order our armed forces into any part of the world on instant notice, to drop bombs, or do anything necessary for the welfare of the United States.

We should take immediate steps to deport all known Communists who are not American citizens. The other Communists should be made to report to the FBI once every 2 weeks. All labor organizations should be made to oust known Communists forthwith. It is time we got our house in order. I realize that a great many citizens will claim that too much power would be vested in the body which I propose should be created. I know you will be accused of playing party politics in creating an emergency, but the emergency is real and the threat is genuine.

Should the Democrats not elect a President in 1948, then, immediately upon the inauguration of the new President, he should forthwith form his Cabinet and an equal number of outstanding Democrats should be put on this commission. Men of unimpeachable morals and ethics are the only men that should even be considered for this council.

Secrecy is of the utmost importance. Let's ready ourselves so that if our Army G2 or Navy Intelligence, the FBI, or the State Department have conclusive evidence of an impending attack, we can beat our enemies to the draw.

It would seem that Russia is our only potential enemy of any magnitude, so we will have to be realistic. Molotov is notoriously anti-American—much more so than Stalin—and Molotov is slated, according to all reliable reports to be the next top man in Russia. In fact, right now Molotov on external affairs probably has more actual influence than Stalin.

I believe that if this proposal is carried out Russia would immediately do two things. First, give up the veto power, which is one thing which makes the United Nations organization weak; and the other would be to grant open inspection by the United Nations of the U. S. S. R. territory and the territory of their satellites, to keep control on atomic development. If these two purposes could be accomplished, then we could fall back on the United Nations organization.

C. ANDRADE III.

DALLAS, Tex.

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, on April 24, 1947, the Arkansas Democrat published an editorial entitled "Senate Takes Momentous Step," dealing with the Greek-Turkish loan bill. I think this editorial is a very able statement of the situation, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE TAKES MOMENTOUS STEP

A momentous step was taken by the Senate Tuesday when it approved the President's request for $400,000,000 to aid Greece and Turkey. The frank purpose is to help those two nations to stand against the Communist tide which has been sweeping out of Russia over much of Europe.

There is danger in that course. W are opposing the all-too-plain and much-too-successful efforts of Russia to use the miseries of war-shattered peoples as a means of extending her political power.

We are saying, "Thus far and no further," to the autocratic government of a mighty nation—a government which has shown that it is bent on expansion, and ruthless in the means it employs. Russia has already annexed a huge territory, and has backed Communist minorities in neighboring countries, enabling them to take control by corrupt and often brutal methods.

It is no light thing to oppose such a power. But it is more perilous to do nothing, while a tyranny grows and spreads. We did that in the 1930s.

We looked the other way, refused to act, when Mussolini and Hitler and the masters of Japan were grabbing and oppressing and intrenching themselves for an assault on the dearest values of our civilization. And it cost us the frightful price of World War II.

So now we are acting. The Senate voted almost three to one for the aid to Greece and Turkey. Our two Arkansas Senators were among the heavy majority for the bill.

That vote is in vivid contrast to the isolationism which gripped Congress and the Nation after World War I—which scuttled part of our Navy, dwarfed the Army to a feeble gesture, and refused to give our strength to make the League of Nations effective.

We have been one of the foremost peoples in supporting the present United Nations—while Russia has hung back, vetoed the majority will, and obstructed both the UN and the peace settlement.

What will come of this Greek-Turkey aid, no man can say. The ultimate decision is with Russia. Our national leaders do not believe that she wants war. Certainly, this country does not. The Senate has greatly strengthened our moral position in this action by giving the UN power to halt it.

Now the Senate bill goes to the House—which has a similar bill of its own. Approval seems assured. We are on a ne world course, having chosen the lesser of two evils—the only road which seems to promise security for ourselves and peace for the world.

Prisoners of War

REMARKS

OF

HON. THOMAS L. OWENS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. OWENS. Mr. Speaker, 2 months ago I addressed the House with respect to the terrible situation which existed in Europe so far as German prisoners of war were concerned; that is, prisoners of war who were being used as slave labor over there. I spoke about complaints of labor leaders of America to the effect that slave labor was having on our own labor over here.

Last month I placed in the RECORD a letter from Dean Acheson, Acting Secretary of State, which showed a considerable improvement in this situation. I have another letter from Dean Acheson showing further improvement. However, there are still millions of those prisoners in the countries of our recent ally, the Soviet Union, and that country has refused to explain how they are using these prisoners although we are certain that they are using them as slaves. They have not given our State Department any information. I believe something should be done about that matter.

The letter from Acheson is as follows:

DEPARTMENT OF STATE,
Washington, April 18, 1947.

The Honorable THOMAS L. OWENS,
House of Representatives.

MY DEAR MR. OWENS: I have received your letter of April 9, 1947, further in regard to the repatriation of German prisoners of war.

With respect to your question concerning the program in France, you are informed that the two phases of the program, that is, repatriation to Germany and liberation on the spot, are being carried on concurrently. There are now in France sufficient numbers of eligible prisoners of war desiring repatriation to fill the quota of 20,000 per month which, as you know, is the minimum rate agreed to at the Paris meeting of American and French representatives. In addition, 25,000 per month will be approached by the French authorities and given the opportunity of remaining in France as free workers. Those desiring to do so will be immediately released from prisoner-of-war status, while those indicating that they do not wish to remain will become eligible for repatriation. Both these rates are subject to upward revision as circumstances permit.

With regard to German prisoners of war captured and held by the U. S. S. R., as indicated in my previous letter, no transfers of American-captured prisoners of war were made to the Soviet authorities. Consequently, you will appreciate that in these circumstances there does not exist the same basis for unilateral action by this Government as in the case of governments holding American-captured prisoners of war. The problem is rather one to be resolved on a quadripartite basis as a matter affecting the over-all administration of Germany, and is of interest to us as one of the occupying powers.

I have noted your opinion concerning the accuracy of the recent Tass report, and your interest in receiving further information on this subject. I shall keep your request in mind and communicate with you again should additional pertinent information be received in the Department.

Sincerely yours,

DEAN ACHESON,
Acting Secretary.

Wool Dilemma

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. SALTONSTALL. Mr. President, there appeared in the Washington Post this morning an editorial entitled "Wool Dilemma." I ask unanimous consent

that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOOL DILEMMA

We pointed out the other day that Senate passage of a bill providing price support until 1949 for domestic wool at the 1946 level (incidentally that level is above parity) shows that the Government's price-lifting program for agricultural products has not become an anachronism. If the House follows the advice of its Agriculture Committee, the Secretary of Agriculture will also be empowered to impose import fees on foreign wools, in addition to regular duties, whenever he thinks that imports are interfering materially with the domestic market.

There has been a good deal of sniping at these proposals for maintaining wool prices at levels which have pushed domestic wool out of the market and opened the door for a veritable flood of foreign wool. Obviously the price support program is inconsistent with the President's drive to bring down living costs, since the higher price for wool will raise the cost and prices of woolen fabrics. The proposed import fees are likewise, as Representative HOPE, chairman of the House Agriculture Committee, admits, contrary in spirit to the reciprocal trade policy which the Government is pushing so energetically.

Although continuance of support prices at existing high levels are, in our opinion, indefensible, the proposed additional import fee appears to be a logical accompaniment of the support program under conditions now prevailing. For the Commodity Credit Corporation is stuck with a huge wool surplus acquired at high support prices that is unsalable in competition with foreign wool. Secretary Anderson has long been pressing for permission to dispose of this wool without regard to legal restrictions on selling price. The Senate price-support bill permits him to do so, provided sales are made "at such a rate and in such manner as will avoid disruption of the domestic market."

The Government has large amounts of money tied up in wool. In fact, more than half of all the funds now invested in the price-support program have been used to support wool prices. It will benefit the taxpayers if this wool can be disposed of while demand is strong at prices entailing no great loss. Its sale would also dissipate fears that some day this wool might be suddenly released, with resultant demoralizing effects on market prices. Obviously, if this disposal program is to be pushed without disrupting the domestic market, it will be necessary to curb foreign wool imports, either by imposing import quotas or fees of the type recommended by the House Agricultural Committee.

Incidentally the wool price-support program has conferred substantial benefits on foreigners, since it has enabled exporting countries to dispose of some of their surplus wool in the American market at very high prices. Last year about 80 percent of all the wool consumed in this country was imported. With annual consumption totaling a billion pounds, the take was a large one. With foreign wools, duties added, selling at prices not far below comparable domestic wools, the American consumer will not benefit greatly from this foreign invasion while the taxpayer will have to shoulder the losses of the domestic support program.

The wool program emphasizes the need for a reexamination of our price-support system in the light of its effects upon our domestic economy and our foreign relations.

The Advertising Council

REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. ROBERTSON. Mr. Speaker, I would like to take a few minutes to pay tribute to a significant anniversary—a fifth anniversary which, in my opinion, is of the greatest possible significance to this democracy.

For five uninterrupted years, with little credit and no acknowledgment from the legislative branch of the Government, American business has devoted a good share of its advertising to the solution of broad national problems. And it has done this in an orderly, planned, and efficient way through its own nonprofit, public-service organization—The Advertising Council.

The lasting success of a representative form of government such as ours rests upon one all-important basis—an informed people. We firmly believe in our democratic system because we also firmly believe that, if the people are given ready access to facts, uncolored by prejudice or propaganda, they will act wisely, vote wisely, and wisely work together for the common good.

Because we live in a complex society, the Government often is in sole possession of facts which it is vitally necessary that the public know. The Government is also aware of nonpolitical, nonpartisan, national objectives which can be attained only if the public is informed of the facts. It is the Government's clear duty, therefore, to see that such facts and such objectives are made clear to the public. It is the duty of both the legislative and the executive branches of our Government, not only to make the facts necessary to intelligent action available to the people, but to use every legitimate means to see that those facts reach the people.

Five years ago this obligation of the Government became vastly more important and vastly more difficult. The war had brought a greater need for common action for the common good than had ever existed. The principles of our Government led us to secure this common action by persuasion rather than by compulsion. Action could be secured only by the presentation of persuasive facts which would induce people to buy War bonds, plant Victory gardens, salvage paper and metals, work in a war factory, and do the hundred-and-one things that would meet the needs of the home front.

The persuasion could be effective only if the facts should be repeated again and again until everyone should know them. The most powerful modern technique for simplifying facts, for bringing them to great masses of people, and for repeating those facts over and over until action results is advertising. Nowhere has advertising been so highly developed as a means of mass communication than in the United States. American advertising has sold merchandise and sold services, and thereby helped to develop the highest standard of living in the world. A group of public-spirited advertising men thought, very early in the war, that advertising could also be used to sell ideas, to spread essential home front information, and thereby to persuade people to common action for the common welfare.

So it was that, shortly after Pearl Harbor, representatives of every phase of American advertising organized themselves for the purpose of mobilizing advertising support behind essential home-front campaigns. They financed and set up the War Advertising Council, which is today continuing to serve the public interest as the Advertising Council.

The Advertising Council aided the Government in preparing more than 150 home-front campaigns, at no cost to the Government. Then it went to American business—big business and little business—and American business voluntarily contributed more than $1,000,000,000 of advertising space and time to those campaigns during the war years.

The result was that more Americans took part in more common action for common ends than at any time in any country's history. The people learned the facts from advertising—radio advertising, newspaper and magazine advertising, outdoor posters, window posters, car cards—and the advertising was contributed by every sort of business from the industrial corporation with national advertising budgets to the city department store and the small-town bank. The newspapers and magazines, the radio stations and radio networks, and the billboard and car-card industries also contributed advertising space and time running into millions of dollars. And the advertising agencies—more than 400 of them—volunteered their services in the preparation of advertisements without charge.

The part American business and American advertising played in keeping the people informed during the war and in persuading them to necessary cooperation in war programs is easily the greatest single contribution to the Nation's welfare that has ever been accomplished on an entirely voluntary basis.

The first week in May marks the fifth anniversary of this organized use of advertising to help solve national problems, of advertising's new role of public servant as well as private salesman, and of business using its voice to display its good citizenship as well as its good salesmanship.

There is no greater tribute to the virility of our democracy, to the willingness of its business interests to work for the common good, and to the efficiency of voluntary action as compared with governmental compulsion, than the record of 5 years in which public-service advertising, contributed by American business interests, has helped this Nation solve some of its most critical problems.

Public-service advertising was a wartime discovery. It continues as a power

for good in peacetime, for The Advertising Council continues to aid both the Government and private groups serving the public in the preparation of public-service advertising campaigns and in securing advertising contributions to those campaigns from business. And business is continuing thus to serve the public interest with contributions both of money and of its advertising at the rate of more than $100,000,000 per year.

The cost of this great public service is borne by business. It costs the Government nothing beyond the very small comparative cost of providing the paper and printing to take advantage of the contributions of space and time by advertisers and advertising media—and this cost to the Government is less than 1 cent for every dollar of advertising space and time, plus the cost of the Division of Advertising Liaison, now lodged in the Office of Government Reports, of about $100,000 per year. It is easily the biggest bargain ever offered to the Federal Government—$100,000,000 worth of service at a cost of less than one-half of 1 percent.

Let me contrast for a moment the voluntary contribution of advertising in the public interest with the system which is in effect in England.

England likewise has discovered that advertising is essential to the distribution of public information. In fact, they consider it so essential that the Government appropriates large sums to be spent upon the purchase of advertising space and time. We are apt to consider British postwar problems as different from ours, but if you examine the list of British Government advertising campaigns, you will find that both we and they are attacking through advertising the problems of health, accidents, sale of government bonds, recruiting nurses for hospitals, and many others—as detailed in a recent speech by the Right Honorable Herbert Stanley Morrison, Lord President of the Council and leader of the House of Commons.

The striking difference between the two systems for the distribution of information through advertising is that England's is government controlled and government paid for, while in this country American business voluntarily foots the bill.

Why is American business contributing the force of its advertising to public-service campaigns? Not only because it is good for the Nation. Not only because it is good for the Government. But because it is also good for business. Public-service advertising is proving that competition is not inconsistent with cooperation. It is proving that business can contribute effectively to the social welfare of the people as well as to their economic welfare. It is proving that business has the Nation's good at heart, not by merely saying so, but by contributing in a practical way to the Nation's good.

I do not hesitate to say, in fact, that the Advertising Council, supported as it is by business interests of every size and throughout the entire country, is doing as much to demonstrate the value and effectiveness of our system of individual enterprise as any organization in the country, and that the Advertising Council is providing a most practical and effective reply to the critics of our system who say that business is essentially predatory and opposed to the common interests of the people.

The men who direct The Advertising Council include some of the most prominent names both in advertising and in industry. During the war, these men dedicated The Advertising Council to the war effort, working exclusively with those agencies of the Federal Government which were concerned with the prosecution of the war, with the American Red Cross and with the National War Fund.

Since the war, The Advertising Council's services and facilities are available to any Government agency or any private organization, whose cause is important to the public interest and whose objectives are nonpartisan, nonpolitical, and noncontroversial. The Advertising Council will conduct no campaign unless, in its opinion, it is clearly in the interest of the whole public and is outside the realm of controversy. Each campaign must either have had its policy established by an act of Congress, or it must be approved by three-fourths of the Council's public-advisory committee. This public advisory committee consists of 19 men and women representing a cross-section of America. They are all prominent, public-spirited citizens reflecting the thoughts and aspirations of business management of labor of the social services, of our three great religions, of education, and of agriculture.

Perhaps the most dramatic and far-reaching campaigns now on the Advertising Council's docket are the American heritage campaign and the American economic system campaign.

The American heritage campaign will reaffirm the principles of American democracy and liberty, and will call the attention of Americans both to their political rights and to their duties as citizens. This campaign is allied with the Attorney General's plan to send a "Freedom Train" through the 48 States beginning this fall. The "Freedom Train" will be a traveling shrine of Americanism, carrying a collection of the original documents, such as the Constitution and the Declaration of Independence, which evidence our liberties.

The American economic system campaign will bring home to the American people the great achievements of our free economic system and the absolute interdependence of its various parts, and will rally all Americans in a national effort to raise our living standards by making the system work for the benefit of all. This campaign was approved unanimously by the Council's public advisory committee in which both labor and management are represented.

Last year United States Savings bonds redemptions were far above purchases. The Advertising Council began a campaign in cooperation with the Treasury Department. The result was that bond sales reached unprecedented figures and this spring are soaring far above redemptions.

For more than a year, the Advertising Council has conducted a traffic-safety campaign in cooperation with the National Safety Council. The National Safety Council gives the Advertising Council credit for having done much with this campaign to bring the traffic death rate to a figure 19 percent less than the last peacetime year.

These are but a few of the many campaigns conducted in the interest of the whole people by the Advertising Council with the space, time and money contributed by American business. Five years of public-service advertising by business has proved that it is good for the public, good for Government, and good for business.

Through the Advertising Council, American business is contributing in a new way to the better working of our democracy.

Settlement of Displaced Persons of Baltic Origin

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mrs. SMITH of Maine. Mr. Speaker, the Legislature of the State of Maine has recently passed a bill, introduced by Charles A. Peirce, representing the capital city of Augusta, in an attempt to effect the settlement of displaced persons of Baltic origin on private property in Maine. This indicates the deep concern of our people over this subject and, while extending assistance to displaced persons, makes productive abandoned Maine farms. Under leave to extend my remarks, I include the act in the RECORD:

H. P. 1543—L. D. 1173

An act setting aside certain lands for settlement by displaced persons of Baltic origin

Whereas the problem of the resettlement and readjustment of displaced persons of Europe is one of the major problems confronting framers of permanent world peace; and

The people of the State of Maine, descendants of former tyranny's refugees who sought freedom and opportunity within these boundaries, express deep sympathy for the plight of today's displaced persons; and

The people of this State have great faith in its future economic and cultural development; and

The economy and culture of the State, temporarily weakened and threatened by the removal at the present time of many of its young men and women to other States, would be strengthened by immigrant settlers from other lands; and

The contribution already made to the State's economy and culture by settlers of Scandinavian and Baltic origin, among others, is of great value and could well be increased by such additional settlers; and

Among the displaced persons of Europe, those of Baltic origin, i. e., natives of Estonia, Latvia, and Lithuania, appear to be particularly adaptable for settlement in this State by reason of similarities in the natural economy and climate of Maine and those countries; and

It seems likely that displaced persons from these Baltic Nations will never be able to return to their native lands which have lost

their sovereignty and have been absorbed by a stronger power: Now, therefore

Be it enacted by the people of the State of Maine, as follows:

Revised statutes, chapter 32, sections 49–A, 49–B, additional. Chapter 32 of the revised statutes is hereby amended by adding thereto two new sections to be numbered 49–A and 49–B, inclusive, to read as follows:

"SEC. 49–A. Statement of policy: It shall be and is hereby declared to be the policy of the State of Maine to encourage the settlement within its borders of displaced persons of Baltic origin; provided nevertheless that nothing herein contained shall be so construed as to discourage immigrants of other nationalities.

"SEC. 49–B. Maine Development Commission to arrange for settlement through negotiations with the Department of State, Deparment of Justice, and the United Nations: The Maine Development Commission is hereby empowered and authorized to negotiate with the United States Department of State, with the United States Department of Justice, and with the United Nations, or with any proper agency or department of the United Nations, to arrange for the settlement in this State of such displaced persons of Baltic origin who are able to buy, or who may have brought for them, private property within the State owned by private persons."

United States Foreign Policy

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1947

Mr. CLASON. Mr. Speaker, under leave to revise and extend my remarks, I include an account of a recent sermon delivered by Rev. Robbins Ralph, of the First Congregational Church, of Northampton, Mass., as reported in the Daily Hampshire Gazette of that city. The sermon is particularly timely in view of the fact that the House is about to take up the issue of President Truman's proposal for aid to Greece and Turkey.

LOCAL MINISTER DEPLORES TRUMAN'S NEW ISOLATIONISM—REV. ROBBINS RALPH FEELS UN, CREATED FOR DEALING WITH EMERGENCIES, SHOULD NOT BE BYPASSED IN GREECE-TURKEY MATTER

With Divided We Fall as his sermon subject, Rev. Robbins Ralph of the First Congregational Church took as his text last Sunday morning the twenty-fifth verse from the twelfth chapter of Matthew: "Every kingdom divided against itself is laid waste; no city or house divided against itself will stand," and presented arguments, so based, for supporting the United Nations organization rather than going it alone as President Truman has urged, in the issue concerning Greece and Turkey.

Rev. Mr. Ralph spoke of the terrifying decision facing our Nation today, as Congress debates the proposal that, quite apart from UN, we rush into Greece and Turkey and attempt to solve the problems in our own way.

WORST ISOLATIONISM SINCE 1920

The clergyman said that President Truman's policy in this matter represents a new isolationism * * * a worse isolationism than that of the 1920's, in that it fools itself. He continued: "It is an isolationism disguising itself as a democratic concern. Many are the nations which will find it hard to see the democratic nature of such action when they are given no voice in determining its necessity or manner of execution. The President is sadly deluding himself in his claim that in his proposed intervention "the United States will be giving effect to the principles of the Charter of the United Nations." Why was the United Nations created? For this specific reason: To rule out just such unilateral action by a single nation as Mr. Truman asks us to take. He and Senator VANDENBERG have talked so much, and so long, and so loudly in defense of the proposal as a measure harmonious with our adherence to the world organization, that I think they must be having a bad time with their own consciences.

"The President asks us to assume a responsibility that belongs to the United Nations. America was one of the prime motivators in the setting up of the new regime. Now in less than 2 years since the adoption of its Charter this great Nation is on the verge of repudiating the whole enterprise. The President's excuse is that the United Nations is too feeble and slow moving to do any good."

EMERGENCY JUST THE TYPE UN WAS MADE TO HANDLE

"I call that a feeble excuse because the Security Council of the United Nations is in continuous session right here on American soil. The full Assembly can be brought into special session if necessary just as quickly as Congress can act. Furthermore, the emergency to be dealt with falls clearly within the scope of the United Nations: It is precisely the type of situation which the UN was created to handle.

"Now in spite of our solemn pledge to maintain international peace by collective action, the United States is asked to take the law into its own hands. There is a speculative threat of Russian aggression, and Mr. Truman proposes that it be met by an overt threat of American military power. We hate to think what would have happened to our infant democracy if the strongest of the original Thirteen Colonies had insisted for long on blundering ahead by itself regardless of the other 12. I hate to think what may happen to our already slender hope for peace if the exhausted and anxious nations of the world find in America an unwillingness for teamwork. It seems to me that one of the most powerful things we could do to increase our influence around the world and to lessen Russia's influence, would be to get down off of our high horse, to rid ourselves of this prima donna complex and to count ourselves one among many. America could be a uniting influence and united the world will stand. The proposal before us is divisive."

SHOULD EXTEND RELIEF—BUT

"I am not saying we should refuse to extend relief to Greece, or any other people in need. We should do even more. Why the United Nations Relief and Rehabilitation Administration was scrapped so early I do not understand. We are the richest and most comfortable people on earth. Let us back up our President in any humanitarian move he makes. And I am not saying that we should appease Russia and take no notice of Communist tactics, Communist infiltration, or Communist expansion. Russian communism is a cruel tyranny; all Christian people, all lovers of freedom and democracy will combat its spread. Nor am I saying that we should leave Greece or Turkey or any other nation helpless like a lamb before the onslaught of the wolves. I am not even saying that Mr. Truman's proposal is wrong; it may be and it may not be. I am not canny enough or well informed enough to know."

WHY BYPASS THE UN?

"But I am raising this question: Why did he bypass the United Nations? If the action he suggests is needed, it would come before the world through a majority of the United Nations Council and Assembly with a vastly greater moral undergirding than coming from us alone. Why did Mr. Truman jump the gun in this way? Could it be that he fears our sister democracies would not see eye to eye with him? Was he not willing to risk the shared viewpoints of the rest of the world? Perhaps the emergency is not as great as he thinks. How are we to know? Can we take his word, and that of his Near East advisers, alone? I sent telegrams several days ago to our two Senators and our Representative, stating, 'Don't scuttle United Nations. Aid Greece, Turkey through cooperative action.' Senator HENRY CABOT LODGE, Jr., in his courteous and thoughtful reply to me, said, 'It is unquestionably true that the administration was guilty of clear error in its neglect to consult with and advise the United Nations regarding American foreign policy in the Near East.' Senator LODGE is right."

UN AT LEAST AS STRONG AS UNITED STATES

"Now, I know there will be many questions troubling you as I criticize the proposed action, and applaud the United Nations. You will say, first, 'Is the United Nations strong enough to take action?' I would answer: As long as we are in the United Nations, it is at least as strong as we are. If the UN needs $400,000,000, if it needs an army, a navy, some guns, or what not; if it needs these things, and we have them, and if we believe in the action which requires them, then these assets can be put at the disposal of the UN. The Continental Army was not weaker in 1776 because the Massachusetts men joined in its efforts, and the United Nations is not weak as long as some of its members are strong.

"Second, you will ask, would the UN be likely to get down to business and do anything? Well, last year the UN handled the situation in Iran pretty well, a situation quite similar to that in Greece and Turkey. Its record in that instance is better than that of our unilateral action in China or the Balkans. And, furthermore, whether the UN could and would handle this trouble never will be known unless we pull with it and give it a chance. If the President sees a fire, why doesn't he inform the fire department instead of organizing his own bucket brigade? If the United Nations fire department should only slumber, then on with the bucket brigade, but, at least, let us turn in the alarm at headquarters.

"Third, you will ask how about the Russian veto? Does not that make it impossible for the United Nations to take any action which Russia does not like? Technically, I don't know. Perhaps there is no clear way provided in the United Nations Charter to override a veto. Actually, however, it is impossible to believe that if a good majority of members in the United Nations saw a clear need for joint action against one of its members, action would be taken. The veto could be overriden by common consent. Russia, quite frankly, is a stumbling block to the success of the United Nations. Its insistence on the veto power is a nuisance, an exasperation, and an obstruction. In the eyes of the world, from New Zealand to Norway, Russia is being thought of as a nation which is hard to get along with. I would hate to have America, in the eyes of the world, viewed as the other major obstacle to the success of the United Nations. When Mr. Truman takes the ball away from the world organization, and runs wildly out of bounds in total disregard of the team play which was called for at Dumbarton Oaks and San Francisco, he is endangering such moral leadership as we still retain before the nations of men. The kind of action proposed is on precisely the same moral level as Russia's persistent use of the veto.

"Common sense and the lessons of history combine with the word of Holy Writ: 'Every kingdom divided against itself is laid waste, and no city or house divided against itself will stand.' May the Almighty Sovereign of all men aid and assist us, as we grope toward the reign of peace, and the realization of human brotherhood."

The Foreign Policy of the United States

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. REED of New York. Mr. Speaker, I was amazed when I heard the message of President Truman in which he expounded our new foreign policy in these words:

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

It was not many years ago that we heard much about the terrible Turks and indignation ran high in this country because of the throat cutting of the Christian Armenians by the Turks. Are we about to arm them to do some more bloodletting of their Christian neighbors for the selfish purpose of facilitating exports from this country. It is probably true that "truth crushed to earth will rise again," but it will probably be too late because the appropriations will have been made.

I wonder how long the taxpayers of this country will continue to have their pockets picked by nations located in an area where blood, pillage, and rape have been their chief contribution to world affairs for thousands of years.

War has been a constant element in the relations between the states. No exact calculation can be made, but J. Novicow has estimated that 3,130 of the 3,357 years between 1496 B. C. and A. D. 1861 were years during which nations were engaged in warfare, while there were only 227 years of peace.

By his count, there have been nearly 300 wars during the 3 centuries of the modern state system.

But Novicow clinches his point by showing how futile war is as a basis for settling the disputes of states.

From the year 1500 B. C. to A. D. 1860 (3,360 years) more than 8,000 treaties of peace meant to remain in force forever were concluded. The average time they remained in force was 2 years.

Under leave to extend my remarks in the RECORD, I am inserting an article by George E. Sokolsky which appeared in the Times-Herald under date of April 28, 1947:

THESE DAYS

(By George E. Sokolsky)

The bill authorizing a further expenditure of $350,000,000 for relief originated in the United Nations, which wanted an additional $610,000,000 spent for relief and rehabilitation.

The share of the United States was put at 57 percent of the program, but as the other countries are not likely to put up a red cent, this is, in effect, an American matter, a continuation of the flood of American dollars to Europe and Asia.

That is UN's way of getting American dollars to flow.

As the bill originally came to the House of Representatives, it gave the State Department a blank check to use $350,000,000 of American money anywhere for any purpose and through any means.

Under Secretary of State Clayton suggested that relief would be limited to Austria, Greece, Hungary, Italy, Poland, and China, but the bill itself made no such stipulations.

Greece has been attended to in another measure and the present Government of Poland has chosen to assume the role of an enemy of the United States.

Certainly, there ought not to be so loose an arrangement that the State Department can slip any country a few millions as a night-club playboy might hand a tip to a head waiter.

A proposal was made that the bill be amended to limit aid to countries other than on Mr. Clayton's list to $15,000,000. It would be wiser if Congress specifically determined which country would receive American aid.

Under the bill, the American dollars contributed out of the earnings of the American people through taxes might be spent anywhere in this world.

It might even be collected as dollar exchange by Soviet Russia through her puppets and satellites. It has been proposed that all this money be spent on American products and transportation with such exceptions as are inevitable.

Apparently those in the State Department and in the United Nations who drew the bill do not understand how dollar exchange operates and how avidly some countries garner and hoard dollars.

The bill itself provides that the relief may be provided in the form of supplies or funds or the establishment of credits. Of course, it might be said that American dollars could be used in such a manner as not to increase the scarcity of goods in this country by making purchases elsewhere.

But the converse of that is that American dollars could be used to build up the industries of our present competitors and potential enemies.

Even more, if dollars are promiscuously given to foreign purchasing agencies, they could come into the American market, bid up our prices, causing a price inflation to our detriment. It is sound that American money for relief be spent by the United States directly and not through foreign agents.

An amendment should be adopted that the procurement and transportation of relief be made by agencies of the Government of the United States. Certainly we want no repetition of UNRRA, into which we poured more than 70 percent of all funds made available for it and yet the results were disastrous from an American standpoint, foreign governments selling our relief to make a profit for themselves.

And that raises an interesting point. Some of these governments can afford to pay back something. Certainly Poland and Hungary are likely to have a fine harvest in 1947. We might lend them grain to be repaid in kind out of their 1947 surplus.

The bill ought to protect the United States against mooching by Europeans. If we provide relief prior to the harvest of 1947, and a country has a surplus in 1947, they should deliver the surplus, equal to the quantity they received in relief, for use by the United States in relieving other countries. Charity ought not to be a one-way street.

Certainly, 2 years after the end of the war, some of the agricultural countries of Europe ought to be back to normal production. The good earth knows no politics, but it requires the labor of man to produce grains, fibers, and other food and agricultural products.

As long as American charity is on the basis of WPA profligacy, it demoralizes those whom we seek to aid. Our task is to help peoples become independent—through work.

Crisis in Education

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1947

Mr. CLASON. Mr. Speaker, under leave to revise and extend my remarks, I include therein an address by Mr. Hubert W. Kregeloh, political commentator for radio station WSPR, of Springfield, Mass., delivered over that station on April 4. The address, entitled "Crisis in Education," contains a great deal of food for thought for all of us interested in education and the preservation of our American ideals and institutions. The address is as follows:

America is faced with a crisis fully as grim as the feared aggressiveness of the Soviet Union or the evil machinations of the Communists—and fraught with equally dangerous long-term possibilities. It is the crisis of education and, incidentally, there exists a clearly recognizable link between it and the other two problems I mentioned. If our educational standards deteriorate, we become a Nation of ignoramuses, and we fall behind in the race for technological, scientific, and cultural leadership. In the end, such a condition could only constitute another temptation to Russian leaders to practice aggression, for it would suggest to them that their scientists at last could beat ours and that consequently an armed showdown would embrace lower risks for them than prevail now.

As far as the danger of communism at home is concerned, it is obvious that our young people are potentially most vulnerable. Communists work hard to get party members or fellow travelers placed in schools and colleges, in order to influence American youngsters while they are at their most impressionable age and while they have neither the experience nor the knowledge to refute the glib arguments of Red teachers, instructors, and professors. The danger from this direction is far greater than most Americans suspect, although there are many parents who have been perturbed at the strange ideas their children espoused on their return from high school or college.

In the educational field the Communists have, in fact, been unusually successful, and if true Americanism, respect for God, parents and the rights of the individual, observance of law and order, and love for the country are not taught in our schools—how can we expect the rising generation to be able and willing to carry on the tradition handed down to them? The public schools of New York City are positively crawling with Red teachers, and in the majority of our colleges there are instructors who teach such subject as history, international relations, current events, philosophy, and economics with a bias favoring the Soviet Union and the Communist ideology. One can perhaps understand that some of these teachers honestly believe that socialization and nationalization are preferable to the capital-

ist system of free enterprise and therefore say so. One can perhaps also understand that some share the peculiar ideas of such confused thinkers as Henry Wallace; and since it is impossible to interpret certain subjects without offering some sort of opinion, a certain amount of bias in such cases appears, indeed, unavoidable. But cases are known in which shabby Americans in classrooms have ridiculed patriotism and love for flag and country as outmoded, reactionary sentimentalism. In short, if we want to purge our system of the Communist and fellow-traveler fifth column, we should start with the classrooms where they obviously do the most harm when a long-term view is taken.

However, we cannot do this simply by ferreting out and firing those who subtly favor the Soviet Union and the Communist philosophy. If we do no more than that we shall only end up with having our schools even more disastrously understaffed than they are already.

For there is a plain and valid reason why so many teachers are Reds. That reason is their economic plight. Considering the grave responsibility they are called to assume, the education demanded of them, the personal appearance that must serve as example, and the social prestige and obligations we connect with the profession, our teachers are so blatantly underpaid that debates on the question are really quite silly. In their justifiable bitterness, is it at all surprising that many incline toward a political philosophy specifically aimed at the underprivileged and at those who feel the existing order is deliberately giving them a raw deal?

The responsibility is ours, and especially of those businessmen whose only anxiety is not to see any of their profits diverted to taxes. Here we have a legion of smug individuals enjoying comforts far above the average. For their little darlings only the best is good enough, and that goes for teachers, too. They demand that the teachers to whom they entrust their children are fortified with as many imposing diplomas as possible, that they are fine Americans and not Reds or pinks, that they are well-mannered and well-dressed, and that they are devoted to their profession. Parents in this category watch the teachers carefully, are ever ready to criticize and demand improvements, and in PTA's they indulge in forceful oratory. Yet they are adamantly unwilling to do the one thing which is the crux of the problem—to help provide the financial means which alone can raise our admittedly not so perfect educational standards, especially on the lower echelons. With characteristic selfishness, these people demand the best but are not prepared to pay for it. It is high time someone awakened them to the fact that although we boast about being the richest Nation on earth, there are quite a number of much poorer countries in which teachers receive relatively better pay, and in which far greater sums are expended for the benefit of the educational field generally.

A pertinent editorial by James McGraw, Jr., president of the McGraw-Hill Publications, appears now in all the publications of that company. Calling the question of teachers' salaries a "major emergency," Mr. McGraw addresses an appeal specifically to the financially well situated business community of the Nation and, he says, "to its hard core of common sense."

"According to the best figures available," the editorial states, "the Soviet Union is spending about twice as large a share of its total national income for education as we are. The figures compared included our expenditures for both public and private education. That comparison is really something to worry about."

Including librarians in the underpaid group, Mr. McGraw says that in purchasing power, public school teachers' salaries, after taxes, average about 20 percent less than they did 8 years ago. Beginning salaries of librarians, always low, have fallen behind an equal amount in purchasing power, and college and university teachers are not much better off, he contends.

"Unless this situation is remedied promptly," the editorial warns, "it is confidently to be expected that:

"1. The more competent teachers will continue to desert our schools in droves, and our libraries will remain understaffed. More than 350,000 teachers—many of them the very able ones—have left the public school teaching staff of about 900,000 in the last 6 years. More than 100,000 of the replacements are 'substandard.' They cannot meet the minimum educational requirements of their jobs which, by admission of the profession itself, are none too high.

"2. Those who remain will be organized increasingly into economic pressure groups. Teachers' strikes and the rapid growth of unionism among teachers at present clearly indicate what is in store.

"The crisis in education is a crisis for the Nation as a whole. However, the salary crisis in education is in special measure a crisis for the business community. That community has a special stake in having a well-educated and well-disposed constituency."

Mr. McGraw goes on to say "there may be room for disagreement as to whether teachers should organize themselves in trade unions, and follow union tactics. But there is no conceivable room for disagreement as to whether organization into fighting economic pressure groups under the lash of a teachers' salary crisis would be a body blow to business.

"Among our teachers it would foster an abiding hostility to the institution of business which, occupying a key position in the life of the community, had not done its utmost to make such unionization unnecessary by taking a lead in relieving the teachers' salary crisis."

Mr. McGraw warns, however, that "the crisis in education is not exclusively a matter of salaries. Unsatisfactory working conditions also play a part. Many schools and libraries are dilapidated and overcrowded. Some small-town school boards oppressively insist that the school teachers be the paragons of piety the board members themselves wish they were but are not. Protection of a proper degree of academic freedom is sometimes missing. The teacher is rarely accorded a prestige comparable to the importance of the job. Elements such as these aggravate the crisis. But the first and absolutely essential step toward surmounting the crisis is to provide tolerable salaries."

The editorial points out, however, that "because of the enormous diversity of local conditions affecting the salaries, no general rule for emergency action would fit all cases. From State to State, average yearly expenditures on education in 1940 varied all the way from about $30 per pupil to about $150. Some States, like Nebraska, finance their schools almost exclusively from local taxes. Others, like Delaware, rely almost entirely on State taxes. But it can be safely said that the minimum requirements of the emergency will not have been met so long as the salaries of classroom teachers and junior members of college faculties and library staffs have not been increased by the amount necessary to keep them abreast of the increase of about 50 percent in the cost of living since 1939." Mr. McGraw thinks that in many cases a temporary cost-of-living adjustment might prove the best way to handle the problem. However, the danger is here that morale is inclined to suffer when the time for removing the temporary increase arrives, no matter how justified and logical removal may be.

Addressing himself, in conclusion, to the teachers, Mr. McGraw says, "It is up to them, in dealing with the salary crisis, to display a maturity and integrity worthy of their profession. Teachers have many employment advantages such as long vacations. Employment in teaching and libraries has been notably stable. Teachers and librarians should not ignore these facts in comparing their position with those whose employment has been less steady. At the same time, the great fiscal difficulties involved in solving the crisis must not be used as an excuse for postponing effective action. The States are better equipped financially and otherwise to take such action than is the Federal Government and, with the localities directly involved, should take the lead. If the price of effective action is a heavier tax burden for communities already too heavily burdened, that price must be paid nonetheless. "For," the editorial ends, "the intelligent self-interest of business requires that it leave nothing undone to meet and master the grave crisis in education."

American Merchant Marine

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. BRADLEY of California. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD the following resolution adopted by the City Council of Baltimore, Md., on March 3, 1947, in support of efforts to build and maintain an adequate merchant fleet for this Nation.

I believe that the sentiments expressed in this resolution are those which prevail very generally throughout the United States and that the Congress would do well to give heed to the feeling that we must maintain a merchant marine sufficient to transport a considerable portion of our import and export trade, as well as to act as an auxiliary to the Navy in time of national emergency.

The City Council of Baltimore is to be commended for its action in adopting this resolution which follows:

Resolution 1341

Resolution requesting the United States Congress to build and maintain a modern American fleet.

Whereas this Nation's welfare and prosperity depends upon the welfare and prosperity of the world; and

Whereas, to accomplish this, it is essential that an American fleet be maintained, competent in speed and tonnage to compete with fleets of other nations: Therefore be it

Resolved by the City Council of Baltimore, That the United States Congress be and it is hereby requested to see that sufficient funds are placed at the disposal of the Maritime Commission to operate, build and maintain a large merchant fleet; and be it further

Resolved, That the United States Congress be requested to see that the merchant fleet be so developed as to become a great aid in national defense, prosperity and welfare of the people of this Nation; and be it further

Resolved, That the chief clerk of the City Council be and he is hereby directed to send a copy of this resolution to the President of the United States, the Speaker of the House of Representatives, the Maritime Commission and to each of the Representatives from Maryland in the United States Congress.

The Moscow Conference

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an analytical and interpretative editorial on the Moscow Conference appearing in the Boston Post of April 25, 1947:

MISFIRE AT MOSCOW

The conclusion, or truer, perhaps, the break-down of the Moscow conference, which meant so much to the world, confirms again that the way to peace is a long road which must be patiently and persistently trod without losing heart or faith in the main objective—the banning of war forever.

No American has reason to be disappointed over the failure to conclude an agreement on the German question. All of us were forewarned by ex-Secretary of State Byrnes that such a settlement would take years to complete.

There were lofty hopes, as the Moscow meeting opened, that at least Austria would be straightened out. But Russia was adamant on even this concession to concord. Months of intensive study and debate on moot, minor points, which would make an Austrian treaty possible, have been wasted.

Yet all is not lost at Moscow. We knew the Russian negotiators before we started—hard-headed, tough, one-way fellows—more bent on wringing out every last ounce of spoils for what the Russians in arms did, than arriving at the goal for which the war was fought.

But the Russians learned something from us and about us. They can sit back today and say, "The days of appeasement are over." The line has been drawn. For we, too, have raised an iron curtain beyond which communism cannot pass. Peace at any price is no longer an American doctrine.

The Russians understand that today. Mr. Molotov made it clear when on Tuesday he said, "If it is the intention of the United States delegation to substitute a new and a narrower agreement for Potsdam and Yalta, it would be better to say so."

It did not have to be said. The agreements were not narrowed. If such agreements out of Yalta, Potsdam, and other meetings—to allow other nations to decide their form of government and live free—had been fulfilled by the Russians, the United States would not have insisted that the treaties with Germany and Austria be ironclad. The inches bestowed on Russia at Yalta and elsewhere, which she stretched into miles, rebounded.

Moscow was a failure and yet not failure. Little, if anything, was settled. But as an able journalist, an American, who covered the Moscow Conference as well as previous big-nation conferences, pointed out last Sunday, in one aspect it was a success for the United States, even though negatively. This time we gave nothing away.

The Moscow meeting has been beneficial in another, if negative, way. It should make even clearer to all Americans—even Henry Wallace—that Russia thinks it is the boy with the ball who will not let the game go on unless he is given five strikes at bat.

By walking off with the ball, Russia assumes that the game cannot go on and that in time we, who protest such tactics, will give in. The Russians thereby confirm again that they hope to wear us down, make us despair and throw us back into isolationism, leaving the field clear for them.

But we cannot afford to give in now. Too many Americans died for the goal we seek. Too many Americans live only that we reach it. Peace has been coupled with patience. Firm, strong, even tough, but patient, we may win out. At least we must keep on striving and hope for the best. The alternative is too ugly to contemplate.

Sky High Prices

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. MASON. Mr. Speaker, pork has reached an all-time high of $30 per hundred and we are told that pork chops will be $1 a pound. So what? General indignation, and the general statement, "Something should be done about it." By whom? "By the Government, of course." But who is the Government? Lincoln said ours is a government of the people, by the people, for the people. The sooner the American people get away from the mistaken notion that a mythical, paternalistic Uncle Sam has magical powers to bring about higher wages and lower prices the better it will be for all of us.

The only way to reduce prices of scarce food items is not to buy them; buy substitutes for them. The American housewife has the remedy in her own hands. Today eggs and poultry are so plentiful that prices have dropped sharply. Turkey raisers from coast to coast have produced more turkeys than they know what to do with. Cold-storage plants are bulging with them. So what happens? Uncle Sam buys 10,000,000 pounds of the surplus for school lunches and thereby keeps up the price of turkeys. Uncle Sam through parity prices, commodity loans, export subsidies, price-support floors, and the purchase of huge quantities fer relief shipments to foreign governments is doing everything he can to keep up the price of the food you buy; and he is using your money, the American taxpayers' money, to finance this market rigging. Instead of letting supply and demand take its course, he uses your money to boost the price of the eggs, the milk, the potatoes, the cheese, and the meat you have to buy. No wonder prices are sky high.

Mr. Speaker, under leave to extend my remarks, already granted, I include the following two editorials on the same subject, one Price of Food, which appeared in the Washington Post on Friday, April 25, 1947, and Only Half Right, which appeared in the Cleveland Plain Dealer on Saturday, April 26, 1947:

[From the Washington Post of April 25, 1947]

PRICE OF FOOD

(By Mark Sullivan)

GOVERNMENT EGG POLICY INCONSISTENT

The Government is buying eggs in order to keep the price up. For this purpose it anticipates buying an immense quantity of eggs. In the budget for the coming year the administration has asked Congress for $175,000,000 to buy eggs.

That would buy 1 egg out of every 10 laid in the country. Whether all the $175,000,000 will be used cannot be known in advance. Whenever the price of eggs in the market falls below a certain figure the Government steps in and buys. The figure changes from time to time. It is based on a flexible standard called "parity price." Always the purpose is to stop a drop in prices. In this the Government buying is successful, of course. But for buying the Government did a few weeks ago, eggs today would be materially lower in price.

After buying eggs to keep the price up, the Government finds various ways to dispose of them, with an aggregate loss. In the administration's budget for the coming year, it estimates the loss on eggs at $42,899,000. The eggs are sold in powdered or frozen form. Some are sold to the British Government, some to processors, some for industrial purposes. None are sold to consumers. Consumers must buy their eggs in the regular market, and the purpose of the Government buying is to keep the market price up. In addition to loss incurred through selling at a lower price than the Government paid, there is loss through expense of storage and handling. Occasionally there is a loss by wastage. In 1945 some 20 carloads of eggs spoiled on sidings. Last year, in another farm product, potatoes, several million dollars' worth bought by the Government while still in the ground, were left there and rotted.

Besides eggs, several other farm products are bought by the Government to keep the price up. They include potatoes, sweetpotatoes, chickens, turkeys. On all these, losses are expected. In the budget for the coming year the estimated loss on potatoes is $28,290,000; on sweetpotatoes, $8,694,000; on chickens, $10,250,000; on turkeys, $6,000,000.

In addition to these losses on the farm products named, other losses are incurred on other farm products, the prices of which are kept up by the Government through various methods and actions, including and besides direct purchase. On one minor crop, peanuts, the loss in the coming year is estimated in the budget at $10,000,000. Besides the crops already mentioned, the Government, through what it calls its "price-support program" as a whole, supports many other crops, including wheat, cotton, wool, hogs, milk, dairy products. On these, no loss is anticipated the coming year, and no provision for loss is included in the budget. When conditions call for it, the Government supports the prices of these crops.

The losses which the Government does expect the coming year, and for which provision is made in the budget—an aggregate of $160,870,000—come directly out of the Federal Treasury, hence out of the pockets of taxpayers. But this direct loss to the taxpayers is much exceeded by the loss to consumers due to paying higher prices for food than they would need to pay if the Government did not keep the prices up. How much consumers lose cannot be estimated. It might well run into billions of dollars.

The most serious consequence of all is the effect on the whole economy of the country. Concern about the danger to the country caused by high prices is the reason for the series of warnings recently issued by President Truman; and these warnings started the agitation about high prices now conspicuous in the news.

A main cause of high prices, not only of food but in the whole price level, is the Government itself. Because the Government keeps prices of food up, cost of living is high. Because cost of living is high, workers demand increase of wages. Increases of wages cause increased cost of manufactured goods. These in turn are a further addition to the cost of living. It is a vicious spiral.

[From the Plain Dealer, Cleveland, Ohio, of April 26, 1947]

ONLY HALF RIGHT

President Truman in his Associated Press talk made a good deal of the point that the Government's support price policy carried over from the war had little to do with the present high cost of foodstuffs. Quite properly he observed that most agricultural prices were currently well above their support levels and that Government purchases were now confined to potatoes.

That, we suspect, is only part of the story. It leaves wholly untold the fact that the Government has recently been engaged in the purchase of staple farm products for export, that it purchased large quantities of wheat in the first quarter when the domestic supply was approaching the seasonal low point, and when accordingly Government buying was responsible for the sharp price rise which was recorded.

There is as yet no way of knowing how much of the $400,000,000 to be made available for assistance to Greece and Turkey will go for food. If, however, the purpose of this grant is to prevent the expansion of communism, and if, as is commonly believed, the best protection against communism is well-filled human stomachs, it is a reasonable expectation that Government purchases of farm products and foodstuffs for foreign relief account will continue high, and that the pressure of this buying on the domestic market will remain strong for many months to come.

We are not objecting either to aid to Greece and Turkey or to the use of American funds to buy food for the hungry in nations abroad. We are merely pointing out that as long as the foreign policy to which we seem to be committed continues, the price of foodstuffs is likely to be maintained at high levels by Government purchases. And, as we have said many times before, hope for relief from high costs and high prices generally will be disappointed until the cost of food can be considerably reduced.

Resolution

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following resolution adopted April 9, 1947, by the Legislature of the State of Michigan:

Senate Concurrent Resolution 21

Concurrent resolution respectfully urging Michigan Senators and Congressmen in Congress to exert all their efforts in attemping to stop or at least reduce the offering of Federal aid to the several States and Territories

Whereas our sister State of Indiana has shown the courage to declare against the unsound financial practice of so-called Federal aid, and the general assembly of said State has passed a concurrent resolution calling upon its Senators and Congressmen "to vote to fetch its country courthouses and city halls back from Pennsylvania Avenue"; and

Whereas the said State of Indiana has called upon the legislatures of her sister States to join with her in appealing to Congress for a cessation of this unsound political fiscal extravagance; and

Whereas when a State legislature is confronted with a Federal-aid law, the legislature must either comply or forfeit money which has been or will be taken from the citizens of the State in taxes, the effect being virtual compulsion; and

Whereas it is obvious that unless Federal aid is discontinued to all States, it will not be refused by any State; and

Whereas the members of the Senate and House of Representatives of the Michigan Legislature agree with Gov. Thomas Dewey, of New York, when he said that, "It is a fundamental truth that when a unit of government spends money that has not been raised locally through taxes, the inevitable result is irresponsibility and waste, and it is old-fashioned common sense that best government is that which is closest to the people and their pocketbooks"; and

Whereas our Nation is financially embarrassed to the amount of one quarter of a trillion dollars and should divert so-called Federal aid toward reducing its indebtedness; and

Whereas Michigan and most other States are in sound financial condition, able to handle their own fiscal responsibilities: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Michigan Legislature joins forces with our neighboring State of Indiana in denouncing this practice of so-called matching dollars; and be it further

Resolved, That we respectfully petition and urge Michigan Senators and Congressmen in Congress to exert all their efforts in attempting to stop or at least reduce the offering of Federal aid to the several States and Territories; and be it further

Resolved, That a copy of this resolution be sent to the legislatures or assemblies of the 48 States, and to the Michigan Senators and Congressmen in Congress.

Adopted by the senate March 13, 1947.

Adopted by the house of representatives April 9, 1947.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLEO,
Clerk of the House of Representatives.

Passing of the Tailor Shop

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. McDOWELL. Mr. Speaker, there has recently been brought to my attention a situation that threatens to destroy one of America's oldest and most honored trades, and that is the tailor shop which is so familiar to every American. Because of the hard work that is required of a tailor, and because of the number of years that is required to learn the business and the high standard of workmanship demanded by the American people, less and less young men are entering the trade, and every city and town in America has been feeling a serious shortage of tailors for the last decade.

In the great metropolitan area of Pittsburgh, Pa., with its more than 2,000,000 people, a combined effort of the tailors of western Pennsylvania resulted in only 18 young men deciding to learn the business and entering an apprenticeship in the past year. Another decade and the ancient business of the community tailor will be a thing of the past and men will buy only clothes made on the assembly lines of the great clothing manufacturers.

The tailors of Pittsburgh, in conjunction with tailors all over the Nation, have requested me, and will request the entire Congress, to consider the matter of bringing to America some thousands of skilled tailors who cannot make a living in Europe because of the chaotic conditions there and because thousands of them are among the displaced persons. This is a matter that should be considered by the House of Representatives, and to shed more light on the situation I include in my remarks here a letter from Leo Petrilli of Pittsburgh, a well-known master tailor, who expresses the situation confronting the American tailor in business.

PITTSBURGH, PA., *April 25, 1947.*

Representative JOHN McDOWELL,
House of Representatives,
Washington, D. C.

DEAR MR. McDOWELL: We feel that you are well aware of the precarious situation the tailoring industry is in due to the ever-growing shortage of skilled needle workers.

Mr. Seifert, local business agent of the Amalgamated Clothing Workers of America, states that in Pittsburgh and vicinity alone there is an urgent need of at least 800 tailors. The total need all over the country has been set at over 15,000.

With the cooperation of the union, we have established in Pittsburgh a school class for tailors which, at present, is attended by 18 students. However, due to the fact that the average age of skilled mechanics now employed in our industry is between 60 and 62 years, the death rate among these men is far greater than the new supply that we can expect from this school, especially as it takes years to train a man in the fine art of tailoring.

This condition exists all over the country and the tailoring industry is faced with certain extinction within very few years unless ways and means are found to overcome this critical shortage.

After long and careful study of the situation, it has been agreed that the surest and quickest way of saving the tailoring industry would be the selective immigration of artisans from Europe.

We wish to respectfully request your kind consideration of our plight and urge your cooperation in our effort to bring in a sufficient number of tailors from Europe to save the fine, old craft of tailoring, and enable us to serve the public with the best possible product.

Respectfully yours,

LEO PETRILLI.

United States Conciliation Service

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid editorial appearing in the Pilot, of Boston, Mass., under date of April 25, 1947, deploring the action taken by the House of Representatives in so drastically reducing the appropria-

tion of the United States Conciliation Service and crippling the agency of the Labor Department that has and is doing such effective and constructive work in the adjustment and settlement of industrial differences and disputes:

UNITED STATES CONCILIATION SERVICE

The country is convinced that we are paying too much for Government. The people are correct. A democracy always spends too much for public services—and always will. This, apparently, is an inevitable part of the price of liberty. Now we are in the throes of a reformist mood. "Economy" is the watchword.

It is not a bad slogan—we have marched under worse. But let's define economy. Let's apply it sensibly and fairly.

Crippling the United States Conciliation Service is not a wise economy. No statistician could tell Americans how much the Conciliation Service of the Department of Labor saves them in dollars and cents in the course of the year. But there is no question that it is an enormous sum. It is far larger than the money appropriated for this service. And the man-hours which, through the medium of the United States Conciliation Service, are spent in productive work, instead of picketing, are only one phase. There is also the matter of better feeling between labor and capital which results when a strike is averted.

The United States Conciliation Service has done noble work in Massachusetts. Its appropriation has been cut to a point that cripples efficient functioning. We urge that the United States Conciliation Service be given the funds it needs in order to work effectively.

We've a grave problem in this country—the task of averting a kind of civil war between labor and capital. As the Popes have insistently, time and again, pointed out, the two were meant to be friends—this "class-struggle" nonsense was the invention of an ivory-tower thinker who all his life was supported by capitalist friends.

It is no true solution to strait-jacket either labor or capital. Each must learn to face the reality that they are Siamese twins, that they live together or die separately.

Conciliation is the one right approach. Granting the imperative need of economy, we insist that it is the silliest kind of extravagance to refuse the United States Conciliation Service the means to continue and extend its excellent work. We have made a mistake here. But it is still possible to repair the mistake. Your political representatives would like to know your views.

Hartley Labor Bill

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of April 28, 1947:

NO SOMERSAULT

Mrs. Eleanor Roosevelt says we need a little clear-cut thinking. She asks if the vote on the Hartley labor bill was genuinely representative of majority opinion in this country, and adds:

"If so, then the people have done a somersault in their thinking since 1944, when they elected as President a man who believed in the Wagner Act."

Clear-cut thinking might suggest, however, that the late Mr. Roosevelt was not reelected in 1944 because of his views on the Wagner Act, but in spite of them. We were then in the midst of war. Mr. Roosevelt was reelected, it is reasonable to believe, because there were so many people in the country who thought he was the man to lead the war to its successful conclusion.

Events in the labor field since 1944 could have led to such a somersault in public thinking as Mrs. Roosevelt seems to be skeptical about. But those who are doubtful of the state of opinion toward labor's excesses in 1944 might turn to a Fortune poll conducted in February 1944. The outcome was as follows:

Which one of these four statements comes closest to expressing your feelings?

	Percent
(a) Labor unions have done an excellent job for this country, and they should be given more power than they now have	6.5
(b) Labor unions have made a number of mistakes, but on the whole they have done much more good than harm, and the public should continue to support them	28.4
(c) Although labor unions have done some good in the past, they have gone too far, and should be prevented by law from doing many of the things they now do	49.3
(d) Labor unions are a bad thing for the country, and they should be done away with entirely	7.0
Don't know	8.8

The country has done no somersault. It thought in 1944, and it thinks now, that under the Wagner Act as interpreted by administrators and courts, labor has exercised autocratic power, and that union members themselves require protection against abuses perpetrated in their name and at their expense by some unwise leaders.

Oregon House Joint Memorial 21 With Reference to Housing at Celilo Indian Village

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I include in my remarks the following resolution adopted by the Legislature of the State of Oregon:

House Joint Memorial 21

To the Honorable Senate and House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the House of Representatives and the Senate of the State of Oregon, in the forty-fourth regular session assembled, most respectfully represent and petition as follows:

Whereas many Indians from various tribes gather at and in the vicinity of Celilo Falls on the Columbia River, located in Wasco County, State of Oregon, to fish at said Celilo Falls on said Columbia River and elsewhere; and

Whereas these rights of the Indians to fish have existed and have been continued and maintained for many generations, and granted to said Indians under the treaty of June 9, 1855, with the Government of the United States of America and otherwise, and are the principal source of livelihood and food for many of said Indians; and

Whereas said fishing operations by said Indians are a valuable source of attraction to thousands of motorists and tourists annually as they drive along the Columbia River Highway, since these fishing grounds are adjacent to said highway, and said motorists and tourists usually stop and view and visit them; and

Whereas the present buildings for many years past used by said Indians at said Celilo Falls are entirely inadequate, unsanitary, unsightly, and very dangerous not only to said Indians who are compelled to use them, but also to the traveling public, and are without sewer connections or disposal or water supply whatsoever, which leaves a bad impression on out-of-State tourists as well as to jeopardize the health and welfare of said Indians who must dwell there; and

Whereas the United States Department of Indian Affairs is the appropriate and responsible governmental agency to relieve and remedy this deplorable and long-endured situation; and

Whereas the Columbia River Indians have long lived at Celilo Village and are without any reservation such as other Indian tribes enjoy and their long and continued residence there makes them familiar with conditions at and near Celilo Falls and Celilo Village: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring), That we, your memorialists, the Forty-fourth Legislative Assembly of the State of Oregon, hereby do petition and request the Congress of the United States of America to take the proper steps to immediately have removed the shacks and filth in the present Indian quarter on that certain 7½ acres of Government land at Celilo Village in said country and State, and to have properly and adequately constructed, suitable and appropriate buildings and dwellings for the use of said Indians, as well as an adequate pure and sanitary water supply; also an adequate sewer system and/or sewage-disposal system to take care of each building and/or dwelling, as well as properly equipped rest rooms, containing wash basins, urinals, toilets, and shower baths, for the use of both said Indian village as well as the tourists, and general public on the adjacent Columbia River highway.

Adopted by house April 3, 1947.

JOHN H. HALL,
Speaker of House.

Adopted by senate April 4, 1947.

M. E. CORNETT,
President of Senate.

An Editorial on Federal Responsibility for Highway Safety

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. BENNETT of Missouri. Mr. Speaker, on April 16, I addressed the House on the subject of H. R. 3042, a bill I have introduced to supplement State responsibility for highway safety with

Federal responsibility. This proposal has met with widespread public interest and approval.

Under leave to extend my remarks, I include the following editorial:

[From the Mobile (Ala.) Press-Register of April 25, 1947]

FRIGHTFUL COST OF TRAFFIC ACCIDENTS BROUGHT SHARPLY INTO SPOTLIGHT AGAIN

Representative MARION T. BENNETT, Republican, of Missouri, has started something.

He did that when he introduced a bill known as H. R. 3042.

As summarized by Mr. BENNETT, the purpose of this bill is to reduce the accident toll on the Nation's highways by establishing and enforcing uniform regulations for the issuance of drivers' licenses, and requiring financial responsibility on the part of drivers, and thus to insure, so far as possible, that those operating motor vehicles are reasonably fit, competent, and able to do so.

In proposing that Congress step into the question of qualifications for driving motor vehicles by writing uniform requirements into Federal law, rather than leaving the question in the hands of the respective States for local treatment, Mr. BENNETT has obviously touched off an argument.

For the moment, we do not intend to dwell on the issues involved in his bill. Instead, we call attention to the indictment he delivered against the incompetence of many drivers and the laxity of some States in regard to the qualifications of drivers.

Mr. BENNETT said:

"Too many Americans apparently accept traffic accidents as inevitable. They do not see or possibly comprehend the tremendous daily toll of killed and injured and the vast property losses resulting from a sum total of many millions of individual acts of thoughtlessness and indifference.

"It is true, but difficult to believe, that while we have had the automobile for about 50 years, numerous States still permit anyone, regardless of his physical or mental fitness, to operate with abandon a killing machine capable of traveling up to 100 miles per hour and weighing thousands of pounds.

"Some of the States which do have license requirements for drivers nevertheless issue licenses cheerfully to lunatics, habitual drunkards, and narcotic addicts. Many drivers are more dangerous than a maniac with a meat ax. In my own State you can get a driver's license renewed for 25 cents and without a test of any kind. In many other States and numerous cities, the drivers' license is a revenue and not a safety measure.

"Statistics gathered by various authoritative sources show that since the end of the war and the resumption of heavy motor travel, the death rate from automobile operation is again decidedly on the increase.

"This deadly killer now ranks tenth in the list of causes of death in this country, and no less a person than the President himself has publicly predicted that on the basis of known figures the automobile accident toll this year in this country will reach 30,000 fatalities.

"This does not even take into account the great loss and suffering from personal injuries not fatal, or the tremendous property damage resulting from motor accidents, or the inevitable business and financial losses accruing therefrom, or the delays and hazards created in travel and interstate traffic. A study of these accidents will demonstrate that many arise from the presence on highways of persons who are unfit or incompetent to drive an automobile.

"It is hardly arguable that something must be done to correct a situation which goes to the very heart of the well-being of the public and of business. Some States, of course, have adopted stringent measures for the regulation of motor-car operation and the careful examination of those who seek to drive.

"Others, unfortunately, have little real effective legislation on the subject and there is a general lack of uniformity in laws presently existing. A number of States do not even require an examination of a person's fitness or ability to operate a motor vehicle."

Mr. BENNETT's bill brings up the States' rights issue, not to mention expansion of Federal bureaucracy and any other angles that may arouse argument.

All this, however, is apart from the fact that he took occasion in his remarks to emphasize the frightful cost of incompetency, carelessness, and recklessness in traffic on streets and highways.

Those States which are open to criticism for laxity where qualifications are concerned could give a lift to responsibility in driving through their licensing policies.

But another factor figures heavily in traffic-accident experience. That factor is careless and chance-taking pedestrians.

Address of Magistrate Maurice Simmons, Past National Commander, United Spanish War Veterans

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Magistrate Maurice Simmons, past national commander, United Spanish War Veterans, at Ulysses S. Grant birthday anniversary exercises, Grant's Tomb, Riverside Drive, New York City, April 27, 1947:

Ulysses S. Grant is a statuesque figure on the American landscape. He was called to command in the agony of the most tragic of civil wars. By his relentless strategy he saved the Union. Through four long years of doubt, defeat, and despair, he never gave up. From Shiloh to Appomattox he stood on the rock of unconditional surrender. At Spottsylvania, after an unbroken chain of Confederate victories, when the armies of Lee seemed invincible, Grant grimly pledged, "I propose to fight it out on this line if it takes all summer."

It seemed that the indecisive strife and the unprecedented loss of life were about to sunder the Union. Abraham Lincoln's calls for conscription of manpower were darkened by draft riots. As treason ran rampant throughout the land, native-born appeasers and Copperheads plotted a peace of dishonor. Thanks to sage and humane statesmanship our gates were kept open to immigration. The sons of Ireland fleeing British persecution, the refugees escaping the bondage of Prussian militarism, and the other victims of Old World autocracy emigrated to the land of the free. These were the men who filled the gaps in our armed forces, brought about by Grant's inflexible policy of military attrition. Through all the campaigns of the Army of the Potomac their bodies buttressed its bleeding flanks.

Today the survivors of Nazi slavery and Soviet savagery are herded by us behind barbed wires in Germany, Austria, and Italy. They dare not return to the hell holes of horror from which they have providentially escaped. Their kin slain in gas chambers or done to death in concentration camps, will our Republic slam the gates of hope in the faces of these tortured exiles? To admit them will work no change in our present immigration policy. About 20 years ago we set up the quota system. The number of immigrants now admissible annually is 154,000. Much of this quota has been untouched. In 1945 only 7 percent of it was used. Of the 850,000 displaced persons in the American zones, 650,000 are Catholics and Protestants and about 20 percent are Jews. Legislation is pending to admit 400,000 of them, over a 4-year period, to be charged to our unused quotas. This is half of those eligible for admission during the recent war years. Will their entry work to our detriment? The Labor Department reports serious shortages in many trades and professions. Among these dispossessed are masses, skilled in the professions, arts, and crafts, needed to fill our labor shortages—agricultural workers, farmers, lumbermen, foresters, construction workers, and household domestics. They will enrich our economy, for they surpass in quality the throngs of immigrants who, during a century of the American cavalcade, built the foundations of our economic supremacy. The upkeep of these displaced persons is now costing us, and over the years will continue to cost us, millions of dollars. Remove them from their bleak barracks overseas and they will become productive taxpayers and help lessen our national budget.

Both World Wars have demonstrated that to maintain its war potential, a nation must keep a large reserve of population. Government statisticians predict that less than a quarter of a century hence, because of our declining birth rate, we shall fall dangerously behind Russia and other emergent world powers. The present postwar increase in population is only a temporary phenomenon. Enlightened self-interest should welcome these 400,000, if qualitatively screened, measured by rigid health standards, financially sponsored so as not to become public charges and scrutinized by our Army Counter Intelligence Corps and other governmental agencies. This legislation has the support of the President of the United States, Secretary of State General Marshall, Governor Dewey, the Federal Council of the Churches of Christ in America, the National Catholic Welfare Conference, the Catholic War Veterans, the American Federation of Labor, and the Congress of Industrial Organizations. Who can question their prudence, patriotism, and statesmanship—these exemplars of the American way of life?

Because these unfortunates have eaten of the bitter herbs of totalitarian rule they will never go back to their uprooted homes in Russia, its satellite states, or return to the Fascist regimes. On their backs they bear the bestial scars of the Red terror and the Nazi swastika. We are either immigrants or the descendants of immigrants. If we deny sanctuary to them, how can we keep faith with our immigrant forebears who paved the freedom road. Shielded in almost impregnable security and blessed by the bounty of divine providence above all the peoples of the earth, shall we heed the smug, confused, or intolerant voices that counsel us to lock our hearts to the pitiful plight of these disinherited victims of man's inhumanity to man?

Wool Situation

REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, many times the metropolitan

press gets a wrong slant on agricultural legislation. I am happy today to call your attention to an editorial that is in this morning's Washington Post entitled "Wool Dilemma." I do this for the reason that within the next few days I presume the wool bill will be here on the floor, and I am sure that anyone can profit by reading this editorial. This editorial points out that a certain situation has developed. It is not a matter of the Smoot-Hawley tariff and whether it is good or bad, or whether the reciprocal trade treaty is good or bad, or whether the Underwood tariff or the Fordney-McCumber tariff or any other tariff is good or bad. This editorial presents the picture we are faced with so far as wool is concerned, and I want to commend the writer of this article for putting in a metropolitan newspaper a factual editorial. Here is one example of striking the nail right on the head:

WOOL DILEMMA

We pointed out the other day that Senate passage of a bill providing price support until 1949 for domestic wool at the 1946 level (incidentally that level is above parity) shows that the Government's price-lifting program for agricultural products has not become an anachronism. If the House follows the advice of its Agriculture Committee, the Secretary of Agriculture will also be empowered to impose import fees on foreign wools, in addition to regular duties, whenever he thinks that imports are interfering materially with the domestic market.

There has been a good deal of sniping at these proposals for maintaining wool prices at levels which have pushed domestic wool out of the market and opened the door for a veritable flood of foreign wool. Obviously the price-support program is inconsistent with the President's drive to bring down living costs, since the higher price for wool will raise the cost and prices of woolen fabrics. The proposed import fees are likewise, as Representative HOPE, chairman of the House Agriculture Committee, admits, contrary in spirit to the reciprocal trade policy which the Government is pushing so energetically.

Although continuance of support prices at existing high levels are, in our opinion, indefensible, the proposed additional import fee appears to be a logical accompaniment of the support program under conditions now prevailing. For the Commodity Credit Corporation is stuck with a huge wool surplus acquired at high support prices that is unsalable in competition with foreign wool. Secretary Anderson has long been pressing for permission to dispose of this wool without regard to legal restrictions on selling price. The Senate price-support bill permits him to do so, provided sales are made "at such a rate and in such manner as will avoid disruption of the domestic market."

The Government has large amounts of money tied up in wool. In fact, more than half of all the funds now invested in the price-support program have been used to support wool prices. It will benefit the taxpayers if this wool can be disposed of while demand is strong at prices entailing no great loss. Its sale would also dissipate fears that some day this wool might be suddenly released, with resultant demoralizing effects on market prices. Obviously, if this disposal program is to be pushed without disrupting the domestic market, it will be necessary to curb foreign wool imports, either by imposing import quotas or fees of the type recommended by the House Agriculture Committee.

Incidentally the wool price-support program has conferred substantial benefits on foreigners, since it has enabled exporting countries to dispose of some of their surplus wool in the American market at very high prices. Last year about 80 percent of all the wool consumed in this country was imported. With annual consumption totaling a billion pounds, the take was a large one. With foreign wools, duties added, selling at prices not far below comparable domestic wools, the American consumer will not benefit greatly from this foreign invasion while the taxpayer will have to shoulder the losses of the domestic support program.

The wool program emphasizes the need for a reexamination of our price-support system in the light of its effects upon our domestic economy and our foreign relations.

General Vandegrift

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the News of Elmira, N. Y., entitled "General Vandegrift Should Be Heeded":

GENERAL VANDEGRIFT SHOULD BE HEEDED

The Marine Corps, famed in song, story and history for its fighting ability, now has its most important fight on its hands. It is literally fighting for its life, as the high brass of the Army and, in some cases, the Navy, seek the power to emasculate the Marine Corps and leave it in a position where it can only be assigned inferior tasks in the event of future hostilities.

The unification merger plan for the armed forces threatens the Marine Corps as no Japs or Germans ever did. As the Senate Armed Services Committee pondered this week the question of whether to recommend President Truman's unification plan for passage by Congress, Gen. A. A. Vandegrift, Commandant of the Marine Corps, and the most brilliant general in Corps history, gave his testimony on the merger.

General Vandegrift did not oppose the main idea of the merger—but he stoutly insisted that the Marine Corps' role and missions be written into the bill and thus make them into law, rather than left to be defined by executive order of the President. The bill as it now stands, he declared, would leave the Marine Corps "stripped of everything but name—reduce it to a role of military impotence."

"The failure of the bill to assign specific functions to the Marine Corps," said General Vandegrift, "is a source of grave concern to me, for it allows the corps to be stripped of everything but name."

The Marines have a hard-won glory and fame. Thousands of them have died on the field of battle. Their ability to overcome almost insuperable odds time and again have won them the respect and admiration of the country and the world. No other fighting outfit occupies the high place in world opinion, a place that approaches reverence in many cases, such as the Marine Corps enjoys.

Army generals have envied since time immemorial the high estate of the Marine Corps in the eyes of the public, and a few Navy admirals are not above suspicion of jealousy. The merger plan is dangerous to the Marine Corps, not as something it can fight and vanquish as it has so many enemies on land, at sea, and in the air, but through Washington politics, and the danger is very real.

The fact that interested persons are trying to push the bill through in its present form, and that they are fighting to keep from specifying in exact language the Marine Corps' place in the new arrangement, but insist instead that the Marine Corps be at the mercy of the whim of the President, himself an ex-Army man, is indicative of the deadly danger inherent to the Corps in the merger bill as it is now written.

In company with General Vandegrift, the News has no fear of the ultimate fate of the Marine Corps if left to any representative body or to the public at large. The gratitude and pride which Americans take in the Corps is second only to the famous esprit de corps of its own members and former members. But like the general, we are apprehensive of a bill that might be loosely drawn in such a way as would make possible a large degree of interpretation of its meaning. Should the bill be thus loosely drawn and should an Army man be appointed to the post of Secretary of National Defense, a post which the unification bill creates, the Corps might well become the victim of the fate the general has pointed out.

This newspaper cannot urge too strongly upon our legislators that they listen and give heed to General Vandegrift. There may very well come a time in the future—perhaps in the near future—when this country may again have desperate need of the kind of services rendered to it by the Marine Corps at Belleau Wood, Chateau Thierry, Guadalcanal, Tarawa, Bloody Nose Ridge, and Iwo Jima, to mention but a few of the battles that are responsible for its illustrious fame.

Comment on the Wisconsin Election

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 24, 1947

Mr. HOFFMAN. Mr. Speaker, under permission granted, I insert herewith the following editorial from the Chicago Tribune of April 24, 1947:

DRIVING REPUBLICANS OUT OF THEIR PARTY

The alien-minded, un-Republican members of the so-called majority in the upper body are doing all they can to drive voters from their party. They are meeting astonishing success in this folly, as the returns from the special congressional election in the Second Wisconsin District demonstrated on Tuesday.

The voters of that district went to the polls, while the other body was approving the Greco-Turkish scheme, to choose the successor to the late Representative Robert K. Henry. Mr. Henry was elected last November by a majority of nearly 30,000. Glen R. Davis, of Waukesha, won the Republican nomination for the vacancy in a primary on April 1 in which he received about 42,000 of 65,000 Republican votes cast.

In the election on Tuesday Mr. Davis barely won. If another 921 Republican voters had stayed home, he would have been beaten in a strong Republican district. As it was, more than 40,000 of the voters who had participated in the Republican primary failed to go to the polls in the election.

There was nothing in Mr. Davis' record to explain the falling off in the vote. His Democratic opponent got 4,000 more votes in the election than were cast in his party's primary. That may be a fact of some significance, but much more noteworthy is the circumstance that the Republicans just stayed home. Obviously they were disgusted with their party leadership and had decided that

the difference between VANDENBERG and Truman is so negligible as not to justify an expression of opinion at the polls.

The Republican Party has now had 7 years of experience with "me, too" tactics. Every time its candidates adopted them they were beaten, as they deserved to be. Last fall the party, for the first time, gave the voters a genuine choice and received a tremendous endorsement at the polls. The fruits of that victory have largely been wasted in the ensuing months.

Mr. Truman and his policies are hardly more popular, actually, today than they were last October or November. His apparent rise in popularity derives solely from the fact that the Republicans in the Senate have given the people of the country no choice.

The election Tuesday in Wisconsin is a precursor of worse to come unless the party changes its tactics. Hope still remains that it will do so. The House, unlike the Senate, has been making a valiant effort to redeem its election pledges. It still has the opportunity to repudiate the Greco-Turkish policy.

If Mr. Truman wants a war with Russia let him say so and submit the proposal to honest debate. If the House approves his current plan, it will be giving him carte blanche to stage another Pearl Harbor in the Piraeus or the Dardanelles.

Federal Aid and the Interstate Highway Network

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. STEVENSON. Mr. Speaker, contained in the policy statement adopted by the forty-fourth annual meeting of delegates of the American Automobile Association at San Francisco, Calif., are numerous assertions of marked significance to highway development in America today, along with recommendations on subjects of national interest, some of which are covered by bills now pending before Congress. As this organization, with more than 2,000,000 car-owner members, has given careful and deep consideration to these matters, I include the text in the RECORD:

FEDERAL AID AND THE INTERSTATE HIGHWAY NETWORK

I

The American Automobile Association reaffirms its support for the Federal-aid principle and for the limitation of Federal-aid to a single Federal-aid system of general-purpose roads of national significance, clearly defined and strictly limited as to mileage. The 40,000-mile national system of interstate highways should be the backbone of this network.

II

The Congress of the United States is commended for its vision and progressiveness in calling for the designation of the national system of interstate highways. The State highway departments and the Public Roads Administration are commended on completing or practically completing the designation of this network. Because of these steps, there is now available a definite pattern for the most important road program ever conceived.

III

The American Automobile Association strongly favors the interstate highway network and urges its expeditious development at high standards suitable for the requirements of each section thereof for both present and future anticipated traffic. The association pledges a vigorous program of informing public leaders and motorists in general, so as to aid in developing strong public support for this road network.

IV

Believing it to be the step which will produce the greatest progress, the association strongly urges the early construction of a suitable number of demonstration sections of high standard, particularly in urban and other heavy traffic areas. To this objective the AAA pledges vigorous activity.

V

The association urges cities to complete plans for their parts of this network at the earliest possible date and to take steps such as Baltimore and other cities have taken whereby demonstration sections will be constructed in the city.

VI

State and local highway authorities are urged to devote substantial proportions of their highway revenues to development of this network because of the advantages which will accrue from such expenditures. At the same time, the AAA urges that the Congress direct the Public Roads Administration to make a study and proposals as to methods of financing this road network, including recommendations as to Federal, State, and local responsibilities therefor and as to the proportions of highway and other taxes which should be devoted to this road network.

VII

Numerous conditions, largely if not entirely unavoidable, have interfered with utilization of Federal-aid funds under the Federal Aid Act of 1944. In the meantime, much planning has been done in States and cities on the basis of that act. Hence, without prejudice as to its general position on Federal aid, the American Automobile Association urges the Congress to take suitable legislative action to permit such funds to be used over a longer period than is now provided for in that act.

VIII

The American Automobile Association reiterates its position that since Federal aid is based on acceptance by the Congress of the vital interest of the Federal Government in the development of an adequate highway system, the cost of Federal aid, in whatever amounts the Congress sees fit to authorize and appropriate, is properly a charge against general taxes and in no way should it be related to, or be made contingent upon the productivity of Federal excise taxes levied on automotive fuels, motor vehicles, and accessories.

FEDERAL AUTOMOTIVE EXCISE TAXES

The levying of special motor-user taxes should be the prerogative of the State and of the State alone.

The Federal gasoline-excise tax should be worthwith repealed.

The other Federal excise taxes on motor vehicles and parts should be reviewed, modified, or repealed in line with the policy on special excise taxes of similar character on other commodities.

HIGHWAY AND TAX PROBLEMS AT THE STATE AND LOCAL LEVELS

I

There should be set up in every State a special highway committee, composed of representatives of the State legislature, the highway department, the counties and cities, the automobile clubs, and other major groups interested in highway development. It should be the function of this committee to make a comprehensive study of road needs, road revenue, and total road costs within the State as the basis for a long-range highway-improvement program, preferably for not less than 5 years and not more than 10 years. Another function of this committee should be to work for continuity of the road program and of major technical staff of the highway department.

II

The State's long-range highway program should utilize the State-wide traffic surveys to determine needs and priorities for construction; in order to assure financial stability for the programs there should be in every State a road budget geared from year to year to the planned construction. It is of the utmost importance that this budget make substantial provision for the requirements of the National System of Interstate Highways.

III

The American Automobile Association vigorously urges that there be a halt in the extension of motor vehicle user taxes to the support of large mileages of local roads. This extension has prevented, and is preventing, the programing of expenditures in accordance with traffic needs on roads of general use, and if continued will reduce State highway departments to mere maintenance organizations and produce a break-down of the present motor-tax structure.

IV

As the tax-collecting and the revenue-distributing agent, the States should have the legal authority to require a strict accounting of all funds given to the subordinate units of Government for road purposes. Such authority is vitally needed as a hedge against the more flagrant kinds of dispersion.

V

The crux of the highway transportation problem today is in American cities. It is essential that progressive programs be developed for major urban highway improvements. The American Automobile Association urges cities expeditiously to carry on thorough analyses of their highway transportation needs so that a master plan, suitable for the motor age, will soon be developed.

Equally important with physical planning is financial planning. Moreover, financial planning must take account of all kinds of community needs which must be met from taxation. Hence, it is further urged that cities prepare 5- or 10-year plans covering their principal needs of various types, including highways, estimate costs and resources which will become available, and determine upon an over-all program with priorities which will be of the most benefit to the development of the city. Highway improvements are bound to occupy an important part of any such over-all program.

VI

To protect the Nation's investment in the highways it has today and the highways it will build tomorrow, it is strongly recommended that all States provide for protection of their highways against undue commercial encroachment through adoption of sound highway zoning measures. AAA clubs everywhere are urged to take the leadership in seeking the passage of highway zoning measures in accordance with the general principles of the AAA's study of roadside problems and its Highway Zoning Legislative Guide.

VII

To make possible the construction of the projected 40,000-mile national system of interstate highways, built to adequate standards, with particular emphasis on incorpora-

tion in such a network of the freeway principle, all States are urged to adopt legislation giving State governments the right to provide for access to main thoroughfares only at selected points. To this end consideration of the recommendations for limited access highway legislation, developed by the United States Public Roads Administration, is recommended.

VIII

Gasoline tax exemptions and refunds have reached scandalous proportions in a number of States—so much so that in one State in a recent year 61 percent of the motor fuel consumed was tax free. Such evasions are unfair and detrimental to the best long-range interests of all concerned—farmers, city dwellers, and other road users—and proper steps should be taken to stop this serious leakage of road revenue.

IX

Due to the war, State highway departments suffered serious losses of technical and engineering personnel. Despite the need for enlarged staffs because of large highway programs, losses of key personnel are continuing. The primary reason is that highway department salaries are not in line with what technicians can earn elsewhere. This condition is a serious threat to the efficient prosecution of highway programs and the intelligent expenditure of huge road funds. Hence it is strongly recommended that in those States where this condition prevails, immediate steps be taken to correct the situation by assuring job security, improving conditions of employment, and instituting a salary scale which is suitable in comparison with salaries paid for similar skills by private industry.

PARKING

Most American cities, large and small, have failed to meet parking needs especially in their central business districts. Furthermore, relatively few cities have instituted measures for meeting present and future parking requirements. In cities the utility of the automobile is steadily being diminished because of lack of adequate terminals. Parking costs have often risen to unreasonable levels because of scarcity of parking space; in fact, the annual outlay for parking by the urban automobile user who travels daily to downtown destinations in many instances surpasses any other single cost involved in operation of his vehicle.

The anticipated growth of traffic in the next two decades and improvements in urban traffic arteries accentuate the need for immediate vigorous attack on the parking problem. Therefore, the American Automobile Association urges that city leaders, both official and civic, take the following steps which are described and discussed extensively in the new AAA Parking Manual:

1. Decide to face and, within reasonable limits, solve their city parking problems.

2. See that the community is organized to do the job. Each city is urged to centralize administrative responsibility for parking problems in a parking authority or parking agency and to arm it with suitable staff, authority, and resources.

3. Get the facts which are a necessary basis for decisions and analyze them carefully.

4. Determine basic parking policies which shall apply in the city, such as whether off-street parking facilities shall be provided by private enterprise, or by a municipal parking authority, or by both, or whether public controls (as to insure permanence of parking facilities, and over parking rate schedules) shall be imposed, with private enterprise operating parking facilities. Zoning ordinance requirements for provision of off-street parking and loading in connection with new buildings should also be considered.

5. Develop and put into effect an adequate community parking plan and program, designed for, say, a 10-year period, with priorities for development so as best to meet needs. This program should cover both curb parking and off-street parking. The closely related problem of off-street loading should be dealt with in the same plan and program.

6. Conduct a program of public information to assure public understanding and support.

7. Coordinate the parking plan and program with other related city development plans and programs, including improvement of public mass transportation and the development of a balance between the two transportation methods, in line with the free choice of the people.

The American Automobile Association urges State legislation which will enable municipalities to create parking authorities or parking agencies with necessary financing and other powers.

It is recognized that adequate parking facilities will involve considerable expenditures. They can, however, be made largely or wholly self-liquidating. A plan of this nature will do much to assure continued economic health of the downtown district with resulting satisfactory tax returns therefrom. Moreover, only by some such plan can cities meet their responsibilities for adequate highway transportation facilities.

ROUTE MARKINGS

I

A number of State highway departments pursue the deplorable practice of changing route numbers after the principal publishers have issued read maps and tour books for the year. This causes much confusion and loss of time to automobile travelers. The American Automobile Association urges that all State highway departments plan and announce changes in route numbers well before the new numbers are posted and avoid making changes immediately before or during the season of heavy travel in their respective sections.

II

The AAA urges affiliated automobile associations and clubs to take vigorous steps to secure route markings through cities which are effective both day and night and so designed that the motorist can follow them without undue difficulty, and so that he will have reasonably frequent reassurance in case his view is blocked or his attention is diverted from a particular route marker. It is particularly urged that turns be clearly indicated by advance warning, with a confirmatory marker beyond the intersection.

It is urged that AAA clubs make a restudy of routes and route markings in the communities in their territory and confer with appropriate authorities on desirable changes. Clubs are urged to keep their members informed of such studies, to seek their views, and to advise them of results.

It is also urged that where necessary legislation be promoted by AAA clubs to put all route markings on Federal and State highways in each State into the hands of the State highway department.

ROADSIDE SANITATION

The United States Public Health Service and the public health departments of all the States are urged to give immediate attention to the problem of the sanitary conditions in roadside establishments serving the motoring public. Diseases caused by unsanitary conditions in roadside establishments are spread to all corners of the Nation. There should be set up a system of inspection to assure that all establishments catering to the traveling public meet at least minimum standards of cleanliness.

INTERNATIONAL TRAVEL

The United Nations organization is urged to take the leadership in simplifying international passage of both individuals and automobiles. To that end, early and careful study should be given to the possibility of developing a passport, registration, and driving licenses and customs documents of worldwide recognition, assuring freedom of travel for all bona fide tourists.

INTER-AMERICAN TRAVEL

I

All Latin-American countries are urged to adopt and ratify, at the earliest possible moment, the convention on the regulation of Inter-American Automotive Traffic, to the end that private passenger cars may circulate with maximum freedom throughout the nations of the Western Hemisphere. In addition it is strongly recommended that, pending the adoption of a world passport, all countries of the Western Hemisphere, including the United States of America, adopt a simple tourist card permitting Americans to cross international boundaries without being forced to obtain passports, visas, entrance and exit permits, and all the other unnecessary and outmoded documents that are now hampering travel in the new world.

II

The controversy between the United States and Mexico concerning charges that have been imposed for tourist cards issued to visitors from each country is contrary to the spirit of the Good Neighbor Policy and is to be deplored. Also, the charges now being imposed are in direct violation of a long-standing agreement between the two countries. The American Automobile Association joins the Asociacion Mexicana Automovilistica in urging the Government of both the United States and Mexico to eliminate immediately these charges on tourist cards.

UNITED STATES CUSTOMS AND IMMIGRATION

The United States Customs and Immigration Services are respectfully urged to reinstitute campaigns among their officers stationed at international borders to raise their standards of courtesy. AAA clubs are receiving many complaints from their members and from the public regarding instances of discourtesy and arrogance. Generally, members of the public do not like to make direct complaints because of fear of reprisals, but it is undoubtedly true that these departments of government are being made unnecessarily unpopular because of the actions of a minority of their officers.

ALASKAN HIGHWAY

It is essential for the defense of this continent—if occasion should ever arise making defense necessary—and essential for the commercial development of Alaska, that a highway connection should be available between continental United States and Alaska. Such a connection is now available by way of the Alaska Highway and will remain available if it is not allowed to deteriorate from want of maintenance. The AAA strongly urges that the Governments of the United States and Canada work out arrangements for the continued maintenance of the Alaska Highway.

NATIONAL PARKS CONCESSIONS AND FEES

I

The American Automobile Association finds that hotels and other accommodations in the principal national parks have deteriorated badly and no longer meet the needs of the large number of people visiting these areas. It is recommended that Congress appropriate sufficient sums of money to modernize and expand these facilities, and to provide other conveniences, including directional signs to points of interest and facilities.

As a matter of permanent policy, it recommends that these facilities continue to be operated on a concession basis, with the

Park Service exercising jurisdiction to control the prices charged to the visiting public.

II

The toll now being collected by the National Park Service on the Shenandoah Parkway—a major through route handling large volumes of interstate travel—is contrary to the public interest and violates the expressed intention of Congress, which prohibits the collection of tolls on any State highway built with aid of Federal funds. The National Park Service is urged to eliminate this toll and to drop any plans it may have for imposing additional tolls. In the event such action is not taken by the National Park Service this convention calls upon AAA national headquarters to test the legality of this toll in the courts.

III

Present policies of the National Park Service have resulted in a scarcity or complete lack of facilities for the comfort and convenience of the traveling public. The American Automobile Association, while not condoning the marring of our national parks and parkways by unsightly roadside stands, urges the National Park Service to provide, or encourage the controlled provision of, comfort stations, automobile service stations, eating and sleeping accommodations, and informative directional signs at appropriate locations. The AAA strongly urges the modification or change of such policies or regulations of the National Park Service as may discourage the greatest, most democratic use of our national parks and parkways.

Pending the development of adequate facilities in national parks and along national parkways, it is urged that the National Park Service amend its policy so as to permit the erection of informational or directional signs at appropriate locations directing visitors to points where they may obtain sleeping, eating, fishing or motor service facilities located outside the park area.

RUBBER POLICY

I

As a primary requirement for national security, the American Automobile Association strongly recommends that the Government of the United States take prompt action to establish a long-range national rubber policy and that the Congress in determining the future operation of our synthetic rubber plants require the following two conditions:

1. The continued production of general purpose rubber to insure that not less than one-third of the Nation's total annual rubber consumption be American-made rubber; and

2. The maintenance—in condition and ready to run on short notice—of stand-by facilities capable of producing an additional 350,000 tons of general-purpose American-made rubber per year.

II

Since the world's rubber supply—crude and synthetic—will exceed the demand in 1947, consideration should be given to the early abolition of governmental controls and the restoration of the commodity to a free world market.

III

Government and industry should continue to pool their resources in further basic and technological research for the improvement of synthetic rubber.

IV

The United States Government should continue its experimental work in the development of natural rubber in the Western Hemisphere.

SAFETY-RESPONSIBILITY LEGISLATION

In the interests of the motorists of America and the public generally, the American Automobile Association strongly urges that every State legislature enact progressive safety-responsibility laws with provisions in conformity with the AAA safety-responsibility bill as it now exists.

CONSUMER RELATIONS

I

The "Public Protection Program" developed by the National Association of Better Business Bureaus for the prevention of abuses in the field of automobile financing is hereby heartily endorsed; AAA clubs are urged to give full support to this program in their respective communities.

II

Also attention should be given to the reasonableness of service charges imposed upon the financing of automobile installment sales.

III

Final solution of the problem can be achieved through corrective State legislation, where permitted, and in other States through extensive educational and cooperative programs. The AAA should undertake prompt and thorough study of existing legislation and legislative proposals with a view to working out a recommended uniform bill or legislative guide that would form the basis for State action.

IV

In order to give full protection to the motorist as a consumer it is recommended that a special committee on consumer relations be appointed and charged with the duty of studying motorists' problems in the consumer field and of working out programs for correction of all abuses that are disclosed by such study.

POSTWAR CARS

Polls of motorist opinion conducted by the American Automobile Association and its affiliated clubs show clearly that motorists want practical improvements designed to add to enjoyment and utility of car use. Outstanding demands include provision of greater visibility for the driver, better means of jacking cars, greater accessibility for greasing and servicing, windshield defrosters, and automatic turn signals. It is recommended that there be continuing surveys of motorists' preferences in design of cars and other automotive products, and that the findings be made public.

ACTION PROGRAM FOR HIGHWAY SAFETY

The American Automobile Association believes that the action program of the President's highway safety conference provides a generally effective guide which, if properly utilized, can produce a very substantial reduction in traffic accidents. Very encouraging progress has been made in a number of places. The establishment of the Federal Committee on Highway Safety by the President through Executive Order No. 9775 is commended. About one-third of the States have held the recommended State conferences and some cities have already taken action. However, in general, there is need for more expeditious and extensive utilization of the excellent recommendation of the action program. The AAA urges that the remaining States hold State-wide conferences and that cities take actions recommendation in the action program.

AAA automobile clubs are urged to make full use of the conference publications, to reappraise the needs in their States and communities in light of these recommendation, and to take vigorous action on such parts of the conference recommendations as will be most effective in reducing traffic accidents in their areas.

IMPROVING AAA CLUB SAFETY PROGRAMS

The governing board of each AAA affiliated association and automobile club is urged:

1. To make an immediate reappraisal of the club's traffic safety activities to the end that each club shall have an effective traffic safety program consistent with its resources in the limited areas being emphasized by the traffic safety committee and national headquarters, and to carry on such program in a thorough and effective manner.

2. To see that the club has a safety director on a full-time basis where club resources make this feasible; otherwise, either on a part-time staff basis or on a volunteer basis;

3. To consider the desirability of having in addition an active traffic safety committee of which the safety director might well be the chairman, at least in the smaller affiliated clubs;

4. To arrange for the presentation at least once a year to its entire membership of a statement, in summarized form, on the traffic safety activities of the club.

National headquarters is requested to prepare a checking-form for use by the governing boards of affiliated associations and clubs in reappraising club safety activities, to maintain a record of club safety directors and safety committees, to set up a plan for maintaining contacts with the club safety directors so as to be of maximum help to them, to set up a training program for club safety directors if the demand warrants, to provide suggestions for effective graphic statements on traffic and safety activities of clubs for use in reporting to club members, and to report to the next annual meeting on these matters and on the activities reported by the clubs.

UNIFORMITY OF TRAFFIC REGULATIONS AND OF TRAFFIC CONTROL DEVICES

There are now available generally excellent revisions of the uniform vehicle code and the model traffic ordinances. There will shortly be available a revised manual on uniform traffic control devices. These three documents provide extremely valuable bases for uniformity of motor vehicle legislation and of signs, signals, and other traffic control devices.

The American Automobile Association pledges an intensive program of activity for the full utilization of these models in the States. It urges affiliated automobile clubs and associations to follow the recommendations in the action program and the report of the committee on laws and ordinances of the President's highway safety conference for securing maximum progress in the adoption of uniform motor vehicle laws and ordinances. It urges cooperation with other interested groups in the State to the maximum feasible extent in securing such advances toward uniformity as are considered most important and attainable.

Affiliated clubs are urged to promote the adoption of the recommendations of the manual on uniform traffic control devices to the maximum extent feasible in their area. It can properly be pointed out that section 12 of the Federal Aid Highway Act of 1944 provides a basis for expediting the securing of uniform traffic-control devices.

MARKING NO-PASSING ZONES

Motorists traveling across State lines often encounter differences in the highly important markings which are intended to indicate the zones in which the motorist is not to use the other side of the roadway to overtake and pass another vehicle. Many different kinds of markings have been used for this purpose. Confusion and increased hazard result.

What the motorist wants is one adequate standard system of marking no-passing zones. This desire of the motorist should be the predominant factor in the decision on this matter—and not past experience or existing pet designs.

The American Automobile Association strongly urges that those responsible for standardization present one adequate standard design.

REEXAMINATION OF DRIVERS

As to reexamination of drivers, the greatest traffic-safety values will be attained by

giving emphasis to those drivers who are involved in accidents, who repeatedly violate traffic laws, who have physical or mental disabilities or infirmities. Thorough reexamination of such persons who are most obviously in need of it is urged and is considered more desirable than general periodic reexamination which would all too likely prove to be hurried and of dubious thoroughness and value.

DRIVER TRAINING

Sixty percent of persons in the 25–34 age group are motor-vehicle drivers, and the percentages of adults who drive are growing. Today it is widely accepted that driver education and training is primarily a function of the high school and that teachers should be trained for this specialized work. Analyses show much lower accident rates for high-school-trained drivers. Over one-third of the States have taken progressive action; several provide for driver education in high schools by legislation or State education department regulation.

The AAA urges that credit courses in driver education and training be presented in every high school in the United States and that these courses include behind-the-wheel instruction. (A home-school cooperation plan is available for high schools which are not yet prepared to include behind-the-wheel instruction in a school-operated dual-control car.)

AAA associations and clubs are urged to institute vigorous programs for the development of public support for such high-school programs, working in cooperation with the school authorities. National headquarters is requested to formulate methods for developing public support, and is urged to continue to provide the services of experienced educators for training teachers and for other aids to educators upon invitation therefrom.

ADULT DRIVER TRAINING PROGRAMS

There is ample evidence that high-quality driver-training instruction presented by AAA automobile clubs is very popular. A number of clubs have very active and highly successful programs. It is strongly urged that other affiliated clubs give serious consideration to the institution of such adult driving schools with suitably high standards. In order to help protect against driver training of substandard quality, the traffic-safety committee and national headquarters are requested to review existing standards for such adult driver training programs and to consider the availability of publishing recommended minimum standards.

PEDESTRIAN PROTECTION AND REGULATION

For many years the American Automobile Association has been very active in the promotion of pedestrian-protection programs in States and municipalities. It continues to believe that protection of pedestrians should be the major objective. However, the pedestrian toll continues to be very high. For the country as a whole it involves nearly 4 out of 10 of the persons killed in traffic. In cities it averages nearly two-thirds. For the protection of pedestrians, therefore, the AAA now urges that following adequate educational periods in each community, regulations be put into effect which will place upon the pedestrian appropriate responsibilities as a part of the traffic stream, just as the motor-vehicle operator has, and should continue to have, his responsibilities in traffic and in relation to the pedestrian. There should be no weakening of proper requirements for motor-vehicle drivers, but there should be enforcement of appropriate pedestrian regulations.

PROTECTION OF SCHOOL CROSSINGS

As the demand for police engaged in traffic work grows, the need of providing officer protection at certain crossings used by school children is being increasingly examined. Each such location should be studied carefully, giving due attention to traffic volumes, speeds, roadway widths, sight distance, accident experience, and to whether by rerouting school-child traffic, the crossing can be eliminated.

In some places satisfactory protection can be afforded by the use of civilian crossing guards in place of police officers, or by pedestrian-actuated signals preferably supplemented by school safety patrols. In other places, where the main hazard is an unusually wide roadway, pedestrian isles of refuge can be installed which with efficient patrol operation will be satisfactory. In yet other instances, school safety stops by motorists may be warranted. In such cases the stop sign should be covered or turned away at all hours except when school children are using the crossing.

In some places, use of efficient, well-trained, and well-supervised patrols will be satisfactory where an officer is now stationed. However, this substitution should never be made where there are not lulls in vehicular traffic occurring at reasonably frequent intervals and of sufficient duration to allow children to cross the street or highway safely. If there are not such adequate lulls, as is stated in the Standard Rules, the traffic problem is not a patrol responsibility, but should be handled by the municipality.

VEHICLE SIZE AND WEIGHT STANDARDS

The AAA reaffirms its position adopted in 1933 for the following limitations: 12-foot 6-inches height limit, 35-foot length limit for single vehicles, 18,000-pound axle load limit (for pneumatic tires only), 8-foot width limit.

Concerning a proposal for 102-inch maximum width, the American Automobile Association for reasons of safety opposes such an increase until a preponderant majority of roads of general use have pavements of at least 20 feet in width.

The American Association of State Highway Officials' policy provides for a 50-foot length limit for a tractor and semitrailer and a 60-foot length limit for other combinations of vehicles. The American Automobile Association believes that the safety aspects of these proposals warrant greater consideration and urges further study on these matters.

The American Automobile Association strongly favors the setting forth of maximum loads permissible on any group of axles through the use of a table in place of the formula heretofore set forth. The table will be much better understood and adoption of it by the States will prove a valuable aid to enforcement.

The American Automobile Association urges that in publishing and using the new size and weight standards there be included a proposal that States having higher limits than those recommended not increase their limits and other States not adopt higher limits than those proposed by the AASHO committee. This seems necessary because of a considerable understanding that the proposed AASHO standards are the lowest standards or floors which States should adopt, but are not intended to be ceilings. The American Automobile Association points out that safety and vehicle performance call for maximums which will not be exceeded.

The American Automobile Association urges the importance of adoption of minimum performance standards (speed-ability on say a 5-percent grade with maximum legal load, and minimum braking efficiency on the level with a maximum legal load) to accompany new size and weight standards. Proposed increased sizes and weights accentuate the need for reasonable minimum performance standards.

Does Appeasement Lead to Better Relations?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio statement by Edgar Ansel Mowrer:

Americans like Wallace and PEPPER are doing their country untold harm at the moment of the greatest political crisis in its history.

They are—like Brutus—honorable men. But in their stubborn justification of past Soviet expansion and advocacy of its farther growth (PEPPER advocated giving the Russians control of the Dardanelles and a share of middle eastern oil), they are misleading the American people. They are glossing over the real basis of the Russo-American dispute.

Since June 1941, the Soviet Union has waged successful war not only upon its enemies but upon its allies, among them, the United States of America.

In 1941, Washington and London had small grounds for loving Moscow, whose nonaggression pact with Berlin had cleared the way for Hitler's attack upon Poland. But when Germany attacked Russia, Churchill and Roosevelt decided to forget the past and try to make a new start in world history.

Ninety percent of all Britishers and Americans applauded this decision. They wanted nothing more than to be friends with the Russians.

The United States and Britain poured into Russia all the war material they could spare. They gave the Russians complete freedom of movement in their countries. They tried to cooperate in all possible lines—from propaganda to strategy. They offered Moscow cooperation in war and friendship in peace.

And they found themselves knocking on a closed door. Stalin accepted American aid upon terms so humiliating for us that Gen. John R. Deane, head of the United States Military Mission in Moscow, justifies our toleration of them only on the ground that if we had bucked, Stalin would have sought a new alliance with Hitler (The Strange Alliance, the Viking Press, New York, 1947).

Soon Moscow went further. After signing the Atlantic Charter (no annexations) it began to claim territories of its allies. It demanded a vast sphere of influence and friendly (meaning subservient) governments in formerly independent little countries. When Roosevelt and Churchill sought to refuse, Stalin blackmailed them into acceptance. Soon we found ourselves acquiescing in the same program of Soviet expansion that Adolf Hitler had refused to grant Russia.

Poland, which fought Hitler when Stalin was cooperating with him, was partitioned. The Balkans and Finland were enslaved. The Baltic States were reannexed. China was compelled by Roosevelt to grant the Soviets special rights in Manchuria.

Our officials and officers submitted to systematic humiliation at the hands of the Russians in half a dozen countries where they were supposed to collaborate. The American administration carefully hushed these degrading stories lest knowledge of them should make the American people unwilling further to collaborate with the Russians.

American armies that could have prevented endless future difficulties by occupying liberated Berlin, Vienna and Prague stopped short in order that our Russian allies should enjoy this satisfaction.

Our "neutrality" in China went so far that in December 1945, Secretary of State Byrnes promised at Moscow to withdraw the American armed forces from China. At Paris last summer he signed away Italian Istria to a Moscow satellite and consented to the internationalization of Italian Trieste.

In creating the United Nations, Roosevelt bent over backwards to give the Soviet Union not one but three seats. We accepted a veto (also unhappily desired by many American Senators) that has enabled the Soviet Union to defy the United Nations.

Had we obtained a really satisfactory peace, these sacrifices and these humiliations would not have mattered. But with each retreat by us, Russian arrogance increased. Instead of harmony, further demands—Turkish provinces and the Dardanelles. A constant Moscow barrage of mendacious propaganda about our motives, steady Soviet intrigue in France and Italy, Communist infiltration into Greece, a deadlock in Germany, Austria, and Korea.

In short, instead of clasping the outstretched hand, Moscow remained true to its dogma that in a war between capitalistic countries, the Soviet Union should participate only as a third party, a tertius gaudens, seeking to realize its aims at the expense of both camps.

Wallace and PEPPER either do not know these things, or they do not care. But the American people have a right to know and judge.

The real cause of Russo-American rivalry is not of private enterprise versus socialization. (Or why would we be working with socialist Britain?)

It is not communism versus capitalism or communism versus Christianity. It is not even totalitarian tyranny versus civil liberties (though this comes closer). It is simply the Soviet claim to dominate which if realized would spell the downfall of the United States. In the jungle of international relations (short of world government) any great increase of power by a great state is a danger which other states must resist or submit to.

Only very slowly the American President, the Congress, and the people have admitted the disagreeable truth. Now that our eyes are open, people of the Wallace-Pepper school would throw sand in them. We cannot afford to be blinded.

In the concluding words of honest General Deane:

"We have the moral and physical power to stop the Soviet leaders cold and should not hesitate to use it. We can check any future aggression if we are alive to the danger that confronts us. If we emulate the ostrich and bury our head in the sand, we shall get the resounding kick from a Russian boot that such an undignified posture invites."

Drive for Lower Prices

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. LEFEVRE. Mr. Speaker, during the past week we have learned of the concerted effort on the part of the retail merchants in many communities voluntarily cutting their prices by a flat 10 percent and in some instances even more. This action by these merchants, I presume, is a patriotic one and a gesture to carry out President Truman's plea in his address to the Associated Press at a luncheon in New York for lower prices. In the face of recent wage increases granted by the major steel companies, electrical manufacturers, and automobile manufacturers, I greatly fear this reduction in profits by retailers will be short lived. Unless these merchants are ready to admit that their margins of profit were already too high, when they undertake to replace their stocks, they might find that this patriotic experiment was rather costly.

I am a retail merchant myself; our business is highly competitive and we merchandise essential consumer commodities. Our margins of profit have a well-established historical mark-up. I believe there are thousands of merchants in our country who cannot afford to join in any community, straight across the board flat 10 percent or better cut. We realize sales have dropped off, but until we are assured of lower wholesale costs, we certainly cannot conscientiously reduce prices. To me the movement is inconsistent with the trend.

I notice some of our Government economists are praising this wage rise pattern, stating that it will give the Nation's purchasing power a much needed bolstering. To me, it is only a shot in the arm, as it were, and will definitely lead to that much dreaded inflation. A wave of wage increases is sweeping the country. Increased costs are bound to result. True, we shall have more automobiles, more electrical devices, and many more products made from steel. There will be more places to spend our money, if we have it to spend. What is the answer? We know the administration has always encouraged reasonable increases in wages. If someone would only define "reasonable," we might have the answer. Certainly it is time to think of the consuming public. All of us do not belong to some highly organized working unit. Manufacturers are giving in to demands because they are tired of strikes and know we need increased production. But what about the unorganized—that great group we hear talked of so much, the rank and file, the white-collared class, and millions of others. Theirs is a dark and drab future unless someone—and that means the Chief Executive or the Congress—faces this issue with sound honest-to-goodness horse sense.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. JENKINS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas it has been called to our attention that there is a bill in the House of Representatives of the United States, designated as H. R. 2910, to authorize the United States during an emergency period to undertake its fair share in the resettlement of displaced persons in Germany, Austria, and Italy, including relatives of citizens or of members of our armed forces by permitting their admission into the United States in a number equivalent to part of the total quota numbers unused during the war years; and

Whereas there are tens of thousands of Lithuanian displaced persons in Germany, Austria, and Italy who are unable or unwilling to return to the country of their nationality or former residence because of persecution or fear of persecution on account of race, religion, or political opinions, all as specifically set forth in said bill designated as H. R. 2910; and

Whereas relatives of these unfortunate displaced persons are anxious about their present and future welfare and would like to arrange for their resettlement in the United States, all in accordance with the immigration laws: Now, therefore, be it

Resolved, That Branch No. 44 of the United Lithuanian Relief Fund of America, Inc., located in the city of Pittston, Luzerne County, Pa., for the reasons above stated, fully endorses bill designated as H. R. 2910, and urgently requests Congressmen, Senators, and the President of the United States to pass favorably on this act.

WILLIAM GRIESTARAITIS,
Chairman.
JOSEPH MACEINA,
Secretary.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1947

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter from a young man in high school at Langdale, Ala., which is one of the most eloquent appeals I have ever read for Federal aid for education. This young man points up America's only hope for the preservation of our free democratic institutions, an educated citizenship. The letter follows:

I pride myself on being an American. Our great country has for many, many years been at the top. We have led the world in everything. We have proved to them that democracy is not decadent. From my social study book, which contrasts democracy with other theories of government, I quote, "Freedom in education is its foundation." Surely no true American would contradict this. Yet, a bitter lump swells in my throat when I realize that Britain spends 3.5 percent of her annual income on education, more than twice ours, and that Russia spends 7 percent. In addition, the American public schools are in a turmoil as never before; you find it in every paper you care to read. What is wrong? What America will be tomorrow depends upon how she is trained today. Will we drop to a level of illiteracy and ignorance if good teachers and students alike continue to quit? Will the highest calling of man be allowed to starve itself out? Will unqualified teachers warp rather than mold our mind of tomorrow? We here are hardest hit. The only convention of any kind that I've attended without receiving a heckle has been the annual Beta Club convention for Alabama. We can take no pride

or recognition in our training outside the State, nor can any teacher.

Equalization of school funds (bill S. 472) is our only immediate hope. O, would that I had your opportunity to serve. I am going to graduate in May as valedictorian. Next election I shall be old enough to vote. I can but hope that every American youth will realize what is happening and will strive to pull Alabama and all American schools from a seemingly chaotic state.

Daylight Saving in the District of Columbia

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by George E. Reedy:

One-third of the Nation will enjoy an extra hour of sunlight today. But voteless Washington, dependent upon legislators who owe no responsibility to the city, will carry on under a time schedule designed to fit the bleak winter months.

There is, of course, still a chance that the District will be able to go on daylight-saving time. It depends entirely upon a vote scheduled in the House today—a vote on a bill to give the city the right to act on the will of its residents.

Backers of the legislation believe there is some possibility that the House may approve the measure, but should it do so it will be reversing an overwhelming vote by which it turned down a daylight-savings bill a few weeks ago.

It is rare for either branch of Congress to make such an abrupt about-face. It has happened, however, and today it is the only chance for District residents who want that extra hour of sunshine to have their wishes carried out.

There is much more involved than just a few extra hours of recreation for city office workers. The pressing problem under standard time is to adjust the activities of Washington to other metropolitan centers operating on different schedules.

Railroads, bus lines, radio stations, and long-distance truckers have already put into effect complicated changes in their operations to meet this situation. However, there is a certain amount of confusion that just cannot be eliminated.

Should the bill go through the House today, this problem could be solved very quickly. The measure has already passed the Senate, and there is little doubt about the desire of Washingtonians for daylight-saving time.

Polls conducted by local newspapers, the board of trade, and citizen's associations have demonstrated that conclusively. The only barrier is lack of congressional permission for the District Commissioners to go into action.

When the daylight-saving bill was before the House a few weeks ago, it was defeated by the opposition of Representatives from nearby rural areas. It has never been popular with farmers who, unlike residents of the District, have the right to vote.

The opposition of the Virginia and Maryland Representatives, is in a sense, fruitless. It does not solve the problems of their rural constituents because all of the other large centers in the surrounding area have gone on fast time.

The farmer doesn't like daylight saving because his working hours are adjusted to rural conditions that cannot be changed by moving the hands of a clock. No one has ever succeeded in convincing a cow that 4 a. m. is actually 5 a. m.

However, the farmer is faced with the fact that practically every large city is on daylight-saving time. To keep Washington on the standard system will not help him in the slightest. It will do nothing except thwart the obvious will of a majority of the District's citizens.

Dangerous Trend to Monopoly

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an article on industial mergers written by Mr. Robert E. Freer, a member of the Federal Trade Commission and a trustee of George Washington University. This article appeared in the Washington Post, April 28, 1947, and is as follows:

We have a declared public policy regarding monopoly that is rooted in the principles of the common law and which has been embodied in and implemented by a series of antitrust statutes including the Sherman and Clayton Acts. But in the dynamic development of industry based on modern technology, the facts of concentration constantly tend to outrun the law.

The factual diagnosis showing the relation of corporate mergers to concentration is as complete and as exact as specialists in the field can make it. Today's choice is one between legislative action recommended by the Federal Trade Commission to plug a loophole in the present laws against such mergers and continued frustration of our declared public policy.

Simply stated, the Commission's proposal is that the Clayton Act be so amended that acquisition by a corporation engaged in interstate commerce of the assets of a competing corporation also engaged in interstate commerce be made unlawful where the result tends to monopoly. Presently on stock (not asset) acquisitions so tending are unlawful under that act and legal actions against even such unlawful acquisitions easily may be defeated.

More than 1,800 formerly independent manufacturing and mining concerns have been swallowed up through merger and acquisition since 1940. Their combined asset value was $4,100,000,000, or nearly 5 percent of the total asset value of all manufacturing concerns in 1943. Moreover, it was the larger corporations, each having assets of over $5,000,000 (in many instances achieved through earlier acquisitions), that accounted for some three-fourths of these recent 1,800 acquisitions.

The war contributed powerfully to the trend of concentration. Government purchases and Government financing of productive facilities were channeled predominantly into the hand of corporations which already occupied positions of dominance. Surplus profits created by such channeling have contributed powerfully to the trend by providing funds for additional wartime and postwar expansion through acquisition of former competitors. Out of $175,000,000,000 of Government contract awards between June 1940 and September 1944, $107,000,000,000, or 67 percent, went to only 100 of the more than 18,000 corporations receiving such awards. During the war 68 corporations received two-thirds of the $1,000,000,000 appropriated by the Government for research and development purposes in industrial laboratories.

The most recent information on the wartime growth of concentration available from the Bureau of Internal Revenue shows that the larger manufacturing corporations—those with assets of $50,000,000 or more each—increased their share of total assets from 42 percent in 1939 to 52 percent in 1943.

The degree of prewar concentration in the economy as a whole and in manufacturing industries in particular was stated in the report of the Senate Small Business Committee, submitted in January 1946.

The 200 largest nonfinancial corporations owned about 55 percent of all the assets of all the nonfinancial corporations in the country. One-tenth of 1 percent of all the corporations owned 52 percent of the total corporate assets. Less than 4 percent of all the manufacturing corporations earned 84 percent of all the net profits of all manufacturing corporations.

More than 57 percent of the total value of manufactured products was produced under conditions where the four largest producers of each product turned out over 50 percent of the total United States output. One-tenth of 1 percent of all the firms in the country in 1939 employed 500 or more workers and accounted for 40 percent of all the nonagricultural employment in the country. One-third of the industrial research personnel were employed by 13 companies.

More mergers and acquisitions in the manufacturing and mining industries took place in 1946 than in any of the previous 15 years. In 1946, the number of mergers was 26 percent above the number in 1945, and 225 percent above the annual average of the years, 1940–41. Years of greatest business activity and high price levels are the years in which the greatest number of mergers take place. In 1920, the number of mergers increased more than six times over the number during 1919.

The stock market crash of 1929 which heralded the onset of the great depression was preceded by a great wave of corporate mergers and a wild speculation in their securities. Today speculation in the future of merged concerns, supported by war-swollen profits, is again operating as one of the important causes of the present upward trend in merger activity. This speculation, which stems from the expectation of greater profits resulting from the elimination of formerly competing concerns, leads inexorably to the elimination of our competitive economy and thus to the elimination of the possibility of legitimate speculation.

Assuming as we must that the Government, acting in the general public interest, can, if Congress so directs, prevent the further growth of monopolistic power through mergers of competing corporations, the question is one of ways and means of halting mergers that tend toward monopoly regardless of whether consummated by sale of stock or of assets.

When section 7 of the Clayton Act was passed in 1914, it was assumed that consummated monopolies could be dissolved under the Sherman Act pursuant to the Supreme Court's decrees of dissolution in the Standard Oil and American Tobacco cases decided in 1911. It was assumed that the only remaining problem was how to prevent the formation of monopoly.

However, about the time that the Federal Trade Commission began to institute a number of proceedings for enforcement of section 7 the Supreme Court interpreted the Sherman Act to mean that huge size and power

acquired through acquisition of competing corporations did not necessarily violate the act and that it was only the abuse of such power and not its existence which would make such acquisitions unlawful. A few years later when the commission's cases under section 7 reached the Court, it was held that the commission had no power under section 7 to halt the incipient monopolies where the unlawful acquisition of stock was followed by an acquisition of the physical properties without which the stock had no value, and where this was done before the commission could complete the hearings and enter its order requiring divestiture of the stock unlawfully acquired.

The practical status of section 7 is that no matter how unlawful an acquisition of stock in a competing corporation may be, the remedy provided by the statute easily can be defeated, leaving the acquiring corporation in possession of the assets which are the fruits of its unlawful acquisition of stock. And if the assets are acquired directly without any intervening acquisition of stock, as has become the prevailing method, there has never been any legal ground for a contention that this was prohibited under section 7.

Thus the brave start, under the Clayton Act, has ended in complete frustration. And at the same time, the Sherman Act has been so construed that it seldom has served to unscramble corporate mergers, no matter how great the size and power of the acquiring or of the consolidated corporation. The contrast between the rapid evolution of economic concentration of power and the feebleness and slowness with which effective legal remedies have been and are being applied is striking. It is sufficient to call in question the reality of our faith in the validity of the competition presupposed by the free enterprise competitive system.

A paradoxical aspect of this problem is that while corporate mergers and acquisitions proceed unrestrained and unrestrainable by law toward an ultimate maximum in unified ownership and concentrated economic power, we still enforce the law against the more transient and more vulnerable forms of trade restraint represented by price agreements and conspiracies among competitors. The process of corporate acquisition proceeds side by side with such forms of trade restraint among competitors. The presence of large-scale unified ownership in any industry is a most powerful guarantee of success in the operation of a price-fixing combination among the competitive units of that industry. The very success of law enforcement against such combinations highlights the advantage of unified corporate ownership as a legally invulnerable means of accomplishing similar ends. Carried to its logical result, there will probably be less and less opportunity to score victories against price-fixing combinations as corporate mergers immune from legal attack take their place.

No one has summarized the danger of monopoly any better than President William Howard Taft, under whose administration some of the most far-reaching antitrust actions of all time were taken. On December 5, 1911, he stated:

"When all energies are directed not toward the reduction of the cost of production for the public benefit by a healthful competition, but toward new ways and means for making permanent in a few hands the absolute control of the conditions and prices prevailing in the whole field of industry, then individual enterprise and effort will be paralyzed and the spirit of commercial freedom will be dead."

The facts of the present situation constitute an increasing threat not only to our traditional antitrust policy but also to the American system of free competitive enterprise which that policy is designed to foster and to protect.

Oil and Gas Division

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herein a statement by Hon. Walter S. Hallanan, chairman of the National Petroleum Council of Washington, D. C. Mr. Hallanan is a citizen of West Virginia and has had extensive experience in matters pertaining to the petroleum industry and his observations should receive careful attention. His statement follows:

Serious misconceptions of the relations of the service being given to the Oil and Gas Division of the Department of the Interior by the petroleum industry are indicated in the report of the Appropriations Committee on Interior Department appropriations now before the House of Representatives.

The petroleum industry answered the request of the Government to provide, through the National Petroleum Council to the Oil and Gas Division of the Department of the Interior, such essential information as various arms of the Government deem necessary to the purposes of national defense and public welfare. The representatives of the petroleum industry—both large and small and coming from every section of the country—responded to the Government request as a public duty. They accepted membership on the National Petroleum Council at the invitation of and under the appointment of the Secretary of the Interior. It should be made crystal clear that the Oil and Gas Division was not created at the request of the oil industry or any part of it. The industry answered the invitation to join in this Government-industry peacetime cooperative effort in consideration of an obligation which we recognize as an industry very closely allied with the problems of national welfare and security. The Government, through the Oil and Gas Division, has requested information from the oil industry on various matters and the industry has responded unselfishly and in the spirit of complete cooperation.

It is unfortunate that in the recent report of the Committee on Appropriations of the House of Representatives dealing with the Oil and Gas Division of the Interior Department, the factual situation is so grossly distorted as to make it appear that the statistics and studies which the Oil and Gas Division is requesting through the National Petroleum Council, are solely a service to the oil and gas industry. The committee report further states that its (Oil and Gas Division) service to industry is to provide information which the industry cannot get without violating the antitrust laws. This is a wholly untrue and indefensible statement which would indicate that the committee has been grossly imposed upon in the representations made to it.

The petroleum industry is making a sincere effort, through the medium of the Oil and Gas Division, to provide the Army and Navy and other governmental agencies with such information, with respect to oil and gas, as intelligent and correct understanding and protection of the national welfare may require.

This effort is being made in pursuance of the suggestion by the Committee on Interstate and Foreign Commerce of the House of Representatives. This committee, in its final report to Congress recognized the stupendous job done by the petroleum industry in cooperation with the Government and suggested continuance of an organization along this same pattern whether for peacetime or military purposes. The report declares:

"The committee regards the creation of the NPC as a significant development, a natural outgrowth of the cooperative accomplishment experienced during the war. Prior to the war, relationships between the petroleum industry and the Federal Government were anything but close and harmonious. Machinery did not exist for enabling the industry to contribute effectively out of its benefits of information and recommendations upon problems of common and public concern. This alliance, if a genuinely cooperative relationship is maintained, will benefit both the Government and industry in terms of a better understanding of petroleum problems and an improved governmental administration of oil and gas activities."

In order that the record should be clear the facts are that although the Oil and Gas Division may render some service to the oil and gas industry the oil and gas industry through the National Petroleum Council renders much greater service to the Government and renders it gratuitously.

It would seem that in order to eliminate any appropriation for the maintenance of the Oil and Gas Division, the Appropriation Committee of the House of Representatves has permitted someone to atempt to "smear" the petroleum industry and its motives in what has been a sincere effort by the industry to provide the Government with industry data and information necessary to the welfare and security of the Nation.

Policing of the District of Columbia

EXTENSION OF REMARKS
OF
HON. E. WALLACE CHADWICK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. CHADWICK. Mr. Speaker, speaking as if to H. R. 1624, a District of Columbia police bill, I claim just 2 minutes of the time of the House to call the attention of the House to a very special and personal obligation of our Members with respect to one aspect of the policing of the District.

LET'S PROTECT OUR HOME FOLKS HERE

We all of us welcome the visits of our constituents to Washington, and we know that many come here in their cars. Accustomed as we are to seeing Pennsylvania licenses on the streets here, nevertheless, each one I see carries a pleasant suggestion of home; I am sure that colleagues from more remote States get a like special pleasure when they see licenses more familiar to them than they are to most of us.

We who are here by reason of the confidence and support of these good people back home owe them, I think, a little special solicitude, to be sure that when they come here as our guests, they are courteously, as well as efficiently, served by the traffic police of this District.

We all know the difference between good policing and bad; we have all suffered at one time or another, somewhere or other, from exhibitions of arrogance and unreasonableness by traffic officers

in strange cities, from which we being strangers could have no assured protection.

But Washington must not be permitted to be a "strange city" to any American who chooses to pay a visit to his Capital. It is his city, in a very peculiar sense; he is not only welcome here, but he is here by special right—a right which I think our traffic force will have to learn to respect.

This lesson does not seem to have been completely learned; I can only assume that some persistent effort is being made to teach it. Unless I am very much mistaken, there are still a few policemen on our Washington streets who might make efficient, or at least formidable, guards in some maximum-security prison, but who lack either the intelligence or the requisite finesse to deal with the American motoring public, who are their real employers.

Personally, I have already observed two such occurrences here which were made unnecessarily annoying by the demeanor of traffic-squad officers. Those I hope were exceptional, but if I observe a third, I am going to do a little investigating on my own account to find out just what happens down here to my constitutents and yours, Mr. Speaker, when they unintentionally fall afoul of some of these hard-boiled babies in uniform. And if I do, I intend to report the facts back to this body, and ask your aid in helping make Washington the most hospitable city in the world to its great hosts of visiting drivers, rather than the motorists' nightmare it now sometimes appears.

In this connection, I call the attention of our Members to an editorial in today's Washington Post under the caption "Sensible signs." We might all do well to commend Director Keneipp's efforts in this direction; and we certainly should commend the concluding sentence of the editorial which reads as follows: "Life in the Capital of the United States is complex enough these days without continuing any minor vexations we can do without."

I trust that those responsible for the discipline and training of the Traffic Squad will not think I am aiming at any unreasonable or impossible standards of perfection. I know that policemen are human, like the rest of us. I know that they sometimes forget their duty, often under great provocation. But it is my experience that a few judiciously administered suspensions go a long way in helping them remember.

Facts on Air Power

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, April 28 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, on April 7—Army Day—J. E. Schaefer, vice president of the Boeing Airplane Co., Wichita, Kans., addressed the Wichita Rotary Club on the subject, Facts on Air Power. Since the address contains many important facts concerning the airplane industry and its relation to world security, I ask unanimous consent to have the speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last week I received a letter from a friend in London and in it appeared this thought provoking statement: "Our need now, as I see it, is no longer for the spirit that rises to meet common danger or adversity, but one which seeks the hidden dangers of today and rises to part company with indifference and complacency." Our own Alf Landon put it in another way in his recent Wichita speech which was widely commented on in New York papers. Alf said, "We must keep alert and we must be prepared to maintain a long-range, stout-hearted American policy for the benefit of the American people." We have won a war, but we have not yet won a peace. Indifference and complacency can and will lose that peace if we are not prepared to assume international obligations in accordance with circumstances and conditions growing out of our participation in World War II. Air power had much to do with the final results of that war and will by direction and indirection have much to do with any peace growing out of it.

We here in Wichita have been very closely associated with an important segment of air power and the results it achieved during World War II. We know what it means to work long hours and make business and personal adjustments in order to build this necessary air power. With all of this experience and background, I am, however, wondering if we understand and appreciate the extent to which our air power of VJ-day has been reduced. You may be surprised to know that we are today following the same road to airpower impotency which we followed after World War I.

In 1918, we increased our aircraft production to 14,020 units per year. This fell to 780 units in 1919. Seventeen aircraft plants were producing airplanes in 1918. Three were producing aircraft in 1926 when the Morrow Board brought out its report on our aircraft impotency. This, together with the Lindbergh flight, stimulated aircraft activity to the point where it was barely able to pull through the depression years. It may interest you to know that we at Boeing-Wichita got down to 13 people during those trying years.

In 1939, as the war clouds began to gather, the aircraft industry ranked forty-fourth in value among all industries. It had a total annual output of $279,000,000 for aircraft and engines as compared with $4,039,000,000 for the motor-vehicle industry. Aircraft was sandwiched in between the sausage and candy industries. This will give you some idea of its relative importance and position in 1939. Early in 1940, a 50,000-airplane program began to be discussed. I well remember the first knowledge I had of this astronomical goal. Gen. H. H. Arnold, then Chief of the Army Air Corps, came to Wichita for one of his periodic visits. We had a good steak dinner at the stockyards and afterward he suggested that I arrange for the guests and his staff to return to town so that he and I could drive back to the hotel together. Soon after we crossed Thirteenth Street and Broadway, he asked me to pull over to the curb, for he said he was worried and wanted to talk with me. When I had done this and had parked, he said, "Earl, what I am telling you is a deep secret at the moment, but within a few weeks the President is going to announce a program to build 50,000 airplanes per year. That is more airplanes than you and I ever dreamed of. If you were in my position and had 50,000 airplanes thrown at you, what would you do?" General Arnold asked. I thanked him for this inquisitive compliment and told him that my first act would be to catch my breath. "Well," he replied, "the first thing I will have to do is train pilots and that is where you come in. We will need training planes and I am going to expect Wichita to build them for me."

Wichita did just that, and later on, after we went through the agony of Pearl Harbor in December of 1941, we were given other jobs to do. In every instance Wichita came through with its quota, until the total military aircraft production throughout the country early in 1944 reached 9,000 airplanes per month.

Because of the many models of different and varying sizes and the attendant difficulty in properly describing production in terms of airplane units, the aircraft industry and the armed services finally agreed on pounds of air-frame weight as a proper basis for measuring productive capacity. Pounds of air-frame weight simply mean pounds of airplane structure exclusive of engine, propellers, and accessories. It is essentially the wings, control surfaces, landing gear, and body of an airplane. These 9,000 airplanes per month, which represented the peak of our air-frame production in 1944, totaled approximately 255,000,000 pounds of air-frame weight exclusive of spare parts. Spares must have added another 10 or 15 percent. It is estimated that the aircraft industry, for the 5-year period between 1940 and 1945, produced $48,000,000,000 worth of aircraft and engines for World War II. This averages nine and one-half billion dollars per year. Remember the automobile industry was a $4,000,000,000 industry in 1939. From a dizzy production peak of 255,000,000 pounds of air frame in 1944, military aircraft production fell to less than 1,000,000 pounds of air-frame weight in December 1946, or to one-eightieth of its 1944 level and one-sixth of the 1941 level, the last year before World War II. From 1920 to 1939, $30,000,000 per year were spent for military aircraft and engines. From 1940 to 1945, $9,600,000,000 per year were spent for military aircraft and engines. Proper and wise planning during peacetime might have saved billions during the war, might even have prevented it from happening. Proper and wise planning is the basis of our concern today.

Now, let's see how the present low levels of industry activity threaten national security. Let us examine a typical development schedule for an airplane with which we here in Wichita are familiar—the B–29. In 1935, we entered into a Government experimental development contract which, in 1939, finally culminated in a definition of the military characteristics for the B–29—4 years were required for this.

I doubt that so long a period of time would be required for similar work today, since great progress was made during the war toward a modern definition of military characteristics as applied to aircraft construction. From this point forward, however, the time element is important and it is doubtful that for any completely new airplane a time lag of approximately 5 years between the design approval contract date and the maximum wartime production peak could be greatly reduced.

The first design-approved contract for the B–29 was let in 1940 and the first flight of the experimental XB–29 was made in 1942. Early in 1943 the first production model came off the lines. All of this was accomplished with unlimited funds and a priority second only to the atomic bomb, officially called the Manhattan project. In the spring of 1944, the first B–29's went overseas. As you will well recall, these first B–29 airplanes came from Wichita. In 1945, five years after the first design-approved contract was let, four plants were producing B–29's. They were

located in Seattle, Wash.; Omaha, Nebr.; Marietta, Ga., and Wichita. These plants reached a maximum monthly production of approximately 380 units, with slightly more than 40 percent of the final total B-29 production being accomplished here in Wichita. It will be seen from this progress report on the B-29's that the military airplanes of 1950 must at least be in the design and development stages today.

Since VJ-day, the B-29 has been succeeded by the B-50, the control surfaces and outer-wing panels for which are produced here in Wichita. The remaining assemblies are being produced and the airplane assembled in our Seattle plant. Boeing's successor to the B-50 is the B-52. It is estimated that approximately 2,000,000 engineering man-hours will be required to design and develop the B-52. In connection with the research and development aspects of air power, it is well to remember that no airplane used in World War II was designed or engineered after we got into the war. All airplanes used in World War II were in or being readied for production when we entered the war.

In 1945, the President appointed an Air Coordinating Committee consisting principally of the Assistant Secretary of War for Air, the Assistant Secretary of Navy for Air, one of the top Assistant Secretaries from the State Department, and top representatives from the CAA and CAB. The report of this Air Coordinating Committee submitted in October 1945, indicates that the current unsettled international situation requires a substantial striking force ready at all times to cooperate in the maintenance of world peace. The committee's study showed that approximately 60,000,000 pounds of military air-frame weight annually, or roughly speaking 5,800 airplanes, are required to maintain this striking force. "After maintenance of world peace is assured and a substantial degree of disarmament has taken place"—and this is quoted from the committee's report—"this annual production of 60,000,000 pounds of military air-frame weight could be halved." As you well know, we have not yet arrived at a place where the maintenance of world peace is well enough assured, nor has there been the substantial degree of disarmament contemplated to assume the degree of safety implied by such a reduction in aircraft production potential, so we should now be producing approximately 60,000,000 pounds of military air-frame annually.

In spite of these recommendations by the Air Coordinating Committee, our actual military production in 1946 was 12,500,000 pounds of air-frame weight. Remember these figures, please. Sixty million pounds is the required military production level set by the Air Coordinating Committee for ready defense and rapid expansion of the aircraft industry under current conditions of unrest. 30,000,000 pounds is the absolute minimum to permit rapid expansion after world peace seems assured; but, in 1946 we produced only 12,500,000 pounds of military air-frame weight. Also remember that the United Nations Charter assumes that, in the beginning at least, we are to keep the peace by enforcing the peace. The United Nations, therefore, in order to be at all effective, must be implemented by air power, for UN effectiveness is based on strength—not weakness. To be more specific—air power is the only force Russia fears from the United States.

If the President's current policy of firmness with Russia—a policy to which I think most of us subscribe—should result in a "put up or shut up situation" the aircraft industry is currently in no position to fulfill the requirements of that situation. It would take 18 months to 2 years to establish reasonable production of modern military aircraft. This was a surprise to many of our Congressmen and Senators to whom I told this story week before last. It would be difficult, if not impossible, to even start producing the aircraft with which we ended World War II inside of at least 1 year and possibly 18 months. As many of you know, substantially all of the jigs, dies, and fixtures for producing B-29's in Wichita, costing approximately $48,000,000 to develop and build, were destroyed and sold for junk. This figure is exclusive of the facility cost which includes buildings and machine tools and which are presently available for emergency use. This facility cost was $27,000,000. All of the B-29 jigs, dies, and fixtures would have to be rebuilt before we could again start production of that model and for any new model these tools would not only have to be built but in many instances designed and engineered for high-production output. Other plants throughout the country are in very much the same situation with respect to military aircraft production. Now what should be done?

First of all, I would want to emphasize the fact that we in the aircraft industry are as much interested in saving tax money as any group of businessmen. We, however, want to save it by judicious spending through proper planning. We have to spend money where it needs to be spent but let's be sure to spend it where it will do the most good. As an industry, we want to be self-supporting and self-sustaining. To accomplish this requires an understanding of the scope of aviation. Aviation is global in its aspects—militarily as well as commercially. It provides one of the best possible answers to the indeterminate time and space factors in the physical equation of economic progress. Understanding this, you can appreciate why we at Boeing, for example, cannot realize the full potential market for our Stratocruisers in a war-torn world. We must have peace to properly organize and exploit this market. We want peace, but we also want to be realistic in our approach toward peace. It is not here, and at the moment it is not imminent. So, in order to properly plan our organizations and development programs, we of the industry are advocating:

First, a constantly up-to-date 5-year program which will—

(a) Establish the Nation's annual requirements in advanced aircraft;

(b) Determine the size of the industrial program necessary to produce these aircraft; and

(c) Devise means and procedures to make rapid expansion possible for the industry.

Secondly, we advocate procurement legislation and procedures which will assure the most efficient execution of this 5-year program.

Third, and most important, we advocate an Air Policy Board established by Congress and operating on the highest policy level. This Board would be directly charged with the development and maintenance of air power. It is my firm belief that only through the adoption of such a program can we spend public funds wisely and economically and at the same time be prepared to back up General Evans and your sons and mine with the air power which they will need when and if a "show-down" comes.

Painful Operation

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. JONES of Ohio. Mr. Speaker, when the appropriation bill for the Department of the Interior was before the House last week, I made some remarks on unexpended appropriations. The total is about $24,500,000,000. Some of this huge sum accumulated during the war years, but a substantial part for public works has piled up since the war ended. The carry-over fund is held in varying amounts by many departments, bureaus, and other agencies of the Government.

The important feature of the $24,500,000,000 carry-over is that Republicans last fall promised to take the water out of the administration's padded request for money. The Republican Congress cannot carry out its promise to the taxpayers of the Nation unless it takes this $24,500,000,000 money "in the sock" voted in prior years when it considers 1948 requests for funds. Therefore, the Government's "sock" should be washed to do a clean job of economy.

It is plain to me, and I believe that you will agree, that Congress should review this tremendous carry-over of appropriated funds, all of which are available for expenditure in the fiscal year 1947 and a substantial amount indefinitely. In the light of current conditions, it is prudent that we examine these funds with a view to determining those that should be allowed to stand and those that should be held up or rescinded.

The Congress would be derelict in its duty if it permitted this gigantic fund—more than $24,000,000,000—to be spent at the discretion of department heads, bureau chiefs, and underlings spread across the country. There should be coordination and over-all planning by the Congress on this huge carry-over.

Obviously, the review should be made with care and wise discrimination to see that the worth-while construction is carried forward and that no mistakes are made that would cost more in the long run than if they were not made. That, of course, is what the House did when it passed the Interior Department appropriation bill.

I made the statement during debate on the Interior Department appropriation bill that this $24,500,000,000 in carry-over funds could be used as a handy political weapon in the 1948 national elections. In view of what we have seen in recent years under a tax and tax, spend and spend, and elect and elect philosophy of government, we must be alert. That is why I now repeat the statement I made last week that public-works construction funds held up during and since the war could be used by the administration in an effort to prevent their inevitable defeat in the 1948 elections.

There has been considerable newspaper editorial comment on this $24,500,000,000 carry-over. The opinion is general that Congress should look into that fund and treat it in the light of present conditions. The Washington Star of last Sunday carried an editorial which approaches the painful problem of reduction of expenditures from the same point of view that our appropriation subcommittee approaches it: to make every feasible reduction in expenditures in the light of our present fiscal condition. I am appending the editorial for the information of the House:

PAINFUL OPERATION

Anyone reading the record of the House debate on the slash in the Interior Depart-

ment appropriation would be hard-pressed to find justification for the extravagant charges and countercharges which various parties to the dispute have made.

The wisdom of some of the cuts may be debatable. But it is difficult to take seriously Secretary Krug's contention that the reductions ordered "might be enough to set off a major depression," or to be impressed by the pronouncement from his predecessor, Harold Ickes, that the Republicans responsible for the slash are "political vandals" in the service of "Eastern exploitation." By the same token, it is a little silly for the Republican spokesman, Representative JONES of Ohio, to be accusing the President and Mr. Krug of a plot to keep control of $24,000,000,000 in frozen or inactive funds so that they can use it in the 1948 campaign "in an effort to whip every Republican Congressman."

As the matter stands now, the House has approved $161,413,513 for the Department for the 1948 fiscal year. The requested appropriation was $295,420,420. This cut has been most severely criticized in its application to construction work under the Department's reclamation program, and the question is to what extent, if any, this actually will cripple the program.

Some time ago, as an anti-inflationary measure, the President froze a portion of the Department's funds, the effect being to conserve materials for other and more urgent purposes and to check the flow of money into the hands of the public. Under this freeze order, according to Mr. JONES, the Department in 1947 was authorized to spend only $162,750,000 on construction. He also says that with the new but reduced appropriation plus unfrozen funds, the Department will have 25 percent more to spend on construction than would have been possible under the President's order.

Possibly this is not enough. Or it may result in a situation which interferes with the best long-range planning. But, at all events, it would not seem to produce a result which justifies the extremely intemperate criticism which has been heaped upon the heads of the Republican Congressmen. Economy is always a painful operation and it can easily be carried to a point that is harmful in the long run. But in our present fiscal condition every feasible reduction in expenditures is desirable, and those who challenge the wisdom of particular cuts should not lapse into the error of confusing sheer abusiveness with intelligent criticism.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. HARRIS. Mr. Speaker, I am sure many other Members of Congress are receiving expressions of interest and concern from their districts, and especially agricultural districts, with reference to next year's program administered by the Production and Marketing Administration, successor to what is generally known as the AAA program.

Many of the farmers and those associated in agricultural pursuits are tremendously interested in continuing the program of soil-building practices, preserving our soil and building for the future. We hear, Mr. Speaker, about a recession and the possibility of a depression. As I have said many times, if the farmers of this Nation are prosperous we will have a prosperous Nation. The farmers are the first of our people to be hurt by any recess in business or general depression. If we are to continue to have a prosperous Nation we are going to have not only to preserve but build our soil, prevent continued erosion and the devastation of this greatest of our resources.

I believe in economy, Mr. Speaker, and the elimination of unnecessary expenditures in any governmental program. I do not believe it is economy to permit the continued depletion of our resources and the opportunity for a prosperous agricultural industry in the future. There is nothing in my opinion more essential than a well-rounded agricultural program. Yet there is no group of people in this country more disturbed today than the farmers of this country, because they are fearful of what the future holds for them. There is a determined effort being made to make a drastic reduction in funds for the next fiscal year and, in fact, to completely eliminate a part of the program so basic to the agricultural industry such as the agricultural conservation program, Federal crop-insurance program, the school-lunch program, and the Commodity Credit Corporation, remembering that we have a definite commitment for the next 2 years of price-support loans and purchases.

Among other communications I have had from my district, I have received a statement of appreciation from a committee of outstanding men for the Congress having given agriculture an opportunity to compete in our national economy, restore our soil, and increase the standard of living of our farm population. With that statement, Mr. Speaker, that transmits a statement on the history of the AAA program, its importance, its accomplishments and why have the AAA. Because these statements express so well the importance of this program and the need for the future stability of the agricultural industry, I include them in the RECORD, under permission to extend my remarks, as follows:

APPRECIATION

To the Congressional Members who have made possible the program of conservation in the Seventh Congressional District, who have given a helping hand to the custodians of our soils during this generation, and who have given agriculture an opportunity to compete in our national economy, who have made possible the restoration of our soils, who have lifted our farm population from the depths of bankruptcy to a higher level of prosperity and who have given assurance of a secure and sound agriculture for future generations.

In behalf of farmers and other county committeemen in this Seventh Congressional District, we the undersigned, express our most sincere thanks.

EARL N. MARTINDALE,
Chairman, Hempstead County.
BRUTIUS HARRELL,
Chairman, Union County.
JAMES B. CEARLY,
Chairman, Nevada County.
ROY H. SHEFFIELD,
Chairman, Chicot County.

HISTORY OF TRIPLE-A

The agricultural conservation program was inaugurated in the year 1936. At that time agriculture was in a state of bankruptcy. Stability of agricultural prices had been lost. In order to survive, agricultural people were forced to drain every ounce of fertility possible from the soil. Large acreages were planted; prices dropped.

The following year an even larger acreage was necessary to furnish the bare essentials needed for existence. It was apparent to everyone that something had to be done, as our soils were becoming entirely depleted and erosion was on a rampage. As a result of the above, health, education, and community life were seriously affected. No new soils could be cleared and no longer could a move to new and fresher lands be made.

These conditions were responsible for the inauguration of our first control program. Compulsory allotments were placed on the planted acreage of cotton in the Seventh Congressional District. This program was not dictatorial. It was very democratic in that before this program could be put into effect, it had to be approved by a referendum requiring two-thirds approval of all cotton producers in the Nation.

It is now recognized that this program was the turning point of our agricultural unrest and devastation. With allotments, a smaller acreage was devoted to cotton, thus allowing thousands of acres to be diverted to other uses. This gave that diverted acreage an opportunity to rest and regain some of its lost fertility. Serious thought was given to the future. Analysis was made of our soils' bank account, revealing a great deficit. The accounts had been overdrawn for a hundred years and still withdrawals were being made. Eroded fields, washes, and gullies took on the appearance of a giant octopus with millions of arms reaching into our soils, carrying them into our streams on down into the Gulf of Mexico, to no longer produce and stabilize our economy.

The second important achievement of this program was the opportunity given farmers to predict the income from the crop year. With allotments as a production-control measure, cotton loans guaranteed a minimum price at harvest time. This gave farm producers the opportunity to use foresight for the first time in planning a budget for the year. With average weather farm producers could have confidence and look to the future not as something to fear but rather as a dream to be conquered. Debts were paid off. Banks exchanged their mortgages for cash and once again became sound. This new stability and economy on the farm influenced the economy of our Nation.

With this chaos conquered there only remained to be found the solution of the insecurity of weather, seasons, and insects. In 1942 the first cotton crop insurance program was put into effect. With this, farm producers could look to the future and plan on an equal with industry and business. At the time of planting, with crop insurance, a producer is guaranteed a minimum production and through cotton loans is guaranteed a minimum price for this cotton. No longer are weather, insects, and price fluctuations a fear.

With fear and uncertainty eradicated and a somewhat higher standard of income guaranteed, more and more thought and effort could be brought to bear on the problem of soil conservation. A study had revealed that one-fourth of the total top soil of Arkansas had been lost to erosion, and that approximately a third more had lost more than one-half of its top soil. These were alarming figures when it was learned that it took several thousand years to build this top soil. Muddy rivers in Arkansas reflected the loss of income, health, and security. The next important finding was that plants do not thrive on soils alone. It was found that there were needed minerals that nature had put in the soils to add life and strength to the plant. In direct relations to this it was found that man and animal must obtain their supply of necessary minerals from the same source—our soils.

Investigations revealed that even though a sufficient quantity of plants were consumed the body might be deficient in needed minerals. This brought up the added problem of restoring the needed minerals to our soils as well as conserving them. These conditions were recognized by the triple-A farmer committeemen throughout the county and programs to correct these conditions were recommended to Congress. Congress accepted its responsibility and has approved programs to help correct these deficiencies. The triple-A committeemen throughout the Seventh Congressional District have made great progress in soil conservation and restoration in the past 11 years; however, it is realized that the program is only in its infancy. Continued vigilance and effort must be expended in future years to correct the destruction of the past 100 years.

WHY THE TRIPLE A?

The paramount function of the triple A farm program is to furnish financial assistance to aid in the carrying out of needed soil conservation and soil-building practices. The program was developed after a great deal of study of the needs of our soils and was inaugurated as an encouragement to farm producers to carry out a continuous cycle of better farming practices.

The need for financial assistance is becoming more apparent each day as we are made to realize that farm producers, even though they have titles to their soils, are only custodians through their lifetime. As custodians over a short period of years the selfish inheritance of man calls for a farming program, developed for the primary purposes of draining all of the strength from the soil so as to furnish the greatest amount of pleasures throughout their lifetime without regard for future generations. There is a great temptation to sacrifice our soils for both selfish and unselfish endeavors. A farm producer will sacrifice his soil to obtain an education for his children, not realizing that the sacrificed soil will be the determining factor in the economy in which his children must survive. Farm producers need financial assistance to lighten the burden they must carry through their guardianship in order to preserve our agriculture for future generations. This responsibility to our future generations must be borne by all civilization. We are equal in this responsibility as farmer, doctor, businessman, or laborer.

Financial assistance is needed by the farm producers to carry out the more expensive practices which they are unable to carry out alone. Lime, terracing, ditching, and pond building are some of the practices that would come under this classification. Farm producers share in the profit in only a small way from these practices, whereas all civilization shares in the benefits. When a farm producer uses lime and phosphate the city dwellers receive the benefits in products containing greater amounts of minerals.

A great percentage of our farm population is made up of tenant farmers. In general these tenant farmers constitute a danger to our soils in that their tenure is over a short period of years. The only interest of this migrating population is the products taken from the soil during their tenure. Financial assistance offered to this population to practice conservation measures is the only guard against this danger.

Our farm program is at the cross roads and the question facing our congressional leaders is, Shall we continue with our soil-conservation work that was started 11 years ago or shall we discontinue it or cripple it by a drastic reduction in funds and lose the gains we have made? It is the sincere desire of the farmers of this district that the program be continued in its entirety without any reduction in funds.

Radio Address to My Constituents

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WTBF on April 19, 1947:

Dear friends of the Triple Cities and my congressional district, I am breaking away from Washington next week to keep a date with old friends. An invitation has been tendered me by Mr. Marlin Casterlin, Townsend national representative, to attend a dinner next Friday evening in my honor at your home library in Johnson City, sponsored by the Broome County Townsend organization.

This occasion will afford me the chance to confer and talk with Triple Cities' friends who are dedicated to Americanism and to the survival of our great country. To those who write me for personal interviews I suggest you come to this dinner in your home library in Johnson City next Friday evening. I will be glad to see you and to converse with you after the program is over.

You will also be interested to learn that I have a message of special significance to the people of Broome County which I will deliver at this affair. It will contain a few questions and will call for some answers which ought to be cleared up by a handful of persons engaged in smearing your Congressman. This handful is dangerously near to subversive and undercover groups, and I want to know a few things about how close they really are to un-American activities.

All in all, my remarks at this dinner my Townsend friends are giving me next Friday will be direct and to the point and will be inspired by honesty and sincerity of purpose on the part of your Congressman in his crusade for straightforward and progressive government. Let us drive out the phonies and make America safe for our citizens.

Tonight, I want you folks to know that I am against the proposal of charging 2 cents postage for the present penny postcard. To me, this is an outrage. It heaps another burden on the shoulders of the great majority of people now groaning under the high cost of living. It is unfair to the public, which often depends on sending important messages for a penny.

To defend their position, some officials say that doubling the cost of the penny postcard is the only way the Government can carry the increases in pay for postal employees and costs for services. That is pure bunk. The Post Office Department has always been a paying proposition; in fact, it is one of the very few Federal Departments that are self-sustaining.

I don't believe you people want to pay 2 cents to send a postcard and I think it is unreasonable to ask you to pay that much. I expect to oppose attempts to make this ruling a law, although I suppose those who favor this increase are prepared to steamroller it through.

The American people are in distress over the rising of living costs which is continuing in spite of promises given us by those who can control them. As the head of a family of six, I deplore these terrific prices in spite of a good income. I am at a loss to understand how the average citizen can possibly feed himself and his dependents with prices as high as they now are.

I feel it is my duty to try to do something about the high cost of living. Therefore, this week, I am drawing the matter to the attention of the Congress, introducing a resolution which proposes an inflation-proof and depression-proof dollar.

My resolution which I expect to have ready for introduction next week reads as follows:

"*Be it resolved*, That it is the sentiment of Congress that as quickly as possible the United States be provided with an inflation-proof and depression-proof dollar, that shall be permanently stable in general purchasing power; so that the people will no longer be plagued by sudden depressions in the general level of prices as in 1929–32; nor by long-drawn-out periods of subnormal prices as in 1933–39; nor by sudden inflationary pressure on the general level of prices as now being experienced."

Thank you.

Community-Property-State Taxes

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include the following resolution adopted by the Minnesota Society of Certified Public Accountants urging the Congress to enact legislation equalizing the income-tax burden now existing between citizens of common-law and community-property States. Our able and distinguished colleague, Representative ALBERT L. REEVES, of Missouri, has introduced H. R. 1759 which seeks to abolish the discrimination and to equalize the tax burden. It is a commendable effort to correct an obvious injustice in our tax structure. Other bills have been introduced having the same objective. It is urged that the Congress take some action on this important subject in the present session. The resolution follows:

Whereas Federal income taxes should be levied without discrimination as between residents of different States; and

Whereas the community-property system adopted by nine of the States (Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Oklahoma, Texas, and Washington) by dividing the income of husband and wife has resulted in lower Federal income taxes to married residents of those States than must be paid by married residents of the other 39 States earning identical income; and

Whereas such unequal tax burden is repugnant to the sense of fairness of the American people; and

Whereas the effect of such Federal income-tax discrimination is aggravated by the present high rates and is causing taxpayers and wealth to migrate from the 39 common-law States to the 9 community-property States; and

Whereas it is undesirable that the 39 States now using the common-law-property system should be compelled to consider changing to the community-property system, which system they would not otherwise favor: Now, therefore, be it

Resolved by the Minnesota Society of Certified Public Accountants duly assembled, That the foregoing inequitable situation be called to the attention of the Congress of the United States and that the Congress be urged to enact such remedial legislation as is necessary, to the end that the Federal income-tax burden of a taxpayer shall not be different if he is a resident of one of the 39 common-law-property States than it would be if he were a resident of one of the 9 community-property States; be it further

Resolved, That a copy of this resolution be forwarded to each Member of the House of Representatives and to each United States Senator and that it be given appropriate publicity.

Wood-Pulp Paper

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. BUCK
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun of March 21, 1947:

WOOD-PULP PAPER FIRST MADE IN UNITED STATES 80 YEARS AGO—SMITH CO., IN LEE, MASS., USED WOOD GROUND BY GERMAN MACHINES

(By Elizur Yale Smith)

In February of this year North American newsprint production reached a record high of 433,607 tons, and in 1945 the production of all grades of paper made from wood pulp amounted to more than 10,000,000 tons. Yet, it was only 80 years ago this week that the first sheet of paper made from ground wood in America was manufactured in my father's paper mills in Lee, Mass. Now wood-pulp paper production in North America is valued at approximately $600,000,000 annually.

Prior to 1867 paper manufacturers had experimented with wood as a basis for paper for decades, and in 1830 an Ohio newspaper, the Crawford Messenger, printed a single edition on a paper made from wood shavings. Similarly in 1863, the Boston Journal printed one edition on a wood-fiber paper. The reduction of wood for this paper was by a chemical process that did not prove successful, and it was not until March 18, 1867, that the first paper was successfully made from ground-wood pulp by the Smith Paper Co. in one of its five paper mills.

The story of the experiment has often been told to me by my father, the late Wellington Smith, and by the late Frederick Wurtzbach, the man who made the ground-wood pulp, at a small pulp mill—the first in America—in the hamlet of Curtisville in the town of Stockbridge among the Berkshire Hills of Massachusetts.

EXPERIMENTS BEGUN IN 1854

As far back as 1854 a Frenchman named Mellier interested my great-uncle, Elizur Smith, and his then partner in paper manufacturing, Cyrus West Field, in a machine of his invention to make paper out of wood. The result was a fair paper made out of basswood, but it was far from being the same quality as is now made from wood. When my father entered the company in 1865 newsprint paper was selling at 24 cents a pound, or $480 a ton, as against a price of $85 to $100 on most contracts today. The idea of making paper out of wood kept going over and over in my father's mind. He got Prof. Paul Ansel Chadbourne of Williams College to experiment in making ground-wood paper stock by filing and scraping wood under water, and although the process was patented it did not turn out to be practical.

Meanwhile in Germany a paper maker named Gottfried Keller and his friend Heinrich Voelter, a paper-mill mechanic, studied wasp nests that are made out of paper and pondered the idea for a few months; then, together, they decided to experiment and try to imitate the process of the wasp. They started to granulate wood with a large grindstone, and instead of the wasp's saliva they used water. This gave them a pulp similar to a rag pulp, but not so fibrous or tough, so they added a small proportion of rags and found they could make the material into a paper with good tensile strength, and one that would quickly absorb printing ink. Voelter invented a machine for grinding the wood into a pulp.

GERMAN MACHINES USED

In the summer of 1866, Theodore Steinway, then the head of the piano manufacturing industry in America, told two of his friends, Albrecht and Rudolph Pagenstecher, that paper was being made successfully from wood in Germany, and suggested the possibilities of profit being made of the venture here in America. Rudolph Pagenstecher made a trip to his homeland and investigated the matter. He was delegated by the others to purchase two of the machines invented by Voelter. These arrived in America in December 1866 in charge of an ingenious worker in wood and metal named Frederick Wurtzbach, whose inventions later on not only increased the quality but also the quantity of wood-pulp paper. To Wurtzbach the newsprint paper mills of America owe a great debt.

In the meantime the Pagenstechers had gone up to the Berkshires and had interested Wellington Smith, then the active head of the Smith Paper Co. in the idea. They financed and built a pulp mill in the nearby hamlet of Curtisville. At that time Lee was the largest paper-manufacturing center in the country; it had cheap and abundant water power and its nearby hills were covered with poplar and spruce. Today, only the five mills of the Smith Paper Co. remain there, making a different grade of high-class paper.

In the early days of March 1867, after much experimentation, the first ground wood that looked like a reasonable product came over the feed belt at the Curtisville mill. It was put into hogsheads and hauled to the Columbia mill of the Smith Paper Co. in Lee. The first run was made on March 18, and after some further experimentation Wellington Smith was able to sell the entire product of two of the paper mills to newspapers at a much reduced price from that paid for rag newsprint. The Smiths paid 8 cents a pound for the ground-wood pulp.

PULP PAPER IN DEMAND

There was a great demand from newspapers for the new paper; the Pagenstechers expanded and built pulp mills in other parts of the country, leased their grinding machine on a royalty basis, eventually became interested in large paper mills, while Wurtzbach built a machine shop where he made improvements on the grinding machines; the Smith Paper Co. built a pulp mill of their own, at Lee, and eventually secured the services of Wurtzbach to superintend the production of the wood-pulp industry.

I find that the first time the New York Sun used the new product was in its issue of May 20, 1874, and in 1880, when the supply of the new paper began to be plentiful, the Sun used it entirely and has done so ever since.

Federal Workmen's Compensation Law

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. KEATING. Mr. Speaker, although I have been one of the loudest protesters against the size of the Federal pay roll, and am gratified that steps are being taken to reduce it substantially, I am no less firm in my conviction that we have a duty and responsibility to extend to those who continue as employees of the Government every protection which would be afforded them in industry or private employment.

Many years ago it was recognized by the progressive States of this Nation, including among the first my own State of New York, that an employee injured in the course of his employment should be compensated without regard to any requirement that he must establish any fault or negligence on the part of his employer. That principle is now well accepted and can no longer be said to be open to challenge. In 1916 Congress adopted a Federal workmen's compensation law.

A serious deficiency in this law in making adequate provision for injured employees was recently brought forcibly to my attention, in a case involving one of my constituents. This young man tried to enlist in the Navy during the war but was turned down because of a stomach condition. He then became director of a proving ground in a civilian capacity, and did outstanding service in the field of explosives in the development of the now famous proximity fuse.

In an explosion in late 1944 his hand was so badly injured that it had to be amputated. If he had been wearing a uniform at the time he would have become the beneficiary, and quite properly so, of many benefits from a grateful nation. I was quite amazed to find, on checking into it, that under the Federal workmen's compensation law no provision is made to compensate for their permanent disabilities civilian employees who receive injuries resulting in the loss of an arm, leg, hand, foot, eye, or loss of hearing.

Parenthetically, may I say that this constituent has, with rather unusual conscientiousness, declined my offer to introduce a private bill for his benefit.

Today I have initiated legislation to correct this situation which I consider a deficiency in our obligation as a nation to those who daily serve us faithfully as our employees. This bill provides a specified number of weeks' compensation in case of the loss or loss of use of an arm, leg, hand, foot, eye, finger or toe, or loss of hearing, to the extent of two-thirds of his monthly pay, subject to the present limitation of $66.67 a month, as follows:

Member lost:	*Number of weeks' compensation*
Arm	312
Leg	288
Hand	244
Foot	205
Eye	160
Thumb	75
First finger	46
Great toe	38
Second finger	30
Third finger	25
Toe other than great toe	16
Fourth finger lost	15
Loss of hearing, both ears	200
Loss of hearing, one ear	52

There are further provisions defining to what extent loss of parts of an arm, leg, or digit shall be compensated, how far loss of vision shall be equivalent to the loss of the eye itself, that loss of both hands, arms, feet, legs, eyes, or any two, shall constitute permanent total disability in the absence of conclusive proof to the contrary, and that any such compensation payable to an employee who dies after an award, shall be paid to his widow or children. It is also provided that an injured employee, instead of receiving the benefits under this bill, may make an election to receive compensation for loss of wage-earning capacity under the existing provisions of the law, if he should determine that he is better off to pursue that remedy.

The suggested compensation in this bill is proposed after considerable study of the question, but with no particular pride of authorship. It may be that amendments should be made to change many of the provisions of this rather comprehensive legislation. I am confident, however, that it is a problem to which we should direct our early attention in hearings to be conducted by the appropriate subcommittee. The essential outlines of such legislation warrant overwhelming support.

Western Polish Border

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Polish Daily News of Chicago, Ill., relating to the Moscow Conference and the present western Polish boundaries:

THE MOSCOW CONFERENCE AND THE PRESENT WESTERN POLISH BOUNDARIES

(By Rev. Dr. Andrew J. Krzesinski)

In connection with the Moscow Conference, in the New York Times and other newspapers, the news was published, according to which, the present Polish western boundaries on the Oder and Neisse Rivers shall be subject to discussion and changes. This news is very astonishing because the new western boundaries were offered to Poland at Yalta and Potsdam Conferences as a compensation for the eastern territories annexed by Soviet Russia. But much more important is the fact that these new Polish western territories since the tenth century belonged to Poland and were inhabited by the Polish population. Later, the Germans took them by violence and slaughtered Polish inhabitants, as they did during the war that has just ended (cf. Andrew J. Krzesinski's Poland's Rights to Justice, pp. 19–20).

These lands are now returned to Poland according to historical justice. They are, however, 20 percent smaller than the eastern Polish territories annexed by Russia. They should, by no means, be regarded as a compensation for the wrongs and injuries inflicted upon Poland by the Germans during the last war.

It is also evident from the documents that before World War II in the eastern territories of Poland annexed by Soviet Russia (46 percent of the whole Polish soil) not only was the Polish population more numerous than any other national group, but that through the centuries until the First World War it was in an absolute majority. In other words, the Poles were more numerous than all other nationalities altogether. The number of Poles was diminished after the First World War because, at the beginning of this war, more than a million of the Polish population were sent by the Russians to Siberia. But, still, in spite of that, this Polish population constituted there a relative majority (Poland's Rights to Justice, pp. 62–74).

According to justice these eastern territories should be returned to Poland.

Furthermore, Poland should be recompensed for all the wrongs committed against her by Germany as well as by Soviet Russia.

England and the United States made great mistakes in their policy toward Poland. Now is the time to correct these mistakes and to restore the full independence and integrity of their faithful ally.

It is human to make mistakes; but it is divine to correct them and act according to justice.

Outlaw the Communist Party

EXTENSION OF REMARKS
OF
HON. WIRT COURTNEY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I am including a resolution passed by the L. O. Crane Post, No. 63, the American Legion, Lawrenceburg, Tenn., which is in my district.

This is a most unusual post of the American Legion. It is located in a town with less than 5,000 population but now has an active membership of 1,509 members, and apparently during the present year it will have a membership of 2,000. At the present time it is the largest country post of the American Legion in the world and this organization and its membership constitute a great influence for good in Lawrenceburg and in Lawrence County.

The resolution follows:

Whereas the L. O. Crane Post, No. 63, the American Legion, of Lawrenceburg, Tenn., the largest country post in the world with 1,509 members, strongly believes that communism is directly opposed to Americanism and the American way of life and is a threat to the foundation of our Government: Therefore be it

Resolved, That all lawmakers be urged to sponsor and vote for legislation that will:

1. Outlaw the Communist Party;
2. Ban the use of the mails to Communist publications;
3. Provide universal fingerprinting and identification;
4. Continue the registration of all aliens and authorize a check of their activities;
5. Deport all aliens advocating the overthrow of the Government by force;
6. Deny admission to the United States of nationals from any country refusing to receive United States aliens ordered deported;
7. Discontinue Federal aid to institutions of learning which refuse to purge their faculties of Communists and fellow travelers.

Unanimously adopted at the regular meeting of April 8, 1947.

CHARLES S. MCLEAN,
Commander.

Attest:

HORACE W. BLAIR,
Adjutant.

Poland's Western Frontiers

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution I have received from the Polish-American Congress that opposes the revision of Poland's western frontiers, as proposed by Secretary Marshall. If revised, it will be a definite gain for Germany, although she has brought so much misery upon the world and she does not, in my opinion, deserve such consideration.

The resolution follows:

THE POLISH-AMERICAN CONGRESS OPPOSES REVISION OF POLAND'S WESTERN FRONTIERS AS PROPOSED BY SECRETARY MARSHALL

At the recent conference in Moscow, Secretary of State George C. Marshall proposed that Poland's western frontiers be revised.

The motivating reason behind Secretary Marshall's statement was the declaration made at Potsdam, according to which, the territories granted to Poland would be temporarily administered by the Polish Government until the final ratification by the peace treaty.

A technical argument arises over the interpretation of the wording of the Potsdam agreement—is the final decision of the peace conference to be only a formal ratification of the Potsdam declarations—or the detailed revision of the text of the agreement itself?

However, the arguments put forth as the principles by which the American delegation is guided are more important. In brief, they carry the following meaning:

1. Poland should obtain certain German territories as compensation for the lands taken in the east by the Soviets.
2. Germany, prior to the war, bought one-fifth of her food abroad and obtained another one-fifth from the lands now occupied by Poland.
3. The moving of the population into Germany and the delivering of the lands they

occupied over to Poland can be the cause of the reestablishment of strong nationalism in Germany and of eventual conflicts with Poland.

4. Land in Silesia containing ores, and above all, coal mines and steel mills should be granted to Poland, but under condition that the production of these areas shall serve the economy of all Europe, including Poland.

5. In view of this, the American delegation proposes a revision of the western Polish frontiers for the benefit of Germany to be carried out by a special commission.

The Polish-American Congress considers the declaration made by the delegation of the United States as politically unfortunate in that it is detrimental to world peace, degrading to the position of the United States, unjust in principle and presupposition, impossible of realization, illogical and impractical.

The proposal of Secretary Marshall is unfortunate because it clearly shows that the United States is more interested in the future and fate of the enemy than it is in the future and welfare of a most loyal and most wronged ally.

The proposition is detrimental to world peace because it would strengthen Russian influence in Poland and consequently deprive other nations of hope of continued defense of their interests by the United States.

The mere assumption that the recovered lands are due Poland only as token compensation for lands grabbed by Russia is erroneous because it recognizes Russia's right to aggrandizement and grants the right to the delegation to fix reparations for a condoned robbery.

Arguments that Germany had obtained one-fifth of her food from lands restored to Poland and that the overcrowding of Germany's population will cause conflict have no foundation. When Germany held possession of these lands during both world wars we often heard that she needed "lebensraum." It makes no difference how much they have, the Germans will always seek "lebensraum" and always will be potential robbers.

To entertain unfounded fears of an aggressive German nationalism at the expense of Poland and delegates of other nations is plain capitulation and a declaration of helplessness, because this betrays a conviction that all the nations together are unable to guarantee future peace to countries bordering on Germany.

Poland's western boundaries are being drawn on the theory that they will create a better economy for the rest of Europe. While this sounds logical in theory, it loses its meaning because it is applied specifically to Poland and not other nations.

Secretary Marshall claims that in drawing up frontiers the guiding thought is the welfare of all nations of Europe. But, from his assertions, it is apparent that he is more concerned with the future of Germany and continues in his belief that the German nation must be strong. It is time to put an end to the conception that Germany must remain what she was. It is time for courage enough to say openly that Germany must be a third-rate nation and that the Germans, who have brought so much misery upon the world, do not deserve any consideration.

No one cares or should care that the German potential be preserved. This is not a question of vengeance but a historical necessity—a judgment of history—to be carried out by the whole civilized world so sorely tried through generations.

Our delegation must not forget, for even a single moment, what the Germans did in this war, the previous war, and in the wars before 1914.

Instead of worrying about a strong Germany, it would be by far more logical to make Poland the stronger nation so that she could become the dominant factor in insuring peace in Europe.

We are troubled and apprehensive because the new course of our foreign policy which we have started to apply to Russia does not also apply to Germany.

POLISH-AMERICAN CONGRESS, INC.
APRIL 1947.

Military Aid to Turkey and Greece

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. GILLIE. Mr. Speaker, we are all aware that American foreign policy is at the crossroads, and that this body is being called upon to make momentous decisions affecting the future of our country in a troubled world. In making these decisions, Congress has an obligation to closely follow public opinion because all of our people are directly involved, and no policy can ever be effective without public support.

The people of northern Indiana have not blindly accepted President Truman's proposals for bypassing the United Nations by extending military aid to Greece and Turkey. They are deeply troubled by the implications of the Truman policy. Their concern is eloquently reflected in the writings of one of our leading newspapermen, Clifford B. Ward, editor of the Fort Wayne, Ind., News-Sentinel.

Mr. Ward is the author of a daily column, Good Evening, which has a wide following in the Middle West. It is a soberly written, well-thought-out feature, with unusual readership interest.

Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include at this point Mr. Ward's column of April 23:

GOOD EVENING
(By Clifford B. Ward)

Without its being brought sharply to the people's attention, this country's State Department has recently made a radical shift in its foreign policy views. The shift is front-page news with a bang and yet the press has been unable to write the story in so many words, for the simple reason that diplomatic language is difficult to understand and usually deals in attitudes which can't be accurately defined.

Only a few days ago, in a very off-hand manner the State Department let it be known that from the American viewpoint the UN is only a forum. Now mark that well. The UN is only a forum or a world debating society in which the views of all the member nations can find expression. If that is not a radical shift in the foreign policy of this Nation, there never was one.

When the war ended, this country was sold on the idea that there must be organization of the leading nations of the world to provide collective security for world peace. The people of this country were told that hereafter the well-intentioned and nonaggressor nations must stand ready at any time to apply force to restrain any ill-intentioned and any aggressive nation or groups of nations from threatening world discord and war. It was to be a solid, substantial world organization of nations with both the will and the power to step into a disturbed situation and quickly right it. It was to be a big-stick proposition.

ONLY A FORUM

Now note and note well that the people are being told that the UN is nothing more than a forum where grievances are aired and that no one should expect the UN to be the solid, substantial organization that it was supposed to be and that rather than being an instrument of collective security, it is only a sounding board.

Honest people, who have been taught to speak the truth and demand the truth, have been casualties of our wartime and our postwartime foreign policy. When the four big powers quickly assented to the demand of one of them that each should have the right to veto any action against an aggressive member of the big four, the tipoff should have been apparent to the world that not one of the big nations intended to be restrained from any evil course of action by a world organization. The setting up of the veto powers was itself a confusion to the intelligent people of the world that while the so-called internationalists were talking out of one side of their mouths and suggesting a surrender of sovereignty by little nations of the world, they wanted none of it for themselves. Even they knew that the medicine which they were so freely praising was lethal to all proper nationalism.

Right now, there are two great powers in the world. It is a situation which has not existed since early days of recorded history when one great power like Rome stood opposed by a second great power like Carthage. Today instead of it being Rome against Carthage, it is the United States against Russia. But it was this country which built up Russia. It was this country which by its mistakes during and after the war created the Frankenstein which now threatens us. And if you say it does not threaten us, you contradict our President and our State Department.

ISSUES AT STAKE

At stake in the Second World War were many issues, but the one that was most important to this country was the dollar diplomacy and the world imperialism of the British-American setup. We resolved against the other issues, but we only went to war when the dollar diplomacy and the world imperialism were threatened. We saved that diplomacy and that imperialism, but by attempting to give too moral a front to our participation in the world's troubles, we made fiction writers out of ourselves. We may have deceived ourselves but we did not deceive the Russians.

They showed no gratitude for the help we gave them, because realistically they saw that they owed us none. We were fighting not to save Russia, but only using Russia's help as an end to a means. Russia today is strong—not strong enough to defeat England and the United States unless she miraculously learns how to make atomic bombs quickly, but strong enough to know that she can bluff us from here to there over a very wide area without us suffering the pain of calling that bluff.

Eventually, I think, one of two things is bound to happen. Either Russia and the Anglo-American set-up is going to clash in the final Armageddon of civilization or Russia is going to cease being the Russia which she now is. The issue is a free state versus a police state fighting for world leadership. Capitalistic western democracy may have tried to delude itself into thinking that it can avoid the show-down battle, but communism has never tried to kid itself thus and is not trying to kid itself thus at this point.

So someone says, if nothing less than a miraculous change of political philosophy in Russia can prevent a final Armageddon between the modern Rome and Carthage, why do you oppose Truman's loan to Greece and

Turkey? I oppose it for reasons of simple honesty and truthfulness, as I opposed "all aid short of war" for Britain and for the reason that I opposed the use of the terms "lend-lease." If we are going to call the turn on Russia and start the shooting in Greece and Turkey, let's say so, step in and do the job, with everyone knowing what we are intending. If we don't want to call the turn on Russia at this time, then let's keep the hell out of Greece and Turkey except as a Red Cross or relief agency.

The real isolationists today are, as they have been all along, the professed internationalists who, while talking in moral world terms, were only masking an American-dollar and a British-pound nationalism.

Aid for Greece and Turkey

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson:

ON THE RECORD

(By Dorothy Thompson)

Wednesday's New York Times, which announced the Senate's overwhelming vote for military and reconstruction aid to Greece and Turkey, also carried in its letter column a communication from Miss Sarah Wambaugh, of Cambridge, Mass. It contained more horse sense than we are accustomed to find, and the best answer I have yet read to the charges that we are bypassing the United Nations.

Miss Wambaugh has been a lifelong student of international affairs. Few Americans know European politics more intimately, and it is doubtful whether anyone is more expert in plebiscites and elections under difficult conditions. She participated as an expert in most of the plebiscites held after World War I. She was logically chosen as adviser to the chief of the United States mission to observe the Greek elections.

Miss Wambaugh points out that our proposed action is in no sense a violation of the UN Charter. The Charter exists to protect nations from aggression. "Every member of the United Nations is under obligation never to act contrary to the Charter, but there is no requirement in the Charter to act always through the United Nations."

Miss Wambaugh confirms that Greece and Turkey are menaced in their territorial integrity. "The distance across Greece from the Yugoslav and Albanian frontiers to the Aegean * * * is only 75 to 100 miles. In many parts of this line the guerrillas are entrenched and, thanks to the neighbors, are * * * proceeding with their project of cutting off Greek Macedonia. * * * Success would mean that Yugoslavia and Bulgaria would * * * divide the area * * *. Russia would then be at the Turkish frontier."

It is under these conditions that Greece and Turkey have asked us for aid, as they have every right under the UN Charter to do.

Greece needs to reorganize her army and disarm all other forces. And if we are bypassing UN in this action, why did not the opponents of unilateral action—including Mr. Wallace—raise voices of protest when the Soviet Union did the same thing?

Miss Wambaugh recalls that during the last 2 years the Soviet Government, without consulting the UN, signed three treaties—with Poland, Czechoslovakia and Yugoslavia—involving military aid, assistance with financial loans, arms, and military and civilian army instructors. These armies are, indeed, Soviet creations—in form (political commissars) and in equipment.

One of these armies, the Polish, defends frontiers that were unilaterally created. Another, the Yugoslav, serves a government which has successfully claimed Italian territory, never Yugoslav. It also is aiding Greek guerrillas, and demanding a large province from Austria.

It is certainly dolorous that 2 years after a war to end war new armies are being created everywhere and that we have a hamstrung UN.

But one really loses patience with those persons who prefer to trust the good intentions of any other country than their own; who cry "war" and "imperialism" when the United States acts to protect the threatened, and neither report nor denounce certain actions of foreign powers.

Miss Wambaugh also speaks an expert word on the Greek elections. The country swung to the right. So will every country which is threatened by or has suffered from a left-wing rebellion and massacre. The left abstained from voting and claims to represent the people, but Miss Wambaugh, who was there, states that careful investigation showed it could have marshaled to the polls not more than 15 percent of the electorate.

It is a habit now to denounce as "undemocratic" all conservative regimes, however representative of a majority. Actually, free countries swing from left to right and vice versa in response to conditions with a tendency to avoid extreme sways. Communism, however, is always a creator of right-wing swings, which is one trouble with it.

The Late Evalyn Walsh McLean

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald and an editorial from today's Washington Star:

[From the Washington Times-Herald]

MRS. EVALYN WALSH MCLEAN IS DEAD HERE—DEATH CAUSED BY PNEUMONIA AT AGE OF 60—ONE OF WASHINGTON'S MOST BELOVED WOMEN

Mrs. Evalyn Walsh McLean, one of Washington's most beloved women and a world-known personality, died at 6:15 p. m. yesterday in Friendship, her home at Wisconsin avenue and R street NW., at the age of 60.

Dr. Bernard J. Walsh pronounced her dead of pneumonia which had developed only 48 hours previously. Her last 24 hours of life were spent in an oxygen tent.

GIVEN LAST RITES

The last rites of the Catholic church were administered by the Rev. Edmund A. Walsh, S. J., a personal friend of many years standing.

The Georgetown University vice president also led the recitation of bedside prayers said by the small group of persons present as the end approached.

Those present when Mrs. McLean died were Dr. Walsh and Father Walsh, Mrs. Eleanor M. Patterson, Supreme Court Justice Frank Murphy and his secretary, Miss Eleanor Baumgardner; former Federal Circuit Judge and Mrs. Thurman Arnold, Frank C. Waldrop, former Senator Reynolds, Nannie Chase, personal secretary to Mrs. McLean, and members of the Friendship household.

SONS FLYING HERE

Flying from Dallas, Tex., last night was her son, John, while her other son, Edward, was en route to Friendship from Beverly Hills, Calif. Both took off for Washington upon receipt of word that their mother's condition had taken a critical turn.

Mrs. McLean had been in poor health since her knee was broken in a fall last year. She had returned from a recuperative visit to Sarasota, Fla., only 10 days ago. She had been back at Friendship only a few days when she became ill. Dr. Walsh said his patient's general condition had worsened 48 hours before she died, but that she had seemed to rally under the oxygen treatment he started later Friday night. Yesterday morning, however, her condition became critical.

In addition to her two sons, a first cousin in Colorado Springs, Colo., and six grandchildren survive Mrs. McLean.

BORN IN COLORADO

Mrs. McLean's death followed by seven months that of her daughter, the wife of former Senator Reynolds of North Carolina, and with her passing ended one of the most colorful careers in Washington history.

Mrs. McLean was the daughter of Thomas F. Walsh, an Irish immigrant, and Carrie Bell Reed Walsh. She was born in Deadwood, Colo., August 1, 1886, a mining community where her parents had been married.

For the first 10 years of her life she lived in mining communities. In 1896, her father became part owner of the famous Camp Bird claim, near Ouray, Colo., one of the world's richest gold mines.

That year, the family moved to Denver, and in 1897 came to Washington and lived in the old Cochran house. The heiress was sent to Miss Somers' School and Mt. Vernon Seminary here, and her brother, Vinson, attended the Friends Select School for boys.

MET M'LEAN WHEN 11

When she was 11, she enrolled in a children's dancing class here and met Edward Beale McLean, whom she later was to marry.

The childhood romance was interrupted the following summer, when the Walshes returned to Colorado, but was resumed when they returned in the fall and took a house at Leroy and Phelps Places NW.

After President McKinley appointed Mr. Walsh commissioner to the Paris exposition in 1899, the family toured England, France, Switzerland, Austria, and Bavaria, and spent several days at the farmhouse in Clonmel, Ireland, where Mr. Walsh had been born.

Mr. Walsh's charity was extended to all the poor of Clonmel and the surrounding area, and the happiness at relieving misery, perhaps more than anything else, always made that part of the European visit most enjoyable to his daughter.

MONUMENT TO FATHER

In later years, the people of Clonmel erected a monument to the man who had helped them so much.

It was during the European tour that the Walshes and the royal family of Belgium developed such a strong friendship.

In Paris, Mr. Walsh entertained King Leopold several times at dinner, and the mine owner's daughter was one of the monarch's favorites.

Upon their return to Washington, the family made plans for the construction of a home at 2020 Massachusetts Avenue NW. When completed, the mansion contained a special suite for the use of King Leopold, who never was able to accept the invitation to visit the Walshes here. The structure was said

to have cost more than $1,000,000. On later trips to Europe, however, the friendship with the Belgian royal family flourished as before.

ROMANCE MATURES

During subsequent years the Walshes lived alternately in Washington and Denver, and Evalyn's romance with young Ned McLean matured.

Balls, banquets, dances, and other social events at the residence on Massachusetts Avenue had become almost legendary in 1905, and it was here that the young hostess developed much of the grace and poise that were to make her one of the Nation's foremost hostesses.

But the year was marked by tragedy. Evalyn's brother, Vinson, was killed and she suffered a leg injury she was to carry to her grave when the auto in which the two were riding blew a tire and plunged into a creek.

The finest surgeons in the world were called in for consultation before her leg was saved—through the use of a 15-inch silver plate to replace crushed bones in her thigh.

During the months following the accident, when Evalyn was confined to bed, Ned McLean was a daily visitor.

As a result of the tragic accident, the Walshes moved back to Denver, but Evalyn made frequent visits to Washington, and on each trip saw Ned. It was while young McLean was covering the Democratic Convention in Denver, in 1908, for his father's newspaper, the Washington Post, that the engagement of the couple was announced formally at the Walsh home there.

Although no date was set for the wedding, the couple took matters into their own hands and married in St. Mark's Episcopal Church, near Denver, July 22, 1908, with only a few close friends in attendance. A few months later they were married according to the rite of the Catholic church by the Rev. Father Dennis J. Stafford at St. Patrick's Church here.

Mr. Walsh and young McLean's father, John R. McLean, each gave the couple $100,000 as a wedding present, and the newlyweds left on a honeymoon tour of the world.

It was during the world tour that Mrs. McLean bought the Star of the East diamond, said by collectors to be of greater value and beauty than the Hope diamond, which so long was associated with her name.

The McLeans returned to Washington in 1909, and on December 18 their first child, Vinson Walsh McLean, was born. The boy was known as "the hundred-million-dollar baby" and slept in a gold crib given the young couple by King Leopold.

Joy over the birth of her first son was blotted out a few weeks later, however, when Mrs. McLean's father passed away. The grief-stricken bride and her husband shortly afterward left for Europe.

It was during this trip that she bought the Hope diamond from M. Cartier, in Paris, scoffing at the superstition that the gem brought tragedy to all who owned it. In later years she was to turn down offers of as much as $2,000,000 for the bluish stone.

CENTER OF SOCIAL LIFE

The couple returned to Washington and for the next several years were the center of the Capital's social life. In January 1916 a second son, John R. McLean, 2d, was born in the mansion on Massachusetts Avenue.

The following June, McLean's father died and the youth took over the management of the Post. Mrs. McLean took great interest in the paper and often directed it policies.

Following the death of Ned's mother, he and Evalyn and their two sons moved into the McLean town house in the 1500 block I Street NW., and the family estate, Friendship, on Wisconsin Avenue. The Lafayette Building now occupies the site of the former structure and McLean Gardens was built on the grounds of Friendship.

A third son, Edward Beale McLean, Jr., was born to the couple June 28, 1918.

Again a birth in the family was to be offset by tragedy. While the McLeans were in Louisville, Ky., a few months later they received word that their oldest son, Vinson, had been struck by an automobile and died within a few hours.

The couple's fourth child, and only daughter, Emily Beale McLean, was born November 16, 1921. She later changed her name to Evalyn Washington McLean.

Subsequently, Mrs. McLean entertained royally in her town house and at Friendship, and became socially famous throughout the world.

So important was the couple socially that they never went out but only received. Royalty, Presidents, diplomats, Cabinet members, Senators, and Congressmen were regular guests at the Sunday luncheons at Friendship.

Among the most frequent visitors at Friendship were President Harding and members of his Cabinet. They played golf on the private course and it was there that Calvin Coolidge, then Vice President, played one of the few games he ever played.

DOMESTIC TROUBLES ARISE

In the late twenties the McLean-Walsh fortune began to dwindle. It was during this period that Mrs. McLean parted with the Hope diamond for the first and only time. She used the stone as collateral on a loan needed to save the Post for her three children. She lost the newspaper, but regained possession of the diamond.

Much of the couple's fortune was restored after the loss of the Post, but they soon were afflicted by matrimonial troubles. McLean's attempts to obtain a divorce in Mexico and Europe were unsuccessful, and he later was committed to a sanitarium near Baltimore. He died there in the late thirties.

Always known for her generosity, Mrs. McLean became interested in the Lindbergh kidnaping and offered $100,000 to Gaston B. Means for information which might lead to the recovery of the child. Means was unable to return the child or the money and was convicted of obtaining money under false pretenses. He died in prison.

Friendship was sold to make way for a war-housing project a few years later, and Mrs. McLean moved to the residence in which she was to die She renamed the cream-painted brick structure after the old estate of her husband's family.

During World War II the Georgetown house was the scene of servicemen's dances and USO gatherings as well as outstanding social affairs. The spacious ballroom of the old house on Massachusetts Avenue was used by the Red Cross for classes in making surgical dressings. In the stables behind the home her father built Mrs. McLean opened a club for Government personnel employed in war work here.

NOTED FOR GENEROSITY

She frequently canceled social engagements to take gifts to amputees in service hospitals in this area and entertained them whenever possible at Friendship. Occasionally she "took in" service families who had no place to live because of the housing shortage.

Mrs. McLean's generosity manifested itself in little things—such as putting an ice water dispenser out in front of her new Friendship estate at a bus stop—and of big things, such as providing the 1932 bonus marchers with food and the shelter of a circus tent.

Among her varied talents, she included authorship of Father Struck It Rich, a sparkling account of her father and their early Washington days.

THE FINAL TRAGEDY

Last year, while walking a pet dog in the rain she slipped and fell, breaking the kneecap of the leg injured in the accident which had taken her brother's life in 1905. For weeks she lingered near death because of the injury.

Then, on September 20, 1946, the last great tragedy entered her life.

On that date, Mrs. McLean's daughter, Evalyn, 24, was found dead in bed at Friendship. An overdose of sleeping pills, which she had been taking for a nervous disorder, was blamed for the death. The girl had been married just 5 years earlier to Senator Reynolds.

Grief over the passing of her daughter was believed to have been one of contributing factors to Mrs. McLean's death yesterday.

[From the Washington Evening Star]

EVALYN WALSH MCLEAN

The fact that she was a woman of fabulous wealth probably would have been enough to insure Mrs. Evalyn Walsh McLean being famous in her own generation. Both by inheritance and by marriage, she was so rich in the world's goods that she would have been celebrated even if she had had no other claim on public attention.

But she also was a person of natural distinction and charm. Mrs. McLean possessed beauty that no camera ever caught, a keenly intelligent mind, a generous heart, a tireless willingness to spend her talents and her energies in the interest of people. Above everything else, she was patently sincere. When she endeavored to help the Lindberghs to recover their baby, or fed the bonus marchers, or kept open house for GI Joes and Janes, her motives were completely philanthropic. Nothing compelled her to devote herself to the welfare of strangers. She voluntarily chose to be the "lady bountiful" she most notably was.

The explanation is obvious. Mrs. McLean loved humanity. There were no classes in the old Friendship or the new. Believing devoutly in good manners as an aspect of democratic civilization, she was an aristocrat in the classic sense to which Shakespeare referred when he made Hamlet say to Polonius concerning the players: "Use them after your own honor and dignity."

The Spend-and-Tax Delusion

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1947

Mr. MEYER. Mr. Speaker, at the recent meeting of the Republican National Committee in Kansas City, Mo., Hon. Frank Carlson, Governor of Kansas, and for many years a distinguished Member of Congress, was one of the principal speakers. Those of us who heard him were of one accord in acclaiming his address as one of the outstanding events of the meeting. Because of the righteous condemnation of the New Deal philosophy of government, the high idealism, and the pro-Americanism embodied in it, it merits the widest dissemination and publicity. As a contribution to that end, Mr. Speaker, I therefore have availed myself of the permission granted me, under the unanimous-consent rule, to quote Governor Carlson's address in full in the RECORD at this point:

I want to thank our good friend, Barak Mattingly, who, for a Missourian, has set

something of a record in setting up two Governors of Kansas for a meeting. I have a suspicion that in using two governors its a Missouri trick to make Kansas look like Georgia. You committeemen really ought to appreciate Barak and that fine 1946 election record that Missouri turned in. As Barak says, it's true that here in Kansas City I can say nice things about Missouri and I'm glad of the opportunity. After all, they are human beings, and I don't know what our Kansas universities would do without the fine football exercise we are able to get—sometimes—from these Missourians.

Oh, we are a couple of jealous sisters, all right, but you'll find no two States of the Union with stronger bonds of comradeship. We were both carved out of the Louisiana Purchase, and together we have built this fine city. The nice part is on the other side of the Kaw.

And we are both glad to have the Republican National Committee to come here, so close to the heart of the Nation. We believe that here you will be able to feel the throbbing pulse of our country, which most surely is beating out a new rhythm of mankind's eagerness to strive together, to turn under with our plows and other productive efforts the hates that made us strive against each other.

Perhaps this explains, if any explanation be necessary, why, as a personal choice, I chose to leave Washington and the Congress, to seek the office of Governor. I wanted to get back among my own people. And, of course, it was a promotion. In Washington I was one of the directors of a big corporation that was $250,000,000,000 in the red—practically insolvent. In Kansas, I'm the general manager for a corporation that is not only solvent, but has several million in reserves, thanks to the foresight of Republican governors.

Recently it has been interesting to note how some of our States have stepped forward to assert a new independence. New Jersey and Indiana Legislatures both have resolved that they want "government to come home." Belatedly we have realized that in its true meaning, there is no such thing as Federal aid. Federal aid is simply the money we send to Washington returned to us with the fees and expenses of bureaucrats deducted.

There is no magic of Federal aid to prevent us from paying for it more dearly than if we supplied and administered it ourselves. The States are now realizing that Federal aid from beneficent "uncle" carries with it the loss of local autonomy.

This is part of the realism that we have gotten out of the terrible lesson of war. The 15-year flirtation with socialism is over—a weird experiment that would shame our heritage.

Inside our Nation, this Democrat policy has caused great masses of people to look to government and politics for their welfare.

Outside our country, this Democrat policy has made whole nations dependent upon the credit of the United States.

It is a policy of trying to bully our way through domestic and international troubles with dollars. We have little Caesars striding up and down the globe clanking their swords and trying to jam down the throats of strange people the idea that we are a peaceful Nation. Other little Caesars walk the highways of our Nation trying to tell us what to wear, eat, plant, sow, and reap—yes, and they've been trying to tell the Republican Congress how to act and how much to spend.

It was such a time, 2,000 years ago, when Rome's vaunted legions were setting up their despicable Herods over the civilized world. Let us shake this idle dream of conquest by lustful men from our eyes before another Pontius Pilate nails civilization to another Roman cross. Let us resume setting before the world—not the dollar mark—but our ideals of government by law and not by opportunists.

Our United States Treasury is not the world's honeypot, although the political entrepreneurs of other nations and of our own city machines may think so.

The test of our time will be whether we have the hardness of character and inflexibility of purpose to deny to ourselves the easy course of "spend and spend" against our grandchildren's bank accounts; to deny ourselves the monetary gains of subsidies and hand-outs before national ruin engulfs us all.

Lenin, godfather of communism, predicted that the United States would spend itself to destruction. The Democrat policy of spending American dollars to meet the threat of the Communist words appears to me a losing battle, since words are so easily coined.

The cause for which we fight in reality is the dignity of man. Whether the man be a penniless American or starving Greek, his true rehabilitation lies in the preservation of a soul and mind fixed on God-given freedom of thought and action, plus a firm reliance and belief in his own destiny.

So what will it matter if we gain a world with dollars and lose our ideals of freedom and justice. We want no puppet states. We will feed the hungry within our powers, but the individual man and the individual nation must work out their own destinies.

Within our Nation there is a similar maladjustment. For instance in Kansas and Missouri we have broad acres to be farmed and mined. There is here power for countless factories; thousands of tons of raw materials to be processed. Here is a great frontier where millions more people may live amid plenty. But, suppose in our congested cities there arises idleness and economic failure of the local economy.

We know the stock Democrat answer would be to "tax and tax and spend and spend" from Federal aid for the support of the destitute. This western frontier under that policy would always remain untouched; indeed it would be taxed to keep needed populations away from it.

Thus, nationally and internationally, the Democrat policy has only "frozen" our problems. The problems have multiplied because not one of them was solved. The mischievous politicians, both native and foreign, have adapted the misfortunes that resulted to their own purposes.

Thus we have the sordid record of the WPA—not as a humanitarian welfare agency—but as a shameless vote machine.

Thus we have the allegedly great Social Security Act, with its benefits being destroyed by debt and inflation; with its future in question because of fiscal mismanagement.

Thus we have in 5 years the financial picture of a Federal Government taking one-fourth of the Nation's income for itself. All the money paid for school teachers, policemen, firemen, State, county, city, and local employees—in fact all local taxes are less than one-tenth of the money we pay for Federal taxes. In 1940, Federal taxes were only 38 percent of the Nation's tax dollar, and the rest went for local and State government. Today Federal taxes are 82 percent of all taxes collected.

This is why throughout the Nation we are hard put to pay our school teachers and police properly. Our Republican cause is the cause of all citizens against bureaucracy and the elimination of that deadly peril of taking so much of our productive effort to dump in the economic wasteland of government. Taxes are a dead weight on our people, for a government cannot earn nor produce new wealth.

Jefferson no doubt was thinking of this evil when he said: "If we were told in Washington when to sow and when to reap we should soon want bread."

Now I suppose that along with the Ten Commandments and the Golden Rule, it will be considered reactionary to quote any authority before Frankfurter, Wallace, or Hannegan, but I will just have to risk it.

For that matter, they are the more reactionary because old King Rehoboam had a palace guard just like the New Deal and right there in the record of the Good Book is the record of the same kind of moth-eaten advice. And I must tell you that Rehoboam was a wash-out—just like the New Deal.

If our campaign wants a text, I should like to proffer this one to illustrate how ancient, how reactionary is this New Deal policy of tax and spend.

Just for fun read the twelfth chapter of First Kings in your Gideon Bible tonight or you can read about the same story in the tenth chapter of Second Chronicles. I think it is in there twice for emphasis, but both seemed to have escaped our current soothsayers.

But here is the story of how treasury pilferers and tax-spenders split an empire, brought down the glory of Solomon and David, deserted their God, morals, and laws—and the destruction of a nation which was never rebuilt.

Compare this with President Truman's utterance at the Jefferson dinner the other night, where he agrees with his advisers that the only course ahead is the spend-and-tax delusion which means less and less pay for every worker in the Nation.

What hopeless, visionless future is portended by our leaders by the policy of endless debt and mismanagement of our productive powers. The Nation, the world, wants only an opportunity to right itself—not Uncle Sam as a wet nurse.

In other years, when our fathers found their economic ceilings were limited and opportunities had dried up, they yoked oxen to prairie schooners; crossed the prairies; fought the Indians and the elements and conquered the soil. In proving their own destinies, they retained their own freedom.

Against this is the crassness and the cheapness of trying to buy men's votes at home and to purchase democracies throughout the world. The very idea of trying to make political capital out of misfortune is as un-American as it is inhuman.

But observe how lightly are the terms of freedom mouthed by the superworld patriots. They talk of "economic justice" when they mean the enslaving dole. They arrogantly adorn themselves in the cloak of liberalism, when their product is the rankest type of defeatism. They cultivate the cancers of our economy by never-ending subsidies. Now they are trying to buy the world, because the gates of the Treasury have turned loose a golden flood.

But we midwesterners see an infinite hope for the future. Our sons are back from the wars, tired in body and of bloodshed, but refreshed in their love of the greatest Nation under the sun. We are relearning from them the magnitude of our great blessings. To them we turn for our vision of the future. If they can harness the desperate sciences of war they will bring a wonderful peace.

It is wonderful to see our party recognize the veteran's place in the body politic. Half of our Republicans in Congress have worn their Nation's uniform. It is a matter of record that we are the veterans' party.

And in another year we shall have a Republican President. The Members of the Republican Congress and we Republican governors have the burden of setting before the Nation an example of unity in thought and action in order that we may more easily win the battle ahead and also ease the task of regeneration that is to come.

Time is working on our side. The seeds of the godless socialism—communism—will rot in free soil, and sooner or later, death will take all dictators by the hand. We do not fear for the deathless philosophy of our own

Government of law and justice, so long as the Nation desires to remain true to its established principles.

In this momentous period, the Republican National Committee, together with the Republican National Convention of 1948, faces its most awe-inspiring task of history.

The people of Kansas and Missouri eagerly look to our party as the only hope for a nation and a world torn by deceits, hate, hunger, and class chaos. And you, for the time being at least, individually in your States and collectively in the Nation are the official representatives of the Republican Party. I pray for your wisdom because I believe it is a prayerful need. This Nation, this world, cannot long endure the mischief that has been loosed. The Republican Party, strong in principle and made stronger by adversity, must return the Government to its people. The national committee in its plans, its organization and in its actions can ill afford to anticipate nothing less than victory.

The Governor of Kansas will be at your service. I hope you will have time to set foot on Kansas soil—or to call at the Governor's home in Topeka.

The Moscow Conference

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. JUDD. Mr. Speaker, the end of the Moscow Conference is a time for most sober and careful evaluation of our whole position in today's world. Under leave to extend my remarks, I include the following two realistic, sensible, and sound editorials:

[From the Washington Post of April 26, 1947]

AFTER MOSCOW

Devoid though it was of constructive achievement, the Moscow Conference appears to have brought forth some useful consequences. One of these is the clear demonstration to all the world of Secretary Marshall's firmness as well as his patience. Throughout the Russians' war of nerves he held tenaciously to the principles that he had carried with him to Moscow 7 weeks ago. In his parting words he spoke of "our impatience" to get ahead with the business of peacemaking. But no impatience was manifested in his conduct. On the contrary, he let the fruitless talkfest run on 2 weeks beyond the point at which we thought he would have been justified in coming home. Nor did he permit his so-called impatience to detract one iota from the principles of freedom, democracy, and good faith on which the new peace must be established.

One other result from the conference that ought to prove an asset in the long run has been the final dissipation of the fog in which the Big Three have enveloped most of their agreements of the past. Yalta and Potsdam brought a semblance of harmony because differences were concealed by such words as "democracy"—meaning liberty and free elections to us and an open door for communism only, to the Russians. At Moscow confused verbiage was discarded. At least the conflicting policies of the east and the west have been clarified before the world. The result, of course, is unmistakable exposure of the Soviet program for the domination of Europe—a sorry sequel to the San Francisco Conference of 2 years ago which set up the United Nations.

The emergence of this Soviet policy in naked form was the motivating force behind what may well be the most significant consequence of the Moscow gathering of the Foreign Ministers. Great Britain, France, and the United States have undoubtedly been drawn closer together by Mr. Molotov's rededication of Russia to totalitarian aims and techinques. Indeed, all statesmen who are not under the domination of the Kremlin must now see that the peacemaking will have to go forward without Russian participation. Russia's price for prompt peacemaking is the communization of Europe, which would be a disaster to the rest of the world. The other nations which united their forces to destroy Nazi and Japanese aggression will not pay that price, and yet they must have a peace that will permit reconstruction to go forward. The only course open to them is further agreement among themselves for the rehabilitation of Europe, so far as that is possible, in the hope that lessening tensions may later convince the Russians that they should join in this undertaking in pursuit of their own interests.

It is not merely the failure of the Moscow Conference which points to this conclusion. Moscow is only an incident in a long series of events pointing in the same direction. The Soviet Union has flatly rejected any sort of plan that would make international control of atomic power feasible. Her agents are carrying out aggressive tactics designed to subvert such countries as Greece and to intimidate Turkey. Our patient efforts to reach an understanding with the Russians to let democracy and communism exist peacefully side by side, in accordance with the preference of free peoples, have failed. Democracy can now defend itself only by taking a positive stand against further totalitarian encroachments, while strengthening its own lines by extensive reconstruction measures.

Some of our more excitable citizens insist that the outcome can only be war. We think they are mistaken, and, fortunately, even the final collapse of the Moscow Conference helps to dispel their fatalistic conclusion. The Council of Foreign Ministers could agree on virtually nothing, but it ended with a sumptuous state banquet at which Premier Stalin offered a toast to President Truman. Further meetings of the council are to be held, perhaps in September and November. The point is that complete disagreement has not festered into hostility. We have no idea that Russia wants war any more than the United States does. War is likely to become a real danger only if irresponsible people on both sides begin to shout for it.

In deploring such reckless talk in the Senate the other day, Senator VANDENBERG described our policy as one of "friendly firmness." Complete failure of the Moscow Conference gives no reason to change that description. The United States can join in a reconstruction scheme for western Europe, we can save the independence of Greece and Turkey, and work through the United Nations for the protection of freedom and peace without assuming a hostile attitude toward any people. Secretary Marshall has already pointed the way. If the Russians decline to work with us, we must do the best we can to bring peace and stability back to this battered old world without them. But the objective must remain the same, and the door to Russian cooperation must be kept hopefully open.

[From the New York Times of April 28, 1947]

THE EAST AND THE WEST

When Secretary of State Marshall broadcasts his report on the Moscow Conference tonight, the world will be able to obtain an even clearer picture than already provided by the events of just what the differences between Russia and the west really are, and what the United States proposes to do about them. No doubt the whole world endorses Mr. Marshall's sentiments, expressed in ruined Berlin, that these differences must be reconciled, for that is the one certain way of averting even greater ruin on a world-wide scale. And it is gratifying that the peace-seeking attitude of the west is being echoed by at least a part of the Russian press, through which the Soviet Government is beginning to talk of the possibility of compromises which it failed to offer at Moscow.

It has been one of the characteristics of Soviet diplomacy that whenever it had pushed its viewpoint to the utmost limit and had produced a deadlock it came up with conciliatory statements and even concessions "in principle" that were sometimes uttered by Premier Stalin himself. And as lubricants of the diplomatic machinery, helping to keep it from breaking down, they were not without value. But the experience of the past five years should have convinced by now all but the incurably gullible that such statements and "concessions" were too often flanking maneuvers to shake the opponents' will and to enable Russia to gain the same old objectives by another route. In any case, none of the Russian pledges during and after the war have been kept, and we can put our trust in new promises only if they are accompanied by an easing of Russian pressure or other actions to convince the world that they will be carried out.

For the present, such actions are conspicuous by their absence. On the contrary, immediately after the Conference was over, the Soviet Government again rang down the Iron Curtain and is now proceeding to tighten its grip on eastern Europe. A new wave of terror appears to be sweeping through Rumania, where the remaining opposition is being crushed by mass arrests and where former Fascist Iron Guardists are being organized into the Communist-dominated Government's "security corps." The new threats against his opposition uttered by Marshal Tito, together with the increase in his personal bodyguard, indicate like developments in Yugoslavia. And there is, unfortunately, little hope that the rest of eastern Europe will fare better.

However, the hearty endorsement which President Truman gave to Mr. Marshall's firm stand at Moscow in the interest of the United States and of world peace confirms that the United States will no longer encourage such Russian methods by appeasement. Indeed, the atmosphere at the White House conference between President Truman, Secretary Marshall, and the key leaders of Congress last night suggested further measures to meet Russo-Communist expansion. It is to be hoped that the results of this conference will enable the leaders of the House to end what begins to look like deliberate delay in the passage of the Greek-Turkish aid bill, already passed by the Senate. But that other measures will follow is shown by action in two other fields. The first is the decision to proceed with the industrial rehabilitation of western Germany, which France is expected to accept, in the effort to make western Germany self-sustaining, bring some relief to American and British taxpayers, and vindicate both our war aims and our way of life in the eyes of the Russian zone in Germany and all Russian-dominated Europe. The second is the transfer of small American naval surplus vessels to China—an action which was facilitated by the end of one-party tutelage and the introduction of what one can only hope will become an increasingly liberal coalition regime, but which also marks the beginning on our part of a more realistic policy in China than the attempt to force Communists into the National Government.

In short, there is no blinking the fact that Russia on the one side and the west, led by the United States, on the other are now engaged in a diplomatic contest in which they

not only maneuver for positional advantages but also struggle for the soul of nations. Russia is doing so in order to impose on them her own system, which she has been able to do thus far only by ruthless force; the west, in order to preserve and widen the frontiers of freedom. On the outcome of that contest will depend the relative moral and strategic position of each side when they meet for the next test in a new conference. On it will also depend the kind of peace we will get, and our own safety.

Veterans Entitled to Increased Aid To Continue Training and Education

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. McDONOUGH. Mr. Speaker, our veterans have returned to civilian life and are now trying to bridge the years which were sacrificed willingly during the war when these young men gave up their personal plans and ambitions and fought for the protection of this Nation. Many have turned to on-the-job training where they are learning a trade to take their place in industry and business. Others have returned to college where they are preparing for a professional career.

Today veterans in both categories are facing barriers that have sprung up from the increased cost of living, the low ceiling on their allowance in addition to subsistence, and, where the student-veteran is concerned, the scarcity of part-time jobs when he seeks to supplement his subsistence allowance to cover the bare cost of living necessities.

Our veterans are confused to find their hopes of completing their education and training dissolving before their eyes. Students attending universities have had estimated food cost increases of over 30 percent, clothes cost increases of about 18 percent, and an increase in housing cost that cannot be determined because the veteran has had to pay whatever was necessary to get accommodations.

The married veteran with small children cannot support his family on the present subsistence allowance of $90 a month. He cannot hold his family together and maintain his scholastic average while working at a part-time job, and his wife must remain at home to care for the children.

The married veteran without children can get by if his wife works to augment the meager family income. The single veteran finds $65 inadequate to cover his living expenses, and must draw upon his savings, get help from home, or seek part-time employment to provide additional funds.

When the GI bill of rights was originally considered by Congress, it was expected that the veteran would find part-time work which would provide him with adequate funds to meet additional expenses over and above the tuition and the $65 subsistence allowance from the Government while he was in school. But in many parts of this country, part-time jobs are just not available. Student-veterans have applied for jobs at school, have tramped from employment agency to employment agency, but have been unable to get any regular part-time work.

Nearly every college in the United States is overcrowded, and the communities cannot offer part-time employment to all the student-veterans who need it. Even where jobs are available, with the increased number of students in every university, instruction periods generally cannot be arranged consecutively and few students have regular free periods of sufficient length to permit part-time employment.

During recent hearings before the Committee on Veterans' Affairs, Mr. Robert McLaughlin of the American Veterans of World War II brought many of these conditions to the attention of the committee. He said in part:

Amvets hold no brief for the indolent veteran who makes no effort to help himself. But we know from interviewing GI students that the college communities cannot provide adequate part-time employment to supplement the income of a substantial number of these boys. The picture has changed since the college days of the average Member of Congress when nearly any student with enough ambition could earn a modest income by part-time work.

Mr. McLaughlin continued:

It is our deep concern that veterans who have resolved to improve their education, and who have planned their rehabilitation in our college halls, may be forced to abandon their plans because of their inability to find work sufficient to supplement their incomes to a minimum of living. If they have to give up their education, their futures are questionable. Many of them will immediately find jobs. Others may become discouraged and never find their proper place in our American life.

I agree with Mr. McLaughlin and I share his concern for the future of our veterans who may be forced to leave school and begin again the task of rehabilitation and adjustment to civilian life. Most of our veterans are willing to make every effort to earn the funds to complete their education or training with the help of the Government. But if work is not available, then it is up to us to act now to help these men. We must not break faith with our veterans. We should increase subsistence to the extent that our veterans, married or single, will be able to complete their training in universities or on the job.

Real Help for Negroes

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of April 26, 1947:

REAL HELP FOR NEGROES

When the Reverend Marian Sanders went to James Island, S. C., that isolated community was not only without a pastor but also lacked any educational opportunities. He established classes for children and adults, and eventually succeeded in getting a modern school, a clinic, and a community building.

Cleo W. Blackburn went into the slums of Indianapolis, established a health center, day nursery, community gardens, a community cannery.

Sanford H. Lee became county agricultural agent in a poverty-stricken section of Georgia. He showed the farmers how to enrich their soil, improve their livestock, live better.

These men are all Negroes, trained in Negro colleges, who have gone out to better the lot of their people. There are many others like them.

Persons who are disturbed about the lot of the Negro in America can do something about it, in a practical way, by aiding the educational institutions that train such leaders.

An opportunity is coming up. The United Negro College Fund has launched a national campaign for $1,300,000 to help support 33 Negro colleges. Pittsburgh's share is $65,000, and a drive will be started here shortly.

Fund officers have some convincing arguments for the training of more Negro leaders.

Although the Nation has one white doctor for every 900 of population, it has only one Negro doctor for each 4,000 Negroes.

It has one white teacher for each 122 pupils; one Negro teacher for each 201 pupils.

There are 67,000 white dentists, but only 1,400 Negro dentists; 400,000 white nurses, only 8,000 Negro nurses; 176,000 white lawyers, only 1,000 Negro lawyers.

And Negroes number 13,000,000 in the United States. Approximately one-tenth of the population.

Address by Secretary of the Treasury at Unveiling of His Portrait

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, last Sunday, April 27, a ceremony was held in the State capitol at Little Rock, Ark., when an excellent portrait of our able and distinguished Secretary of the Treasury, Hon. John Snyder, was unveiled and presented to the State of Arkansas. This public ceremony was attended by a host of admiring friends and neighbors of the Secretary from his native State of Arkansas, and from other States, who joined in paying an appropriate and sincere tribute to him as one of the Nation's most able and distinguished public servants.

Following the unveiling and presentation of the portrait, Mr. Snyder responded with a splendid address, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The desire for approval and good wishes of friends and neighbors is inherent in every man. Particularly does he want the honor and respect of those in his home town, his own community, and his native State.

Consequently, I deeply appreciate the courtesy you pay me today. I feel doubly honored that you have chosen to place my portrait here in our imposing capitol building alongside those distinguished governors who have helped to guide the destinies of this State.

It is with sincere humility and a strong sense of responsibility that I accept this high compliment. And, I will do my best to be worthy at all times of your generous tribute.

Business and Government service have taken me away from Arkansas. But my childhood was spent in the northeastern part of the State at Jonesboro, and I began my banking career at Forrest City. So I have always claimed full citizenship.

We never forget the influences of our early environment. And certainly Arkansas, so suitably named the Wonder State, has richly endowed her sons.

They can take pride in the beauty of her streams and mountains, in the sturdy character of her people, in the steady progress of her industries, and in the growth of her fine cities.

For in her reservoir of wealth are the extreme fertility of the river belts, the rich production of oil and gas deposits in the southwest, the timber growth of nearly every variety known to the temperate zone, the mountains of coal, the precious metals, and in addition the many industries covering the State.

We were singularly blessed by the great Mississippi and Arkansas rivers. They provided a gateway, first to a rich plantation life in their bottom lands, and later to the development of the agricultural riches and extensive mineral resources of Arkansas. And we can have a particular pride in this capital city of Little Rock, whose importance is reflected in this magnificent State House in which we are now met.

This building depicts, in its beauty and dignity, our principles of cooperative freedom; it represents to us the power of justice in our complex social and economic life; it symbolizes the duties of our Government—to serve and to guard, constantly and zealously, the American birthright.

Arkansas today is beginning a new era of industrial, economic, and social progress. This era holds promise of increasing prosperity for our people, and of expanding influence in the trade marts of the world.

Our productive contribution to the Nation's war effort has fully demonstrated our capabilities. When we consider the factors of size and population, no State has a more impressive record in this respect.

During my service in Washington, first, with the Defense Plants Corporation, and later, as Director of War Mobilization and Reconversion, I had opportunity to scrutinize Arkansas' wartime accomplishments.

In terms of war production, we ranked high in aluminum. Here the greatest bauxite deposits our Nation possesses provide 94 percent of all the ore mined in North America. From them came an astounding proportion of the air-force fighters and bombers so essential to the defeat of our enemies. Arkansas aluminum went into numerous other products essential to our military effort, and this metal is only a part of the story.

Manganese output increased 37 percent over 1939. Petroleum and its byproducts, building materials of all kinds, forestry yields, cotton—all these came out of the enterprise of our Commonwealth in ever-increasing quantities. Meats, dairy products, poultry, and other foodstuffs for our armies and those of our allies were supplied in great amounts.

And, at the same time, Arkansas established a record of particular importance to the Treasury Department. Her citizens invested more than $375,000,000 in savings bonds to help finance our defense and war efforts. More than $290,000,000 of this amount was in series E bonds, savings largely arising from the earnings of our workers and farmers.

There was, of course, another contribution, the greatest of all, that Arkansas made to the cause of freedom. She sent her men and women by the thousands to serve their country bravely and devotedly.

The veterans now returned take up their civilian occupations with a broader vision and a keener sense of responsibility. In memory of the men and women who gave their lives, and in the name of our physically incapacitated, all of us are challenged to further and greater service in peacetime America.

For there is a new call in public service for that leadership such as made Arkansas a great State. The importance of public service, in these significant and troublous times, cannot be overemphasized.

Never have we had a more urgent need than today for the talents and energies of capable, conscientious men and women in the administration of our affairs, whether at local, State, or national levels.

We must do all we can to encourage and attract such leaders to public life.

We must develop and manifest a wider understanding of the great problems incident to government, give a greater degree of appreciation for efforts expended in public service, and then demonstrate that appreciation, as you have done so impressively here.

Certainly we are more conscious today than ever before of the tremendous burden that rests upon the man who occupies the Presidency of this Nation. I am sure, too, that we realize more and more the great demands that the vital problems of government impose upon other leaders in our national establishment and in our increasingly complex State and local administrations.

If we are to attract the most capable administrators, the keenest intellects, and the leaders of vision to public service, we must vest in such service not only adequate material compensation, but the incentive produced by recognized efforts.

Appreciation cannot fail to inspire in men of public office a spirit of unselfishness in rendering service. And the great majority of our public leaders have sought to place the welfare of all the people ahead of any other consideration. They have not been deterred nor influenced by the prospect of personal gain or by the fear of personal loss.

Such is the philosophy that Harry Truman has brought to the Presidency in these critical times.

I know from intimate personal experience, too, that the majority of Federal employees, from Cabinet members and heads of departments to clerks in the most routine jobs, are serving energetically and well.

The right to object, and to criticize, is in the American tradition, and none of us would change that. But the criticism that at times has been heaped indiscriminately upon public servants, has not made easier the task of filling posts of responsibility.

Another way in which we can elevate the standards of public administration is to push energetically a widespread program of training for such employment.

A great number of our young people, returned from military service, are taking advantage of Federal assistance in further preparation for civilian careers. Many of them are displaying an eager interest in the field of government.

We find in our colleges and universities an unprecedented demand for courses in civil administration, economics, law, finance, and in statistical studies—all branches of training that seem to lead naturally to careers in government.

Even if such students turn their talents to the fields of private enterprise, the training they receive will make them more alert to the responsibilities of citizenship.

In the Treasury Department, we are developing a definite program to enlist for Federal employment, those so qualified. We are hoping in the years to come, that the most able men and women from our universities, business institutions, and like fields, will be well represented in Government personnel.

While we are in the process of reducing the Government establishment to a peacetime level, no large-scale recruitment is in prospect, but we are undertaking this program on a long-range basis.

We are asking colleges throughout the country to advise us of the names of prominent students in their classes which deal with subjects related to Treasury activities. I hope that a number of the young people of my own State will be interested in qualifying for positions under the civil service.

There is still another way in which the character of our Government can be improved. That is through a vigorous and continuing interest in her functions on the part of our entire people.

We are fortunate that through our educational system, the radio, newspapers, and other informational media, our people are in better position than ever before to understand and to help solve the problems of government.

We have had a wonderful example of the value of public understanding in the unity with which our citizenship, regardless of party or particular interests, has supported the President in his conduct of world political and economic affairs.

The expansion of this Nation, in industry, in population, and in world interests has placed upon our National Administration a responsibility far greater than on that of any previous generation. The welfare of all of us, and to a great extent, world progress toward economic stability and peace, depend upon its leadership. The responsibilities of the leaders of our State and local governments are hardly less important.

It is not enough today that we have good Government. We must have vigorous Government, government by men of integrity, energy, vision, and unselfishness.

A democratic government is worth our sincere endeavors. It is worth making a matter of personal, individual concern. We must exercise the responsibilities of citizenship by proper selection of our officials, and by willingness and ability to give of our own talents to public service.

Having assured the selection of the right men, we must give them our support. We must demonstrate that an alert and informed citizenship expects of them the highest ideals of performance, and backs them to the limit in the execution of their trust.

In such manner, our Government will be well equipped to meet the tremendous responsibilities of this modern world.

The people of Arkansas, by a wholehearted devotion to the economic goals we have set for ourselves, can, I am confident, reach a level of material prosperity such as we have never before known. By the same token, the cooperative endeavors of the American people will assure the continued material and spiritual well-being of the Nation.

The road of progress is a difficult one. The path to economic, financial, and political stability, in the face of our present national

problems, is not smooth. Within the next few years, democracy must demonstrate her competence to overcome the obstacles and hindrances before us. Democracy will succeed if all of us actively cooperate to this end.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. WILLIAM B. UMSTEAD
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. UMSTEAD. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject entitled "Federal Aid for Education," delivered by me and broadcast from Station WPTF at Raleigh, N. C., on Sunday, April 27, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today American education—our Nation's priceless heritage—is facing the greatest crisis in its history.

At a time when our national wealth has reached a new peacetime high, our entire elementary and secondary system of education, which is the base of our total educational structure, is threatened with break-down. During the present year alone it has been estimated that some 6,000 schools will be closed and 75,000 children of school age will receive no schooling because of the lack of teachers.

The principal reason for this condition is, of course, low salaries. Our teachers are finding it more and more difficult to earn a decent living in a period of rising prices. A recent survey shows that the classroom teachers throughout the country receive an average of about $37 per week. This is less than $1 per hour for a 40-hour week, and most teachers work far in excess of 40 hours per week. The same survey shows that almost 200,000 of the Nation's teachers are receiving less than $25 per week, which is hardly as much as the average wage rate paid for unskilled labor.

We have paid too little attention to our teachers and to their problems and difficulties. The war years and the reconversion period, with the high cost of living, have merely intensified these problems and difficulties. About 350,000 teachers have left the teaching profession since 1940, which is more than one-third of the total number of teachers. Never before has there been such a tremendous turn-over in the teaching profession during a similar period of time. Today, there are 70,000 unfilled teaching positions in the United States and many inadequately trained teachers have been pressed into the service. The public-school system of North Carolina has felt the impact of this situation.

It is perfectly clear, therefore, why fewer and fewer young people are entering the teaching profession today. In 1920, 22 percent of all college students were enrolled in teachers' colleges. Today, there are less than 7 percent. Along with the laudable ambition to serve mankind in the training of youth, there must be, of necessity, some consideration given to the matter of making a decent living. These facts and conditions make it mandatory that we take immediate steps to restore the dignity of the teaching profession and recognize once again the importance of the teacher to the education of our youth, to the community, State, and Nation. We must devote more attention and more of our resources to the strengthening of our secondary school system, which is the pride and bulwark of our democracy.

It has become apparent that without Federal aid it is impossible for all of the States in the Union to provide anything approaching equal educational opportunities. In view of this situation, the President of the United States, in his budget message last January, placed himself squarely on record for "basic legislation under which the Federal Government will supplement the resources of the States to assist them to equalize educational opportunities and achieve satisfactory educational standards." The present crisis dramatizes a fundamental weakness in our system of secondary education. For many years tremendous differences have existed between the States and the amount of money spent per pupil. In 1943, this difference ranged from $179 per pupil in New York to $35 per pupil in Mississippi. These figures, while significant, do not tell the whole story. They must be studied in relation to the wealth of the various States. Some States are making every possible effort to develop and maintain a sound educational program, yet their educational system remains sub-standard because of their inability to raise sufficient funds for education through taxation.

North Carolina, for example, according to a study by the National Education Association, was spending more for education in proportion to its income than many other States, even though its expenditure per pupil of $52 in 1943 was among the lowest in the Nation. When the number of pupils and the per capita cost of each is measured against the State's income, North Carolina, on the basis of its ability to pay for education, was spending as much as New York and considerably more than such States as Ohio and California. In spite of this splendid effort on the part of North Carolina, it is to be admitted that even with the increases made in 1945 and 1947, the salaries paid to schoolteachers in the State are still inadequate.

Because of the difference in the wealth and income of the various States, and the unequal burden imposed on some States in developing a sound system of secondary education, Federal aid is now being seriously proposed.

Assistance by the Federal Government to the States for educational purposes is nothing new. It actually began about the time the Federal Government was established and has been continued through the years. At the present time, this assistance is given in the form of grants for the support of land-grant colleges, agricultural experiment stations, cooperative agricultural extension services, vocational education, vocational rehabilitation; and more recently, in the educational assistance provided for veterans in World War II. However, Federal aid for education, such as above mentioned, has been provided to meet special and specific educational needs. Through the years, and especially during the past 5 years, the critical condition of our secondary school systems has spotlighted the necessity for Federal aid, not only for specific needs, but for general assistance to our entire elementary and secondary educational systems.

There have been many bills introduced into Congress since 1938 for the purpose of providing Federal aid to public schools. Certainly, such aid, if provided by the Federal Government, should be divided among the States largely on the basis of the number of school children in each State, the ability of each State to adequately finance its public-school system by taxation, and the effort being made by each State in behalf of its public-school system. Such a method of distribution would mean much to North Carolina, with its 900,000 children in its public-school system, and in view of what the State is now doing for its public schools in proportion to its ability to pay and the total amount of taxes collected by it.

Since I retired from Congress, in 1938, I have given the question of Federal aid to schools a great deal of thought. I was once a schoolteacher. I know something of their place in the community in which they teach. I know something of their problems and responsibilities. I know something of the many things expected of them and the many demands made upon them. I also understand something of the devotion to mankind which impels them to continue their work, in spite of adverse circumstances and inadequate salaries. In my opinion, the people in North Carolina have come to realize more than ever before the acute and serious condition which our teachers have faced during the past decade and its serious effect upon our public-school systems. Not only in North Carolina, but throughout the Nation, there is an awakening of public sentiment which will ultimately, in my judgment, demand and see to it that the importance of our elementary and secondary school systems is not only recognized, but adequately provided for.

In this hour of our Nation's history our form of government, our institutions, and our way of life are being tested at home and abroad. We face more difficult problems than ever before in time of peace. If we are to meet the test we should not forget that our whole structure of government, our way of life, our economy, and our national defense are all vitally affected by our educational system, and, certainly, we cannot forget the duty we owe to the citizens of tomorrow. The poorest man and the greatest industry in the land should be vitally interested in the effectiveness of our public-school systems.

The crisis is acute. It must not be permitted to continue. I can see no solution other than assistance from the Federal Government. I therefore am in favor of Federal aid for public schools, and I expect to support it as vigorously as I can. To me, this is one of the most important domestic questions now before the people of America, and I hope that everywhere, in every State, there will be an uprising of deep concern and interest in the condition of our public schools which will result in a general effort to improve the situation which exists today. It can, and must, be done.

Plight of the DP's

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial entitled "Plight of the DP's," which appeared in the Providence Journal on February 14, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLIGHT OF THE DP'S

Too little has been said and too little done about the plight of the estimated 800,000 displaced persons in Europe. Most of them, for political or other reasons, dare not return to their homelands for fear of persecution or death. And most of them have suffered more cruelly during and since the war than any other people in the war-stricken world.

Bold plans have been discussed from time to time to create havens where these un-

fortunate DP's can rebuild their shattered lives. Zionist groups would open Palestine to all the Jewish DP's who care to go there. But even if that suggestion should be accepted, it wouldn't solve the problem because only about one-third of the DP's are of Jewish extraction. The others are of many faiths and many nationalities. All that they have in common is their homelessness and their desire to find a place to live in peace.

President Truman has proposed that more refugees from Europe be permitted to enter this country under unused quotas of the immigration law. Brazil and Argentina have elaborate plans, on paper, for admitting thousands of immigrants. Australia and South Africa are eager for new settlers.

But when it comes to the practical point of finding havens for the displaced, innumerable difficulties stand in the way. Some countries won't accept paupers. Some want only settlers with special skills. Some South American countries require prospective immigrants to show certificates of baptism in the Roman Catholic Church before they can be admitted.

The net result is that precious little is being done to help the 800,000 homeless persons in Europe. They deserve more than sympathy. It is time for this Nation and others to demonstrate the ideas we preach about good will, charity, and brotherhood.

Only Two Terms for a President?

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry Steele Commager appearing in Sunday's New York Times magazine section:

ONLY TWO TERMS FOR A PRESIDENT?—A HISTORIAN OPPOSES THE PROPOSED AMENDMENT—LEAVE THE QUESTION TO THE PEOPLE, HE SAYS

(By Henry Steele Commager)

In the 160 years since the founding of the Republic there have been some 300 attempts by Congress to change the constitutional provision for Presidential tenure and reeligibility. Now, mirabile dictu, one of these attempts has been successful—at least so far as the Congress is concerned—and State legislatures have the opportunity of passing on an amendment limiting Presidents to two elective terms.

Could the success of this amendment—so easily achieved—have anything to do with the fact that Franklin Roosevelt broke the two-term tradition and that now for the first time, the party that opposed him is in control? The question—so congressional debaters insisted with monotonous regularity—was a nonpartisan one. But the amendment was passed by unanimous Republican vote in both houses of Congress, and Representative SABATH had the bad manners to call it "a pitiful victory over a great man now sleeping on the banks of the Hudson."

Let us—like the Republicans—consider the amendment in a nonpartisan spirit, judge it purely on its merits, or demerits. And here we are confronted and distracted at once with a veritable Bartlett's compendium of familiar quotations. Proponents of the amendment rang the changes on Washington, Jefferson, Cleveland, and Wilson with tireless regularity; certainly they proved that at one time or another a great many distinguished statesmen had disapproved of more than two terms for any President.

Yet we should disregard this smoke screen of quotations. We should disregard it for two reasons: Because, in the idiom of a past generation, the quotations don't signify, and because quotations cancel each other out. For every apt quotation against two terms which the Library of Congress dredged up for Republican Congressmen there is another, often from the same source, supporting the right of people to exercise their own judgment on the matter.

Quotations may be disregarded, but history should not be disregarded. And history, ancient and recent, has much to tell us that is both edifying and relevant. For it is instructive to recall that this question of Presidential reeligibility was thoroughly canvassed by the wise men who made the Federal Constitution. No part of our Constitution received more attention, gave rise to more discussion, than that dealing with the Executive.

It is needless now to rehearse that discussion. What is important is to keep in mind that after the most exhaustive inquiry and debate on the matter of Presidential reeligibility the framers left the question open. Whatever opinion individual members may subsequently have expressed, the combined wisdom of the makers of the Constitution dictated the conclusion that this question was best left to the judgment of the American people.

And if we turn from a consideration of the conclusion of the framers to that classic exposition of the Constitution, the Federalist, the moral is the same. No. 72 of the Federalist is devoted entirely to this matter of Presidential reeligibility, and it is perhaps appropriate to recall what the grandfather of the Republican Party, Alexander Hamilton, wrote there:

"Nothing appears more plausible at first sight, nor more ill-founded upon close inspection, than a scheme * * * of continuing the Chief Magistrate in office for a certain time, and then excluding him from it, either for a limited period or forever after. This exclusion, whether temporary or perpetual, would have nearly the same effects, and these effects would be for the most part rather pernicious than salutary. * * * There is an excess of refinement in the idea of disabling the people to continue in office men who had entitled themselves, in their opinion, to approbation and confidence; the advantages of which are at best speculative and equivocal, and are overbalanced by disadvantages far more certain and decisive."

These are wise words, but they represent, after all, theory rather than experience. As it happens we are not without experience with this matter of Presidential tenure. Sixteen of our Presidents were elected to the Presidency but once, ten twice, and one four times. Those who sponsor this amendment insist that long tenure of office makes, inevitably, for dictatorship, despotism, and tyranny, and the longer the tenure, so the argument runs, the greater the danger. Has there been, in fact, any correlation between tenure of office and dictatorship or tyranny? Was Washington more dictatorial than John Adams, Monroe than Polk, Cleveland than Harrison, Wilson than Hoover?

But the amendment, it will be said, applies only to more than two terms. The logic of a denial of a third term applies equally to a second, but let that pass. We have had one experience with a President elected to more than two terms. And during that same period, 1933–45, we had an opportunity to see real dictatorship, real despotism, in one country after another. Did Roosevelt's tenure of office for longer than two terms in fact lead to dictatorship, despotism, tyranny? Did it in fact impair the vitality of the American constitutional system or of the republican form of government? As Jefferson said in his first inaugural address, "Let history answer this question."

Nothing reveals more glaringly the danger of deductive reasoning in the realm of politics than the glassy complacency with which otherwise intelligent men assure us that a tenure of more than 8 years in the Presidency will lead to dictatorship. Gladstone was Prime Minister of Britain for 14 years, but there was no dictatorship. Mackenzie King has been Premier of Canada for some 20 years, but Canada has not suffered from dictatorship. Franklin Roosevelt was President for 12 years, but the United States did not experience dictatorship.

Once, when dealing with a perplexing tax case, Justice Holmes was confronted by his colleagues with the old dictum: the power to tax involves the power to destroy. His answer was succinct and conclusive. "Not," he said, "while this court sits." So we might say to all admonitions that long tenure in office leads to dictatorship: Not while the American people are on the job, not while democracy has any vitality.

It was Justice Holmes, too, who said that even for practical purposes, theory is sometimes more important than fact. Let us turn then to the theory of the matter—to theory not as vain speculation, but as principle.

There is one principle that is inescapably involved in this question of limited tenure, and that is the principle of democracy. Turn and twist it as you will, the proposed amendment is a vote of no confidence in democracy. What those who support it say is that the American people cannot be trusted to decide wisely on the question of their Chief Executive. Moreover, they say retroactively, the American people, by their decisions in 1940 and 1944, justify this mistrust. They made mistakes then; they are not to be permitted to make similar mistakes in the future.

But why are the people not to be trusted in this, the most important decision that they can make in the ordinary course of politics? They can be trusted, apparently, to vote for a man once, or even twice, for the Presidency, but not three times. They can be trusted to vote for Senators and Representatives any number of times, and Senator O'DANIEL'S proposal that President and Congressmen alike be limited to a single term received only his own vote. They can be trusted to vote for State executives, State legislators, and even State judges any number of times in most States. They can be trusted to vote on new constitutions and on constitutional amendments. It is only in this one political choice that they are to be limited.

Have they merited this distrust? Suffice it to say that in 160 years they have never elected a bad President, a President of whom it could fairly be said that he was dangerous to the Republic.

It may be said, to be sure, that the people are not free agents in this matter. They do not exercise real choice, but are limited to the candidates presented to them by the conventions of the major parties. And history reminds us that Presidents can exercise a very real influence over party conventions, and indeed frustrate popular will through packed and controlled conventions. The most notorious example of this was the Republican Convention of 1912.

Yet it is well to remember that however influential Presidents may be in obtaining a second nomination, only one—Roosevelt—obtained a third, and there is little evidence that he or his henchmen packed the Democratic Convention which gave him that third; it wasn't necessary. Grant, one of the most popular of American Presidents, was unable to win a third nomination; Wilson, who at least flirted with the idea of a third term, was wholly unable to win any support to that notion.

It should be admitted that these precedents are far from conclusive. A shrewd and ambitious President could probably force his nomination on his party a third time if he wished to do so, and if he seemed like a winner. But this is a criticism not of the reeligibility of the President but of the convention system. That the convention system needs reform is notorious, but criticism of Presidential control of party conventions comes with bad grace from a party which has consistently blinked at its own "rotten boroughs" in the South. If the present nominating system plays into the hands of unscrupulous politicians, the thing to do is to reform the nominating system, not to limit the democratic process.

This notion that the people are not to be trusted is no new thing in our history. It was a favorite doctrine of the Federalists. It was taken up by Calhoun and the southern democracy in the generation before the Civil War. It has rarely been heard in blatant form since then, but it pops up, again and again, in the theory that the people are likely to be carried away by their passions, that democracy may turn into mobocracy, or that men may be misled by pernicious propaganda. Of recent years the favorite form is the argument ad horrendum from European experience. It happened that way in Germany, we are told, or in Italy, or in Spain, so it can happen here.

These insinuations do not rise to the dignity of an argument, for if democracy isn't to be trusted with its most important responsibility, we might as well give up the whole business now and look for something else. Americans have not, in fact, yielded to the blandishments of dictators, been misled by propaganda into countenancing despotism. In theory, to be sure, it is not impossible that they may do so in the future.

Two observations are relevant here. The first is that in a democracy people have a right to make mistakes and to learn by mistakes. The second is that if Americans ever do arrive at the point where they wish to retain a dictator in power, no constitutional amendment is going to stop them. By that time democracy will be gone anyway.

There is one other principle that is involved in this question of a limitation on Presidential tenure. It is not as obvious as the principle of democracy; it was, in fact, barely hinted at in the congressional debates on the amendment, but it is of vital importance. And that is the principle that the Constitution should contain limitations, not on the machinery of government but on its scope.

This—so far have we drifted from sound constitutional doctrine—takes a bit of explaining. The framers of our Constitution were determined, above all, to erect barriers against arbitrary government, to insure a "government of laws and not of men." That government was good, they knew, which did not have the power to be bad. And in innumerable ways they threw restrictions around goverment. But those restrictions were designed to fence off, as it were, certain areas from government control. There were some things no government could do, some rights no government could invade. Parliament, as James Otis neatly put it, could not make two and two five, nor could Parliament, or any government, deprive men of their life or liberty or property without due process of law.

And to make sure that government could not invade these sacred domains, governments were limited, and limitations written into the constitutions and the bills of rights. But the limitations were on the realm or scope of government. Where government had, of necessity, authority, it must clearly have sufficient authority to do the job well. To confuse limitations on the realm or scope of government with limitations on the authority of government when it operates in its proper field is a fundamental error.

From time to time we have committed this error in our law-making, but heretofore—with the possible exception of the Prohibition amendment—we have not committed it in our Constitution. The original Constitution set careful limits to the realm of Government, but where authority was granted, it was granted fully. And that is the interpretation which John Marshall and most of his successors placed upon the Constitution.

Now for the first time we are adding to our Constitution a limitation on the power of Government, or of the people in their relation to their Government. We are confusing what belongs in a Constitution with what belongs in administration, or in ordinary politics.

The concept of democracy was far more limited in 1787 than it is today, and the framers of the Constitution confessed to more and deeper misgivings about it than any statesman would admit today. Yet, with all their misgivings, all their uncertainty about the future, the framers did not make the fundamental mistake we are now asked to make. They did not write into the Constitution a limitation upon the exercise of power in that field where power must be exercised. They left this matter to the judgment of the people not only because, in the long run, they trusted the people, but because, logically, that was the right place to leave it.

It still is.

Greek-Turkish Aid Bill

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me on the Greek-Turkish aid bill, H. R. 2616:

MINORITY VIEWS OF MR. SMITH OF WISCONSIN

The undersigned respectfully disagrees with the majority members of the committee which has reported the bill.

Justification for enactment of the bill must be found in President Truman's speech of March 12 to the Congress. He said: "The foreign policy and the national security are involved." Aside from pointing out the deplorable situation in Greece, politically and economically, and the threat to Turkish sovereignty, he was strangely silent as to just how our own national security is involved. Greece and Turkey are a long way from the United States of America.

There can be no doubt that the President has embarked upon a new foreign policy for this country. He now seeks congressional approval, so it is up to us. One writer has said that it is a global anti-Communist policy. It is far more extensive than the Monroe Doctrine and, historically, more uncertain and much more dangerous. This is what he said:

"I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure."

The implications of this policy are so great that even the President's advisers in the State and Armed Services Departments refused to venture a guess as to what it will cost or where it will ultimately lead. If the bill is adopted in its present form it will commit the United States to unlimited expenditures of money and resources and call for military expeditions in an effort to support free peoples all over the world. It is the certain course to imperialism and the imposition of permanent conscription upon our people.

It is quite obvious that Mr. Truman has failed to consider all the implications of his policy at home and abroad. At home, wide segments of our people oppose this program because of this uncertainty. Abroad, many nations other than Russia wonder if this plan will ultimately affect them or interfere with their policies. Historians tell us that President Monroe took no such chance when he announced the Monroe Doctrine. He sounded out those nations that might become involved in such a policy. He was absolutely sure of all the implications involved. This is not the case with the President.

This issue is now squarely before the people. Under our form of government the Congress will accept or reject the "Truman policy." We believe the evidence submitted in support of it fails to meet the burden of proof. It is designed, so we are informed, to "stop the onward rush of communism." This is wishful thinking and propaganda aimed to gain popular support. More about that later.

The President has said that the situation in Greece and Turkey is a threat to our "national security" and hence we must appropriate $400,000,000 to stop the rush of communism. In Greece, communistic bands in the north, aided by Tito and other pro-Soviet leaders, threaten the established government in Greece. The situation in Turkey is different, in that some 20 Russian divisions are massed on the border and the preservation of its integrity is essential to order in the Middle East. The internal situations in these countries are entirely different. The Greeks are in a bad way, financially and politically, but that is nothing new. Since 1823, historians say that Greece has been sustained by loans from other countries. The British, French, Germans, and Italians have at some time bolstered the economy of that nation. Now it is proposed that we, in time of peace, should step in and carry the burden which the others left off.

Turkey has a strong government, politically and economically, and its only need is for modern military equipment Weapons which it has are obsolete, and new arms call for instruction by men who have led modern armies.

With utmost respect, I challenge the President's sincerity when he calls upon us to stop communism in those countries because it is a threat to our national security. We yield to no one in our desire to stop communism, for it is a diabolic ideology; it is un-Christian, and would set up a police state to govern men. Is it not, however, wholly inconsistent to stop communism in Turkey and Greece, at an original investment of $400,000,000, while communism is rampant in these United States? And how much money would the President invest to stamp out communism in this country? He has suggested that it would cost $50,000,000. What kind of consistency is this, four hundred million abroad and fifty million at home?

The fact is that President Truman does not fear the spread of communism in this country at all. He has said so in plain, understandable language. In reply to ex-Gov. George H. Earle, of Pennsylvania, he said in part:

"People are very much wrought up about the Communist "bug-a-boo," but I am of the opinion that the country is perfectly safe so far as communism is concerned—we have too many sane people."

In this country the President says communism is a bug-a-boo, but in Turkey and

Greece it's a threat to our national security. This is utter nonsense. It is a wholly inconsistent position and especially so when it is recalled that on March 22 Mr. Truman issued an Executive order that Communists and Communist sympathizers be removed from their Government jobs because they are a threat to "our democratic processes." What kind of hocus-pocus and double talk is this?

If there is a threat to our security it comes by way of pressure by Russia upon Greece and Turkey. Russia wants a share in the control of the Dardanelles and the Middle East oil fields. It could well be that there is this threat, but the President did not predicate his request upon that premise. He is avoiding the real issue. His responsibility is to spell out clearly that our objective is a military one. There is hardly any proof that it aims to put down communism.

I am opposed to this bill because:

1. It is uncertain as to scope and cost.

2. It is a serious threat to our entire social and economic structure, as it will eventually lead to war. It could easily bankrupt the Nation.

3. Aggressive action against Russia will result in dividing the world into two armed forces. This would lead to an unbridled race for armaments. War and bankruptcy would be certain.

4. There is no justification for bypassing the United Nations organization, even though we believed it was important to act.

If we believe in collective security, that organization should have been requested to act. We have now dealt it a blow from which it can never recover.

President Truman came to the Congress on March 12 and said we were suddenly in the middle of an internal crisis and something must be done about it before the end of the month as the British were pulling out. Almost 30 days have elapsed, and nothing has happened. Members of this committee know that the State Department was well aware as to what was happening in Greece, and this knowledge is certainly chargeable to the President. What kind of leadership is this?

Felix Morley, Human Events, March 5, 1947, said:

"As the sun sinks slowly on the British Empire it would seem time for the American people to ask themselves, very seriously, whether their leadership in the last 10 years has been sufficiently forthright or sufficiently intelligent to encourage trust and confidence now."

The test will come on the vote for or against this bill. If Members of this Congress hear the voices of their constituents it will be an emphatic "No."

How long will it take to realize the limits of our possibilities to help the world? In World War I, it was to sacrifice in order to make the world safe for democracy. Our treasure in life and property was shed unselfishly upon that altar. Then we defeated German militarism and the Kaiser. From 1939 to 1941 we inched our way into World War II. Then it was to destroy Hitler and nazism; under the Atlantic Charter we were pledged to eliminate fear from the world and to make peace and freedom secure. In 1941 we became an ally with Russia; we furnished it with that military equipment which ultimately helped to drive the Germans to defeat. We have sacrificed billions of dollars, thousands of lives, and untold and irreplaceable resources in this last war. For what? That is what troubles our people today; that is why they are confused.

The time has now come to save our own land and the heritage we received. The world looks to us for leadership; but if we become weak and impotent, if we dissipate our resources and spread ourselves too thinly, it will look elsewhere for that leadership, to the next strong nation. Call this what you will; but we believe it is realism, in the light of world conditions. To follow the President means that we are again embarking upon a course that calls for the exercise of force, not in the United States but thousands of miles from it. It will not make for peace—but war.

The Honorable Joseph P. Kennedy recently said that before other foreign grants or loans are considered by our Government we should take stock to find out (a) what we have, (b) what we need to maintain our own life, (c) what is sought of us abroad, and (d) what good purpose it will serve. The preponderance of the testimony by top-flight Government officials who appeared in support of this legislation indicated that they have no idea as to what we have or what will be the upshot of the policy advocated in this measure. Secretary of War Patterson was frank to admit that if the objective sought in this legislation was not achieved he did not know what our policy would be from then on. Obviously, it could only lead to increased military preparation and untold additional expenditures of money.

Our foreign policy should rest upon a real desire to maintain peace and to make secure our own system under which this country has grown and developed to a greater extent than any other on the face of the earth. We, of course, must resist the encroachment of communism which seeks to destroy this country. If this is really our purpose, it is essential that we survey our resources, which should be done before any further commitments are considered. It has been pointed out that there are approximately $100,000,000,000 in short-term internal obligations, and in view of this situation the United States cannot possibly finance resistance to other systems of government to the extent and for the period proposed or required without impoverishing this Nation. Even with the expenditure of all the money today, there is no definite assurance that we can meet the objective sought in this bill. If we impoverish ourselves we will be in extreme danger of a forced importation of the very political philosophy we are trying to check everywhere.

I believe the wise policy is to keep the American way of life as strong as our resources can make it. This is the way for the United States Let us face the issue without equivocation.

LAWRENCE H. SMITH.

Filling of Vacancy in the Office of Vice President

REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. GARY. Mr. Speaker, I have today introduced a joint resolution, proposing an amendment to the Constitution of the United States, which provides that in the case of a vacancy in the office of Vice President, the Senate and the House of Representatives shall, meeting jointly and by a majority vote, fill the vacancy from among those persons constitutionally eligible for the office of President. If the Congress is not in session at the time the vacancy occurs, the President is required to issue a proclamation convening the Congress.

Several bills and resolutions have been introduced in the Congress providing for changes in the present law governing the succession to the office of President. Under these measures, the succession would pass to some public officer who had been selected because of his qualifications for the particular office which he holds rather than his qualifications to serve as President of the United States. The amendment proposed by me is not in conflict with any bills which have been offered to change the statute relating to succession, but it would do away with the necessity of using the statute except when vacancies occur simultaneously in the office of President and Vice President.

Under my proposal whenever there is a vacancy in the office of President, the Vice President would immediately be elevated to the Presidency. The Senate and the House would then hold a joint session and by a majority vote elect a Vice President. They would not be limited in their selection to a Member of the Congress, but could elect anyone eligible for the office of President. It is to be assumed that in discharging this responsibility, the Members of the House and the Senate would consider not only a person's fitness for the office of Vice President, but would also consider his qualifications for the Presidency in the event of his elevation to that high office.

In his message to the Congress on the question of Presidential succession, President Truman pointed out that the existing statute, which provides that the members of the Cabinet shall successively fill a vacancy, gives him the power to nominate his immediate successor. He expressed the view that in a democracy this power should not rest with the Chief Executive, but the office should be filled by an elective officer. He, therefore, recommended the enactment of legislation placing the Speaker of the House of Representatives first in order of succession. The Speaker is an elective officer, but he is elected because of his ability as a presiding officer, and seniority is a strong factor in his selection.

The President further suggested that, if his recommendation did not meet with the approval of the Congress, "some other plan of succession be devised so that the office of the President would be filled by an officer who holds his position as a result of the expression of the will of the voters of this country." I cannot conceive of any method short of a popular election which would more accurately express the will of the voters of this country than election by those whom the voters have selected to represent them in the Halls of the Congress.

Tribute to the Late Senator Josiah W. Bailey

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. GEORGE. Mr. President, I ask to have printed in the RECORD an editorial

entitled "The Testament of a Great Public Servant," from the Southern Agriculturist, a publication founded in 1869. The editorial pays a tribute to our late colleague, Josiah W. Bailey, of the State of North Carolina.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TESTAMENT OF A GREAT PUBLIC SERVANT

In a political last will and testament, the late Josiah W. Bailey, who served with great distinction as a United States Senator from North Carolina from 1931 until his death in Raleigh on December 15, 1946, cited three major dangers as threatening the freedom and security of the United States. They were (1) the growing dominating influence of the Soviet Union, (2) a reckless fiscal policy, and (3) our ruthless labor leaders.

Regarding Russia, Senator Bailey, a devout Baptist who edited the Biblical Record from 1893 to 1907, warned the United States to be on the alert against possible world domination on the part of that government. He said, "There are those who think that Russia does not intend to destroy the United Nations Organization. It is my opinion that Russia does not intend to go along with it unless Russia can have her way. She means to dominate Europe and Asia and then the whole world."

The Senator asserted that there was evidence that the Soviet Union was operating in the United States by propaganda and infiltration. He cautioned, however, that failure of the United Nations did not necessarily mean war, and that internationalism did not mean that "our country must have a hand in every controversy, or that we should assume responsibility everywhere."

Senator Bailey called for a strong, firm, and peaceful foreign policy on our part and our getting into no controversy except in clear defense of our own country.

Senator Bailey who served as United States collector of internal revenue in North Carolina, from 1913 to 1921, deplored extravagant national spending policies, saying:

"No country has ever spent the earnings and the substance of its people as this country has without ruining itself and its inhabitants. The war expenditures were necessary, but there is absolutely no excuse for the extravagant civilian expenditure during the period in which I have been Senator.

"We must stabilize our currency and our economy at the earliest moment possible if we are to avoid disaster and chaos."

In one portion of his philosophical document, Senator Bailey charged that labor leaders had repudiated collective bargaining and undertaken to substitute dictatorial demands for it. He suggested that antitrust laws could be applied to monopolistic practices in labor relations just "as we can apply them to any relationship affecting commerce among the States."

Among his labor recommendations were restoration of the injunction to prevent irreparable injury, a requirement that unions perform their contracts or be held liable in damages if collective bargaining were to be preserved, and settlement of labor controversies in courts of justice and not by boards, commissioners, or panels.

"I could not support a considerable number of measures put forward by President Roosevelt because it was plain to me that they were unsound and the long-run consequence would be bad for the people. I voted against the Wagner Act. It was and is a plain piece of political class legislation. We now see its consequences. Purporting to avoid strikes, it is an inducement to strike. Proposing to free the workingmen, it has placed them under the power of labor bosses."

Senator Bailey advocated freedom for both employers and workers. He said that there can be no right to prevent a man from working just because he does not belong to a union. This is not freedom, it is coercion.

This warning comes from a patriotic American who was one of the most eloquent statesmen of his time with a reputation for clear thinking. When he spoke, the Senate Chamber was filled. He was the champion of individual freedom. He was the defender of States' rights against the encroachments of Federal power. He consistently upheld the integrity of the courts. He was an advocate of sound monetary policy. And he believed in and fought for a strong agriculture in a balanced economy.

Realizing that the end was near, Josiah Bailey bequeathed to the people of his beloved State and Nation the benefit of his experience and observations in a lifetime of patriotic public service.

Federal Aid for Schools

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. SMITH. Mr. President, we have been having some very interesting hearings before the Committee on Labor and Public Welfare on the subject of Federal aid for schools and education in America. I noticed in the New York Herald Tribune on April 26, and again on April 29, two very interesting editorials by Mr. Walter Lippmann, one entitled "Federal Aid for Schools," the other "More on Federal Aid for Schools." They are so relevant to the subject of Federal aid for education that I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of April 26, 1947]

FEDERAL AID FOR SCHOOLS

(By Walter Lippmann)

The case for spending Federal money on the public schools must be very strong indeed, or Senator TAFT would hardly be sponsoring a bill (known as S. 472) at this time for just that. The Senator is no spendthrift. Nor is he one who likes to extend the responsibilities of Government, much less of the Federal Government, in a field which belongs primarily to the States.

But he has studied the facts, and he has concluded, as any man must who will also study them, that the condition of our public schools in many parts of the country is deplorable, indeed a national disgrace and a national danger, and that the need for Federal aid is absolute and compelling.

Yet there may be some who suppose that this bill is a departure from the American tradition. It is not. Since the earliest days of the Republic the principle of Federal aid to public education has been well established. Congress has enacted some 160 laws in support of education, beginning with the so-called Land Ordnance of 1785, which reserved to the United States the lot No. 16 of every township in the western territory, for the maintenance of public schools within the said township. That policy was continued under the Federal Union, and as public lands became scarcer, Federal aid to education has since 1802 been given also directly in money.

In all 175,000,000 acres of public lands, an area larger than Indiana, Ohio, and West Virginia combined, have been devoted by the Federal Government to the support of education. Grants of money for various forms of education—agricultural, vocational training, military training and the like—have been made regularly and under various laws.

There will be others who feel that we have spent too much money in recent years, and that the Nation cannot afford new and additional expenditures for the schools. The Taft bill, which the Senator admits is only a humble beginning of what ought to be spent, would cost $150,000,000 the first year, $200,000,000 the second, and after that $250,000,000 each year. It ought to be more than that, and eventually it will have to be, once the mechanism for distributing the funds has been tested. A fair estimate would be $500,000,000 in aid of education, and another $500,000,000 for school and library buildings.

For the time being, however, we are talking only of the modest sums in the Taft bill. In the year 1945 the American people spent more than three times as much for drink as they did for their elementary and secondary schools. They spent $7,700,000,000, or about $55 per capita, on drink and $2,500,000,000, or about $17 per capita, on schools. No one can keep a straight face and argue that this country could not afford to spend $2 per capita more on schools when he looks at what it does spend on other things.

Perhaps the simplest, clearest, and most accurate way to judge the need for Federal aid is to use as our measuring stick the average amount spent by the Northern and Western States per classroom unit. This would cover the teacher's salary, janitor service, equipment, heating, upkeep for a classroom of 30 children in the elementary schools and of 27 in high schools. In 1944 the northern and western States spent on the average $2,199 per year per classroom unit.

That was not nearly enough. There are places where the expenditure is $6,000. But the figure of $2,199 is certainly the minimum that could be called tolerable. Now if we closed all the classrooms where this minimum was not spent, two-thirds of the school rooms in the country would be closed. In 21 States over 90 percent of the children would be without schools.

If we raised the standard, as we ought to do, to $3,000 per classroom unit, 8 out of 10 children in this country would have no school to go to. In 22 States there would be no schools at all.

The trouble with these statistics is, I realize, that they are so bad that they seem incredible. But as a matter of fact the condition of education in great parts of the country is incredibly bad. The results of our neglect of education are spectacular and humiliating. In the 1940 census there were 3,000,000 adults with no schooling. There were 10,000,000 illiterates, who could not read and write as well as a child in the fourth grade. Among the young men who registered for the draft, there were 350,000 who could not sign their names. There were nearly 3,000,000 boys and girls between 7 and 17 years of age who were not in school. There are States where many children go to school less than 5 months a year.

The more you look at the facts, the more certain it is that the National Government will have to act. No one who looks at the facts will, I believe, come to any other conclusion.

[From the New York Herald Tribune of April 29, 1947]

MORE ON FEDERAL AID FOR SCHOOLS

(By Walter Lippmann)

Many would agree with what was said in the preceding article about Federal aid to

the schools—as in the bill sponsored by Senator TAFT—that the principle is well established, that the Nation can readily afford to spend more on education, and that the need is very great. Yet some will be reluctant to act, feeling that a bill of this kind is a measure to tax the people of States that do well for the benefit of States that do badly.

They will, however, be astonished to find, if they look into the matter, that the people of the poorer States with the poorest schools actually make a greater effort, actually devote a larger part of their income, to educate their children, than do the people of the richer and more favored States. The people of the poorer States can accept Federal money for their schools without loss of self-respect.

The reason for this is obvious, once you think about it, but the obvious often escapes us. The poorer States have, of course, less income per taxpayer. But they have more children per taxpayer than the richer States. They have to educate more children out of smaller resources.

If we are talking of justice and self-reliance, then the comparisons are in their favor. A poor family with five children cannot give each child as good opportunity as a rich family with one child. But that does not mean that the poorer family has not tried to do as well by its children as the richer one. Now, on the whole, the States with the worst schools spend a bigger proportion of their incomes on schools.

The fair measure of a State's ability to pay for education is the size of its income per child of school age. The 11 States with the smallest income per school-age child in 1939 were, in the order of their poverty—Mississippi, Arkansas, Alabama, South Carolina, North Carolina, Georgia, Kentucky, New Mexico, Tennessee, Louisiana, West Virginia. But none of these States would be found on a list of the 11 which devote the smallest part of their income to schools.

Mississippi, for example, is at the bottom of the list in what it spends on schools. But it is near the top of the list, actually ninth, for the whole country in the percentage of its income which is devoted to education. It spends 3.41 percent of its income. New York spends 2.6 percent of its income. But because Mississippi is so poor but has relatively so many children, it has an average of $400 to spend on a classroom unit whereas New York has $4,100 to spend per classroom unit.

In other words the States with the poorest schools are not those which make the least effort. Many of them make the greatest effort. New Mexico, for example, though it is among the eleven which spend the least, leads all the other States in the proportion of its income which it spends.

I do not, however, mean to give the impression that the effort of the poorer States is consistently greater than that of the richer ones. But it is true that most of them make an effort which is near the average for the Nation as a whole.

There is, therefore, no moral basis for objecting to Federal aid. The Taft bill would tax individuals wherever they live, and would distribute the proceeds to States which, though they spend 2.5 percent of their income on schools, do not have enough money to provide $40 per pupil per year.

I have labored this moral issue because I assume that there is no need to persuade any American that schools are vitally important, or that the Nation as a whole suffers if the children of any part of it are illiterate, or grossly uneducated, or miseducated.

No doubt the mere expenditure of money will not give this country the education it needs to govern itself and to prosper. That calls for a lot more than money. But mere money is needed urgently, even desperately, to provide the simplest kind of ordinary literacy throughout the Nation. On that, whatever our theories of education, we can all agree, and there is no point in being complicated and subtle about it.

The Moscow Failure

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 29 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled "The Moscow Failure," from the April 25, 1947, edition of the Chicago Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MOSCOW FAILURE

General Eisenhower told the American Society of Newspaper Editors last week that there is only one sure protection for the people of this country. This, he said, is the friendship of the other peoples of the world.

It would be hard to say that world friendship had been promoted by the sour and fruitless wrangle of the foreign ministers just concluded at Moscow.

If any improvement in United States-Soviet relations resulted from this meeting, it has come from incidentals. We believe there has been some real increase in sympathy here for the Russian people, based upon news stories about how they live and work and play, what they eat, what they wear, and how they pay for it. William McGaffin has contributed many such stories to this newspaper.

When the Russian is reduced to his specifications as a human being it is impossible not to recognize in him our brother; it is impossible not to hope that he will become our sincere and loyal friend.

It will be fortunate if the Soviet Government will see the good that came from the presence of a more numerous body of correspondents than usual. It should encourage a more open policy on news. The gain in unofficial relations might ultimately offset the failure on the official level.

Truman's proposal to aid Greece and Turkey, in a military as well as an economic way, worsened at least the surface of American-Russian official relations. The best to be hoped for is that the strain and alarm it produced may prove to be preliminary to a better and clearer understanding. But there is no evidence of this process in the news from Moscow.

Though the Truman doctrine is often regarded in this country as a process of helping out the British, it has been widely criticized in Britain in circles far removed from those to which Henry Wallace addressed himself.

The Economist, for instance, complains that the manner and timing were decided without consultation with London. If this is true, it would seem to reinforce the idea in this country that the manner and timing of the British announcement of withdrawal had not been sufficiently, at least, discussed with this country.

The Economist concludes its considerations of the question with this sentence:

"But if it is to lead to a kind of indefinite phony war with dollars and words, then Bevin, with the British people deeply divided, will have to find a way to security and prosperity within the Empire and western Europe."

Watchdogs Damage Economy of Nation

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial which appeared in the Miami Herald of April 24. For 2 days Congressman DWIGHT ROGERS and I attempted to point out to the Congress the great damage that would be done to the people of Florida if the Committee on Appropriations persisted in its efforts to eliminate all underground water surveys.

This editorial points out in a few well-chosen words this policy of being "penny-wise and pound-foolish" now indulged in by our alleged "watchdogs of the Treasury."

I hope that all the Members of Congress will read this editorial. It follows:

WATCHDOGS DAMAGE ECONOMY OF NATION

Self-constituted "watchdogs of the Treasury" are having a field day in Washington, getting particular glee and satisfaction, apparently, out of devastating attacks on the budget of the Department of the Interior.

As usual, when men develop a misguided fervor, their thinking becomes lopsided.

It is particularly so in this instance since, from the standpoint of sound economics as well as politics, the department's worthwhile services should be strongly supported.

These services are the constructive extension and use, or conservation, of the Nation's natural resources, and represent for the most part a point of close contact with the people.

Newest of the "pound-foolish" decisions of the "watchdogs" was made Tuesday when the House Appropriations Committee, working on the Nation's biggest peacetime budget, cut out of the department's request all moneys that would go to ground water and geodetic surveys throughout the United States.

This decision, if it stands, would end the work of these surveys on June 30. Guessing, much of it selfish and purposefully inspired, would take the place of the findings of facts, which are the sole objective of the studies.

The result could, and probably would be, catastrophic.

South Florida, particularly the Miami area, has an especial interest in this situation, since the work of the survey here, which is jointly financed by the cities of Miami, Miami Beach, Coral Gables, and Dade County, with matching funds from the Federal Government, would be ended.

The survey is the agency which has developed the outline under which the metropolitan Miami area's fresh-water supply is being stabilized.

As the result of its findings, too, work is proceeding successfully to halt the salt-water infiltration under this, and surrounding communities, to the end that the penetrating tongues of damaging salinity may be pushed back.

The survey's contribution to the State's water-resources program—it joins with the Florida Geological Survey from Orange County southward—also would cease.

Multiply the situation here and in south Florida manifold, and you have a picture of the far-reaching and disastrous effect of such

short-sighted economic policy throughout the United States.

The Senate should promptly restore the House-deleted appropriation.

The Labor Bill

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a radio speech which I made on April 19, over Station WBAB, Atlantic City, and WSMJ in Bridgeton, N. J., dealing very briefly with the labor bill recently passed by the House:

The House of Representatives pretty closely reflects the desires and policies of a majority of the people in the country. The very substantial margin by which the labor bill was passed this week was certainly in response to the insistence by the people back home that an attempt be made to introduce equity in our labor laws, and to avoid constant interruptions in production by our present bad labor relations.

This bill does not and cannot satisfy everybody, and certainly it does not completely satisfy me. It contains features which I would prefer had not been included. Other desirable provisions are lacking. Nevertheless, it responds to an overwhelming need that the present system be changed; a system which has paved the way for a concentration of power in the hands of a few national labor leaders, so great that it is inconsistent with the welfare of a free and productive people.

I stress the words "national leaders" advisedly because the ultimate result of this bill will be to restore to local labor leaders, and particularly to the rank and file of working people, the powers which are rightfully theirs, and which have been taken away from them by a few very shrewd and ruthless labor politicians.

Illustrations of the evils of such concentrated authority were brought out in the hearings before the committee. In one instance, it was testified that a steel factory in the West received notice from the Labor Board in Washington that the employees of the factory were going on strike at the expiration of 30 days. This notice was received by the management with great surprise, because they were wholly unaware of any labor dispute whatsoever among their employees with whom their relations had been consistently good. They immediately asked the leaders of the local union what disputes or demands were pending, who replied that they themselves were unaware of any difficulties, and the company had better consult the national headquarters of the union in New York. This was a political strike, not a workers' strike.

You will remember that I said to you recently, in discussing the telephone strike, that in many instances the operators were out against their will. This was graphically indicated a day or two later by the action of the operators in Woodward, Okla., following the devastating tornado which struck that town. The union instructed their operators not to return to duty even in view of the great emergency created by the storm, which had destroyed one-third of the city. The operators, according to Associated Press reports, returned to their posts and resigned from the union. We can applaud their action.

Strong labor unions are necessary. The workingman must be protected in every fundamental right that he has won after a long struggle. I believe that the bill, admitting again its many faults, actually strengthens the right of the worker himself at the expense of a few national leaders, who should be the servants of the workingman but who have become his masters. One whole section of the bill is devoted to the rights of union members. They are protected against unreasonable assessments and initiation fees, against the practice of some leaders to perpetuate themselves in power by undemocratic means, and in the language of the bill they are firmly guaranteed the right to have the affairs of their own union "conducted in a manner that is fair to its members and in conformity with the free will of a majority of the members."

I again emphasize that this bill is not wholly desirable. But I know many local labor leaders in our own district, and I know thousands of union members in south Jersey. I would rather by far see control restored to them than to have it continue to be exercised in a dictatorial fashion from New York, Detroit, or San Francisco. Our labor record in south Jersey for the most part has been very good. Most of our local leaders are intelligent and patriotic citizens. It is in their interest and in the interest of the average workingman that their own organizations be free from the dictatorship of a handful of tyrants acting contrary to the Nation's interest.

An Indictment of Russia—From the Record

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. REED of New York. Mr. Speaker, I am opposed to shipping war materials to Russia. Our people have had a ghastly experience as a consequence of arming potential enemies. Is is possible that our people, many of whom sacrificed their sons as a direct result of arming Japan with scrap iron, copper, oil, airplane engines, and other war implements, have forgotten the tragedy resulting from the New Deal program of appeasement? Are those Members in Congress who vote to ship steel and other war material to Russia really representing the true sentiment of their constituents? I cannot believe that such a vote on my part would be in accord with the mature judgment of my constituents.

The request made by President Truman for an appropriation to buy food to feed the starving will, if granted, be used instead to support the communistic program in the satellite countries of Russia as was done by UNRRA. It is time to look at the record before letting sentiment dethrone reason.

I am inserting, under leave to extend my remarks, An Indictment of Russia—From the Record prepared by David Lawrence which appeared in the United States News of May 2, 1947:

AN INDICTMENT OF RUSSIA—FROM THE RECORD

UNITED STATES HAS CONSISTENTLY OFFERED COOPERATION WITH THE SOVIET UNION IN MILITARY, ECONOMIC, AND POLITICAL FIELDS DURING AND AFTER WAR—RUSSIAN RECORD IS ONE OF NONCOOPERATION IN ALL EFFORTS INVOLVING MUTUAL UNDERSTANDING AND ACTION

I. Summary of acts from United States side evidencing desire for cooperation with Soviet Union

A. War Aid

1. Military and civilian supplies to a value of over $11,000,000,000 were supplied the Soviet Union under lend-lease.

2. Military and technological information was furnished through United States military mission in Moscow.

3. Substantial medical supplies and civilian goods were sent to the Soviet Union by American agencies, such as the Red Cross and Russian War Relief.

B. Postwar Aid

1. UNRRA supplies to the value of $250,000,000 were sent to Byelorussia and the Ukraine. Seventy-two percent of the cost of the UNRRA program was borne by the United States.

2. The United States agreed to discuss extension of large credit to the Soviet Government to assist in postwar reconstruction.

C. Decisions Made at Meetings of Heads of States

1. At Yalta:

(a) United States agreed to cession of Kurile Islands and Southern Sakhalin to U. S. S. R.

(b) United States agreed to organize independence of Outer Mongolia.

(c) United States agreed to Soviet interests as paramount in Dairen, Port Arthur, and the Manchurian railways.

(d) United States agreed to fixing of Curzon Line as western border of Soviet Union, thereby incorporating in Soviet Union sizable area of prewar Polish territory.

(e) United States agreed to participation of Byelorussia and the Ukraine in UN, thereby giving Soviet Union three votes.

(f) Agreement was reached with Soviet Government for exchange of nationals liberated by Soviet and American armed forces.

2. At Potsdam:

(a) United States agreed to the Soviet annexation of northern portion of East Prussia.

(b) United States agreed to provisional Polish administration of eastern Germany.

(c) United States agreed that postwar conditions required modification of Montreux convention in respect to the Dardanelles.

(d) Recognition was given to Soviet claims for preferential reparations from western Germany.

D. Peace Treaties

1. Concessions were made to Soviet claims for reparations from Italy.

2. Compromises were made with Soviet and Yugoslav viewpoints on boundaries and administration of Venezia Giulia and Trieste.

3. Soviet Union was offered 25-year mutual guaranty pact against Japanese and German aggression. Period of proposed agreement was later extended to 40 years.

4. Secretary Byrnes publicly recognized special security interests of U. S. S. R. in central and eastern Europe.

E. United Nations

1. United States has displayed considerable patience with Soviet use of veto in the Security Council.

2. Generous United States offer on atomic energy is unprecedented in world history.

F. International Organizations

United States has advocated Soviet participation in all specialized international organizations and has made direct efforts to obtain Soviet participation.

G. Cultural

United States has constantly sought to arrange for the exchange of publications, scientists, artists, students, and so forth, between United States and Soviet Union.

H. Civil Aviation

United States has persistently sought to negotiate agreement with Soviet Union for reciprocal civil air traffic between the two countries.

II. Soviet response to United States efforts toward cooperation

A. War Aid

1. Grudging Soviet recognition of extent and value of lend-lease aid and long delay in agreeing to begin negotiations for a settlement.

2. Complete lack of reciprocity in exchange of military and technological information during the war.

3. Little publicity given in Soviet Union to nongovernmental aid received from people of the United States.

B. Postwar Aid

1. Refusal of Soviet Government to discuss settlement of outstanding economic questions between the two countries in connection with credit negotiations. Constant reiteration by Soviet propaganda of theme that United States was threatened by imminent economic crisis which would oblige it to grant large credits to Russian market.

C. Political and Territorial Questions

1. Failure of Soviet Government to observe Yalta commitments for free elections in Poland, Rumania, and Bulgaria.

2. Encouragement by Soviet Union of obstructionism and truculence in Governments of Poland, Rumania, Bulgaria, and Yugoslavia.

3. Noncooperation by Soviet Union in implementing occupation policies in Germany, Austria, and Korea.

4. Widespread Soviet removals from eastern Europe, Manchuria, and Korea, thereby seriously interfering with resumption of industrial production.

5. Obstructionist Soviet tactics in negotiations for Italian and Balkan peace treaties in meetings of both deputies and Foreign Ministers. Negotiations on these treaties extended from September 1945 to end of 1946. Soviet Union has likewise delayed consideration of proposed guaranty pact against German and Japanese aggression.

6. Soviet Union has refused to agree to organization of Germany as an economic unit, thereby preventing a more rapid return to a self-sustaining German economy and the recovery of Europe.

7. The Soviets have rejected all overtures directed toward an agreement on international civil aviation.

8. Freedom of navigation on the Danube has not been restored because of Soviet opposition.

9. Soviet Union has declined to participate in most specialized international organizations. In those which it has joined its attitude has been distinguished by either obstructionism or disinterest.

10. Soviets refused to permit access by American repatriation teams to American citizens liberated by Soviet armed forces. For their part the Soviets have insisted strenuously that all Soviet citizens, including persons coming from areas incorporated into Soviet Union since outbreak of war, be forcibly turned over to Soviet repatriation authorities, regardless of their individual desires.

D. United Nations

1. Soviets have used United Nations as an instrument for political maneuvering and propaganda purposes and have shown little interest in true aims of the Organization.

2. Soviet attitude has prevented any progress in work of Military Staff Committee.

3. As a result of Soviet tactics, the UN has made little progress for a year in solving the problem of control of atomic energy. While preventing agreement on this, Soviets have exploited propaganda possibilities of their general disarmament proposals.

4. On 10 occasions Soviets have utilized veto in Security Council to prevent UN action. These occurred four times regarding Spain, three times concerning admission of new members to UN, and once each regarding the Syrian and Lebanon case, the proposal for a commission of investigation in Greece and the British charges against Albania in the matter of the Corfu Channel.

E. Propaganda

Since the war ended Soviet propaganda, both for internal consumption and as distributed through controlled outlets around the world, has been violently and abusively anti-American. United States is pictured as imperialistic, reactionary, Fascist, and striving for world domination. United States Government is alleged to be in hands of small group aiming at imposing its will on world by force and as being entirely out of step with desires and aspirations of American people.

F. Cultural

United States efforts for cultural exchanges have not been reciprocated. On the contrary, the Soviet Government has made strenuous efforts to further isolate Soviet people from any cultural contact with outside world, except such as occurs under auspices of Soviet Government agencies.

An Appeal for Understanding

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an editorial published April 14, 1947, in the Larchmont (N. Y.) Daily Times titled "An Appeal for Understanding":

AN APPEAL FOR UNDERSTANDING

Building now, as in past years, constitutes the largest single industry in Westchester. Those connected with building, including not only workers but affiliated materials corporations, architects, and contractors, constitute the largest of the bases upon which the county's economic well-being rests. That is why the threat of higher prices and a possible strike by building trades unions should cause serious concern to all who have the county's best interests at heart.

There is at present what might be called a consumers' strike against these high building costs, brought about mainly by higher union wage scales than exist elsewhere in the New York area. This has resulted in a let-down in employment in the building trades which cannot but have its ultimate effect upon merchants and the professions in general.

The State of New York now has available at Albany approximately $50,000,000 earmarked for public improvements in Westchester. But Governor Dewey and State Public Works Superintendent Sells have declared openly that contracts will not be let until costs shall have come down. Similarly, the county has projects which will cost in the neighborhood of $3,500,000, while an estimate by the county planning department is that $25,000,000 worth of construction is planned by our 6 cities, 18 towns, and 22 villages—all when and if building costs are readjusted. Those in authority do not ask or expect a return to prewar prices. But they are adamant that they will not pay prevailing costs. The same sentiment has deterred thousands who want homes from building, and has affected similarly large developments which have been laid out.

There is, admittedly, the possibility that a large number of workingmen may be needed for the veterans' hospital being erected at Crugers Point on the Hudson, but late reports from that project are that applicants for work are being turned away and some others who had been employed have been laid off. Certainly, this project will not be sufficient to give employment by any means to all in Westchester in the building trades.

Altogether, we face a common problem, one which will affect not only workmen, unions, and contractors, but also the prosperity of all who have their economic roots in the county. Should a serious strike develop, should unions remain determined to keep labor costs high, should materials remain out of reach because of prices, all of us will suffer.

This is, then, an appeal to members of the unions and to members of the employing organizations that they pledge themselves to determined efforts for understanding of the problems of each group. If one suffers, all will suffer; but if reasonable agreement can be reached, all will prosper. Above all, we appeal to those who have threatened a stoppage that this be averted by any means. With millions of dollars available for work which will extend over years ahead, it would be little short of asininity to allow shortsightedness to interfere.

Westchester, a county which must grow tremendously in the near future, should not be handicapped now by unreasonable demands. We must get our building costs down to a dependable equitable basis, where a contractor will know in advance what his costs will be and can figure accordingly. So long as prices of labor and materials remain sky high, this important segment of our economic system will remain blighted and everybody concerned directly or affected indirectly will lose.

Dangerous Trend to Monopoly

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article based on a recent report of the Federal Trade Commission, and written by Hon. Robert E. Freer, a member of the Commission.

The report of the Commission, and the article of Mr. Freer which summarizes the report, present a situation that the Congress should consider and act upon at once. The prevention of monopoly in this country is a matter of paramount importance to our people and particularly

to the ability of small and independent businesses to survive and continue.

The recommendations of changes to existing law to prevent the present way of bringing about monopolistic situations should be considered at once by the appropriate committees of the Congress.

INDUSTRIAL MERGERS

(By Robert E. Freer)

DANGEROUS TREND TO MONOPOLY

(EDITOR'S NOTE.—Mr. Freer is a member of the Federal Trade Commission and a trustee of George Washington University.)

We have a declared public policy regarding monopoly that is rooted in the principles of the common law and which has been embodied in and implemented by a series of antitrust statutes including the Sherman and Clayton Acts. But in the dynamic development of industry based on modern technology, the facts of concentration constantly tend to outrun the law.

The factual diagnosis showing the relation of corporate mergers to concentration is as complete and as exact as specialists in the field can make it. Today's choice is one between legislative action recommended by the Federal Trade Commision to plug a loophole in the present laws against such mergers and continued frustration of our declared public policy.

Simply stated, the commission's proposal is that the Clayton Act be so amended that acquisition by a corporation engaged in interstate commerce of the assets of a competing corporation also engaged in interstate commerce be made unlawful where the result tends to monopoly. Presently only stock (not asset) acquisitions so tending are unlawful under that act and legal actions against even such unlawful acquisitions easily may be defeated.

More than 1,800 formerly independent manufacturing and mining concerns have been swallowed up through merger and acquisition since 1940. Their combined asset value was $4,100,000,000, or nearly 5 percent of the total asset value of all manufacturing concerns in 1943. Moreover, it was the larger corporations each having assets of over $5,000,000 (in many instances achieved through earlier acquisitions) that accounted for some three-fourths of these recent 1,800 acquisitions.

The war contributed powerfully to the trend of concentration. Government purchases and Government financing of productive facilities were channeled predominantly into the hands of corporations which already occupied positions of dominance. Surplus profits created by such channeling have contributed powerfully to the trend by providing funds for additional wartime and postwar expansion through acquisition of former competitors. Out of $175,000,000,000 of Government contract awards between June 1940 and September 1944, one hundred and seven billion, or 67 percent, went to only 100 of the more than 18,000 corporations receiving such awards. During the war 68 corporations received two-thirds of the $1,000,000,000 appropriated by the Government for research and development purposes in industrial laboratories.

The most recent information on the wartime growth of concentration available from the Bureau of Internal Revenue shows that the larger manufacturing corporations, those with assets of $50,000,000 or more each, increased their share of total assets from 42 percent in 1939 to 52 percent in 1943.

The degree of prewar concentration in the economy as a whole and in manufacturing industries in particular was stated in the report of the Senate Small Business Committee, submitted in January 1946:

The 200 largest nonfinancial corporations owned about 55 percent of all the assets of all the nonfinancial corporations in the country. One-tenth of 1 percent of all the corporations owned 52 percent of the total corporate assets. Less than 4 percent of all the manufacturing corporations earned 84 percent of all the net profits of all manufacturing corporations.

More than 57 percent of the total value of manufactured products was produced under conditions where the four largest producers of each product turned out over 50 percent of the total United States output. One-tenth of 1 percent of all the firms in the country in 1939 employed 500 or more workers and accounted for 40 percent of all the nonagricultural employment in the country. One third of the industrial research personnel were employed by 13 companies.

More mergers and acquisitions in the manufacturing and mining industries took place in 1946 than in any of the previous 15 years. In 1946, the number of mergers was 26 percent above the number in 1945, and 225 percent above the annual average of the years 1940–41. Years of greatest business activity and high price levels are the years in which the greatest number of mergers take place. In 1920, the number of mergers increased more than six times over the number during 1919.

The stock-market crash of 1929 which heralded the onset of the great depression was preceded by a great wave of corporate mergers and a wild speculation in their securities. Today speculation in the future of merged concerns, supported by war-swollen profits, is again operating as one of the important causes of the present upward trend in merger activity. This speculation, which stems from the expectation of greater profits resulting from the elimination of formerly competing concerns, leads inexorably to the elimination of our competitive economy and thus to the elimination of the possibility of legitimate speculation.

Assuming as we must that the Government, acting in the general public interest, can, if Congress so directs, prevent the further growth of monopolistic power through mergers of competing corporations, the question is one of ways and means of halting mergers that tend toward monopoly regardless of whether consummated by sale of stock or of assets.

When section 7 of the Clayton Act was passed in 1914, it was assumed that consummated monopolies could be dissolved under the Sherman Act pursuant to the Supreme Court's decrees of dissolution in the Standard Oil and American Tobacco cases decided in 1911. It was assumed that the only remaining problem was how to prevent the formation of monopoly.

However, about the time that the Federal Trade Commission began to institute a number of proceedings for enforcement of section 7 the Supreme Court interpreted the Sherman Act to mean that huge size and power acquired through acquisition of competing corporations did not necessarily violate the act and that it was only the abuse of such power and not its existence which would make such acquisitions unlawful. A few years later when the commission's cases under section 7 reached the court, it was held that the commission had no power under section 7 to halt the incipient monopolies where the unlawful acquisition of stock was followed by an acquisition of the physical properties without which the stock had no value, and where this was done before the commission could complete the hearings and enter its order requiring divestiture of the stock unlawfully acquired.

The practical status of section 7 is that no matter how unlawful an acquisition of stock in a competing corporation may be, the remedy provided by the statute easily can be defeated, leaving the acquiring corporation in possession of the assets which are the fruits of its unlawful acquisition of stock. And if the assets are acquired directly without any intervening acquisition of stock, as has become the prevailing method, there has never been any legal ground for a contention that this was prohibited under section 7.

Thus the brave start, under the Clayton Act, has ended in complete frustration. And at the same time, the Sherman Act has been so construed that it seldom has served to unscramble corporate mergers, no matter how great the size and power of the acquiring or of the consolidated corporation. The contrast between the rapid evolution of economic concentration of power and the feebleness and slowness with which effective legal remedies have been and are being applied is striking. It is sufficient to call in question the reality of our faith in the validity of the competition presupposed by the free enterprise competitive system.

A paradoxical aspect of this problem is that while corporate mergers and acquisitions proceed unrestrained and unrestrainable by law toward an ultimate maximum in unified ownership and concentrated economic power, we still enforce the law against the more transient and more vulnerable forms of trade restraint represented by price agreements and conspiracies among competitors. The process of corporate acquisition proceeds side by side with such forms of trade restraint among competitors. The presence of large-scale unified ownership in any industry is a most powerful guarantee of success in the operation of a price-fixing combination among the competitive units of that industry. The very success of law enforcement against such combinations high lights the advantage of unified corporate ownership as a legally invulnerable means of accomplishing similar ends. Carried to its logical result, there will probably be less and less opportunity to score victories against price-fixing combinations as corporate mergers immune from legal attack take their place.

No one has summarized the danger of monopoly any better than President William Howard Taft, under whose administration some of the most far-reaching antitrust actions of all time were taken. On December 5, 1911, he stated:

"When all energies are directed not toward the reduction of the cost of production for the public benefit by a healthful competition, but toward new ways and means for making permanent in a few hands the absolute control of the conditions and prices prevailing in the whole field of industry, then individual enterprise and effort will be paralyzed and the spirit of commercial freedom will be dead."

The facts of the present situation constitute an increasing threat not only to our traditional antitrust policy but also to the American system of free competitive enterprise which that policy is designed to foster and to protect.

The Lost Battalion

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. GOSSETT. Mr. Speaker, several bills are pending in the Congress designed to help the boys who toiled and suffered as prisoners of war. I wish to insert in the RECORD a letter I have just received from J. B. Heinen, Jr., president of The Lost Battalion organization of Texas. The indescribable horrors of

Japanese prison camps, the savage and inhuman treatment of American prisoners of war by the Japanese, are known to all of us. Time should not dim our memories or cause us to forget these black pages in the history of war. Insofar as possible, we should compel our late enemies, both in Europe and Asia, to pay for their treatment of prisoners of war and for their violations of the rules of war and of human decency. Such payment as we may be able to extract from them should go as a partial reward to these men who, in some miraculous way survived, and to the families of those who did not survive.

The Lost Battalion, composed almost entirely of Texans, was sent into Java in January of 1942 at a time when those islands were already lost. There was no hope of successful defense, no hope of this unit's being reinforced, no hope of its escape or retreat. The Lost Battalion was confronted by the overwhelming force of a then-conquering army.

Some have said these boys were sacrificed to American prestige. May it be said to their eternal glory, they lived up to the highest traditions of American valor. That any of them lived to tell the story is a tribute to their indomitable will and courage. They have not become embittered. They continue to serve in peace as they did in war. A proud and a grateful Nation should never forget them. They were great soldiers. Those who still live are our best citizens.

THE LOST BATTALION,
Dallas, Tex., April 11, 1947.

The Honorable ED GOSSETT,
Representative from Texas,
United States House of Representatives,
Washington, D. C.:

This is written to reacquaint you with certain facts concerning the well-being of a group of your Texas constituents.

The Lost Battalion, a Texas National Guard unit, was ordered to the Philippines in November 1941. We were the Second Battalion, One Hundred and Thirty-first Field Artillery, Thirty-sixth Division. The battalion never reached the Philippines. On January 11, 1942, we set up defense for the Nineteenth Bombardment Squadron on the island of Java. Through war urgencies, we actually became an integral part of that organization. Our mission was the defense of the Philippines. As the war progressed, Java was threatened and our mission became the defense of Java. When finally it became evident that Java could not be properly defended by the Allies, all United States forces, with the exception of ourselves only, were ordered to evacuate Java. We then became "The Lost Battalion," as we have been named by our Texas newspapers. And "lost" we have been ever since. There is little official record of our part in the war. For 42 months we remained as POW's of the Japanese in Java, Sumatra, Singapore, Burma, Siam, and Japan. Eighty-nine of our members died of the indescribable hardships we were forced to endure during those 42 months. Others have died since our return to our homes from causes encountered during those 42 months. It is doubtful that there is a single truly healthy man of the entire unit today because of those 42 months.

It is true that we have been accorded every consideration by all facilities of the War Department in accordance with what regulations prescribe as due POW's. It is also true that in the opinion of most people, in accordance with what was asked of us, that recognition of our services in the form of adequate promotions combined with the monetary benefits derived therefrom falls short of what members of the service with the same length of service as ourselves, but not in our plight, have received in fact. It is hard to reconcile one promotion as just in the face of over 5 years' service, nearly four of which were spent overseas under the conditions we were asked to face. General Ulio's speech on the occasion of the liberation of the first group of POW's of the Philippines, and I quote: "Truly these men deserve all that a grateful nation can accord them," has in fact up to the present time only been well-meaning words.

It is realized that what should have been accomplished for us in the form of adequate promotions some 2 years ago becomes extremely difficult to accomplish now. It is also realized that the difficulty now involved does not in any manner detract from the justification of our cause.

Bearing in mind that we did not fail our country, and bearing in mind that there has never been uttered one complaint of having been asked to do the impossible or of having been sacrificed as a token of our Nation's obligations in world interests, the Lost Battalion urges you not to allow present proposals that concern our well-being to go unattended. It is today that we need financial assistance to rehabilitate ourselves in the face of the extremely high costs that we encounter at every turn. I repeat, it is doubtful that there are many of us who can withstand the continuous physical effort necessary to maintain a normal standard of living.

Therefore the Lost Battalion asks your wholehearted support of bill No. 172 which has been read in this present Congress—the type of support that brings that bill into action and prompt passage. It is known that there is more than one proposed bill for POW's but we do feel that our (including all military, naval or civilian personnel connected with the defense of the Far East during the first phases of the war) deserves consideration over and above what is just for those who were unfortunate enough to have been captured later in the war. They at least had a chance; were a part of a force sufficient in strength and arms to expect victory; did not face a situation where the only two possibilities were to be killed or ultimately captured; did not spend the excessive length of time in bondage as ourselves; were allowed to receive mail and packages; had a knowledge of the true progress of the war and were not so severely maltreated. There is a difference.

Trusting that you will not let the ravages of time further subtract from just compensation to ourselves, we close our appeal to you for action in our behalf.

Sincerely,

THE LOST BATTALION,
J. B. HEINEN, Jr., *President.*

Industrial Relations

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Sumner H. Slichter, which appeared in the New York Times magazine on April 27. This article is entitled "The Great Question in Industrial Relations" and deals with the major problem of interruptions to production which jeopardize the public health or the public safety, a problem with which House Resolutions 17, 34, 68, 75, and 76 also deal.

Professor Slichter has been Lamont University professor at Harvard University since 1940. Previous to that, he was on the faculties of Princeton and Cornell Universities. He has written extensively on the problems of business economics. More recently, he was the chairman of a labor-management committee appointed by the Honorable Robert F. Bradford, Governor of Massachusetts. This committee filed an unanimous report with Governor Bradford and, for the convenience of those who may wish to refer to that report, portions of it appear in the Appendix of the RECORD at pages A1438, A1446, and A1448.

The article emphasizes the fact that existing methods of handling such emergencies are completely unsatisfactory. The suggested procedure obviously might involve compulsory arbitration, which will result in vigorous objections, yet, as Professor Slichter points out, it "would probably cause compulsion to be used less frequently than has been the practice in recent years."

The article also stresses the responsibility of those who oppose compulsory arbitration in this limited and vital field to suggest something better. At least one means of meeting the challenge of the final sentence of the article lies in the method proposed in House Resolutions 17, 34, 68, 75, and 76.

If the occasion arises again, as it has in the past, when the public health or the public safety is in jeopardy, a failure to have created an effective means of protecting the people of this country will be the responsibility also of Congress.

The article follows:

The great question in industrial relations is: "What does one do when a strike or lockout imperils the public health or the public safety?"

It is a question which nearly everyone dodges. Sometimes the dodge takes the form of the suggestion: "Let us improve collective bargaining." Obviously this suggestion does not tell the community what to do when bargaining fails to produce a settlement. Sometimes the dodge takes the form of saying: "Let the parties fight it out." John L. Lewis made this second suggestion before the Senate Committee on Labor early in March. He said that he did not know how you are going to compel the seller to sell if he does not want to sell or the buyer to buy if he does not want to buy. Hence, the only effective limits on the refusal of prospective buyers and sellers to deal with one another are those imposed by economic necessity.

If Mr. Lewis is right, the prospect is indeed a grim one. The economic forces to which Mr. Lewis refers may take months to operate. The General Motors strike, for example, lasted over 100 days. No one would pretend, however, that the country could stand a general railroad strike 100 days. Even a general steel strike of 100 days would be disastrous. In some way the community must be prepared to have its representatives step into the picture and protect the health and safety of the people.

Lack of preparedness is dangerous—dangerous to the workers as well as the community. The railway strike of last May led over 300 Members of the House to vote to draft railway workers, and the telephone strike led New Jersey to impose criminal penalties upon utility workers who strike

contrary to law. These are indicators of the hysterical legislation which may occur if the country is caught unprepared by a grave emergency. What should be done?

Let us inquire first what methods have been used to handle emergencies in the past and how well these methods have worked. Three principal methods have been used: (1) Emergency or fact-finding boards; (2) Government seizure of plants; (3) direct intervention by the President.

1. Emergency or fact-finding boards: The principal use of emergency boards has been in the railway industry but during the last year so-called fact-finding boards have been appointed in a number of other cases, most of them disputes which did not threaten public health or public safety. An emergency board or fact-finding board is not appointed until bargaining has failed to settle the dispute and the parties have rejected arbitration. The boards hear evidence and arguments and make a decision, but the proposed terms of settlement are not binding upon either party.

Although some emergency boards, such as the board of last summer in the Milwaukee gas dispute, have been notably successful, the record of the boards on the whole has been disappointing. Two serious charges lie against the boards—they have undermined collective bargaining and voluntary arbitration and they have frequently failed to settle the dispute. Naturally it is easier for the representatives of one side or both to refuse to negotiate an agreement or to submit a case to arbitration if the immediate result is, not a strike or lock-cut, but the appointment of an emergency board which has no authority to make a binding award.

Indeed, the prospect that the Government will appoint an emergency board is virtually an invitation to the parties not to settle their differences by bargaining or arbitration. Of the eight principal disputes in the railway industry during the last 10 years, only the wage case of 1937 was settled by bargaining and only the wage case between 18 railway unions and the railways in early 1946 was settled by voluntary arbitration. The other six major railway disputes were referred to emergency boards, but only one of these six cases was settled by acceptance of the recommendations of the emergency board. Certainly this record does not make a strong case for emergency boards.

2. Government seizure of plants: Seizure may be precipitated by rejections of the recommendations of an emergency board, as in the railway wage cases of 1942–43. More recently the Government ended the interruption of coal production by seizing the mines in May 1946. Seizure is provided for in public-utility disputes by the laws of New Jersey, Virginia, and Indiana.

Government seizure may occur (as it has) even though the employer has been willing to arbitrate the dispute, but the principal objection to seizure is that it does not settle the dispute. It is only a stopgap. For example, the railway disputes of the 1942–43 which led to seizure were settled only after the President had arranged terms which were acceptable to the unions. Thereafter the roads were returned to their owners.

The shortcomings of seizure are vividly illustrated by the coal dispute of last year. After seizure, the Government made a contract with the union which specified the wages and terms of employment under Government operation. This contract, of course, did not settle the differences between the operators and the union. As a result today, nearly a year after the strike, the mines are still in the hands of the Government.

3. Direct intervention by the President: In recent years this has become the principal method of settling disputes which create national emergencies. All of the five principal railway disputes during the last 10 years in which the recommendations of emergency boards were rejected eventually went to the President. So also did the steel case of 1946. In some cases (the railway wage dispute of 1941 and the Diesel engine case of 1943) the President acted as a conciliator and settled the dispute by asking the employers to make additional concessions. In the three other railway cases and in the steel case of 1946 the President acted as an arbitrator and suggested definite terms of settlement.

One objection to intervention by the President relates to procedure. The President does not invite the two sides to submit briefs and arguments and he cannot give thorough study to the case. In fact, the proceedings before the President have usually been ex parte. No ordinary arbitrator would dare proceed in such a one-sided manner and with so little study of the case. Even more important is the objection that the President is not likely to be the person whom the two sides would select as a neutral. Nevertheless, his prestige is so great that a decision by him is virtually an order. It is equivalent to compulsory arbitration—but compulsory arbitration in its most undesirable form, namely, by a political officer of the Government.

This review of recent experience shows that there have been three principal shortcomings in the methods of dealing with national emergencies:

1. These methods have undermined the willingness of employers and unions to settle disputes by collective bargaining or by voluntary arbitration.

2. They have permitted disputes to be settled by elected officers of the Government, thus creating the danger that politics will be introduced into industrial relations.

3. They have failed in several instances to protect the community against an interruption to the production of essential goods and services.

What should be done? The ideal solution would be for trade unions and employers in essential industries to negotiate agreements to submit disputes over the terms of new contracts to arbitration in case bargaining fails to produce a settlement. These agreements might be called procedural agreements to distinguish them from the ordinary agreements which stipulate wages and working conditions.

These procedural agreements should run for a long period—say, 5 years—and should specify the rules under which arbitrations would be conducted and including the way in which arbitrators would be selected. If trade-unions and employers were to blanket the essential industries of the country with procedural agreements of the sort suggested, the community might feel that it was adequately protected against strikes or lock-outs which imperil the public health or the public safety.

If the unions and employers in essential industries fail to protect the public by negotiating agreements to arbitrate future disputes, how should the public interest be safeguarded? Any new arrangements, of course, should be carefully planned to avoid the three major shortcomings in the methods that have been used in handling emergencies. As a foundation for dealing with emergencies, the Government should have authority to require the parties to maintain the status quo for a reasonable period—say, 30 days—subject to reasonable extension. Such authority is needed in order to give the Government an opportunity to use its emergency powers before essential services are interrupted.

The Government should have several instruments for dealing with emergencies. The first instrument should be a show-cause hearing in which the parties should be required to show why they should not submit their dispute to arbitration. The use of the show-cause hearing should be optional with the President. The hearing should be conducted by an impartial person skilled in industrial relations. It should not be a broad review of the merits of the unsettled issues in the dispute, but should be sharply focused on the reasons for the refusal of arbitration. It should be the duty of the hearing officer to endeavor to work out an acceptable formula for arbitration.

The possibility that the President might order a show-cause hearing would, of course, greatly stimulate the parties to settle their differences by bargaining or by voluntary arbitration. If a show-cause hearing for any reason seemed inappropriate or if it failed to produce an agreement to arbitrate, the appointment of an emergency board would probably be desirable.

Neither trade-unions nor employers, however, should be given any reason to expect that the emergency board might be slanted in favor of one side or the other. Hence the board should be appointed by a nonpolitical officer of the Government, say the head of the Conciliation Service, from a panel of men who have been jointly recommended as neutral and competent by representatives of labor and management. Fortunately, such a panel now exists—it has been selected by the Labor-Management Advisory Committee of the Conciliation Service.

What should be done if one party or both reject the recommendations of the emergency board? This is the crucial question, because at this point present arrangements for handling emergencies have broken down again and again. It is obviously inappropriate for the President or any political officer of the Government to act as a conciliator or an arbitrator. That practice should cease. Likewise Government seizure of plants should be avoided. It settles nothing—as recent experience clearly demonstrates.

The most appropriate procedure would be to authorize the President to require the parties to try out the recommendations of the emergency board for a limited period—say 6 months—unless they agree to different terms. This is a reasonable procedure because the recommendations of the emergency board would undoubtedly represent the best-informed and most impartial of all available opinions on the merits of the dispute.

The proposed procedure would meet each of the three tests suggested above:

(1) It would greatly reduce the attractiveness of emergency boards to both unions and employers—and thus encourage the parties to settle their differences by bargaining or arbitration.

(2) It would keep politics out of industrial relations (a) because emergency boards would be picked by a nonelective official of government from a panel selected in advance by representatives of labor and industry and (b) because the President would be discouraged from attempting to arbitrate disputes himself.

(3) It would protect the public health and safety by providing a basis on which production would continue. Either party would, of course, be free instantly to start new proceedings for the purpose of determining what wages and working conditions would be put into effect at the end of the 6-month period.

How would the requirement that the two sides try out the recommendations of the emergency board be enforced? No individual, of course, could be compelled to perform service against his will. And it would be ridiculous to make striking a crime, as New Jersey has attempted to do. Unions or employers, however, could be required to rescind strike or lock-out orders, and interference with persons willing to work could be forbidden.

In addition, refusal of any employee to work under the conditions recommended by the emergency board could, if necessary, be treated as a termination of employment and

employers might be forbidden to rehire such persons except as new employees. Most important of all, however, would be the requirement that the employer maintain the wages and working conditions recommended by the emergency board and that he be forbidden to enforce other wages and conditions by a lockout or to concede other wages and conditions in order to end a strike.

Many persons will object to these proposals on the ground that under certain circumstances they would result in compulsory arbitration. Both trade-unions and a large part of American business are strongly opposed to compulsory arbitration. They assert that it would undermine self-government by employers and workers, plunge labor and management into politics, and threaten free institutions.

Although the proposed arrangements might at times result in compulsory arbitration, they would probably cause compulsion to be used less frequently than has been the practice in recent years. Furthermore, the procedure is so safeguarded that the usual objections to compulsory arbitration do not apply. The period for trying out the award of the emergency board is limited to 6 months.

Perhaps persons who object to compulsory arbitration of the limited sort here proposed may be able to suggest something better. Let us hope that they will do so. Objections to compulsion should not obscure the basic point that the Government must in some way be able to prevent interruptions to production which would imperil the public health or the public safety. To hold otherwise would be to argue that the right of employers and unions to settle their differences by a fight is more important than the public health and the public safety.

That is a proposition which no community can accept. Production cannot continue, however, unless there is a way of determining wages and working conditions. If the parties cannot agree on wages and working conditions and will not arbitrate them, then the Government or its representatives must fix them.

It is not enough to say that one is against compulsion. The crucial question is what procedure does one favor after negotiations have broken down and after refusal of the parties to arbitrate jeopardizes the public health and the public safety. That is the insistent question which requires an answer. The most constructive step that could happen in industrial relations would be for the organized employers and the trade-unions to cease merely telling the community what they are against and to join in proposing to the country constructive arrangements which will assure continuous production in essential industries.

Former Prisoners of War Are Expected To Provide a Field Day for Ambulance-Chasing Attorneys

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. VAN ZANDT. Mr. Speaker, I was shocked and incensed at a situation which was brought forcibly to my attention at a hearing last week before the House Committee on Interstate and Foreign Commerce on H. R. 1000, a bill sponsored by the Veterans of Foreign Wars and introduced by me to provide indemnification for former prisoners of war who were victims of brutality, starvation and inhuman treatment by Japan, Germany and Italy in violation of the Geneva Convention agreement on treatment of prisoners of war.

Veterans of Bataan, survivors of the infamous "death march" and Japanese "hell ships," and European prisoners of war related in a simple, undramatic manner the torture and suffering which they were forced to endure, and proved their unqualified eligibility for indemnification from these enemy nations. It was a shock, then, that we heard some of these former prisoners tell of a group of Washington attorneys who would capitalize on their sufferings by acting as agents on a percentage basis to handle their claims against these enemy governments. The witnesses further testified that the solicitation which they received offered the expert services of these attorneys to recover on these claims and influence legislation on their behalf for the modest fee of 15 percent of the amount recovered for the claimant.

Before introducing H. R. 1000 I was assured by the sponsoring organization, and by the other recognized veteran organizations, that they would file and process indemnification claims of former prisoners of war without one cent of cost to those veterans. I am certain that the Congress recognizes the services which these organizations are willing and able to render and from past experience is convinced of their integrity and sincerity in all matters affecting the welfare and rights of veterans.

It is immediately apparent that veteran organizations represent only one medium for filing and adjudicating, without cost, claims of former prisoners of war. Our own governmental agency, the Veterans' Administration, is experienced in this type of work and especially trained to handle such claims. General Bradley, Administrator of Veterans' Affairs, on several occasions has cautioned veterans against accepting offers from private individuals who would secure recovery of claims, obtain confidential information on deceased relatives or influence veterans' legislation for the particular client—all for a nominal sum.

In all legislation affecting veterans it has been the intent of Congress that veterans should receive the benefit of such legislation without cost. Expenditure of personal funds by veterans to retain private counsel for purposes of litigation or adjudication was never contemplated in any of the legislation which the Congress has enacted. I am certain that consideration of current and future bills will embody this same intent. It is evident, however, that certain individuals do not care to interpret this desire of Congress as an implied provision of legislation which we have or will enact.

Despite a flagrant violation of legal ethics by Messrs. George A. Nugent, Harold H. Martin, and other Washington authors of the solicitation which former prisoners of war testified as having received, these attorneys are legally unassailable and are considered as practicing attorneys of good standing and of excellent reputation. To substantiate this professional consideration, Mr. Nugent brazenly appeared before the House Committee on Interstate and Foreign Commerce and frankly admitted having approached several of the veteran witnesses with a straight-forward, above-board business proposition.

To prevent a continuance or recurrence of a condition whereby fellow Americans, in evident clear conscience, can trade on the physical torture and mental cruelty suffered by former prisoners of war, I urgently recommend to the Congress that any legislation affecting these veterans specifically spell out the rights of claimants to obtain the cost-free services of veteran organizations, the Veterans' Administration, or any agency designated by Congress. I further recommend that it be prohibited, and so stated in the act, for any person or group of persons to accept financial consideration for filing, adjudicating, and recovering the indemnification claims of former prisoners of war.

Protecting the rights and interest of these and all veterans to the fullest extent possible by law is the obligation of Congress. We have evidenced recognition of this responsibility by our intent as expressed in past legislation. We must now insure adherence to this desire by spelling out in specific provisions our intent in all future acts.

We Must Have More Hydroelectric Power—Not Less

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. JOHNSON of Texas. Mr. Speaker, last week Arthur Goldschmidt, director of the Power Division of the Department of Interior, showed why we must have greater support for increased hydroelectric power in a graphic speech before the National Rural Electrification Cooperative Association at Spokane, Wash.

About the same time the House of Representatives began its systematic reduction of the appropriations for the Bureau of Reclamation, the Southwestern Power Administration, and for Bonneville. Under the bill passed by the House, not only will we be unable to increase our facilities for producing power, but we will not even be able to fully utilize the facilities that were so wisely provided by earlier Congresses. An adequate power supply is basic to the defense of our Nation and essential to the peacetime development of our agricultural, commercial and industrial strength.

I insert Mr. Goldschmidt's remarks in the RECORD in the hope that they may be read and heeded by Members of the Congress, in order that the short-sighted action of the House will not be finally sustained by the Congress:

I deeply appreciate the opportunity you have given me to talk to you about our joint

problems and joint undertakings in the development and disposal of electric power. There is hardly an area in this Nation where we do not have present or prospective associations in the power business—we as wholesalers and you as distributors of public power. The Department of the Interior, through its various agencies, is engaged in marketing power from existing dams and projects under construction in States comprising more than four-fifths of the Nation's area.

The department's combined power wholesaling job already involves more kilowatt hours than that of any other agency, public or private. Power demands throughout the areas in which we operate are forcing tremendous increases in this capacity. Throughout the 17 Western States, the Bureau of Reclamation is working on a program of multiple purpose water developments that will more than double its existing two-million-odd kilowatts of capacity within the next 6 years. In these States and eastward to the Atlantic, the Corps of Engineers is undertaking construction on water-control programs that will develop another million and a quarter kilowatts of power, or twice the capacity already installed in its dams. In the southwest the Corps of Engineers is doubling the capacity of the existing dams and has additional projects under construction. Here in the northwest scheduled additions to the Columbia River development required by the Bonneville Power Administration look to making available another 745,000 kilowatts of capacity and requirements indicate that another 1,500,000 will be needed by 1953.

The Corps of Engineers and the Bureau of Reclamation are continuing their surveys for the multiple purpose development of the rivers of America and tremendous additions to the power capacity figures I have mentioned are in the making. Although these figures seem large, we can today, without fear of the ridicule of the past, ask: Will this be enough? Will these plans and projects, even if brought into production at the earliest possible moment, catch up with the tremendous power demands that are currently swamping us? Are our sights high enough?

The answer is simply that this is not enough. Neither our present nor our prospective power supply is adequate to maintain full production and full employment. In this Nation, power supply has become a basic factor in our way of life and in our ways of making a living. When we plan, authorize, and budget additional power capacity in the power business, we must take into account the planning, authorizing, and budgeting of our consumers. The millions of farmers that you represent and the millions more that you will come to represent, the householders, shopkeepers, businessmen, and industrialists are planning, authorizing, and budgeting for power consuming appliances and equipment. The result is that we have outgrown our plants. We threaten to outgrow our plans.

The total of consumers of the electric industry has risen to over 36,000,000. The average annual residential use of power has increased to 1,296 kilowatt-hours from 735 kilowatt-hours 10 years ago, an increase of 76 percent. We know that this figure is not a stopping point for here in Washington where abundant low-cost power has been available, the annual residential use is now about 3,000 kilowatt-hours. Business and industry are using more power than ever before. The Nation's primary aluminum load alone has increased from about 4,000,000,000 kilowatt-hours in 1940 to the rate of about 10,000,000,000 annually today. This spring the Nation is consuming over 4,500,000,000 kilowatt-hours each week compared to 2,000,000,000 weekly 10 years ago.

These figures didn't just happen. They are not an accident. The tremendous increase in the use of electricity in our Nation has come about as a result of definite programs and policies intended to bring it about. We as a nation set out to make power widely available to the people under programs and policies designed for that purpose. The Congress undertook to encourage multiple purpose water conservation and development programs that would make large power supplies available at low cost. We undertook as a matter of national policy to get those power supplies to the people. We undertook to encourage wider rural electrification for the Nation's benefit. These policies have been consistent and interdependent. Low cost hydropower has made many of your projects feasible and low rates to consumers have made our projects pay out.

The power policies and programs thus undertaken in the past few years reflect the best of our American tradition in business, finance, and government. They were not particularly new when they were reenacted in the Bonneville and TVA Acts, the Rural Electrification Act, and the Flood Control Act of 1944. But in these and other acts the Congress supplied the missing ingredient—action. Congress authorized the jobs to be done and made the funds available to do them. Sound policies were backed up by concrete and steel, copper and aluminum, in dams and transmission lines. These policies and programs are a part of progressive American thinking, our desire to develop and grow, to build bigger and better and to greater purpose. The same policies that have brought about our greater use of power have been tested in business as well as Government with the same result. They constitute the dynamics of the American economy.

A great American who had much to do with these policies—in business rather than Government—died this month. He greatly affected the pattern of our industry, our thinking, and even our language. He believed in mass production and he knew that mass production required mass consumption. This simple truism and the logical extension of it in the fields of production techniques and pricing policies was the foundation of his unquestionably great contribution to the development of our country.

Henry Ford believed in cheap and abundant automobiles. He wanted to produce and to sell. He broke with the tradition of monopoly and of getting out of the consumer all that the traffic would bear. Instead of thinking in terms of investment, Henry Ford thought in terms of production. I'm not suggesting that he wasn't interested in making money or that he had some philanthropic notion of putting a steering wheel in each pair of hands. But he was interested in making money out of production rather than out of scarcity. And any businessman who follows that line of reasoning—and Ford proved it was profitable reasoning—automatically casts his lot with the consumer. That is the simple business basis of our Federal power policy. We believe in the development of abundant supplies of low-cost power and in making that power widely available to the people.

Henry Ford also set out to make low-cost cars before there was a sure market, before there were adequate roads, before there were people who knew how to run them. His action, and that of others who followed his pattern, created demand, created roads, created drivers, created the success of Henry Ford. This policy of not selling short on America's capacity for continued growth has also been the basis of the Government's program of placing generators in dams it was building for other purposes, and of carrying the power to prospective markets. Those generators and transmission facilities were ordered ahead of the market demand—and they created that demand. This bold move to build ahead of the market—ahead of predictions of power use, predictions based upon obsolete power sales theories and unsound rate practices, has turned out to be as good a business proposition for Uncle Sam as it was for Henry Ford. We are today selling all of the power that we can produce and are returning the cost of its production to the Government. We see no let-up in this demand.

Let me draw one further analogy. The Ford policy of mass production for mass consumption did not injure the automobile industry. He made the country car conscious and the spur of his competition was a driving force in the industry. Whether they derided his efforts or feared them, his competitors were benefitted by Ford's policies. Today the fruits of our power policies are meeting a similar test. The public power capacity of the Nation is larger than ever before and represents about one-fifth of the national capacity. According to the Edison Institute the profits of the private utility industry in 1946 rose to $685,000,000, increasing more than 20 percent over 1945. Never had publicly owned power been a larger percentage of the total power available in America—and yet never have the profits of the private industry been higher. Representatives of the private utility industry have ridiculed our progressive plans, complained of our accomplishments and have sought to hamstring our development. But in spite of their ridicule and anguish and lobbying against our efforts to increase power supplies at lower rates to the consumers, our programs are paying out and the private utilities are making profits.

The fact is that the bold development of power resources and the sound mass consumption pricing policies of public agencies have started a chain reaction in the development of the American power market. The current sharp upward trend in power demand is creating our most immediately pressing problem. Today, we can no longer build ahead of demand. Even if all agencies, public, and private, got together with the greatest combined effort, we could not meet present demands for power. To be sure, the shortage of material supplies to add new customers is in many cases putting off the day of reckoning on power supply. But the Nation as a whole is today operating its power system by heavy encroachments on its reserves. The combined national peak was 93 percent of the total dependable capacity of class I utilities in January. This means we had an average of only 7 percent reserves. Our output has been above wartime peaks for the last 6 months. Many important power areas are operating well above their net assured capacity. We are relying on luck. England's power experience this spring with unusual weather provides us with an example of the dangers and hardships that can result from relying upon inadequate power supplies.

We must as a Nation do everything in our power to catch up with ourselves and get on a sound basis of power supply. This country cannot defend itself without adequate power. We cannot, moreover, maintain a sound level of employment or business activity or even our standard of living without adequate power. We must not cynically rely upon the inevitability of recessions. Indeed, nothing short of a depression, with its toll of national insecurity and individual hardships can prevent us from hitting the ceiling of our power supply with serious repercussions, unless public and private agencies both buckle down to the task of getting every available kilowatt on the line as quickly as possible.

A short recession cannot solve our problem even if it were sound to count on it. Such a period would inevitably slow up the

private companies in buying new equipment. It would further tend to unbalance the Federal budget and make difficult the securing of funds for Federal expansion. By cutting consumption to the bone, a recession might give our utility systems a breather which would last only as long as the recession itself and from which we would emerge worse off than before. Even with the best of will, the bottlenecks in capacity to produce power machinery are omnious. Our three generator manufacturers can put out only about 12,500,000 kilowatts in the next 3 years. Increases in plant capacity, if they can be completed, may bring this up an other one and one-half millions by 1949. This must take care of all electrical capacity, including foreign orders. The excessively long delivery time of 27 to 39 months for power transformers and the shortage in distribution transformer manufacturing capacity and the difficulties of getting other materials add to our problem. It is evident that manufacturing capability must be increased.

Let us look down the next 10 years. Assuming the 4½ percent rate of growth in peaks that was experienced by our power systems from 1930 to 1939, a period that included a major depression, we will need 26,000,000 kilowatts of additions to our installed capacity to meet our peaks in 1957 without reserves. I am not using the so-called abnormal increase of more than 12 percent in the peak in the last year because I am developing a very conservative estimate. Assuming only 15 percent as average national reserve and our total requirements for 1957 will be 84,000,000 kilowatts. I have allowed for no retirements nor for the rate of growth we have experienced since the war. This must be our minimum target. The growths of this year and next cannot be met with adequate reserves—but we must plan to get upon at least this footing before our 10 years are up. This means that every kilowatt of Federal capacity now on order and every project having power potentialities must be hastened to completion as rapidly as possible.

For American industry cannot operate its electrical equipment on excuses—or even on reasons for power deficiencies. American farmers cannot electrify their farms on promises of more capacity.

Just what constitutes a shortage? There is never a meat shortage among vegetarians. Doubtless there are large areas in the world with a fraction of our own electrical capacity, where there is no bottleneck in power or transformers or consumers' equipment. But we cannot compare the power requirements of our highly complex economy with those of any other nation in the world.

When we ushered in the age of electricity, we moved down a road from which there is no turning back. Some people may prefer the good old days of the smoky lamp and the old oaken bucket and a few of them may be able to find these treasures in wayside antique shops. But there are not enough such lamps and buckets to go around and there are not adequate means of keeping them in use today.

This Nation needs and will continue to need more electric power than any comparable nation on earth for its day-to-day living. It needs more power for its day-to-day production. We use Coulee kilowatts here in the Northwest instead of coolie labor and there is no way to reverse this process of substitution. All the manpower in the region cannot replace electricity in the production of aluminum. Nor can manpower replace electrical power in the tremendous pumping operations on the irrigated lands in this area. We cannot replace machines with men and maintain our level of living or our national security.

I am aware that we have greater electrical capacity than any other nation in the world. But to a large degree our kilowatt strength is a measure of our weakness. A knight in full armor may have been able to win over a group of unprotected fighters. But he must depend upon the Percheron that was bred to carry him. We, too, are dependent upon our horsepowers and cannot maintain our production, our health, or our national security without them. We cannot take electricity from our homes, shops, and factories and switch it to other uses at a moment's notice or at all.

Our food habits, for instance, are based upon ample refrigeration in the home, in the markets, and in transportation—all requiring electricity. Our sanitary facilities are dependent upon electrically driven pumps for which there is now no substitute in most of our crowded urban areas. This requirement that we have power for our national health and security is not only true of our cities, although here it is a fact to an absolute degree. On the farm, the introduction of electricity has increased our capacity to produce manyfold—and we are dependent upon this increased capacity to produce. Moreover, any effort to move backward, even temporarily, to the use of other than electrical means of refrigeration, heating, cooling, water pumping, and cooking would require equipment that no longer exists or makeshifts for which there is not the manpower on our farms to operate.

So I think we can assume that electric power is here to stay. But if it is to do the job that only it can do, in providing the basis for a strong national economy, we must move ahead to install additional capacity as rapidly as it can be fabricated.

I believe that it is sound national policy to increase the production of public power in connection with Federal multiple-purpose water developments because those projects are conservative of our energy resources and provide other lasting and essential benefits to our people. I believe that it is sound national policy to increase the ratio of these public power installations to the total capacity of the country because under the policies that have been laid down by the Congress for their handling they provide an opportunity to develop undeveloped areas and afford a means for consumer protection on price and availability of power. But as much as I favor the continued development of publicly produced power for the long run, I believe even more strongly that our present task is to add kilowatts to our national capacity and I would not think of discouraging any development of additional electrical energy at this time—whether by steam, hydro, or diesel, by cooperatives, private utilities, or by public agencies.

We have reached a point where the necessity for more power production facilities overrides any other consideration. I hope that the utilities will bend every effort to increase their capacity. At the same time I consider that the attempts being made to delay or halt the progress of the cooperatives and the Federal Government to be dangerous in the extreme. The work of the Bureau of Reclamation, the Corps of Engineers, of Bonneville, of Southwestern, and of TVA is vital to supply the power requirements of our Nation.

I assume that the agreement reached by public and private utilities alike in this region, calling for more and faster Federal power facilities was motivated by a knowledge that this power is essential to the development of the Northwest and the maintenance of its agricultural, commercial, and industrial strength and is basic to the defense of our Nation. I suggest that the time has come for others in the utility business, public and private cooperative, to take a similar responsibility for the economic welfare and the security of our country and its people.

You have your share of the obligation to see that the Nation's power needs are supplied. You cannot fail to support increased production of hydroelectric power at Federal projects. This must be done in the interests of the farmer, the consumer, the worker, and the businessman. It must be done in the interests of our economic well-being and our national security.

Suggestion on Lowering Prices

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a letter which I have received from my friend and constituent, A. J. Boudreau, of the New Drug Store, of Lake Charles, La., in respect to his suggestion as to how to lower prices. The letter follows:

THE NEW DRUG STORE,
Lake Charles, La., April 23, 1947.

Hon. HENRY D. LARCADE,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN: Of late I hear quite some discussions, especially in the press and over the radio, pertaining to the reduction of the high cost of living, and from all indications, even to the remarks of the President, it seems that the solution is for the retailer to start reducing prices on articles which he has had to pay prices above the average in order to obtain. It strikes me that an investigation by Congress into the vast amounts spent in radio advertising alone on commodities could be curtailed to a point whereby that would reduce the cost of merchandise a great deal. What price is paid by the manufacturers on radio programs and radio advertising? Compare that with the squawk of the union man's wages. How many union laborers do you think draw the salary that some of our spot programs pay to the entertainers. I think that a thorough investigation as to the amount of money spent on advertising of toothpastes, face powders, beautifying creams, cigarettes, tobaccos, and hundreds of others too numerous to mention could bring down that cost of these products to a level whereby a retrenchment would be made that would be justifiable and still very few people would be affected. I would like to see a just and impartial investigation along these lines, and then I feel that the source of price reduction could be started where it rightfully belongs.

Trusting the pleasure of an early reply. Everybody O. K. down here, working hard, and still hearing lots of fine remarks in your favor down in this city.

Regards to all.

A. J. BOUDREAUX.

Russia Indicted

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 14, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit an article

from the Washington Daily News by Peter Edson which is self-explanatory. The article follows:

MORE CONCESSIONS TO RUSSIA?—TAKE A LOOK AT RECORD

(By Peter Edson)

May 8 will be the second anniversary of VE-day. In all that time the United States has been doing its darnedest to cooperate with Soviet Russia. The result—climaxed by the outcome of the Big Four Foreign Ministers' meeting at Moscow—has been pretty much of a large goose egg.

The record of American attempts to be pals is long as a telephone pole. It begins with $11,000,000,000 lend-lease aid furnished in wartime, and it runs through 72 percent—the United States share—of $250,000,000 UNRRA aid to White Russia and the Ukraine. Until this month it has been impossible to get Russia to even talk about making a settlement for lend-lease or extension of further credits.

REPULSED ON ATOM

The United States offer to share the secrets of atomic energy production and work out effective international controls was unprecedented in its generosity. It has met only obstruction.

Offers for closer cultural ties through exchange of students, professors, scientific and technical information have been repulsed. Offers to negotiate treaties settling economic and trade relations have likewise been repulsed.

To American eyes, war-torn Russia could have used this help. She spurned it, drawing back into isolation like a hibernating bear, exercising tight discipline over her people to turn them away from the West. Moreover, Russia has refused to allow her neighbors to be economically free. She apparently feared that if they were free they would be dominated by the West. By this action Russia has in effect alarmed the West against her.

CONCESSION AT YALTA

At Yalta the United States agreed to cession of the Kurile Islands and southern Sakhalin to Russia. The United States agreed to recognize the independence of Outer Mongolia. The United States agreed to recognize Soviet interests in Manchurian railways and ports. The United States agreed to cession of eastern Poland to Russia.

At Potsdam the United States agreed to cession of northern East Prussia to Russia. The United States agreed to Polish administration of eastern Germany. The United States agreed to consider revision of the treaty governing control of the Dardanelles. The United States agreed to reparations for Russia from western Germany.

In drafting the United Nations Charter the United States made many concessions to the Soviet. The United States agreed to admission of White Russia and the Ukraine as full members to give Russia three votes. The United States gave in to Soviet ideas on the veto.

In the Council of Foreign Ministers, the United States agreed to Russian reparations from Italy. Concessions were made to the Soviet viewpoint on the boundaries of Trieste and Venezia Giulia. Recognition was given to Russian security interests in eastern Europe.

BLOCKED AGAIN

The United States even offered Russia a 40-year guaranty against German or Jap aggression. Russia has blocked this, and all other American, British, and French proposals for settlement of the Ruhr and reparations questions.

For over a year the Russians delayed the peace treaties with German satellite countries. At the Moscow Conference just closed the Soviet blocked completion of an Austrian treaty and the drafting of a German treaty.

In the four-power Allied Control Councils for governing occupied territories, the Soviet has bucked the organization of Germany, Austria, and Korea as economic units. Moreover, the Russians have removed vast quantities of capital goods from these areas and from Manchuria, further retarding their recovery.

RUSSIA RENEGED

Russia has failed to carry out her commitments. She failed to carry out free elections in Poland, Rumania, Bulgaria. She has refused to talk about abuses in Hungary. She has encouraged Yugoslavia to obstruct policies not approved by Moscow. She has blocked freedom of navigation on the Danube.

In the United Nations the real lack of progress can be attributed principally to Soviet obstruction. Ten times the Soviet has used the veto. Work of the Military Staff Committee has been delayed interminably. The Russians have refused to join various UN subordinate organizations—the Food and Agriculture Organization, International Trade Organization, Aviation Organization, World Bank and Monetary Fund.

In the main, the Russians have used the United Nations as a sounding board for their propaganda, with complete disregard for real UN objectives. This propaganda, at home and abroad, has been a vicious, anti-American line.

The question is how anyone reading this record can still follow the Wallace line of offering Soviet Russia further concessions. In the past 2 years this policy has merely encouraged the Russians to hold out for more.

Resolution Adopted by National Association of Wool Manufacturers

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following resolution respecting the wool support program adopted by the National Association of Wool Manufacturers at its eighty-second annual meeting on April 22, 1947:

Whereas because of the increased cost of raising wool, the Government has, until April 15 of this year, given support to the wool growers of the United States by purchasing their wool through the Commodity Credit Corporation; and

Whereas there is now a bill before the Congress, designated as S. 814, to continue the support program through 1947 and 1948; and

Whereas an amendment to this bill provides that the Secretary of Agriculture may, in connection with this support program, levy an import fee up to 50 percent ad valorem on wool or products thereof that may be imported or withdrawn from bond or an equivalent floor tax on wool that may have been imported or withdrawn from bond and not processed at the time the import fee is imposed; and

Whereas we are opposed to such a provision for the following reasons:

1. This represents a delegation of tariff-making power to the Secretary of Agriculture. The members of this association have consistently opposed a similar delegation of tariff-making power to the Secretary of State under the so-called reciprocal trade agreements program.

2. The use of import fees and floor taxes would mean that the woolen and worsted manufacturers of this country would have to sell goods far in advance of the time they knew the cost of the raw materials they were to use therein. Although this material would be purchased by the mill on firm contracts many months in advance, the mill would not know its actual cost until the material had been put into process.

3. The imposition of import fees on imported wool would raise the cost of yarn and fabrics manufactured in the United States without a corresponding increase in the landed duty paid cost of imported yarns and fabrics, thereby vitiating the compensatory feature of the wool tariff and putting domestic manufacturers at a serious disadvantage in meeting competition from imported manufactured wool products: Now, therefore, be it

Resolved, That it is the unanimous opinion of the members of the National Association of Wool Manufacturers, in convention assembled, that the proposed amendment providing for a delegation to the Secretary of Agriculture of authority to levy import taxes on imported wool is without merit, inflationary, unnecessary, and destructive of normal business, and that such a delegation of tariff-making power should be deleted from the wool support bill, S. 814; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to the appropriate Cabinet officials, to Members of Congress and to other Government officials with a request that steps be taken to delete this import excise provision from any bill which may be adopted by the Congress or approved by the President of the United States.

Brig. Gen. Raymond W. Bliss

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, it was with a feeling of great satisfaction that I learned of the President's selection of Brig. Gen. Raymond W. Bliss as the Surgeon General of the Army, with rank of major general.

Aside from General Bliss' fine record as a soldier, he is a real physician—the patient comes first—exceptionally experienced and able. He knows, from first-hand experience, the problems which face our service medicos in the discharge of their duties.

Those of us who come from Massachusetts are proud to claim General Bliss as a native son, for he was born in Chelsea, Mass., on May 17, 1888, and received his medical degree at Tufts Medical School, Boston, later receiving a degree in surgery at Harvard and an honorary doctor of science degree at his alma mater, Tufts College. He lived for quite a time at Billerica in my own district. His sister still lives there.

His Army career has been a long and illustrious one. After his graduation from Tufts College in 1910, with the degree of doctor of medicine, he was com-

missioned a first lieutenant in the Medical Reserve Corps in September 1911. He served on active duty until May 1913, when he was commissioned a first lieutenant in the Medical Corps of the Regular Army. He was graduated from the Army Medical School, Washington, D. C., in June 1913.

After tours of duty at various stations in the United States and Hawaii, he entered the Harvard Medical School for a special course in surgery from August to December 1920. He remained at Boston for further clinical study and instruction at Harvard College, receiving the degree in surgery from Harvard in 1921. In October of that year he became executive officer of the Hospital Subdivision of the Veterans' Bureau at Washington.

Subsequent to World War I, General Bliss served as chief of surgery at Sternberg General Hospital, Manila, Philippine Islands, at Fort Sam Houston and at William Beaumont General Hospital, El Paso, Tex.

He was a military observer in London from September 1940 to January 1941, and became surgeon of the First Army and Eastern Defense Command in 1942. He was assigned as Chief of Operations, June 1943, and Assistant Surgeon General August 25, 1944, in the Office of the Surgeon General, Washington, D. C., serving in that capacity until his appointment as Deputy Surgeon General, January 1, 1946. He was made Assistant to the Surgeon General, February 1, 1946, with permanent grade of brigadier general.

General Bliss, who was awarded an honorary doctor of science degree by Tufts College in 1943, is a fellow of the American College of Surgeons. During World War II he made extensive tours of the Pacific areas, and later served as an observer at the atom bomb test at Bikini. He has just returned to Washington from a 2-month inspection trip through the European and Mediterranean areas.

General Bliss has been awarded the Distinguished Service Medal, Legion of Merit, French Legion of Honor, and the Award of the Italian Crown.

He will give superlatively good care to the soldiers.

No Private Affair

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following editorial from the Los Angeles Daily News of April 23, 1947:

NO PRIVATE AFFAIR

In the midst of Congress' debate of the proposed loan to Greece and Turkey there has been revealed the almost incredible story-behind-the-story of this country's $500,000,000 loan to China in 1942. Peter Edson, the NEA Service Washington correspondent who unearthed the story, could scarcely have picked a timelier moment to write it. For it provides a perfect object lesson in the unsound use of public funds.

The purpose of the Chinese loan was praiseworthy. Here was a brave, beleaguered ally fighting in the common cause. The fight was going badly, for China lacked food, clothing, and an abundance of modern war equipment. She also needed money to support a tottering financial structure and retain her entity.

It was to America's advantage, naturally, to keep China strong and fighting. But because of the Jap blockade the material requirements could not be supplied. As Mr. Edson says, "It was impossible to ship her anything but love and credit."

Details of this necessary transaction were vague. Generalissimo Chiang Kai-shek asked for the loan but wouldn't discuss how it was to be used until it was granted. President Roosevelt got congressional authorization to make the loan; then he and Harry Hopkins handled the deal themselves, with a later assist from Morgenthau, then Secretary of the Treasury.

China's Foreign Minister T. V. Soong listed seven broad purposes for which money might be spent. And the money was forthcoming. There were no strings attached. Discussion of repayment was deferred until after the war.

The upshot was that nine-tenths of this half billion went into a financial juggling act which was supposed to stabilize Chinese currency and retard inflation. It didn't work. The remaining tenth did go for consumer goods that China desperately needed.

In all, China received some $3,000,000,000 in assorted war aid from the United States. China stayed in the war. She deserved our help and got it. But did she use that help to the best advantage? Where is China today? And where are the $3,000,000,000?

Mr. Truman asks for $400,000,000 for Greece and Turkey. Generalissimo Chiang wants another $500,000,000, already earmarked for China but not delivered. The purpose of these loans is praiseworthy, too. Greece and China are former brave allies. Their people are in need, and their Governments are insecure. The people are ripe for an imposed totalitarian rule if those Governments fall.

Mightn't it be well this time, however, to mix some crass, hard-headed business methods with idealism? The Government should tell its citizens, who are the source of its billions, how those billions will be spent. It should insist on assurances from debtor nations that those billions will be used wisely and for the greatest good.

The Members of Congress can and should read Mr. Edson's story and ponder its moral—that in an era of even nominal democracy the spending of public money is not the private affair of Government officials.

Legislation Before the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. McGARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently delivered by me:

Mr. Chairman, honored guests, ladies and gentlemen, it is a pleasure to be present at the first annual banquet of the Baltimore Avenue Business Men's Association, because it brings back memories of many years ago, when I was a resident of this neighborhood. Although I won't say how many years, I might mention the fact that your businesses flourish today in what was then open country.

As businessmen you are naturally interested in, and vitally affected by, the legislation now before the Eightieth Congress. After 14 years of a New Deal regime which sought by excessive taxation and one-sided labor laws to stifle the free enterprise system in America, a Congress has come into being which has in mind the interests of all the American people.

I would like to emphasize "all the American people" in order to refute those who claim that the Republican Party is the rich man's party, and that the measures passed by this Congress benefit only the rich. These people chose the income-tax bill as their particular target. Why, it is hard to say. This bill will not only reduce taxes, but will release a stream of venture capital from the upper income levels into the field of productive enterprise, resulting in more jobs at higher wages and a sustaining of consumer buying power.

As you know, the House last week passed a labor bill, designed to correct the many abuses which have resulted from the Wagner Act. This legislation, like the bill to outlaw the portal-to-portal pay suits, was necessary to protect both labor and management from the excess of union leaders.

And protection is what the American businessman needs at the present time in order to recover from the overwhelming effects of the war years and to survive the monopoly of industry which threatens smaller businesses.

The tariff is another obstacle which looms in the path of the American businessman. It is to be hoped that the members of the American delegation to the International Trade Conference in Geneva will remember that, while talk of free world trade sounds good and beautiful; in effect, any substantial lowering of the tariff rates would prove disastrous to both industry and labor. Since foreign goods are generally cheaper and produced at a much lower cost, the demand for American products would decrease and the skilled American laborer would find himself without work.

A nation's economic stability cannot be restored overnight. However, we of the Eightieth Congress, are trying to do our best in this direction. In January we voted to extend the excise tax. I do not favor this legislation, however, and it is my sincere hope that in the near future we shall be able to end this restrictive wartime measure. Many businesses from this locality have written to me about the excise tax, and I am glad to have this opportunity to say that you have my full sympathy in this matter.

As America returns once more to her normal prosperity, I hope to see again the country where all men are equal, where the so-called little man can, by hard work, attain success, and where his achievements are not penalized by excessive taxation.

MacArthur Bridge, St. Louis, Mo.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD

an editorial taken from the April 26 issue of the St. Louis Star-Times dealing with tolls on the MacArthur Bridge at St. Louis. The matter of tolls over this bridge is a hotly contested question in St. Louis at this time and this editorial raises a very interesting point which should be considered by all interested parties. The editorial follows:

ANOTHER PARTY TO THE FREE BRIDGE ISSUE?

A dispatch from the Star-Times Washington bureau yesterday called attention to the possibility the War Department could help St. Louis citizens free themselves from the tolls that are charged for use of their free bridge.

A legal test of the city administration's right to continue its claim on MacArthur Bridge as a source of easy revenue is before the Missouri Supreme Court. A ruling there in favor of the bridge users—represented by the Automobile Club of Missouri—should settle the question. Meanwhile, however, the War Department's interest in the bridge tolls is an aspect of the situation worthy of consideration. It directs attention to a policy of the Federal Government that has been flouted in the case of a bridge that was built with the understanding that it was to be and forever remain a free bridge. It offers an alternative procedure in the event the bridge fight is lost in the State courts.

Several laws have been passed giving the War Department power to regulate bridge tolls. The latest of these, enacted last year, establishes the principle that any bridge built over a navigable stream shall be a toll bridge only for the purpose of paying a reasonable return on the bridge debt and the maintenance.

This law further states that if tolls are charged for use of an interstate bridge by a city or other governmental subdivision, rates of toll shall be so adjusted as to pay for the bridge within a period of not to exceed 20 years from the date of acquisition or construction.

How the handling of MacArthur Bridge—the Free Bridge it used to be called—fails to square with this philosophy is well known. The bridge was built with the understanding it was to be free. In 1932, however, tolls were applied to pay off $8,200,000 in relief bonds, and because of the emergency that confronted the city, there was no serious objection. The relief bonds were retired in 1945, but the tolls continue, simply because here is a convenient source of revenue—legal or illegal—for the city's general fund.

As pointed out in yesterday's dispatch from Washington, the War Department will look into such situations if appealed to by a representative group. In the case of a municipally owned bridge at Hudson, Wis., a group of truckers complained against toll policy. A hearing was held by the Corps of Engineers, and the result is lower tolls for the next 6 months and the possibility of further changes at the end of that period. The Public Roads Administration has cited the bridge in Wisconsin as the No. 2 example of "improper public operation of a toll enterprise." The No. 1 example is none other than our own free (pay your tolls) bridge.

The autocratic attitude of the city administration, therefore, is not only out of line with assurances given when the construction bond campaign was launched in 1905. It is out of line with an established Federal policy, a policy which can and should be invoked if other efforts to give St. Louis a free bridge over the Mississippi do not succeed. In fact, there is no reason why a complaint should not be filed with the War Department while the court test is pending. This is a suggestion to the Automobile Club or to any of the many other organizations of users interested in making the "free" bridge truly free.

The Eighteth Congress and United States Immigration Policy

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Michigan Committee for Displaced Persons, Rackham Auditorium, Detroit, Mich., April 28, 1947:

I will try to tell you something about the details of the subject of immigration policy in this Congress, but I am also here to ask you to do a job in seeing that we get action by this Congress.

We must first understand the size and nature of our problem. There are about 1,200,000 displaced persons in Europe, of whom about 850,000 are found in the United States zones in Germany and Austria and in Italy. These are the remains of the Nazi's slave laborers and the unhappy remnants of the martyred Jews of Europe. One-third of them are Poles, one-fifth Balts, and one-fourth Jews, with a sprinkling of white Russians and Ukranians. Seventy-five to eighty-percent are Christians—mostly Catholic.

In a speech I made on the floor of the House some weeks ago, I called this group the "walking dead of Europe." Anyone who has been to the DP camps knows the blackness of despair, the hopelessness which overwhelms these unfortunates. When we realize that the Jews who remain are the sturdiest survivors of the Nazi holocaust which wiped out 5,000,000 Jews in Europe alone, we realize the extent of our responsibility. These are the Jews of whom 75 percent long to go to Palestine, the doors of which have been shut against them—but more of that later. When we talk about immigration into the United States of refugees and DP's, we are not talking about overhauling our national immigration policy but only about liquidating our war obligations. These 1,200,000 refugees and DP's have no place to go back to or quite properly don't want to go back to where they came from. They represent about one-eighth of the total of 8,000,000 refugees and DP's who our forces found when they entered the enemy countries. The other 7,000,000 have been repatriated. These 1,200,000 are either in legitimate fear of persecution from communistic regimes which have taken over their former homelands for the most part—or if they are Jews, find it impossible to face the surroundings and the people directly responsible for obliterating millions of their brothers.

Two things are sought of the United States: First, the opening of its doors to enough immigration, within, and not outside of, the over-all existing quota of 153,789 persons per year to resettle its share of the refugees and DP's; and second, affiliation with the International Refugee Organization under the auspices of the United Nations. The latter will not cost us any additional money. On the contrary, it will help save us money. Yet until the public conscience begins to be awakened there will be all sorts of objections to this very elementary measure of justice.

Some people in the Congress are demanding that all immigration be stopped for 5 or even 10 years and others that immigration, already low in a country of 140,000,000 people which was built on immigration, should be cut in half.

We might pause here to ask, "Who are we to talk about immigration?" Are we not all descendants of immigrants? What is America if not a land built by immigrants? In the years 1880–1930 we admitted almost 30,000,000 immigrants. Never in recorded history has a Nation grown so great, so powerful, and so rich as we did in those 50 years. Was that bad?

During the war years despite our meager quota of 153,789 immigrants per year, hardly any immigrants could come here and we admitted 700,000 less than the quota figures. Some bookkeeping in heaven would certainly dictate that we now use this unused number of quotas to look after those who have been made so miserable by a cruel fate.

The greatest pressure on the national immigration quotas is from those in countries with very low quotas, while those countries with high immigration quotas have no one to send or have no one to send that we would let in. This is attributable to the heavy weighting of our quota system, based on the national origins of our population in 1920 according to place of birth, which gives large quotas to the northern and western European nationals and discriminates against the southern and eastern Europeans. The British quota, for example, is the largest of any, about 60,000 per year, yet almost 95 percent of it has been unused in the last 15 years. The German quota now is about 20,000 per year and is hardly used at all because the Jews of Germany have all left or been killed and the Nazis cannot get by the screening of our Army; but Poland with its 572,920 displaced persons has a quota of only 6,524 per year. At that rate it will take 50 years for even half the Polish displaced persons to immigrate to the United States. Under the Austrian quota it will take about 25 years to accommodate all of the DP's who want to enter the United States. The Estonian quota tops the list for under it, it would take 300 years to admit the Estonian displaced persons on Estonia's quota of 116 per year. Despite the desire of all these people to come to the United States, and although 153,789 quota immigrants are allowed annually, over 70,000 visas or almost 50 percent will go unused during the year 1946–47.

Obviously the question cries out for solution. You are anxious to know, I am sure, what can be done about it. The objection to immigration in the Congress is very great. I believe it is misguided; but it is so real that only the most powerful action from home communities like yours will check it and then it will be checked only in favor of a bill of a moderate character.

Three approaches to this type of legislation have been made by bills pending in the Congress and I would suggest yet a fourth.

The pending bills may be divided into three categories. Category No. 1 seeks the admission of a number of displaced persons and refugees equivalent to part of the unused quota numbers for the 2 years immediately succeeding the war or a variant of that time and is designed to admit 150,000 to 250,000 refugees and displaced persons over a 2-year period. Category No. 2 proposes the admission of certain types of artisans and specialists within limited numbers and particularly chosen because they can be beneficial to our Nation's economy. The numbers in this category are limited automatically by the qualifications. Category No. 3 proposes to admit an arbitrary number of displaced persons per year—the aggregate number to be well within the quota numbers unused during the war years. And the last category which I would suggest myself is the granting of authority to our Government to join in an international compact for absorbing the refugees and displaced persons within as many different countries as will agree to take them, the United States taking its share within the limitations of its unused quota numbers.

In the third category which I have listed—to admit a certain fixed number of displaced persons—is the Stratton bill, H. R. 2910.

Under this bill 400,000 displaced persons may be admitted during the four fiscal years following passage of the act at the rate of 100,000 or more per year but not more than 100,000 in the first year, 200,000 in the second year, 300,000 in the third year, and the remainder in the fourth year. Priority under the act would be given to relatives in the fourth degree of citizens of the United States and all persons who have served honorably in the armed forces of the United States in World War I or II. It is noteworthy that this bill is sponsored by the Honorable WILLIAM G. STRATTON of Illinois. It is fitting that a midwesterner should sponsor this bill. The Midwest has sometimes been charged with holding aloof from active support of our assumption of an international position and responsibilities. But our fine meeting here tonight, the introduction of this excellent immigration bill by Mr. STRATTON, the unparalled position of leadership held by your own Senator VANDENBERG, in causing our country to play its full part in the world system of cooperation which is the United Nations, all demonstrate that the Middle West is coming into its own in United States foreign policy.

Of the bills already introduced I urge support of the Stratton bill. It advances a solution of the problem and it lends encouragement to other nations to take the same action—a result essential for the displaced persons and refugees to be absorbed and the problem ended. The bill calls for such minor addition to our population that they can have no ill effects, but will broaden and improve our culture and economy in the same way that we have experienced with immigration in the past. The bill does not expand our quota immigration system, but comes well within it in using up only a part of past unused quotas.

We must note that European countries such as Belgium, France, and Great Britain as well as other American Republics like Venezuela and Brazil have already taken in displaced persons and refugees. As recently as February, Venezuela, a small country, agreed to take in 15,000 European displaced persons, and Brazil has agreed to take 50,000 refugees, while Argentina has opened her doors to the new immigration of 100,000 Italians and Spaniards. Special agreements have been made by which Great Britain has taken artisans and other skilled workers, and the same is true of the other European countries named. These are strong indications of what will happen throughout the world if the United States, the leading nation in the world, once determines its immigration policy.

A panel of distinguished professors and researchers in the special field of immigration made a study called Economic Aspects of Immigration within the last 3 months. This study analyzes our past experience with immigration and shows that none of our important economic difficulties have ever been traced to immigration. The study concludes: "Eras of heavy immigration in our history have been eras of prosperity as well as of rapid expansion and have not been marked by any significant amount of unemployment."

No discussion of immigration as it affects refugees and displaced persons would be complete without consideration of the problem of Palestine. Here is a land hungry to receive the Jews of Europe with 600,000 of their coreligionists struggling to enable them to enter and with hundreds of thousands in the whole world ready to finance their resettlement. At one time provision can be made for 75 percent of the Jewish DP's to be resettled in Palestine, aside from other thousands of Jews in Europe whose only reason for living is for the day when they can see Palestine. I have been to Palestine. There is room for them there—ample room and a place for a peaceful and happy life if the United Nations of the world will but this once honor their solemn covenant with a people strong only in justice and not in armies and navies. A special session of the General Assembly of the United Nations met today to take up this problem. Let us pray for justice and, above all, for just action.

I also would like to draw your attention to a bill introduced by Senator IVES in the Senate and myself in the House, H. R. 2446, in which we seek to admit free of quota restrictions children under 14 years of age orphaned in this war who are to be adopted by citizens of the United States. The number of such children who could be admitted under the bill is unlikely to be very great, though I wish it were. Senator IVES and I estimate that it would not amount to more than 25,000 per year.

The primary objections to other immigrants do not apply to these children as they will not occupy the housing space and take the jobs of other Americans. They are too young for jobs and will move right into the homes of their foster parents as actual adoption is required before a child could be admitted under this bill. But the human and spiritual salvage value is enormous, for the bill saves and introduces into the freedom and advantages of this unique land children otherwise destined to languish in the ruins of Europe. It is indeed a priceless gift so easily within our bounty with no disadvantage whatever.

We have talked about the urgent need for an immigration policy which will resettle this martyred remnant of refugees and displaced persons, but what of their case in the meantime until we and other nations get around to resettling them, and what about help in resettlement?

The General Assembly of the United Nations, after a year's study, dealt with this problem on December 15, 1946, when it adopted the constitution of the International Refugee Organization. The IRO is designed to deal with the repatriation, resettlement, and interim care of the refugees and displaced persons and to take it out of the hands of any one nation. This happens to be an enormous boon to us for our refugee and displaced-persons camps have been under the direct jurisdiction of the Army, with UNRRA taking care of administration—but UNRRA is finished on the 30th of June and our military authorities have been aghast at the prospect of taking over the whole job. The IRO is the best way out for them and for us.

All of the United Nations are invited to become members of the IRO but it can get started when 15 have joined; those 15 to include the United States. So far 11 have joined and the United States has joined subject to the approval of Congress. Enough nations to enable the IRO to go ahead will surely come in, once Congress approves. Our commitment for the first year is about 45 percent of the IRO's budget or roughly in the neighborhood of $72,000,000. but this does not represent a new expense for us because we are now spending some eight to ten million dollars a month through our military services for the maintenance of refugees and displaced-persons camps in the United States occupied zones. In other words, we exchange a $72,000,000 contribution to the IRO for the headache of running displaced-persons camps at the expense of about $120,000,000 a year now. The Senate has already passed the necessary measure and it now awaits action in the House, where I hope it will be passed promptly. Time is very short now and the stake is very great.

I stated before that I would try to tell you what you could do about bringing to pass these measures on the immigration into the United States of a fair share of the refugees and displaced persons, the increase in admission of quota immigrants through existing laws and regulations, the passage of the bill to admit war orphans for adoption, the entry of Jewish displaced persons into Palestine and the confirmation of membership by the United States in the International Refugee Organization. You can best help in getting these measures effected by three courses of action: (1) Extensive educational campaigns through all media of press, radio, mail, meetings, and discussions which will disclose the facts to every citizen. It will amaze you to know how many citizens do not know the facts and believe that what is being attempted in measures like the Stratton bill is to open wide the doors of the United States to millions of immigrants from Europe as we did in the nineties and early 1900's. (2) To let your legislators know how you feel about these issues and to discuss them with your legislators. You should be very careful to recognize, however, that a legislator wants to learn the views of the whole community before he acts and therefore is not being arbitrary if he does not go along with you until he gets an opportunity to see how the whole community feels about the subject. (3) To be sure that those refugees and displaced persons who do come in under our existing immigration laws are settled in the community agreeably, harmoniously, and without any dislocation to other citizens. This is truly a program of action by which you, with your own means, may assure the success of all our efforts.

Let us now consider the whole immigration situation in the light of our foreign policy. The United States enjoys the highest moral credit of any nation in the world today. Any cause for which we plead has the sympathetic consideration of the majority of the nations of the United Nations. The maintenance of this position of leadership in the world gives us the opportunity of attaining a century of peace from today through the effectiveness of the United Nations, but it also involves the responsibility that we shall participate in the solution of the world's problems and take our share of the world's burdens. One of the most plaguing problems of the postwar era and constantly a stark reminder of the imprint of war are the refugees and displaced persons. We must take our share of this responsibility and in good season.

We are also engaged today in considering a great problem of foreign policy of aid to Greece and Turkey. Why do we consider it? It is primarily to protect the forces of individual freedom and the security of a private economy in a world endangered by the suppression of the individual and the deification of materialism. It is noteworthy in all the discussion before the United Nations about the refugees and displaced persons that the Soviets insist that every one of them must be repatriated—that even if a displaced person legitimately believes that he would be persecuted if he returned to his country of origin due to his political beliefs, or if a Jewish person—that he cannot face a land where he has lost every relative and friend in gas execution chambers or lime-filled freight cars—he still must go back where he came from. Our ideology commands that no man, under such conditions, should be made to go back, and I hope the U. S. S. R. will come around to the same conclusion with us one day.

But the triumph of our ideas, their humanity and justice, is not demonstrated by stating them alone, but by showing that we have the will and ability to care for these unfortunates and to resettle them elsewhere. In the measure that we solve this problem with efficiency and justice will we be judged in our ability to solve the greater problems of world peace, security, and individual freedom.

Jackson Heights Merchants Association, Long Island, N. Y.

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. ROSS. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include an article from the Monday, April 28, issue of the Long Island Star-Journal. This article points out the sound approach of the Jackson Heights merchants to bring prices down. It follows:

QUEENS MERCHANTS LEAD IN PRICE CUT PROGRAM

Queens is taking the lead today in following the so-called Newburyport plan to reduce prices by at least 10 percent. The Jackson Heights Merchants Association has announced a plan of its own beginning Wednesday which will drive prices down even further.

Alfred M. Berger, president of the association, has announced that the 250 merchant members serving an estimated population of 100,000, will "cut back prices to what they think is normal."

The price slashes are expected to range from 10 to 50 percent, depending on the type of merchandise.

"We have told the wholesalers and manufacturers of our plan and with their cooperation, the plan will be extended indefinitely," Berger stated.

He explained that the move was made because the Jackson Heights merchants do not believe a flat percentage decrease has the same relative importance for all types of merchandise, and therefore this scheme was adopted to bring prices down to their true values.

High Time To Stop Kidding Ourselves About Communism and To Look the Facts in the Face

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Paterson Evening News, Paterson, N. J., which appeared on April 15, 1947:

HIGH TIME TO STOP KIDDING OURSELVES ABOUT COMMUNISM AND TO LOOK THE FACTS IN THE FACE

The basic fact about which public knowledge must be aroused is that communism is a world movement directed from a single center in Moscow.

The purpose of that movement is to overthrow every capitalist, socialist, and democratic government in the world.

Abolition of the Comintern merely transferred its direction to the central committee of the Communist Party in Russia.

The great social war which Lenin declared has been going on for 30 years. Stalin and Trotsky split not over the ultimate goal of world revolution, but over the tactical point of timing.

We are confronted in this country today by the advance guard of Communist infiltration and termitism.

As a matter of self-preservation, we have the right—and if we are not completely insane we shall exercise it—to meet this challenge by every legal expedient at our command.

J. Edgar Hoover is in a position to know more than any other American about subversive activities in this country.

As Director of the Federal Bureau of Investigation he smashed every Nazi sabotage plan before it could get started. At the same time he kept an eye on Communist sabotage efforts during the early months of the war, when Stalin and Hitler were pals.

The Communists, according to the FBI officials, were even then so widely infiltrated in our labor unions that, if Stalin and Hitler had not split, this country would have been faced with an uncontrollable wave of sabotage against production and national defense.

When, therefore, J. Edgar Hoover tells the House Committee on Un-American Activities that American Communists constitute a "fifth column," doing Moscow's bidding he knows what he is talking about.

The Communist Party in the United States is better organized, testified Mr. Hoover, than the Nazi "fifth columns" were in Europe before the war. Then he added:

"Communism in reality is not a political party. It is a way of life—an evil and malignant way of life."

The dangerous element in the Communist Party here and abroad has been drilled and disciplined in deception. When cornered it denies any connection with the movement to which it is dedicated.

Anyone who got up in the Red Square in Moscow and advocated democracy, as we understand the word, would be promptly shot or whisked off to a "correction camp" and worked to death.

The Communist Party in Russia does not tolerate subversion as we do.

Whether or not the advantages of outlawing this movement would outweigh the disadvantages is now being debated throughout the country. A good many people believe that it is dangerous folly to allow the Communist Party to take advantage of the Bill of Rights in order to plot destruction of our form of government.

A good many others share Mr. Hoover's fear of making martyrs of Moscow's agents and their dupes. They fear, too, that outlawing the CP would "drive communism under ground."

Communism already is underground in this country, as well as above ground. The menace is not from Communist Party members, who go around showing their cards, but from those who conceal their membership, and take their orders secretly from the hundreds of NKVD agents working in our midst.

Were it possible, all Communists might be forced to wear labels so that they could be publicly known for what they are.

Whether our own form of government can long survive the tolerance shown in the past to Communist activities right under our noses is a moot question.

Any attempt to restrain these activities is immediately met by the cry of "witch hunt" or "Red baiting." When the Supreme Court of the United States upheld the dismissal from the War Manpower Commission of a member of an out-and-out Communist organization, the appellant's counsel accused the Court of joining in a witch hunt. That is Communist technique.

The bill in Congress to outlaw the Communist Party may not indicate the wisest course to be taken to meet this menace.

Yet the hearings on it serve the useful purpose of attracting public attention to a movement that has heretofore received all too little informed notice. The people do not want emotionalism. They do want the facts.

The Communists work throughout the world under many different party names. They outlawed their own party here by changing it to an association when Russia entered the war. Then, when the war ended, they cropped up again as an American political party.

The mere outlawing of their official organization would still leave their agents and dupes to carry on their intrigue and propaganda through American-Soviet Friendship and hundreds of similar fronts and transmission belts.

Inequalities and Secondary Education

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me with reference to H. R. 156, a bill to authorize the appropriation of funds in order to assist in reducing the inequalities of educational opportunities in elementary and secondary schools, introduced by me and pending before the Committee on Education and Labor:

Mr. Chairman, members of the committee, it has always been my belief that the financing of education is a responsibility of the local community and the States. In my opinion, any departure from this practice must be examined carefully lest the Nation's schools, like schools in so many unfortunate lands, be brought under the control of some centralized bureau of government.

I know that voluminous evidence will be presented to the committee for the purpose of showing that an inequality of educational opportunity exists among the States. But we must not be too hasty in jumping to the conclusion that inaction by the Federal Government is the principal cause of this inequality. In the very States which are requesting aid from the Federal Government there are inequalities of educational opportunity within the States themselves. I should think that States which have amassed huge surpluses in their State treasuries would spread this money through the State so that more children, especially those in rural areas, would have an opportunity for a decent education. Certainly the States should examine their own methods of educational finance before they plead to the Federal Government for aid. However worthy may be the States' requests for Federal aid, they must be considered in light of the Federal Government's stupendous national debt, and in light of the catastrophe which would befall our country if the Federal Government were to fail in its interest payments to its debtors.

Nevertheless, I realize that there is an emergency in American education at the present time. Thousands of public-school teachers are leaving the profession to take other jobs which pay a just wage. As a result, many school boards have been forced to hire incompetent teachers who lack both talent and training for the important task of training our citizens of the future. Experts tell me that immediate salary increases must be granted to teachers or else our Nation will face its worst educational crisis in

the history of American education. I'm proud to say that my State of California has enacted a minimum-wage law for teachers requiring a beginning wage of not less than $2,400 a year.

As far as I can determine, there's no way for the Federal Government to demand that the States spend more money for their schools. Hence, we are faced with the fact that unless the Federal Government grants some money to the poorer States, particularly those in the South, thousands of American children, through no fault of theirs, will be deprived of an opportunity for an adequate education. I have too much affection for our young people, and too much understanding of the national disaster which would result from an unintelligent citizenry to permit these children to go through life without the advantages of a good education.

Once I made up my mind, and I reached the decision reluctantly that Federal aid to education was necessary despite the risks involved, I looked for a pattern of Federal aid legislation which would be acceptable to all interested groups. I studied carefully the Senate report accompanying S. 181 of the Seventy-ninth Congress, second session. I understand that the information in this report was compiled by experts in educational administration and finance, and that the specific recommendations in the report are the fruit of much hard work by a subcommittee of the Senate which heard a great many witnesses present extensive testimony on the Federal aid question.

Therefore, my bill, H. R. 156, follows the pattern suggested in this report. Federal control over the school curriculum, the selection of teachers, and methods of instruction is expressly prohibited. The bill restricts aid to the poorer States according to a formula which correlates total child population, State-wide average income and effort to support schools. I understand that only 25 States would receive funds under this formula. The bill requires State-wide equalization so that 4 years after the act is in effect, at least $40 will be spent for every child in the schools of the State. Perhaps this amount should be raised to $50. Perhaps, too, my bill might be amended so that a large percentage, if not all, of the funds would be earmarked for raising the salaries of classroom teachers in the public schools.

One section of the Senate report which attracted my attention was a bipartisan separate statement of views. I think that every member of the committee should read this statement carefully. It sets forth a practical solution for a problem which has disturbed the Congress for some time and proposes a reasonable plan for working out a Federal aid bill which is so fair that it should appeal to all persons sincerely interested in the educational welfare of the Nation's school children.

With the committee's permission, I'd like to quote a few important sections of this statement. It says: "A functional democracy makes it possible for many people to do the same thing in different ways. Consequently, the Federal Government should not discourage in any way the different activities of several kinds of schools, all of which are devoted in various ways to the common purpose of producing the good citizen. To the degree that the nonpublic school is directly or indirectly suppressed or discouraged in the attainment of its purpose, to that same degree does education become the potential tool of a totalitarian state."

I think that the principle just stated is more important. It recalls to mind the famous decision of the United States Supreme Court in the Oregon case in which the Court held that the State could not force parents to send their children to public schools. The Court declared, "The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the State to standardize its children by forcing them to accept instructions from public teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

In another section the statement says, "In spite of evidence to the contrary, some people sincerely fear that Federal aid to church-controlled schools would bring about the union of church and state. We have considered this problem very carefully, and we have concluded that such a fear is groundless. If it were not, we would be the first to oppose such aid. Another tenet of our democratic belief which we hold to be just as sacred and important as the separation of church and state is that of freedom of religion. Such freedom should not be limited by imposing, in effect, certain penalties on those who faithfully carry out the practice and teachings of their religion. In this connection, also, we must recognize that the Government does not wish to supplant the duty of parents in the instruction and training of their children, but merely wishes to supplement and facilitate it."

It seems to me that this quotation expresses the American theory of separation of church and state. And I certainly hope that the committee will not accept any other theory such as one which would deprive children of governmental benefits, particularly in the line of service, such as transportation, nonreligious textbooks, health, and welfare services, simply because they attend parochial schools.

My bill simply incorporates into several of the bills pending before the committee, and directly into Mr. McCowan's bill, the amendment proposed in the separate statement of views. The formula in my bill requires the State to count all the children, 5 to 17, regardless of whether they attend public or nonpublic or no school. The Federal Government has a duty towards all children, not merely towards those in public schools. Now if a State is to count all the children, then it must see to it that all the school children in the State are made eligible as beneficiaries of the Federal Government's aid.

I think of the State governments as a trustee for Federal funds which must be spent according to the provisions of the Federal Constitution and the Federal law. Now if a State government is permitted by law to disburse Federal funds to both public and nonpublic schools, it should do so. I understand that 20 States are so doing in the National School Lunch Act. If a State is not permitted by law to disburse Federal funds to nonpublic schools, then the Federal Government should withhold a pro rata share of the States' allotment for direct distribution to such schools None of the funds alloted to nonpublic schools would be used for paying the salaries of teachers in nonpublic schools. I understand that this restrictio is acceptable both to labor and to the large nonpublic school interests. Under the provisions of my bill, therefore, States' right are protected, and at the same time the Federal Government adheres to its traditional policy of equity toward all schools both public and nonpublic. If there is some amazement at the idea that Federal funds should be granted for at least the indirect aid of nonpublic schools, may I cite a remark in the separate statement of views:

"Under the terms of the GI bill our National Government will pay millions of dollars in tuition fees to privately controlled schools. It appears that a Congress which has agreed to pay a veteran's tuition to a privately controlled school should not hesitate to grant aid or service to a similar school to which he chooses to send his children."

Let there be no misunderstanding. I do respect States' rights in education. I do believe that the State and not the Federal Government should set educational standards and should supervise in a general way the schools within the State. But State control of education does not mean that the Federal Government must bring its educational legislation into conformity with the antisectarian prohibitions in State constitutions which are not found in the Federal Constitution. The Federal Government must not be partial to either the public or nonpublic schools. It must treat both fairly.

I am told that under my bill about $242,500,000 would go to the public schools and only $7,500,000 to the nonpublic schools. I shall be disappointed if our educational leaders refuse to endorse my bill simply because of this little recognition to the nonpublic schools.

I'll tolerate Federal aid, but only on condition that Federal aid legislation is fair to all needy American school children.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. BENNETT of Missouri. Mr. Speaker, each week Congress has been in session for the last 4 years or more I have given my constituents a report over the radio about legislative developments in Washington, D. C. These broadcasts are over Stations KWTO and KGBX at Springfield, Mo., and KDRO at Sedalia, Mo. Under leave to extend my remarks, I include the following address which I made over KDRO and KGBX, Saturday, April 19, and on KWTO, Sunday, April 20. This speech is on the subject of the Labor-Management Relations Act of 1947 which passed the House by a vote of 308 to 107:

LABOR'S NEW BILL OF RIGHTS

Fellow citizens, the work of the House of Representatives in the past week was almost wholly concerned with passage of H. R. 3020, the Hartley labor bill. Passage of this bill represents another pledge which the Republican Congress is keeping with the people. Other pledges on which the House has recently made good include a balancing of the budget, reduction of the national debt and bureaucracy, driving Communists out of the Government, and passage of a tax-reduction bill. Today I will give you a report on the labor bill.

The purpose of this bill is to be found in the language of its preamble, which I quote as follows:

"To prescribe fair and equitable rules of conduct to be observed by labor and management in their relations with one another which affect commerce, to protect the rights of individual workers in their relations with labor organizations whose activities affect commerce, to recognize the paramount public interest in labor disputes affecting commerce that endanger the public health, safety, or welfare, and for other purposes."

Of course, fellow citizens, it will not be possible for me in these few minutes adequately to cover all of the arguments and points about this bill which were discussed

for four full days by the House last week. I will cover the main points. If you wish further information your Congressman, on request, will be glad to send you a copy of the bill, together with the committee report on it containing both the majority and minority views. If you want copies of the CONGRESSIONAL RECORDS of the debates your Congressman can probably get them for you, too.

I want to say a few words now about the necessity for legislation of this kind. During the last few years, the effects of industrial strife have at times brought our country to the brink of general economic paralysis. Employees have suffered, employers have suffered, and above all the public has suffered. The enactment of comprehensive legislation to define clearly the legitimate rights of employers and employees in their industrial relations, in keeping with the protection of the paramount public interest, is necessary. The bill, H. R. 3020, does just that. It prescribes the rights of all parties having a stake in harmonious industrial relations and requires that each party respect the rights of others.

The House by its action last week indicated its belief that enactment of the bill will have the effect of bringing widespread industrial strife to an end, and that employers and employees will once again go forward together as a team united to achieve for their mutual benefit and for the welfare of the Nation the highest standard of living yet known in the history of the world.

During the 6 years preceding enactment of the National Industrial Recovery Act of 1933, the United States had an average of 753 strikes a year, involving an average of 297,000 workers; during the next 6 years 2,541 strikes per year involving an average of 1,181,000 workers and during the next 5 years—that is through 1944—3,514 strikes a year, involving an average of 1,508,000 workers. In 1945 approximately 38,000,000 man-days of labor were lost as a result of strikes. And that total was trebled last year when there were 115,000,000 man-days lost and the number of strikes hit a new high of 4,985. The resulting loss in national wealth is staggering. These figures do not take into consideration the man-days lost as a result of the indirect effects of these strikes.

In face of this record, there are few who would have the temerity to assert that labor relations in the United States are today satisfactory. The American people, and their representatives in Congress, are insistent that some means be found by legislation to reverse this alarming trend and to bring about industrial peace.

The bill passed by the House last week is really a bill of rights both for American workingmen and for their employers. For the last 14 years, as a result of labor laws ill-conceived and disastrously executed, the American workingman has been deprived of his dignity as an individual. He has been cajoled, coerced, intimidated, and on many occasions beaten up and murdered in the name of the splendid claims set forth in section 1 of the National Labor Relations Act, sometimes known as the Wagner Act. His whole economic life has been subject to the complete domination and control of unregulated monopolists. He has on many occasions had to pay them tribute to get a job. He has been forced into labor organizations against his will. At other times when he has desired to join a particular labor organization he has been prevented from doing so and forced to join another one. He has been compelled to contribute to causes and candidates for public office to which he was opposed. He has been prohibited from expressing his own mind on his own employment. He has frequently against his will been called out on strikes which have resulted in wage losses representing years of his savings. In many cases his economic life has been ruled by Communists and other subversive influences. In short, his mind, his soul, and his very life, have been subject to a tyranny more despotic than one could think possible in a free country.

The employer's plight has likewise not been happy. He has witnessed the productive efficiency in his plants sink to alarmingly low levels. He has been required to employ or reinstate individuals who have destroyed his property and assaulted other workers. When he has tried to fire Communists he has been prevented from doing so by the National Labor Relations Board. He has seen the loyalty of his supervisors and forcme undermined by the compulsory unionism imposed upon them by this Board. He has been required by law to bargain over matters which were economically impossible for him to agree to, and when he refused to agree has been accused of failing to bargain in good faith. He has been compelled to bargain with the same union that bargains with his competitors and thus to reveal to his competitors the secrets of his business. He has had to stand helplessly by while employees desiring to enter his plant to work have been obstructed by violence, mass picketing, and general rowdyism. He has had to stand silent while irresponsible detractors slandered, abused, and vilified him. His business, on occasions, has been virtually brought to a standstill by disputes to which he himself was not a party and in which he himself had no interest. And, finally, he has been compelled by the laws of the greatest Republic with the most democracy in the world, or at least by their administrators, to treat his employees as if they belonged to another or different class or caste of society. This sordid story was unfolded before the Labor Committee in 3 months of hearings during which all sides were given opportunity to be heard, and over 2,000,000 words of testimony for and against the bill was recorded on 3,600 pages of the printed hearings. The Wagner Act was passed after only 3 days of consideration. It was a rubber-stamp measure written by the administration and rammed through Congress. In contrast, the bill last week had 3 months of hearings, 4 days of debate, and was under an open rule on the floor, which means that any Member could propose amendments to it and that the debate on it was unlimited.

This bill, which is now pending before the Senate, attacks the problem in a comprehensive, not in a piecemeal fashion. It is neither drastic, oppressive, nor punitive. It does not restrict or in any manner interfere with employees' rights to organize and to bargain collectively when they wish to do so. It does not restrict in any way employees' rights to engage in lawful strikes. It does not take away any rights guaranteed by the existing National Labor Relations Act except where unions violate the law. It does not even apply to railroad workers who have their own successful system known as the Railway Labor Act, passed by a previous Republican Congress and which has, by mediation, almost eliminated railroad strikes, there having been only one in many years. The bill was written by the Congress and not by the CIO or the bureaucrats. It is not an antilabor bill.

In the year 1215, at Runnymeade, England, King John delivered the Magna Carta, surrendering to the British Barons sovereign power. In 1789, the Constitution of the United States gave to the common people of our country their Bill of Rights. History repeats itself. In 1933 the New Deal brought forth the National Labor Relations Act, rightly called another Magna Carta, and by it surrendered to the labor barons sovereign powers over the working man and woman of the United States. This year the Congress gives to these working men and women their bill of rights. It gives them at least 18 rights they have not had before. And the bill itself contains 20 major provisions.

As time will now permit I will list these provisions and rights for you. And I remind you that for the asking your Congressman will send you detailed and official information on the subject.

The new bill of rights for labor and the public puts an end to the business of the National Labor Relations Board being both judge and prosecutor. It outlaws the closed shop and monopolistic industry-wide bargaining. It gives both parties to a labor dispute the obligation to bargain and a secret ballot for workers. It eliminates Communists from jobs as officers of unions. It outlaws sympathy strikes, jurisdictional strikes, illegal boycotts, sit-down strikes, strikes against Government, mass picketing, and other forms of violence designed to prevent individuals from entering or leaving a place of employment. It outlaws picketing of a place of business where the proprietor is not involved in a labor dispute with his employees. It subjects unions to provisions of the antitrust or monopoly laws. It gives the employer and worker free speech. It makes labor organizations equally responsible with employers for contract violations and provides for suit by either against the other in United States district courts. It provides a means for stopping strikes which imperil or threaten to imperil the public health, safety, or interest. This bill gives the worker the right to know how much money his union has, how much it pays its officers, and how much of the union's money the officers use for their expenses. It gives the worker the right, without fear of reprisal, to support any candidate for public office that he chooses and to decide for himself whether or not his money will be spent for political purposes. It gives the worker the right to go to and from his work without being threatened or molested, and the right to have a fair hearing before an impartial board, without cost to himself, whenever he believes that any employer or union is depriving him of these rights. It outlaws racketeering under the guise of legitimate union activity.

The professional labor leaders, those who make their living by working the worker, don't like this bill very well, but the common workingman and the general public, as indicated by the Gallup poll of public opinion, are strongly for such a measure to put labor and management on an equal footing before the law, with neither above the law. That is in the American tradition.

The Senate will pass the House bill, with slight modification, and then it will be up to the President to say with his signature or a veto whether or not it shall become law. Last year he vetoed the Case bill, which was similar in character. Since that time, however, conditions have grown steadily worse and the time has come to determine which is the bigger, the CIO unions or the union of the United States of America.

That's all for today. Thanks for listening.

Office of International Information and Cultural Affairs

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein quotations from outside groups which have studied oper-

ations of the Office of International Information and Cultural Affairs:

COMMITTEE OF THE AMERICAN SOCIETY OF NEWSPAPER EDITORS

Concluding paragraph of the report of the special committee appointed by the American Society of Newspaper Editors to study the overseas information activities of the Department of State (quoted from Editor and Publisher, December 14, 1946), the committee, by unanimous vote, presents this final conclusion:

"The present uncertainties in international relations justify an effort by the United States Government to make its activities and its policies clear to the people of the world through the agency set up in the State Department. Your committee recognizes, however, the dangers inherent in Government dissemination of news and suggests that the society appoint a special committee to review at intervals the work of the State Department agency and make its findings available to the membership."

Respectfully,

N. R. Howard, Chairman, Editor, Cleveland News; George Cornish, Managing Editor, New York Herald Tribune; Oveta Culp Hobby, Executive Editor, Houston Post; Edwin L. James, Managing Editor, New York Times; Ben M. McKelway, Associate Editor, Washington Star; Hamilton Owens, Editor, Baltimore Sun; Benn Reese, Managing Editor, St. Louis Post-Dispatch; Gideon Seymour, Executive Editor, Cowles Newspapers, Minneapolis.

From a group who were associated with Government overseas information work during the war, who are now with private information agencies, and who volunteered this statement:

The signers of this statement were associated in one way or another with the Government's effort to combat enemy propaganda during the war. * * * What had to be faced and counteracted during the war was the fact that for 20 years the American people and their institutions were misunderstood, deprecated, and defamed. * * * Today even that inadequate program (State Department's International Information program) is threatened. * * * An effective foreign policy is inseparable from an alert overseas news and information program. * * * Our policies are being deliberately misinterpreted or innocently misunderstood throughout much of the world * * * a United States Government program costing $50,000,000 a year to help win the peace would not seem excessive, although the State Department has only requested half that amount. * * * What is needed is an intelligent and dynamic expansion of the State Department's overseas program, rather than an ill-considered and costly retreat.

Edward Barrett, Editorial Director, Newsweek Magazine; Thurman L. Barnard, Vice President and General Manager, Compton Advertising Agency; Simon Bessie, Harper Brothers Publishing Company; Norman Cousins, Editor, Saturday Review of Literature; Louis G. Cowan, Louis G. Cowan Co. (Radio Productions); Harold Guinzberg, President, Viking Press; C. D. Jackson, President, Time-Life International; James Line, Publisher, Time Magazine; Tom Malley, Associate Editor, Newsweek Magazine.

Digest of Earnings Reports

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mrs. DOUGLAS. Mr. Speaker, you need consumer buying power to maintain profits. I have pointed out again and again that the buying power of the mass of the American people is not sufficient to maintain the kind of profits indicated in this report of the Wall Street Journal.

If decisive action is not taken by this Congress, we are headed for grave trouble. Punitive labor legislation is not the answer.

Under permission to revise and extend my remarks, I include the following Digest of Earnings Reports which appeared in the Wall Street Journal of April 18, 1947:

DIGEST OF EARNINGS REPORTS

A summary of corporation earnings reports published today by the Wall Street Journal appears below. Further details on the reports of the larger and more widely held companies appear elsewhere in this issue or in the case of a few reports received just at press time, will appear in tomorrow's issue. Unless otherwise noted, Federal taxes have been deducted in arriving at net income. When available, comparisons with the corresponding period of the previous year are shown—Thursday, April 24, 1947:

Company	Period	Net income		Earnings per common share	
		1947	1946	1947	1946
Acme Steel Co	Mar. 31, quarter	$2,055,118	$679,329	[1] 2.09	$0.69
Alabama Power Co	12 months, Mar. 31	7,167,474	6,009,996		
American Chicle	Mar. 31, quarter	1,124,700	746,131	2.60	1.72
American Hide & Leather	9 months, Mar. 31	1,323,445	257,413	2.00	.17
Do	Mar. 31, quarter	598,084	70,389	.93	.03
Atlas Imperial Diesel Engine	Feb. 28, quarter	55,869	71,675	.14	.16
Autocar Co	Mar. 31, quarter	1,326,253	521,159	[2] 2.37	[1] 1.01

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WLBF on April 26, 1947:

Dear friends of the Triple Cities and my congressional district, you can take all the serious questions now before Congress, roll them into a bundle and forget about them, unless one great question is settled and soon. I refer to the high cost of living.

As head of a typically American family for nearly 20 years now, although it is a little larger than ordinary, I can honestly say I never saw prices so high, never remember food costing so much, never realized how many dollars it takes to clothe and put shoes on six children.

Frankly I am alarmed at the continual soaring of prices. I don't see how the American people can keep their heads above water. It is hard enough when one has a reasonable income, but when smaller amounts of money come in to the family treasury, you just can't make ends meet.

The fact remains that people have to eat, they have to enjoy shelter, they have to wear clothes. If they can't do these necessary things, then something is wrong with the system.

Some say the Government doesn't owe anybody a living. Perhaps not, but the Government is responsible for seeing that people have opportunity to work for that living. Certainly the President and Congress should deplore the terrific costs of food and other necessities the public must buy.

No matter how abundant the harvest, regardless of how ripe and numerous the crops, of what good are they to the people when no one can pay the prices asked for them. The answer is starvation in the land of plenty.

Such a condition results in misery for the consumer, who is the worker, ruin for the farmer, and failure for everybody concerned. This kind of economic disaster brings on chaos and disorder. We must not let it happen in the United States.

An inflation-proof dollar will solve the greatest issue before the country, the problem of making a living. That dollar will buy a fair share of food, will give the American people a roof over their heads, will clothe them and make it possible to raise our standard of living which we need to push up instead of down.

Yes, prices are too high. Those who are responsible for raising them are not helping themselves any more than they are the people they expect to pay the prices. Nobody will profit by bringing desolation upon the beautiful country and progress can come only by taking the opposite course.

In a recent speech to the House I stated:

"Mr. Speaker, I hold in my hand a resolution which was adopted by the Binghamton Central Labor Union, an organization representing all the affiliated unions of the American Federation of Labor in my area. The CLU hereby goes on record as being against the doubling of the penny postal card charge. Speaking for myself, I join with them in saying that I think it is ill-advised for a proposal of this kind to be made, when important communications by means of this service to the rank and file of our people are being sent through the mails by the millions every month. The penny postal card is the only way they have ever been able to send messages, because they cannot afford telegrams, or in many cases, special-delivery letters, or in some instances even regular postage. So I bring the central labor union's protest against the doubling of this rate to the floor of the House. This is a reasonable request and should be seriously considered. I think the penny postal card ought to be kept at a penny.

"I have heard the argument that raising the cost of postage all along the line is the only possible way we can balance the Post Office budget. That sounds like 'bunk' to me.

"You will get as much revenue from people who depend on the penny post card as you will by charging the public 2 cents. This is a small thing, but the little things sometimes hurt the masses of Americans more than the big ones.

"Let us forget about socking those who depend upon the penny post card to get their messages to loved ones and friends. Let us figure out a more equitable way to tax the public. I hereby declare myself against this skulduggery and demand that the lowly but dependable penny post card be kept inviolate to the American people for one red cent."

Thank you.

Portrait of a Leader

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I wish to include an article taken from the April 25 edition of the Minneapolis Star Journal, which is a reprint from an article in the May 1947 issue of Reader's Digest entitled "Wanted: More Men Like JUDD." This is a splendid exposition of the unique background and exceptional ability of our able and distinguished colleague from Minnesota, Dr. WALTER H. JUDD. I introduce it in the RECORD so that his colleagues in the Congress and the public generally may have a better knowledge of the splendid qualifications of the gentleman from Minnesota, Congressman JUDD. It follows:

PORTRAIT OF A LEADER—WHOLE NATION LISTENS NOW TO WALTER JUDD

(By Stanley High)

WALTER JUDD, of Minneapolis, is a physician and was a missionary. He had never been in politics—had spent most of his adult life abroad. When his neighbors suggested he would make a good Congressman, he laughed it off. He'd never do as a candidate, he said. In the first place, he couldn't even cast a ballot for himself—he hadn't lived in the district long enough, a fact which the machine politicians certainly would make the most of.

Besides, if he ran, he would have to say frankly that he believed a Congressman should be guided in his voting less by what the voters of his district want him to do than by what he thinks he ought to do. An impossible candidate!

So the people drafted him, elected him, and have reelected him twice. Today JUDD is an outstanding leader in Congress. When word goes around that he is to speak, fellow Members crowd the floor as for few other speakers. Few Representatives are so widely known outside Congress, or are so eagerly listened to.

Among the influences which help to account for JUDD are a map of the missionary journeys of St. Paul; a talk about the parable of the rich young ruler; a piece of shrapnel which JUDD removed from the body of a dying young Chinese and a telephone call, late one afternoon in Minneapolis, from a man he scarcely knew, who said: "The time has come for you to put up or shut up."

In Rising City, the tiny Nebraska town where JUDD was born 48 years ago, the Congregationalists could not afford a regular preacher.

But his mother kept the Sunday school going. The map of St. Paul's missionary journeys was on the wall of the Sunday school room.

"Sunday after Sunday, year after year, there it was"—JUDD says—"the world staring me in the face."

When he was in high school his parents permitted him to attend a YMCA conference in Lincoln. He doesn't remember anything about that conference except a talk about the rich young ruler: "The story of a young man who had everything except courage enough to put a cause before himself. Instead of helping to make history, he walked out of it and became history's greatest quitter."

Back home JUDD told his dubious family that he had found a cause. He had resolved to be a medical missionary.

After working his way through the University of Nebraska and its medical school, he went to China in 1925—to a mission hospital 12 days' river-journey from the coast of southern Fukien province, an area infested with bandits and malaria. He escaped the bandits, but 46 malaria attacks nearly killed him and, in 1931, forced him to return to the United States. In 1934 he went back to China to head a hospital in Fenchow in Shansi Province.

The Japanese, meanwhile, had invaded Manchuria and captured Peiping. While studying at the Mayo Clinic after his first stay in China, JUDD had warned every audience he could round up that Japan was embarked on one of the great aggressions of history, that by fueling Japan's war machine the United States also was preparing an inevitable attack upon itself.

What he saw when he returned to China confirmed his fears and kindled his wrath.

Fenchow, 400 miles southwest of Peiping, was in Japan's line of march. The mission compound became a haven for fleeing Chinese. The hospital filled with men, women, and children torn by American scrap iron processed into Japanese shrapnel.

Early in 1938 a copy of the Reader's Digest, 3 months old, reached Fenchow. In it JUDD read the condensation of a letter to the New York Times by Henry L. Stimson, former Secretary of State: "Shall we keep on helping Japan?

"Is the condition of our statesmanship so pitifully inadequate," asked Stimson, "that we cannot devise the simple means of international cooperation which would stop our participation in this slaughter?"

Those were precisely the things which JUDD had been burning to say to his countrymen. That Stimson had said them gave him hope that, if he returned to America to tell his ominous story, his countrymen would listen.

Fenchow, repeatedly shelled and bombed, had been captured in February 1937. Thereafter, JUDD got a close-up of Japan's war machine and war mentality. He stayed for 5 months under the Japanese until he was able to put the hospital in order and bring in large quantities of medical supplies to guarantee that it could carry on.

One day a 17-year-old Chinese soldier was brought to JUDD's hospital. Wounded in a bombardment near Peiping, he had been carried from village to village for 60 days, his

wound untended. JUDD removed a piece of shrapnel from the boy's body, but the youngster died.

With that piece of shrapnel before him, JUDD wrote a letter of resignation to his mission board:

"I have no delusions that I will be able to change the course of history as soon as I land. But I have to try my hardest in order to get at peace with my conscience."

JUDD and his wife, who had come home with their children before the city was captured, figured they could finance his campaign for 1 year by using savings and a legacy of $1,000 from his grandfather.

Though more than half his speeches were free and many "honoraria" were only $10 and $25, they financed it for more than 2 years.

Calling on Americans to boycott Japan now or give up their sons later, JUDD made 1,400 speeches in 46 States.

"Whenever I got overly discouraged and felt like giving in," he says, "I'd just reach in my pocket for that bit of shrapnel."

But JUDD's efforts were no match for America's unconcern. Toward the end of 1940 he realized it was too late to stop Japan by measures short of war.

On a temporary basis he took over a medical practice in Minneapolis. But he continued to preach his warning message. He gave it from a Minneapolis pulpit one Sunday morning and that day it was confirmed, in blood and disaster, at Pearl Harbor.

At a small luncheon in the spring of 1942, an editor friend suggested that a good place for JUDD to help win the war and to start to win the peace was the Fifth Congressional District and that a good way to start might be with JUDD as candidate.

JUDD laughed it off, but it was less funny when, a couple of evenings later, a doctor friend and a prominent young lawyer called to make the same suggestion.

"We aren't politicians," they said; "we're just citizens who are steamed up about getting better people in government. What we want from you isn't 'Yes' or 'No,' but permission to find out whether anyone else feels the way we do."

The next week a delegation from the Minneapolis Junior Association of Commerce invited JUDD to lunch.

"We are the committee on honesty and efficiency in government," they told him. "There's a congressional election coming up and we are considering you."

JUDD still was unconvinced when two other nonpolitical groups made like appeals. Then one day he got a phone call from a young Minneapolis businessman.

"Look here," the man said, "you've no right to go up and down our community telling us what our civic duty is and then refuse to do yours. You've got to put up or shut up."

JUDD's campaign was a joke to the ward heeler. It started without money, organization, or politicians. Its strength was the "JUDD for Congress volunteers"—preachers, teachers, day laborers, clubwomen, young businessmen, even a group entirely made up of JUDD's patients—who, save for voting, had never before lifted a political finger.

Elected, JUDD became a leader of the campaign, in Congress and the country, to arouse American support for world collaboration. His 10-point plan for the treatment of Japan, outlined in 1943, was the basis for the policies of MacArthur and our State Department.

No other Member of Congress speaks with such authority on Far Eastern affairs.

But JUDD's leadership in Congress and the country rests on something even more significant—his position as a politician who regards politics as a duty on behalf of better government and Congress as an opportunity to be, for his constituents, "not a mirror, but a window."

"Many Members of Congress," said one of them recently, "think it is their job merely to reflect the opinions and prejudices of their constituents. But not JUDD. He goes after the truth about both sides of an issue and he makes up his own mind. Then he tries to inform and lead his constituents—not simply be their echo."

JUDD's Minnesota constituents like it. So, if they had a JUDD, would most Americans.

Address By Senator Myers, of Pennsylvania, Before the Associated Motion Picture Advertisers

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 30 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, in New York last week, at the invitation of Mr. Rutgers Neilson, president of the Associated Motion Picture Advertisers, it was my pleasure to address the thirtieth anniversary meeting of that organization. Since my remarks concerned the present and future standing of an important part of America's film industry, I ask unanimous consent to have the address placed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLITICS IS YOUR BUSINESS, TOO

As a moviegoer of long standing, I am glad to see what manner of man—and woman—it is which has been enticing me into your theaters these many years. That you have been doing an effective job is evident, for 60,000,000 Americans can hardly be wrong.

Much of the credit for attracting such a tremendous Nation-wide audience for the motion picture each week rightfully, of course, belongs to your publicity and advertising specialists who make up the Associated Motion Picture Advertisers. But, of course, you could not have achieved such success without having a product with sufficient appeal to support the exploitation you give it. I gather that inside your industry there is a continuous controversy over whether the moviegoers really do pay much attention to the product, but the evidence is clear to me that the public is becoming more and more discerning each year.

As a result motion-picture advertising, as I evaluate it, has been learning not to cry "wolf" over a turkey, so that when it does have an outstanding production it has not used up all the superlatives on lesser accomplishments.

This is all to the good, and I trust the trend will continue.

I am informed that this is your 30th anniversary—a span of years that very nearly matches the history of the film industry itself. Because you have provided it with an audience, the motion-picture industry has been enabled to improve its standards continuously, and although there are times when each of us could wish for greater improvement in higher standards, I think, generally, the progress has been outstanding.

I noted with great interest the presentation of your citation to Mr. Dietz for an outstanding job in public relations. This is certainly fine recognition for a fine job. It is my thought, too, that some organization, inside or outside your industry, should give your entire association a similar citation for an outstanding job in public relations for you people certainly deserve it for your work for this great enterprise of yours.

Your organization has taken on many obligations outside the strict field of "selling" motion pictures to the public, and I salute your members for demonstrating interest, as an organization, in things and events not strictly related to business. I am informed that your organization has actively supported the task of making the United Nations and its work more familiar to all the people of our country, and I think that is a very worth while thing. I am told of other ways in which you have demonstrated your consciousness of a public responsibility, and for that, too, I congratulate you.

Tonight you are giving your salute to the presidents of your various companies, thus helping to cement the production and promotion branches of your industry and emphasizing the interdependence of both.

As you get together and chart the future of your motion-picture industry, I hope you will provide in the future, either under the heading of public service or as plain ordinary good business, a greater place in the preparation and production of motion pictures for the things which truly represent America. This is not to say that many of our motion pictures now being shown do not reflect some of the best features of American democracy and of our traditions of decency among men, but rather, that every film with an American locale should, in my opinion, manage in one place or another, in one way or another, to show some of those things of America of which we are all proud.

You know, of course, why I suggest such a thing. The motion picture is without a doubt the outstanding cultural ambassador of the United States. Your stars are known as universally as Mars and Jupiter. The motion pictures we send abroad have a profound influence in building knowledge abroad of our country.

I am not pleading for a propaganda drive, nor do I suggest that art be made secondary to politics. I do not ask that the movies gild the American lily and show us all as supermen wearing halos. Americans are people, and people have faults; American institutions have faults; America does have gangsters and cut-throats and thieves and liars and cheats and venal politicians and scheming women and designing men; greed is universal, and, of course, Americans have their share of it. But we also have things in this country which few other countries enjoy: rights, privileges, immunities, yes, but obligations, too, and duties, and we are jealous of them, and I think the rest of the world should know about them, and I know of no medium better able than the motion picture to reflect our lives and our times and our hopes and desires.

The opportunity of the motion picture to advance the cause of human understanding is not restricted by any means to the foreign market. The motion picture can play a tremendously important role here at home. It has a political mission in America if it will assume it.

By politics I do not mean partisan politics. Politics is not a field restricted to the politicians and to those who actively support or attack politicians. Politics in America is the fabric of our very existence. On international politics depends the future of the world, the existence of the world.

Thirty years ago, when your organization was born, anyone making a statement like that might well have been hooted off the platform. We knew something about international politics in those days, and we knew international politics could lead to war and war could lead to great personal and national suffering. But it was not a matter of great concern to us. However, just as the motion pictures have learned a lot in those 30 years, so we have learned a lot about international politics and war. No one hoots now at any

prediction that a war—the next war—could wipe out an entire world.

But while we are encouraging greater national and international concern with the problems that lead to war—and while your industry is taking what no doubt will be a very significant role in bringing home to the people of this country and of other countries what future wars could mean to us—we must also keep in mind all the time how important it is to us in America to see to it that our own institutions we treasure so dearly are maintained and defended and that our children are impressed with their value. This is the political mission of our generation, a mission in which the motion-picture industry is admirably equipped to participate.

It would be presumptuous for me to tell the motion-picture industry how to do this, for your industry has indicated that when it wants to it can do it not only with finesse but with exceptional success.

You have done it many times in your documentaries. But every motion picture which is produced is a documentary in one sense or another, a commentary on the age and the society out of which it has come. The code of the motion-picture producers recognizes this fact by enforcing certain taboos. Crime must not pay, the guilty must be punished, certain moral standards must be maintained. These are to prevent the movies to some extent from being a bad influence. Why not a supplementary code to make sure that the movies are a good influence?

I spoke earlier of politics and the screen. In the days when the movies were young, politics provided some of the circusy atmosphere, some of the entertainment we now derive from the movies. We had torchlight parades, and flowery oratory, and band concerts and all sorts of trimmings—they were only trimmings—which came to be recognized by many of our people as politics itself. Communication was far from swift, and Washington was a far-away place, and even our State capitols were far removed from the day-to-day lives of our people. Politics in the nineties and the first quarter of the twentieth centry was largely what you people might call a "B" production.

Politics is out of that class now, far out of that class; it's big time now, it's colossal. In Washington alone in the year beginning July 1 it will be nearly a $38,000,000,000 business. During wartime, it was much bigger. It will be some years, assuming the peace we are trying to build endures, before it is a much smaller business. Our State governments are talking of billion-dollar budgets. Our municipalities, many of them already debt-ridden, are looking at their needs and requirements and then at their revenues with trepidation. Politics is the biggest business in America—this business of protecting our security, of building a better country, of improving living standards, of eliminating slums, and with them one of our worst breeding places of crime, of educating our children, of harnessing nature and putting it to work for us, of protecting our resources, of doing all the things we expect of an enlightened Government in an atomic age.

Politics now is a personal thing, which touches all of us. No medium of information, no medium of entertainment as far-reaching in influence as the motion picture can ignore the force of politics on our lives.

As recently, perhaps, as 1929 politics was not nearly of such real and personal concern to every man, woman, and child in America. There was seemingly no threat of war and little concern about the rest of the world and those parts of the world where wars were then being conceived. The stock market was booming and fortunes were being made—on paper—by everyone every day in the week. Credit was unlimited. The world was our oyster.

And then something happened. Not immediately, but soon thereafter, the people of the United States began to realize that what happened in Washington was of vital personal concern to them. Then began some of the most controversial years of political history, and out of that controversy, that continuous battling over issues and ideas, came more than just the New Deal; out of it came the education of our electorate in the field of government.

And ever since then Americans have been doing some real thinking about their Government and what they think it should be. For instance, they are wondering right now, while business is pretty good, whether Government should have any "say" on the questions of prices and controls and safeguards. They are beginning to wonder and worry now whether the present level of prices is inviting the same economic disaster we experienced less than 20 years ago. They are alive to issues which once were thought to be only the concern of the politicians and the bankers and the manufacturers and the lawyers. They watch the stock market, yes, but not as speculators and not merely as spectators; they know now that what happens in Wall Street often has repercussions on Main Street. They watch the foreign news now, too, because they know that things that happen 10,000 miles away have a distressing habit of confronting us later in crisis form, and people who have been through two World Wars in one generation learn to recognize a crisis pretty quickly.

I cite these things because the American people have impressed me as a United States Senator with their awareness of the world of today, of the atomic era. Depressions and wars are not pages out of a history book; they are not what you people might call period productions. They are life today.

The workingman no less than the businessman and banker insists on knowing these days what "they"—we in Washington—are doing, or failing to do, on matters vitally affecting jobs and businesses. And I think that's fine.

That being so—that politics is not only cracker-barrel conversation in America but also dinner-table talk and shop talk and the subject of sermons and, if you will, even a pertinent matter for young sweethearts to discuss on a moonlight night—when they start thinking about a house—and the 35 cents' worth of building materials they can now buy for a dollar—then it seems to me that the motion picture, which seeks to mirror modern life and modern thought, can well fit politics—politics in the broad sense—into its art form

The motion-picture industry has done it well on several occasions, beginning back many years ago in Birth of a Nation. It has done it in Wilson, a historical which was as much a picture of the immediate present as it was of its own era, for its ideas, its issues are as alive and compelling today as they were in Wilson's day.

I understand that a major production is now contemplated on the life of Franklin Roosevelt. I would not presume to give any technical advice to those planning such a picture but I would like to put in my two-cents worth on one aspect of such a picture and that is: if a picture is made of FDR and his remarkable life, the American people are going to insist that it be good.

Speaking, not as a Democrat, but as one of the millions and millions of Americans who loved Franklin Roosevelt, I think that each of us—Democrat or Republican—could dedicate our lives to no cause greater in scope or in significance or in challenge than that cause to which Franklin Roosevelt gave his life and that is the cause of decency among men and among nations.

There is certainly room in this cause for your industry, an industry which has shown in countless ways that the cause of America is its cause.

Week in and week out you entice us into your gleaming palaces and generally you manage well to keep us entertained and for that we thank you. But teach us, too, as only Hollywood can teach a mass lesson on a grand scale, that what we enjoy in America is not an accidental heritage but one which was brought for us by the blood and sacrifice and the imagination and daring and determination of men who loved humanity because they loved God.

An FEPC Bill Will Shackle Ohio People

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Here in Ohio, for March 1947:

AN FEPC BILL WILL SHACKLE OHIO PEOPLE

When Ohio, like the rest of the Nation, voted last November, it did not necessarily vote Republican in the political sense.

It voted against past and future regimentation of business, industry, and individuals. It voted against turning the country over to the Communists and labor radicals. It voted the way it did because the vast majority of its citizens knew there was no sane reason why there was no soap, no meat, no toilet paper and the thousand-and-one items which business could produce under normal conditions.

Notwithstanding this very obvious mandate from the people, there is every indication at this time that the top-heavy Republican Ohio Legislature intends to jam through a bill which will give radical communistic labor leaders and other minority agitators more power than they ever had before with which to further harass business.

This bill will appear under the title of a "Fair Employment Practice Commission Act."

If this passes, the result will be that Ohio's business and industry will be shackled and hamstrung to an extent far greater than ever experienced under the restrictive, unfair class legislation of the New Deal.

The name sounds nice. Particularly the "fair" part. It's a good label on an unfair bill. The mere fact that it is labeled "fair" will cause thousands of people to support it without any knowledge of its far-reaching effect on business and worker. It will be highly propagandized with emotional appeals.

But make no mistake about it. Despite its pleasing title there will be concealed restrictions, enforcement methods and penalties all aimed at the employer which will make the iniquitous Wagner Act mild by comparison, if the final bill is patterned in even small measure after Senate bill 10, introduced by Senator Howard M. Metzenbaum of Cleveland.

The bill would create a State bureau with agents and examiners to police all businesses in Ohio which employ three or more persons. They will see that the employer does not discriminate because of race, color, creed or ancestry in the hiring, firing and promotion of his employees.

Under such a bill, it would be illegal for an employer to even keep a record of the race, color, creed or ancestry of his employees. He could not upgrade any where ability and race, color, etc., conflicted without laying himself liable for prosecution. And his prosecution would be before a commission or agent who would not be bound by the regulations of common law or statutory rules of evidence and procedure.

Such a bill would open wide the doors of nearly every business in the State of Ohio to those agitators who are skilled in stirring up unrest and dissatisfaction by playing upon the racial and religious intolerances of employees in a drive for recruits for labor organizations or radical political parties. That's one reason so many Communists and certain other minority group leaders are already behind the movement to put over the bill.

Under this bill, the employer could be held responsible for the intolerances of his employees. For example, an employer hires a perfectly competent and capable Negro machinist. This is resented by some of his less tolerant workers and the employer is served with an ultimatum to get rid of the Negro "or we quit."

He faces the problem of either having trouble in his plant or of violating the law.

It is unfortunate that such conditions of intolerance and cruelty exist—but they do. Every informed person knows it, and we are not so naive that we believe all employers are free from the taint. But there is one thing certain—you can't change human nature with a law and a policeman's club. It's been tried too many times—and invariably has failed. It takes education.

There are many racketeering and Communistic union organizers who can only exist through disunity and disorder. Such a bill would play right into their hands by supplying them with a legal manner of harassing employers whose men were perfectly satisfied with wages, hours, and working conditions.

Through the discriminatory provisions of the bill they could virtually force the employer to hire, when men were needed, some notorious trouble-making union organizer who soon would have the plant in a virtual uproar of dissatisfaction, well softened up for organization purposes.

Why should any Federal or State bureau, at the instigation of agitators, labor or minority group leaders or anybody else dictate to any private citizen whom he must hire? That kind of tyranny might go over in Russia, but it is not the American way of doing things.

Assuming that even a moderate FEPC bill would have some merit, we are still of the opinion that any legislation which could tell an employer whom he could hire, whom he could fire, and whom he could promote is unwarranted at this time. We have had enough of that type of legislation to last for a long time.

Nothing should be done which would in any way interfere with full production and full employment in Ohio industries. Without governmental meddling, this goal is in sight.

It is a foregone conclusion that anyone opposing such a measure will be sharply criticized by Communists, radicals, spokesmen for minority groups and by many well-meaning but perhaps misguided citizens.

However, we feel that the dangers of industrial disruption which are inherent in such a bill far outweigh its possible advantages and that it should not be passed.

The Americanism of Dr. Francis E. Townsend

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. PHILLIPS of California. Mr. Speaker, some days ago the gentleman from New York [Mr. BUTLER] extended his remarks in the RECORD and presumably quoted from the Townsend National Weekly. He expressed misgivings regarding an editorial in this paper and quoted comments, attributed to Dr. Townsend, regarding communism and free enterprise.

I have no thought of repeating the quotations. I would like the gentleman from New York to know that many of us were concerned, a year or more ago, with the editorial policies of that paper, but that we have been convinced that these have returned to normal.

I was startled to read the quotations included in the extensions of the gentleman from New York on April 17. I immediately sent for a copy of the editorial. The answer is readily apparent. The quotations are only partial quotations. They are picked out of the context and asked to stand alone, without their supporting words. The gentleman from New York was distressed over what seemed to be a support of communism.

The editorial, in my opinion, was absolutely right when it said that:

A dictatorial system under a benevolent and all-wise manager woud probably be the most nearly efficient of any conceivable system.

Who denies that? It has been stated and restated since the beginnings of government. The trouble is, of course, that no such government remains benevolent. We say, in the United States, very properly, that we will sacrifice some of the efficiency of such managership in favor of the blessings of representative government.

Dr. Townsend then seemed to compare such dictatorship with communism. What is wrong with that? Communism, as practiced today in the world, is the most arrogant, the most selfish, the most stupid, and the most retrogressive doctrine ever offered intelligent people, but it is still dictatorship. I think the gentleman from New York should have concluded the quotation, which was as follows:

Hence we think it safe to assume that communism developed by force will never long prevail in a world that is rapidly becoming enlightened by science.

So far as free enterprise is concerned, I can only quote again the words of the editorial:

Any system that produces goods with a speed out of all proportion to the ability of the population to buy and use is bound to collapse.

And again, Dr. Townsend says:

Profit, in the near future, will mean profit for all, not aggrandizement of the few at the expense of the many.

Is not that true? If it is not, then the platforms of the Republican and Democratic Parties, the antimonopoly acts, and innumerable laws passed by the Congress in years past, and the general thinking of the people of this country, have been sadly mistaken over the years. Dr. Townsend continues:

Let us make that transition—

That is, from monopoly and Government controls and OPA's and all the children of tyranny, to free enterprise—

as quickly as possible and avoid a total collapse of industry and a condition of chaos.

And, finally, as you would expect, Dr. Townsend concludes:

The first step? National insurance for all a la the Townsend plan.

I am only suggesting to my good friend from New York that he read the editorial again. If he wants to suggest that it may have been hastily written, and that it shows signs of that haste, I will not have the heart to argue the point. Having written a weekly column for more than 15 years, sometimes under conditions of such haste that I held my mental fingers crossed until I read it again in print, my sympathy goes out to all men and women who have to meet deadlines. But it is quite another thing to charge Dr. Townsend with an interest in, or a desire for, any other form of government than the one under which we now enjoy the freedom of the United States of America, and the only form of government under which such a beneficial program as the Townsend plan could be put into operation.

I much prefer to think of the quotation from the London magazine known as Bookshelf, which said recently:

Dr. Francis E. Townsend is one of the greatest thinkers in the field of economics * * * it will not be long before the entire United States will recognize the eminence of the father of the Townsend plan.

Marshall Pins It on Stalin

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of even date:

MARSHALL PINS IT ON STALIN

Secretary of State Marshall made his eagerly awaited Moscow Conference report to the Nation Monday evening over several networks.

We're sorry to say we don't think the World War II Chief of Staff ever will be a ball of fire as a radio speaker. The speech, too, seemed seriously loaded up with big words and long sentences.

The only news in it was Secretary Marshall's partial account of what Stalin told him when the two men met in Moscow a few days ago.

What Stalin said was that the Moscow parley on a peace treaty for Germany had made clear the issues and points of disagreement between Russia and the western allies, and that after a while some kind of treaty probably could be patched up.

The "one worlders" are grasping at this straw as a means of keeping alive their theory that Stalin is the salty but benevolent Uncle Joe of wartime legend.

He isn't, of course, and he never was.

Marshall, we're glad to see, doesn't fall for that "one world" piece of wishful thinking. He rolled out a blunt and forceful retort in his Monday evening speech to this soft soap of Stalin's.

What Marshall did was to blame the Moscow stalemate on Russia. He charged the Russians with welshing on plainly written agreements. And he said that "the patient is sinking while the doctors deliberate."

Townsend concludes:

Once the workshop of Europe, Germany is now flat on its back, producing little; and all Europe is suffering as a result. Plainly, Stalin wants this to go on indefinitely, in the hope that the western allies will quit Germany in disgust and thereby give him a chance to communize the whole Reich plus Austria.

Stalin feels that it will be time enough to talk again about all this when the foreign ministers convene in London in November for another whirl at a German peace treaty.

But November is 6 months away. What happens in the meantime to Germany, and to the American, British, and French taxpayers now supporting the western German poorhouse at a cost of hundreds of millions a year?

Our own feeling has long been that the best thing we could do would be to get out of Europe as fast as possible, leave it to go Communist if the Europeans haven't the guts to resist the Reds, and devote ourselves to girding the Western Hemisphere against any possible future attacks.

However, it is a safe bet that our present rulers have no idea of doing that, and that the Vandenberg Republicans are going to go along with the Truman plan to fight communism with dollars around the world.

PUTTING GERMANY TOGETHER AGAIN

Under these circumstances, it seems to us that the best thing we can do is to get western Germany merged economically as soon as possible and help its industries step up nonmilitary production as fast as they can.

Such a merger already has been accomplished in the American and British occupation zones.

The French zone should be brought into the set-up, and the whole combine fueled with the necessary money, credits, and material. Western Germany should be enabled as soon as may be to start buying enough food to feed itself properly, by selling manufactured goods to other nations.

If Stalin raises any objections, as he may, the Western Allies should tell him to put up or shut up—meaning to become reasonable and honest about a final peace for Germany, or keep eastern Germany and see how far he can get with it. Judging from the way the poor Russians are still starving and scratching along, almost 30 years after the Communist revolution in Russia, he won't be able to get very far.

In doing all this, the Western Allies would not be acting out of any sob-sister pity for the Germans, who after all let Hitler lead them into that 1939 attack on Poland which precipitated World War II.

The object would be the cold and businesslike one of taking some of the present crushing loads off American, British, and French — especially American—taxpayers, and stopping some of the drain on United States food which is helping to keep our own food prices so high.

Let's get started on this plan now, without asking Stalin's or anybody else's leave, or waiting for November. November may be too late.

Moscow Conference

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. COUDERT. Mr. Speaker, I arise to call attention to the report of a distinguished citizen of my district, Hon. John Foster Dulles, a delegate to the recently concluded Moscow Conference. The subject matter is of vital importance, and Mr. Dulles' observations are remarkably enlightening. His statement, as it appeared in the New York Times of April 30, 1947, is as follows:

DULLES' REPORT TO THE NATION ON MOSCOW CONFERENCE OF BIG FOUR FOREIGN MINISTERS

Eight weeks ago, I went to Moscow with Secretary Marshall. I went, as a Republican, to add another chapter to the growing history of bipartisan cooperation in foreign policy. Now we have returned. We did not go to Moscow with great expectations. We came back with even less than we had expected. We had not expected much because we were tackling, for the first time, the most difficult of all peace problems. We had, however, expected three results:

1. Increased economic and political unity in Germany, now divided into four compartments by the four military zones of occupation.

2. Agreement in principle on a four-power treaty to keep Germany disarmed.

3. An Austrian treaty.

The Conference did not conclude any of these matters. That was a grave disappointment to us. It was a tragedy to millions in Europe whose suffering is prolonged because the big powers cannot agree on the kind of a peace that they want. I shall recount some of our difficulties.

GERMANY

We did not get agreement on economic and political unity for Germany because the Soviet delegation wanted to rebuild Germany in a way which the other three delegations thought dangerous. We all wanted a Germany which, we hoped, would never again want to make war. But the United States, the British, and the French also wanted a Germany which could not again make war even if it wanted to.

The Soviet leaders were willing to take a chance on rebuilding a powerful Germany which might again be a powder keg in the middle of Europe. That represented a big change in Soviet thinking since the Potsdam Conference of 1945. Then the Soviet Union, Great Britain, and the United States had agreed that peace would best be served if Germany did not have a high-powered central government, and if Germany were economically weakened by the removal of industrial plants, particularly those which could readily be converted to war purposes. Those plants, it was agreed, would be taken from Germany and shipped to the Allies, principally to the Soviet Union, as reparations.

GERMAN REPARATIONS

That Potsdam scheme did not work out very well in helping the Soviet Union. After the German plants were taken apart the Russians could not always put them together again. Even if they could, it was expensive business to get them going in Russia. Housing had to be built around the machinery and power lines and railroad tracks had to be connected with it. By now, the Russians have lost most of their original enthusiasm about getting plants from Germany. Many parts of German factories are rusting on the railroad sidings between Berlin and Moscow, and the Soviet authorities have taken from their own zone in Germany only about half of the plants to which they were entitled under the Potsdam Agreement. They have switched to taking, as reparations, the goods which the Germans manufactured there.

The Soviet Government now wants to extend that scheme to all of Germany and to get $10,000,000,000 worth of German goods. That, however, involves much more than writing a new reparation formula. It involves making Germany into a high-powered industrial state. Even if Germany does not go into the business of making goods for the Soviet Union, Germany will have to have considerable industry.

Much of the farm lands of eastern Germany have been taken away and given to Poland. Also, about 10,000,000 Germans who used to live there or in Czechoslovakia have been expelled into Germany. The result will be nearly 70,000,000 Germans crowded into a Germany much smaller than before and with relatively little farm land. There will be about three times as many Germans per square mile in Germany as there are Frenchmen per square mile in France. The people will starve unless they can get food from abroad. They can only pay for that food by manufacturing goods for export. That, as I say, will require considerable industrialization.

The new Soviet plan would add the further industrialization needed to enable Germany to go into the mass production of goods for Soviet needs. If that happens, Germany will again be a great industrial power. A little over a year ago, Marshal (Vassily P.) Sokolovsky said, "To leave Germany an annual capacity of 9,000,000 tons of steel will mean war within a few years." Yet at Moscow the Soviet delegation proposed that Germany's steel capacity should be raised not to 9,000,000 tons, but to between 10,000,000 and 12,000,000 tons.

GERMAN POLITICAL ORGANIZATIONS

The Soviet leaders, of course, know that this involves risk. However, Soviet economic needs are so acute and so vast that they are now willing to take risks in order to get goods. They plan to reduce the risk by tying Germany tightly into their own political system so that, they figure, Germany's industrial might will never be used against them. They want in Germany three things: A strong central government operating from Berlin, which is in the Soviet zone; a single dominant political party, in which Communists will play a leading part; a trade union federation which will put all German trade unions under central control located at Berlin. Such a set-up they believe they can control by penetration, at which they are past masters. Under those conditions, they are willing to risk turning Germany into a workshop for the Soviet Union. The plan, of course, also fits into Soviet world strategy.

The British, the French, and ourselves could not agree to this new Soviet plan. We had very different ideas about the new Germany. We wanted political institutions which would train Germans to think and act individually and not be mass followers of some fanatical leader. We wanted to see authority grow from the bottom up and not be imposed from the top down.

Favored federal system

We felt that Germany would be more apt to be peaceful under a federal system like our own—where there are checks and balances through states' rights and an independent judiciary, competing political parties, and trade-unions with local autonomy.

We wanted a Germany where ideas and people and goods could move about freely. Such conditions, we thought, gave the best chance that Germans would become self-supporting, self-respecting, and peaceful members of society. Those are some the things we wanted.

There were other things we did not want. We did not want Germany quickly rebuilt as a great, modern industrial machine. We did not want political and economic centralization so that anyone who controls Berlin would automatically control all Germany.

In other words, we did not want all the German eggs in one basket. That is too great a temptation to dangle before militant and vengeful persons who will surely again be found in Germany. Furthermore, we did not want a Germany which would be a projection into western Europe of a totalitarian system.

After the First World War German industry was rebuilt with Allied money and Germany was politically centralized under Allied pressure on the theory that such a Germany would pay more reparations. Instead, that centralized, industrial machine proved to be made to order for Hitler's purposes. It seems that history is trying to repeat itself.

It is natural that the Soviet Union should seek much reparation from Germany. Their land was horribly devastated by German armies. Due to that and other causes, Soviet economic needs are today very great. So Soviet leaders are willing to take the risk which proved so disastrous after World War I. The British, the French, and the United States delegations were not willing to take that risk.

CONSEQUENCES OF DIVISION OF GERMANY

So the Council of Foreign Ministers disagreed on the future of Germany. As a result Germany remains economically and politically divided by zones of occupation. That is bad—not just for Germans but for Germany's neighbors, the French, the Dutch, the Belgians, the British, and others. All of them, in one way or another, are injured by the present state of German economy.

There are many burdens which the German people in justice ought to bear. There are many burdens which unhappily Germany's victims must bear. But there is one burden which ought not to be inflicted—that is the burden of incompetent government of Germany by the victors. No one of the four powers which today rule Germany believes that Germans ought to be herded into four closed compartments. On the contrary, they have repeatedly proclaimed that what is left of Germany ought to be politically and economically united. That does not happen, only because the Allied Government of Germany is paralyzed by its internal differences.

Germans lack national will

Today the German people are so shattered that there is no national will. But such a will is bound to emerge. It will emerge as an ugly thing if the four-power government of Germany persists in inflicting on Germany that which they themselves proclaim to be wrong.

To relieve the situation, the British and Americans are trying to unite their two zones. There is outstanding an invitation to the other zone to join that merger. In the meantime, it is imperative that our two-zone merger be a success. Our joint area includes the Ruhr, which is the economic heart of Europe. Today that heart is barely beating. The situation gives us a great responsibility and a great opportunity. If our joint administration can pump vitality into western Europe, that will bring about more competent administration elsewhere. We will have achieved, by force of example, what we could not achieve by persuasion at Moscow.

FOUR-POWER TREATY

We did not agree on a four-power treaty to keep Germany disarmed. Senator VANDENBERG had suggested such a treaty nearly 2½ years ago. Secretary Byrnes had submitted a draft of the treaty over a year ago. It was a single-purpose treaty. It was designed to show the world that, whatever else happened, the four great powers would stand united in their determination not to let Germany rearm. We thought that if that simple step were quickly taken, men's minds would be freed from the paralysis of fear, and wisdom and justice would be more apt to prevail.

At Moscow, the British and French wanted to go ahead with such a treaty. The Soviet countered with many proposed riders. Their effect was to commit the parties to the highly centralized, industrialized Germany which the Soviet wanted. While the Soviet delegation professed to want a four-party treaty, they knew that the conditions they proposed would make such a treaty impossible. A Communist newspaper in Rome let the cat out of the bag when it said:

"It is certain that Mr. Marshall's proposal, which tends to make the United States of America remain in the center of Europe for fifty-odd years, cannot be accepted lightheartedly by any European power." There is little doubt that Soviet leaders would heave a great sigh of relief if the United States were to quit Europe and go home. Then they would automatically dominate the whole continent.

The United States delegation made clear that Soviet rejection of our proposed four-power pact would not, in fact, end the determination of the American people to interest themselves in Europe. We cannot afford to be aloof from conditions which have twice involved us in great wars.

AUSTRIAN TREATY

We did not get an Austrian treaty although at times we seemed close to it. The Soviet delegation wanted Yugoslavia to get an important slice of Austrian territory and to get $150,000,000 from Austria by way of reparation. But the most debated clauses were the economic clauses. The Soviet delegation wanted economic provisions which, as Secretary Marshall put it, would have made Austria a puppet state. They demanded ownership of the most important part of Austrian economy and the right to operate it free from the controls of Austrian law. The effect would have been to make much of Austria a part of the Soviet Union.

The Soviet claim derived from a prior agreement that the Soviet Union could take over, as reparations, German external assets in eastern Europe, including German external assets in the eastern part of Austria, which the Soviet Army occupies. There was, however, at Moscow, much dispute as to what were really "German" assets. When, in 1938, Germany had seized Austria, German interests proceeded to take over a great part of its economy. The Austrian owners, many of them Jewish, were coerced into selling their property. Usually they got only a nominal price.

The Allies, including the Soviet Union, had at London in January 1943 and again at Moscow in October 1943 taken the position that they would regard such German acts as null and void. However, the Soviet Union now insists that, even when the Germans had acquired such Austrian assets by duress, the assets should not be restored, but should be turned over to the Soviet Union as the legitimate heir to all so-called "German assets."

The result, we estimated, would have been to leave the Austrian state a shell from which the Soviet would have picked the kernel. There would not be that "free and independent" Austria which had been pledged by the Moscow Declaration of October 1943. Under the circumstances, the United States delegation did not accept the only kind of a treaty to which the Soviet would agree.

We did, however, arrange for further study of the facts by a four-power commission which will operate from Vienna. We hoped that its findings will make possible an early treaty. If that does not happen, then we said that the future of Austria should be put before the next September meeting of the General Assembly of the United Nations. We felt that differences among the four Allies ought not indefinitely prevent Austria from recovering her independence and freedom from the burdens of military occupation.

DEVELOPMENT OF UNITED STATES POLICIES

For the reasons given, we came home with virtually no agreements. However, we did not come home empty-handed. Neither did we come home discouraged.

We did not come home empty-handed because at Moscow we worked out policies which can be of tremendous value for the future. If the United States, for the first time in its history, is going to take a continuing interest in the affairs of Europe, it is imperative that we have clear-cut policies. We need to know our own mind. Also, the peoples of Europe are entitled to know our intentions, so that they can judge them.

Moscow was a splendid testing ground for the development of concrete policies. When we discussed there the political future of Germany, we had to make clear what democracy meant to us in terms of human rights. Also, we had to spell out the political processes through which men can combine for the common good, and at the same time keep their personal freedoms.

When we debated the economic future of Germany, we suggested practical ways whereby the peoples of Europe can use their assets to greater advantage. We proposed that great industrial centers like those of the Ruhr and upper Silesia should not be operated merely as national assets, but as assets which would serve many people in different nations.

We suggested that they be under the jurisdiction of some over-all European body, such as the Economic Commission for Europe set up by the United Nations. It would be the job of that commission to assure that the resources of the Ruhr, for example, would be shared on fair terms both by Germans and by Germany's neighbors and not be an economic club in the hands of Germany.

As we studied the problem of Germany in its European setting, we became more and more convinced that there is no economic solution along purely national lines. Increased economic unity is absolutely essential to the well-being of Europe.

In our opinion, these statements of American position will constitute an asset of tremendous value to the future. They will give content and cohesion to our own foreign policy. It was significant that they were developed under conditions which drew together, on a nonpartisan basis, top representatives of the State Department, of the Foreign Service, and of the United States Army in Germany. The positions we took will show the world that we have ideas and ideals and not merely dollars. Also, the peoples of Europe will see that while we have European policies, they are not the kind of policies which we would or we could impose from without. What we want for Europe can happen only if the peoples of Europe want it for themselves.

FRANCO-AMERICAN RELATIONS

Another gain from the Conference was the establishment of closer relations with France. Franco-American relations have been bedeviled for several years by a succession of irritations. At Moscow, we cleared away much misunderstanding. It became plain that the American and the French nations today stand together for the basic rights of man just as they have stood together for 150 years. Our relations with the British continued intimate and cordial. On all vital matters, the British, the French and ourselves came to similar conclusions. That was not because our positions were concerted in advance. They were not. We thought along similar lines because we have a similar spiritual and political background.

Still another asset we bring back is better understanding of how Soviet foreign policy works. It depends little on getting results by diplomatic negotiation. It depends much on getting results by penetrating into the political parties and labor organizations of other countries. I have already mentioned that Soviet leaders have such confidence in these methods that they are willing to let Germany again become a great industrial power. They are using those methods now to get the kind of Germany they want.

In the Soviet zone of Germany, the dominant political party and the labor unions are already subject to Soviet will, though they may not know it themselves. It is much the same in the French zone of Germany. In the British and United States zones, Soviet influence in the political parties and labor unions is growing rapidly. Soviet agitators there, as elsewhere, have ample funds, they are well trained, and they are adept at enlisting local zealots and malcontents and getting them into key positions.

The American people should draw some conclusions from that. One conclusion is that we cannot afford to feel complacent merely because, at conferences, we have stopped surrendering our principles. Soviet activity is not suspended merely because the Council of Foreign Ministers disagrees and takes a recess.

Also, we must not feel complacent because we have supremacy in certain kinds of military weapons. The challenge we face is not a military one. I am confident that Soviet leaders do not want war. Also, they are too smart to challenge us at a level where, temporarily at least, they are at a grave disadvantage. The present challenge is at a level where they are well-equipped and where we are poorly equipped.

CONCLUSION

The conclusion is that we Americans must work unceasingly for our ideals and we must work in ways that count. It greatly encouraged us in Moscow to know, through President Truman and Senator VANDENBERG, that at home constructive policies were being formulated and implemented. We should, of course, seek international agreement whenever such agreement is possible.

We should, of course, invoke the aid of the United Nations whenever it can do the job. But we cannot let ourselves be stymied merely because we cannot get agreement or because the United Nations is not yet able to take over the full task of maintaining freedom in the world. It is up to us to show, in every available way, that free institutions are the means whereby men can save themselves from the sea of misery in which they find themselves.

I do not doubt that such efforts will succeed. Also, as they succeed, they will reduce our differences with the Soviet Union. There is one powerful unifying force; that is the will and the welfare of the peoples of the world. We must both appeal to that. Take, for example, the will and the needs of the peoples of Europe. They do not want to be divided against themselves. They do not want to be unified under the domination of any great power. They want to increase their economic productivity. They do not want human freedom blotted out. After all, Europe is the cradle of western civilization.

Defends our policies

No European policies can, over a long period, be sustained unless they conform to those basic facts. The United States delegation believes that the policies which it developed at Moscow do conform to the desires and needs of the people of Europe. We feel that the Soviet policies do not conform to those desires or needs. If we are right in that judgment, if we are steadfast, if, in the face of misrepresentation, we can find the way to bring other people to understand what our policies really are and how they work, then I am confident that our policies will be so welcomed that the contradictory policies of the Soviet Union will give way before our own.

Four-power unity could then become a solid reality. That is a result devoutly to be hoped for. It is good to have increased unity between the British, the French, and ourselves. But that is not good enough. We all want four-power unity whenever it can be obtained as a reality, not as a sham.

It was somewhat of an ordeal to have spent these 7 weeks in unceasing negotiation at Moscow. It was particularly hard because we never had the lift which comes from achieving agreement. There is a tendency under such conditions to become impatient and either agree merely to break the monotony or come home before the possibilities of genuine agreement are fully exhausted.

I think that the United States delegation held to a steady course. That was largely due to the calm yet strong leadership of Secretary Marshall. Also, we were sustained by a sense of unity at home. The Moscow press and radio featured minor defections and dangerously magnified them out of all proportion to their reality. They gave their own people, and some others, the impression that behind the United States delegation was an American people who were vacillating and were divided. As far as the United States delegation was concerned, we knew better. We knew that the American people were solidly backing positive foreign policies which would build peace on its only tested foundation, the foundation of human liberty.

Crossroads in Education

EXTENSION OF REMARKS

OF

HON. MONROE M. REDDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. REDDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in Smoky Mountain Times, Bryson City, N. C.:

CROSSROADS IN EDUCATION

Now before the United States Senate is bill S. 472, bipartisan-sponsored and introduced by Senator TAFT, of Ohio, which provides as follows:

1. Authorizes Federal funds up to $250,000,000 a year to assist public schools in the neediest States.

2. Apportions these funds on the basis of need determined by the number of children and the wealth of a State.

3. Guarantees that every child in every school district of every State shall have at least a $40-per-year education.

4. Guarantees local control of the public schools.

5. Provides for fair distribution of the Federal funds in the education of minority races.

Now we have always deplored the spending of Federal funds, often needlessly and with great waste and inefficiency. Too, we have always opposed Federal aid for education because it usually carried with it the danger of Federal control. This we felt could never meet the varied needs of our States and their communities.

The present bill, however, seems cured of these defects. Under these conditions we favor Federal aid for education, being of the opinion that the public welfare of this great Nation demands it.

If the Federal Government can pour out untold millions of dollars to buy up a so-called surplus of potatoes, spend more millions to store and hoard them while many of its citizens could well use them, and then end up by plowing these potatoes back into the ground—and there are many similar instances of such waste in the recent history of our National Government—then we are convinced that Federal aid for education by comparison would be money mighty well spent.

The boys and girls of America are worth more than any dozen potato crops, or the money we might spend to subsidize them.

There has long been too much pork-barrel statesmanship in our National Government. The silver bloc wants special consideration, the potato Senator needs subsidy for price protection, the wheat farmer and his Representatives then want their share and so it goes. The wind-up, when everybody gets through scratching the other fellow's back, in order to get his own scratched in return, is that more and more billions have been poured down the drain.

It's time we spent a few million where it will really do some good for everyone by raising the level of our citizenship during the coming generation. If freedom (whether it be from foreign aggression or home-grown ignorance) and equality are to be more than an empty phrase, glibly recited by favored children in our richer States and unknown under the Constitution to others, then it is time we spent some money in this direction where it will do something concrete and lasting for the public good.

Considering the wide differences in the ability of the States to finance an adequate educational program, considering further that the national public welfare demands equality of educational opportunity, and that only the Federal Government through its power of taxation can equalize the abilities of the States to finance such adequate programs of education, there is only one answer—Federal aid.

If youth can be sacrificed in time of war without regard to native State or place in society; if every citizen is to shoulder his proper responsibility in this great Nation of ours—then society cannot afford to be less generous in providing equal educational opportunities for all. It is the inalienable right of every child.

Hon. Elpidio Quirino

EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. BELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following biography of Hon. Elpidio Quirino, Vice President of the Philippines and concurrently Secretary of Foreign Affairs, written by Dr. Diosdado M. Yap, editor and publisher of Bataan magazine, an independent monthly publication of Philippine affairs and trade. Mr. Quirino is scheduled to arrive in Washington on May 6 as a guest of the United States. I believe Members of Congress and others may be interested to know of Mr. Quirino's background in view of the high office he holds in the Philippines and because of the strategic position of

the Philippine Islands in the Far East. The biography follows:

QUIRINO—SYMBOL OF FILIPINO GREATNESS

(By Diosdado M. Yap, editor and publisher of Bataan)

One of the most colorful characters in the contemporary history of the Philippines is Elpidio Quirino, Vice President of the Philippines and concurrently Secretary of Foreign Affairs. His meteoric rise from obscurity constitutes one of the most enviable records in modern political history.

Acclaimed as a lawyer of great distinction, able orator, eminent and far-sighted legislator, and above all, an economist of vision and analytical mind, Quirino's life is full of adversities, trials, and privations. Like President Roxas, he is a product of the American-patterned public-school system in the Philippines. Like many of the great American leaders, Quirino is a self-made man.

Summing up his interpretation of American-Philippine relations at this crucial stage in world uncertainty, Quirino stated that "happily, Filipino bonds with America are infinitely stronger today than they had ever been. American concern for the future of the Philippines was never more truly felt and more genuine."

TAUGHT SCHOOL AT 15

He was born on November 16, 1890, in Vigan, Ilocos Sur—the third among nine children of Don Mariano Quirino and Gregoria Rivera. So hard was the life of his family that when he was 15, he taught in one of the barrio schools of his home town. His teaching experience gave him a grasp of fundamental school problems, making him an enthusiastic champion of the public-school system in the islands. It was undoubtedly his insight into the educational needs of his people that prompted him to fight in the halls of the Philippine Congress for legislation designed to improve the educational standards of his country.

At the age of 18, he left the barrio school and went to Manila, where he enrolled in the Manila High School. He supported himself by sketching and illustrating for several publications and by doing clerical work in the government. It was in the high school that he learned the rules of discussion and debate, heading the Cryptia Debating Club which was the opposing group to the Rizal Debating Society led by Manuel Roxas, now President of the Philippines.

Graduating in April 1911, he enrolled in the College of Law, University of the Philippines. He won his degree of bachelor of laws in March 1915, and passed the Philippine bar in the same year. In 1921, he was admitted to practice in the United States District Court of China. In 1934, as a member of the last Philippine independence mission, he was admitted to practice in the Supreme Court of the United States.

WAS QUEZON'S SECRETARY

Upon becoming a lawyer, he served as a law clerk in the office of the Philippine commission. Because of his eminently satisfactory record in this post, he was selected as secretary to Manuel L. Quezon. From then on, he established a relationship with Quezon which the years did not change or destroy, but enriched. It was a relationship based on mutual trust, confidence, and affection.

After serving as secretary to Mr. Quezon for 2 years, Quirino resigned in 1919 to launch his candidacy for membership in the lower house of the Philippine Legislature. He won and served as Representative from the First District of Ilocos Sur. In 1921, he became a delegate of the House of Representatives to the International Bar Conference in Peking, China.

Believing that his sphere of activity as a representative was too limited, he launched his candidacy for the Senate in 1922. He was defeated. But in 1925 he tried again and was elected as Senator from the First Senatorial District. He served in the Senate continuously thereafter until he became a delegate to the Philippine Constitutional Convention.

As a member of the Senate before the establishment of the Commonwealth Government, Quirino was the Senate majority floor leader. He was ranking member of the last Philippine independence mission to the United States headed by the late Manuel L. Quezon which secured the passage of the Tydings-McDuffie Independence Law in 1934. As a member of the Constitutional Convention he was responsible for breaking the long deadlock on the question of whether the constitution being drafted was also going to become the constitution of the Philippine Republic. Quirino advocated that the matter be left to the people and the leaders of the new republic.

HELD MANY CABINET POSTS

Resigning from his active legislative portfolio, he served as Secretary of Finance under Governor-General Frank Murphy, 1934-35, and was the first Secretary of Finance under the Commonwealth Government from 1935 to 1936. During 1936 to 1938, he was Secretary of the Interior. While in the Cabinet, he was chairman of the National Information Board, the National Relief Board and the board of trustees of the Philippines Charity Sweepstakes.

As Secretary of Finance, he advocated the creation of the National Loan and Investment Board and the National Economic Council. As Secretary of the Interior, he advocated the conversion of several barrios into municipalities and municipalities into cities. He was responsible for the creation of the National Information and Radio Boards for the purpose of informing 18,000,000 Filipinos what the Government is doing, and what its problems are, and how they are being solved.

Before his return to the Senate in 1941, Quirino was vice chairman of the board of directors of the Agricultural and Industrial Bank; a member of the board of directors of the National Development Co. and several of its subsidiaries. At intervals, while not serving the Government in any official capacity, he practiced law and taught in various colleges and universities in Manila. He was dean of the Adamson College of Law before his election to the senate in 1941. On the eve of the outbreak of the war, Quirino was elected senator-at-large, and upon the liberation of the Philippines in 1945, he was elected President pro tempore of the Philippine Senate, while Manuel Roxas was the President of the Senate.

From the foregoing background events of his colorful life, it is clear that several factors merged to make Quirino what he is today. Even as a student he had displayed grit and perseverance in the face of hardships. He decided to attain a goal, and he bent all his efforts to it. His enviable accomplishments as Secretary of Foreign Affairs of the infant Republic, which included the negotiations of the various treaties signed by the United States and the Philippines may be attributed to his simple formula of never flinching from hardship and danger; of never disdaining to undergo the sacrifices called for by the poverty of his origin.

NEVER SULKY, NEVER PROUD

Quirino is a fighter. His political adversaries readily admit that their definite extinction from politics is due to the hard-hitting, uncompromising fighting spirit of the Philippine Republic's first secretary of foreign affairs. He does not admit any compromise. As a politician, he has had his defeats and triumphs. But in defeat he is never sulky; in triumph he is never proud.

In all his activities as a public official one mark stands out in bold relief. It is that the the escutcheon of his name has suffered no blot nor blemish, even during those critical days of the Japanese occupation of the Philippines. For three years and a half of the Japanese domination of the islands, Quirino consistently refused to accept any position under the puppet government. No one can point to his political career the finger of scorn or contempt. His official and private transactions are above any reproach, his honesty beyond question, and his integrity without stain. To him public office is a public trust. So binding upon him is this consideration that he would not even dare practice his profession as long as he is in the Government service because he does not want his professional duties to interfere or to conflict with his duties to the public.

Elpidio Quirino married Alicia Syquia on January 16, 1921. They had five children. As revenge for his consistent refusal to accept any position offered him by the Japanese military command during the regime of the puppet government in the islands, his wife and three of his children were massacred by the Japanese in his presence during the slaughter of Manila in February 1945.

Labor Unions and You

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. GATHINGS. Mr. Speaker, a most able and learned presentation of the labor-management problem was made by Hon. B. A. Lynch, of Blytheville, Ark., before the Blytheville Rotary Club on April 10, 1947. Mr. Lynch, who is a past president of the Arkansas Bankers Association, has given this most important issue painstaking and thorough study and his speech deserves careful attention and earnest consideration of the Congress:

As a preface to the remarks that I am about to make, I would like to state that I am not antilabor union. I feel that labor unions have their place in the economic set-up and that it is necessary to have unions in order that the workingman may receive just compensation and reasonable working conditions.

I am going to talk to you today about a modern version of an ancient vice—a vice which throughout the centuries of man's existence has caused perhaps more misery, more suffering, more blood letting than any other. I am going to remind you of conditions we face today, and consequences which threaten us tomorrow, as a result of evil and irresponsible lust for power on the part of scheming and unscrupulous men.

Lust for power is by no means in itself a new sin. Genghis Khan and his generals had it so strongly that they put the Oriental world to the torch to satisfy their craving. Caesar had it. Al Capone had it. Hitler and his Nazis had it and would gladly have enslaved you and me, starved us or tortured us to insanity or death to satisfy their phobia for domination.

As we examine history's record of power-mad individuals and groups, we find two points of similarity which apply in every case. First, lust for power feeds on the attainment of power and quickly becomes insatiable. Second, man has always, at some point, been forced to overthrow those who would oppress him, and the longer he has waited the more difficult and bloody has been his job.

These same fundamentals apply to a small group of men who have it within their power today, legally, to reach into our homes and private business, to disrupt the life of this community, to order that we shall receive no food or clothing by rail or highway, that we shall have no coal or automobiles or radios. They have the power to tell the young men of this community which trades or crafts they may enter, and on what terms. Theirs is a tyranny no different in principle, and no less dangerous in potential consequences, than the tyrannies which recently have been overthrown at such staggering costs in lives, dollars, and material resources.

I refer, of course, to those barons of labor who through sly campaigns of attrition have successfully entrapped a large segment of the wage earners of our Nation and who already have attained such power that they have no hesitancy in bringing difficulty and discomfort to every man, woman, and child in America to gain some immediate selfish end. You are perhaps familiar with various examples of the ruthless ambition of these men, but you may not have recognized the full extent of their shrewdness in preying upon the normal human tendencies and habits of people like you and me.

Right now, today, this week, we are being taken into camp through a maneuver so simple as to be almost childish, and yet so shrewd that I dare say not one man in a thousand recognizes what is happening. If you will but check your own memory I believe you will find that there were many times in 1946 when you became so incensed at the unreasonableness and presumptuousness of labor racketeers that you fairly exploded with indignation. You were not alone. Throughout the Nation, other men and women felt exactly as you did, and enough of them expressed their feelings at the ballot box to sweep into office a political party whose most popular promise was one to put the gods of labor in their proper place.

Have you felt during the past few weeks as you did during the steel strike last year, during the auto strike, the rail strike, or the coal strike? You have not, and neither have I—and that is exactly the result which shrewdness has accomplished. We in this room are living evidence of the success which has accompanied the efforts of our would-be dictators to see that our influence, and the influence of millions like us, was largely immunized during this vital period when Congress is considering labor legislation. The flood of letters and telegrams that swamped the desks of Congressmen a few short weeks ago has become a trickle. In some cases even those who rode into office under the banner of labor reform are weakening under the double drag of public apathy and all-out labor lobbying. That condition, fraught with more immediate peril to you and me than anything that Stalin can do, was brought about by the simple expedient of calling off strikes for a brief period so that you and I might yield to our normal inclination to tend to our personal affairs and forget our determination to protect ourselves from legalized economic domination.

Let me remind you of a few of the things our labor barons and monopolists are seeking to maintain as their legal rights—a few of the issues for which they are fighting so violently while you and I sit by—a few of the instruments through which they expect to continue to gorge themselves with power at our expense.

Among the foremost tools of their despotism is a legalized racket which you and I know to be wholly antagonistic to the intent of the very Constitution of this Nation. I refer to the "closed shop"—a form of totalitarianism so incompatible with the principles of democracy that it should make any free man recoil in disgust. Under it the dictators of national labor unions, each in his own sphere, have established systems of government wherein they are privileged to make their own laws, collect their own tribute, extend or deny to any individual craftsman the right to work, and punish without jury trial any citizen of their realm who incurs their displeasure.

Under such a system the vaunted "rights to strike" becomes the right of a few professional labor monopolists to order tens or even hundreds of thousands of American citizens to quit work whether they wish to or not, under penalty of permanent expulsion from the trade through which they earn their livelihood.

Under such a system the individual worker is no longer a free man. He is no longer a man who can make his own decisions, who can decide where he wants to work, for whom, and for how much. He is no longer a man who by working harder and more skillfully may hope to advance above the level of the less ambitious. He becomes not an individual, but merely the one one-thousandth fraction of a group of a thousand workers. He is told how many bricks he can lay in one day, or how many feet of concrete he can pour, and woe to him who dares to give his best to his job if his best is more than the rules allow.

If you have any doubt as to the extremes to which such tyranny can go, I refer you to a mandate of the American Federation of Musicians. The mandate provides that if a professional musician is offered a job in some city other than that in which he is working, he must wait up to 6 months before the union will permit him to move. If he should make the mistake of accepting a better job in another locality without written permission, he may be permanently barred from again earning his living in his chosen field. On union orders he may be banned from radio stations, from public auditoriums, from concert halls, and even from hotel orchestras.

Let me show you how such a system can be reflected in costs. A few days ago, in one of our southern cities, a public-welfare group sought to produce a series of four short radio announcements in transcribed form. They wanted to open each of these four announcements with a few seconds of music. The radio station which was to make the transcriptions offered to contribute its organ without charge. A church organist offered to play the necessary bars without charge. But the owner of the radio station could not allow the church organist to enter his studio under penalty of a strike which would have taken him off the air. Union rules provided that the fee for less than 6 minutes of music, with the musician on the premises for a total elapsed time of less than 30 minutes, should be $104.

Perhaps you don't make transcriptions or employ organists. Perhaps you don't even like radio stations. But you do employ plumbers or electricians now and then. You do depend on railroads and trucks and gasoline refineries. And I say to you that the cancer which is eating at the heart of American industry today will take you and me to destruction with it unless we assert ourselves while there is yet time. I say to you that the right of a man to work is more sacred than the right of a labor baron to call a strike. I say to you that the spirit and original meaning of this Nation's Bill of Rights is more sacred than the Wagner Act, and that when any group of citizens attempts to become bigger than our Government it is high time the rest of us put that group in its place.

We have seen that happen before. We once saw big business become too powerful for the good of the rest of us. We put it in its place with the Sherman Antitrust Act. Yet the monopolies of big business at its all-time worst were child's play as compared with the monopolies which the lords of labor have attained through the technique they refer to as "industry-wide bargaining." If even as many as two manufacturers of automobiles get together to fix prices they are subject to fines and penitentiary sentences. Yet it is perfectly legal, according to our present laws and their interpretations, for automobile labor leaders not only to get together and fix industry-wide prices for automobile labor, but to enforce their prices by denying automobiles to you and me until their demands are met.

What justice is there in such a situation? What justice is there in a situation which provides that the Government itself shall fix the prices which a railroad may charge for hauling freight, and then permits a labor monopoly to tell the railroads of the entire Nation how much they shall pay their workmen, how many men shall be employed aboard each train, what jobs each workman may and may not do, and the terms and conditions under which each workman may be employed.

There was a time, even since today's labor laws were put upon the statute books when matters such as I have been discussing were of only remote concern to you and me as individual citizens. But that was before labor's lust for power began to feed so ravenously upon the attainment of power. That was before its appetite had become insatiable. Today it has become the standard practice of "big labor" to use you and me as pawns. By depriving you and me and the rest of the public of coal, of cars, or of railroad service, these monopolists seek to make us scream so loudly for relief that a manufacturer, an entire industry, or even the Government itself must yield to their demands.

The degree of discomfort which we in this room have suffered because of the labor racket has of course varied with our individual problems and our individual exposure. Yet all of us know that our discomforts of the past are but forerunners of greater discomforts to come unless we join together, and join with straight-thinking citizens throughout the Nation, to bring an end to the growing dictatorships which surround us.

I know that none of us is so naive as to believe that if Congress should adjourn without passing corrective legislation we could see a continuation of the relatively good behavior which now exists. Certainly the tremendous war chests allocated by the CIO and AFL for organization work in the South do not indicate any lack of fervor for expansion and further conquest. On the other hand, we may depend upon it that the captains of labor will not be satisfied until they can tell each of us whom we may hire, how much we must pay, what amount of work is to be done, and whom we may and may not fire. They will not be satisfied until every shop is a "closed shop," until every industry must bargain with them on an industry-wide basis, and until the technique of the secondary boycott is so refined and perfected that, for example, truck drivers may be ordered to quit handling cotton for farmers or cotton products for manufacturers until southern Congressmen and Senators vote for labor-sponsored bills.

I wish that I might discuss with you fully the alarming potentialities of this matter of secondary boycotts—a practice already so vicious that an industry or a business can often be brought to its knees through sympathetic action by unions in no way associated with the particular question in controversy. If, for example, an organizer seeks to persuade the employees of your grocery store to join a clerks' union, it is entirely legal for him to call on the truck drivers' union to refuse to make deliveries to your store until your employees give in.

There are many more such unjust and un-American practices against which the individual citizen has no legal defense under today's statutes. Not the least of them is the jurisdictional strike, through which a

business may be brought to bankruptcy while two unions fight over the one question of which shall be boss. You have recently seen a prime and much publicized example of such a strike in the film studios of Hollywood. Here heads were cracked, property was destroyed, thousands of employees were prevented from working, and millions of dollars were lost to the studios while two relatively minor unions fought with each other, not over wages or hours or conditions of work, but over which should control the workmen building certain scenery for sound stages. The principle involved is exactly the same as though your drug store were closed down by picket lines while the pharmacists' union and the clerks' union threw bricks at each other over whether or not your pharmacist or your counter clerk should have the exclusive right to sell bottles of patent medicines.

What can you and I do about this? What positive action can we take? What effective resistance can we, as individuals, put up against huge Nation-wide monopolies which operate within the law and, therefore, with the support of the courts and law-enforcement agencies of the land? Our position under such circumstances is difficult, but it is by no means hopeless. For we are the people who can change the law. We, as average Americans, are the people who can say, and see to it, that there shall no longer be one set of laws for us, and an entirely different set of laws for the professional practitioners of labor. We can insist that the right to work be restored to every American, that unwilling and involuntary taxation and tribute shall no longer be exacted as a condition of employment, that labor monopolies of vital industries shall no longer be tolerated, and that written contracts between workers and employers shall no longer be binding upon employers alone. We can insist, in short, that the benefits and privileges of democratic government be restored to all Americans alike.

In Washington today are men whom we have sent there, among other things, to cast our vote on this particular problem. It is your job and mine, as individuals, to see that they know how we feel, that they know how our friends feel, and that their votes reflect the will of the majority rather than the pressure of the privileged. I seriously doubt that there are half a dozen men in this room who have told a Senator or Representative from this State, either orally or in writing, how they feel on this question. I doubt that there are two of us who have called on even our closest friends to express themselves to those who represent them. This is exactly the situation which contributes most to our danger. It is exactly the situation which the bosses of "big labor" counted upon when they let the steel industry and the coal mines and the gasoline refineries operate smoothly during this period of legislative crisis. All that you and I need do to make possible still further and still more offensive encroachments is to continue exactly what we are now doing.

Cussing John Lewis or Dan Tobin among ourselves may be an entertaining pastime but it will not get results. Speeches like this won't do it. There is one thing, and one only, that will—positive action in the form of written demands upon those whom we have elected to handle this matter. May I urge upon you that before this day has passed you dispatch your own message by wire or letter. May I urge that as leaders of this community you accept the responsibility for seeing that a minimum of 10 of your friends also express themselves in writing. May I beg, in the name of the preservation of your independence and the future of this Nation, that you pledge a solemn oath to fulfill this simple but vital responsibility.

At some point you and I, as have other men in other times, shall be forced to overthrow those who would oppress us. We shall find, as others have found, that the longer we wait the more difficult will be our job. A matter of letters today may grow into a matter of lives tomorrow. It is a job which inevitably you and I must do—a job which will never be easier than today. I have accepted my part of it. I earnestly plead that you accept yours.

House Joint Resolution 153

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. WILLIAMS. Mr. Speaker, for 3 days I have watched gallons of crocodile tears flowing down the aisles of this House and into this well—shed over the pitiful plight of those unfortunates across the waters, half of whom only 3 years ago were running bayonets through the bellies of good American soldiers: As previously stated by my distinguished colleague, Mr. RANKIN, about 80 years ago a fellow by the name of Sherman marched through the Southland pillaging, burning, and destroying everything in his wake. The South felt the cruel hand of total war in its fight for independence the same as these people in Europe, but the only thing in the form of relief that was sent south was a bunch of carpetbaggers who came down and relieved our people of what little they had left. And yet these people literally beat their guns into plowshares and plowed the earth with milk cows, saddle horses, and anything they could get strong enough to pull a plow. They used their resources at hand, and they did not starve, and today we find our stanchest advocates of the democratic way of life in the South.

No, I cannot reconcile this sending of millions of dollars of the American taxpayers' money on an overseas joy ride and at the same time refusing to pay the terminal-leave bonds of our soldiers in cash; I cannot reconcile the sending of these millions overseas and at the same time cutting in half appropriations for our own interior development; I cannot reconcile the sending of thousands of tons of fertilizer overseas when our own farmers are crying for fertilizer with which to make their crops to feed America; I cannot reconcile the sending of these millions overseas and at the same time refusing to raise ceilings for veterans' on-the-job training so that our veterans in training may have a livable income; I cannot reconcile the sending of these millions of dollars overseas when at the same time we stagger under the greatest national debt that the world has ever seen; I cannot reconcile the sending of these millions overseas when we know that most of it will go into the hands of Communists who are waiting to stab us in the back the minute we turn around.

I am tired of fighting wars for the sole privilege of feeding the world. To continue this policy will wreck any country or people.

We owe it to our people to take care of them first. It is their money, and before voting to ship it overseas, stop and try to justify your action of Friday in the light of your action today.

Another Gift to Europe

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. SPRINGER. Mr. Speaker, this pending measure, House Joint Resolution 153, provides for a gift of $350,000,000 to Europe. Other nations are not joining with us in this proposal, but our Nation is proposing to extend this huge sum of money, which we do not now have, for some purpose—and that purpose is largely unknown to any of the Members of this body. We will remember, I am certain, that we have heretofore extended relief to Europe, and the devastated countries, in the sum of $2,700,000,000. I was one of those who aided in the passage of those laws, because I wanted to aid, insofar as we could, in those areas where the need was great and the people were hungry and were suffering. At the time we extended that aid to Europe, it was represented to the Members of the House that the sum embraced in that relief measure, in the sum of $2,700,000,000, was the entire and full amount which the United States of America would be called upon to contribute for all such purposes.

And, we must not forget that our Nation, at that time, contributed 72 cents of every dollar that was provided for those purposes. We met that request, and we have provided that huge sum of money for those stricken areas. While, we are now advised that the crops are developing and the harvest will soon be upon them, yet someone has suggested to the President that "we should extend additional aid to Europe," and he has requested the Congress for the sum of $350,000,000 for some country, or countries, in Europe—no one can now state what those countries are—and no one can now tell, with any certainty, whether the communistic-dominated countries will participate in this fund or not. Even Russia, who has participated in aid during the war, and since the war, can participate in this fund—if those in charge of it shall so decree. With all of the aid we have extended, under lend-lease, and in direct assistance, we have granted something near $55,000,000,000 to $60,000,000,000 to Europe during and since the war. Now, we are asked to provide this additional sum of money, alone—as no other nation is bound to participate in the extension of such aid at this time.

Mr. Speaker, I am very anxious to know who will administer this fund, if this measure passes? I am also very anxious to know in what countries, and among

what people, this proposed aid will be available? And, since the European harvest time is at hand, what effort will be made by the people of any country seeking aid, to harvest and save their crops and thereby take care of the people of their own country? These are pertinent questions, I am certain. The people of the United States of America desire to know these answers—and they are entitled to have each one of those questions answered.

Mr. Speaker, there are other considerations here involved to which I desire to address myself. We are embarking upon a new enterprise, because our Nation is assuming to extend this huge sum of money to some country, or countries, hereafter to be determined, located in Europe, without any assistance from any other country, insofar as the record shows. Certainly some other European nation should have the love of Europe sufficiently at heart to come forward and offer to aid, if the need is great, and if any people in any country are in great distress. But they do not come forward. Yet, their financial structure is as good, or better, than our own. And, if this gift is extended—then we have embarked upon the highway of greater aid, in time of peace, and I wonder when the next request will come for additional funds for this same purpose? This is a most serious problem before us. We are staggering under the load of taxes, and the withholding taxes are deducted from the pay envelopes of every man, woman, and child who now work for wages, and the huge debt that stands before us is unpaid, and the interest upon it is accumulating. As we contemplate this measure, today, we are constrained to wonder what the end will be? We wonder what the plight of the average American will be, in the future, and if there should be a recess in employment—or if there should be a depression, and I am convinced there will be a depression in the future—then the huge sums of money that have been so ruthlessly given away to Europe, long after the war is over, would be a welcome asset in our own country to drive need and starvation from the doors of our own people.

Mr. Speaker, in the confused state of this measure, and in the face of that which we have already done to aid in those countries, and that further fact that we are embarking, alone, upon this project—giving away the funds which are so sorely needed here—and no one can tell whether we are aiding the spread of communism in Europe by this action—we are probably doing just that—I cannot lend my voice and vote to this measure.

While I desire to aid those in distress, yet when I am voting to spend the people's money I demand to know the facts, and all of the facts, and I desire to know who is going to handle the money, and to whom and for what purpose the same will be used. The membership of the House are without that information. The Foreign Affairs Committee has not provided that information. We are merely asked to give a blank check, for a huge sum of money, to be used by someone, for some purpose, somewhere—and that policy is not subscribed by me in this or any other problem.

Let us transact business in a business-like manner, and let us reject all proposals which fail to measure up to that correct and long-determined standard.

Address by Vice Adm. P. N. L. Bellinger, United States Navy

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address made at the Ninth Annual Azalea Festival at Charleston, S. C., on April 21, 1947, by one of South Carolina's most distinguished sons, Vice Adm. P. N. L. Bellinger.

No man, living or dead, has contributed more to air power in this Nation. Admiral Bellinger was a pioneer in this field. He flew the Atlantic in the NC4 in the early days of aviation history. He has served on many boards during the development of heavier-than-air craft.

During the war, he was in charge of the Atlantic Naval Air Command protecting the shores of this Nation. The record of his contributions to the security of our Atlantic shore line is replete with acts of heroism, rescue, and protection.

It is a distinguished honor to me personally to call to my colleagues' attention the words of wisdom spoken by the gallant admiral; words that will bear fruit to our children in the future and words which it will be well for us all to take note of and to heed.

The address of Vice Adm. P. N. L. Bellinger follows:

I am indeed honored to be with you today as the Navy's representative at your Ninth Annual Azalea Festival. I was born and raised in Cheraw, about 150 miles north from here. I can still remember the great interest displayed by my elders as each spring approached. Would it be a good season for the azaleas? Would they bloom early or late? And these beautiful old gardens, such as Magnolia and Middleton were, of course, household names.

In later life, I have often encountered people in other parts of the country who were heading south to see these magnificent azalea gardens. As a native South Carolinian, this has always given me a sense of pride. I liked the idea of strangers taking an active interest in the beauties of my home State.

For many years you have been carrying on this fine tradition. It adds to the joy and appreciation of living. I would like to think that my grandchildren, too, will enjoy it, year after year, without interruption such as that which prevented the festival from being held for the last 6 years. I would like to believe that peace and our scheme of democratic life, which encourages such individual expression, will last eternally.

However, many differences must be resolved to guarantee that peace. The ravaged peoples of the world must be restored as peaceful, independent, democratic nations. Lies, false propaganda, mud slinging, and distrust must be replaced by international friendship and cooperation. It is not an impossible program. It is a difficult one. But until the day it is realized, war is more than just a possibility. Until that day comes, we must remain prepared against that possibility.

The democratic method of attaining that program is opposed, at home and abroad, by an alien philosophy. Professing to seek the same end, its advocates declare that a communistic form of government would solve all problems, domestic and foreign. But nowhere on earth is the true communistic principle of government actually in practice. Through appeal to the have-nots, the hopeless, and the desperate, whole peoples have been enslaved by small, powerful, persuasive minorities. In the guise of a glorious crusade to free the workingman, the professional Communists have further enslaved him. In promising them peace, the masses are being prepared for a fanatical war, and with the technique of totalitarian governments everywhere, the most elaborate precautions are taken to prevent their citizens from learning the true conditions under which the American people live. They dread publishing the truth, for they know too well that the truth will incite their own peoples to demand more rights, higher standards of living, fewer working hours, higher pay, better equipment, better housing, better working conditions. The governments so created are indistinguishable from the Fascist governments we fought to destroy. It is a matter for sober thought that there are more dictatorships flourishing throughout the world today than in 1939 when Germany invaded Poland without cause, treaty notwithstanding. We speak of the war being over, of being at peace, but let us not confuse ourselves with empty words. There is no peace. We must not confuse our definitions like the little boy who came home with a big bump on the back of his head. His mother asked him if he'd been fighting. "No; I wasn't fighting," he said, "I was just sitting on Willie Jones and forgot to hold his feet."

We have placed our faith in peace treaties before, and they have failed. Some well-meaning souls—and others not so well-meaning—are proposing disarmament as the surest solution to the intricate puzzle of world peace. Disarmament is nothing new to this country, either. We have tried it—and each time laid ourselves open to attack. International disarmament would effectively disarm only the United States. It would leave the communistic powers free to follow their insidious scheme of expansion. And presently a disarmed United States, unable further to argue the cause of freedom, would become the easy prey of the Eurasian conqueror.

Wars, like fires, are better prevented than extinguished after they start. But if they are allowed to start, they are prevented from doing maximum damage by extinguishing them before they become holocausts. Just as each member of a community subscribes to a fire department, or a police department, so must each member of the international community strive to establish and support a mutual brigade for the enforcement of peace. That is why we place our hope in the United Nations. We will always have to contribute to that agency, in money, in men, and munitions. Modern wars are never won by defending your home soil. They are won on the enemy's home grounds. The best deterrent for any war is to make the United States so powerful that it would be suicide for any nation to venture a sudden attack upon us. How can we make ourselves so powerful that it would be suicide for any nation to venture a sudden attack upon us? How can we make ourselves so powerful that any nation or combination of nations would hesitate to attack us? Does this not sound prohibitive

economically? This can be accomplished both expensively or relatively economically.

A war machine consists of immense quantities of expensive equipment, and the most expensive of all, our young men and women. The lifeblood of this machine is national morale. This costs nothing but is the most valuable of all.

We must inculcate in ourselves, I pray we all have it, in all our citizens, and in our children a feeling of intense nationalism. Let us become informed of the beauty, grandeur, and advantages of this great country of ours, the pricelessness of democracy.

Just prior to the last two wars we were adjudged weak by our enemies because of internal arguments. Democracy is based on individual expression. We must always have it, but never let it be thought that we will not solidly pull together and fight any aggression. Our armed forces are the visible guaranty of strength to any power contemplating attack. They must be strong. They must withstand the shock of initial attack. They must be maintained at maximum strength with maximum economy. Your Navy is your shock absorber in the initial attack. It must be strong. Its ability to counter the initial thrusts of the enemy will determine the length and quite probably the outcome of the struggle.

Your Navy is a modern Navy. It does not neglect any means of carrying out its job. It employs submarines, all types of on-the-sea warships and is the foremost of all nations in the integration of air-sea warfare. Its amphibious force—the Marine Corps—has no par.

The speed of naval attack may now be measured in the hundreds of miles an hour. The Navy has perfected a guided missile which can be carried from the deck of a carrier by a fighter airplane, released at great distance, and guided to its target with devastating effect.

Your Navy, through the integration of its fighting forces, is a mighty insurance policy. Let us not cancel this insurance in favor of much-talked-of but untried weapons. One of our leaders recently said that all we have perfected in push-button warfare is the push button. Certainly at the present time war is more imminent than push-button warfare.

Our fleet has proven its ability to operate away from its bases for extended periods. The fast carrier task forces demonstrated this off the shores of Japan and Okinawa, through the Central Pacific, and off the Philippines.

The world is in a chaotic condition today. Most of the nations are impoverished and famine stricken. The United States is bearing the largest part of the responsibility for feeding and clothing Europe, without thought of profit. The four freedoms we fought so hard to establish are not yet realities in many parts of the globe. Such conditions are fertile territory for the growth of distrust and desire which create war. Of necessity the United States today wears the mantle of world leadership. The international situation requires that we wear it. Our own security demands it. A weak nation cannot wear the mantle of world leadership. Weakness has only gained the doubtful privilege of appeasement. We can't afford to follow the theme of the two rabbits who were trapped in a hollow log by a pack of yelping dogs. Father Rabbit calmed Mother Rabbit with "Take courage, my dear. If we can just hold out for a short time we will outnumber them."

Your Navy can move as a unit throughout the seas of the world. It can defend itself and yet attack—and its reach through naval aviation, is deep into the enemy's homeland. It both keeps abreast of and originates new weapons, new developments, new techniques. It operates the latest in aircraft. Freedom of the seas is a plank in the platform of democracy. No country having the freedom of the sea has yet been conquered. There has come into being during our generation a new sea. That sea bounds the known world and is navigable only by airplanes and guided missiles. The combination of ships, airplanes, and men is as yet unbeatable.

Our country is dedicated to peace. Our Navy is a member of that team. Its mission is to prevent war, but if war cannot be avoided, to win it as swiftly, as decisively and as economically as its power permits.

But these are grim thoughts to inject in this scene of peace. I suggest we return now to the more pleasant contemplation of the beauties of nature which God has so lavishly bestowed upon this community. It is my earnest hope that never again will these festivals have to be interrupted by war.

There's Danger Ahead

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the current issue of the National Tribune:

THERE'S DANGER AHEAD

For parts of 2 days last week we sat at the press table in the meeting room of the House Committee on Veterans' Affairs, listening in on the presentation of testimony designed to secure free automobiles for some of our veterans who were maimed in their country's service. In that room were some 20 or 30 heroes whose arms and legs had been blown off in the hell of war. Some were in special wheel chairs, others leaned on crutches or stood against the side walls of the crowded room. Some had empty sleeves or possessed those glistening hooks that are such a sad substitute for hands.

With an eager ear and with intent and searching looks on their wan faces, these men, too, listened as representatives of veterans' organizations pleaded for modifications of existing law that would open to them the promise of a car, free and equipped with special appliances, and they heard questions being asked and answered. They also heard Members of Congress talk in terms of cash settlements in lieu of autos. Perhaps they were not as confused in mind as they might have been if they had been able to read behind some of those questions to which witnesses replied as best they could. Certain it is that they could not have been versed in the complexities of legislation and the wiles of legislators as hope eternal beat within their breasts, but we had cause for meditation, and we could not refrain from posing to ourselves two or three disturbing questions. Are the veterans' spokesmen rendering to these boys the best type of service of which they are capable? Are the lads themselves seeking the sort of relief that will most suit their needs? Are those Congressmen who sat there in judgment trying sincerely to meet the issues, or are they permitting their hearts to warp their judgments?

The case of the amputees is not unlike many other demands for our veterans that are phrased in bills pending before the committee, and the reception of their claims is no different from that which may be granted to similar measures. It is not easy for an elected representative of the people to look upon the victims of war and fail to accede to their wishes. Their sacrifices have been many, their wounds grievous. They were sent away to a war they did not order. They were told that when they returned nothing would be too good for them. Cost was then no consideration. It must not be now, but, we thought, wisdom exercised in a choice of legislation is of great moment, so we wondered, up there at the Capitol, just where we were heading and why. This was but a single benefit, but its implications could be applied to many another bill that has been dropped in the hopper.

Here were a dozen or so requests to extend the autos for amputees bill that went through the Congress last August as a rider on an appropriation measure. It provided $1,600 automobiles for our boys who lost, or lost the use of, both feet above the ankle. Rushed through in a breeze during the closing hours of the session by a spirited lobby made up largely of the injured veterans themselves, it had many imperfections. It was intended as a rehabilitation aid to those who needed cars to reestablish themselves in business careers. It little matters that some have variously abused their privileges, but it is of importance that the hastily conceived legislation has left behind scores of discriminations about which something must be done.

It was brought out last week that while some of the legless veterans who could pass driver tests were able to get autos, others were not; that $1,600 would supply an appropriate car in one locality and not in another; that those injured at one date were eligible, and some who lost legs earlier were out of luck; that actual loss of use of limbs was difficult of definition, and so on. Request piled upon request that the same benefits should go to those who lost arms above the wrist, to the blinded and to those who suffered paralysis. And these were only a few of the issues discussed. It is proposed in some of the bills that World War I veterans must also be included, and one wag of a Congressman suggested that Spanish War veterans should likewise be remembered. Many were the complications that evidenced themselves before the hearings were adjourned and the whole matter referred to a special subcommittee.

How measured was the thought given to the original legislation is now water over the dam. It will appear strange to many of our readers that we discuss it briefly here, because we have fought consistently over the years for proper benefits to the one class of our country's citizens that deserves special recognition over all others, and we have fought as desperately against those who find it possible in their narrow minds and flintlike hearts to deny them. Nevertheless, we must insist now that careful consideration be given to all of these bills, and to many others that like them promote uncommon advantages. We support some of the extensions sought by amputees because the precedents have been established and because no laws applying to veterans and their dependent loved ones can be permitted to be discriminatory, but we do believe that greater thought must be given to all proposals that are to be made for our service men and women, and we are sure that all veterans, their legislative representatives and those whom they send to the Congress should stop, look, and listen before they seriously pass on measures that are a far departure from a pattern of benefits which can stand the acid test of public opinion.

This Congress is economy minded. It is driving hard to curtail expenditures. Already it has demonstrated that it cares not who or what is hurt in its effort to reach a given objective, and veterans and their plans have not been unaffected. We recall the year 1933, when most of our younger veterans were still in knee pants, and when by stealth and deception another Congress was led to enact an economy act that wiped out the

then structure of veterans' laws, drove thousands of needy out of hospitals and homes and sent hundreds to premature graves by the suicide route. We have no desire to witness a repetition of those awful days. We who are experienced have no stomach to fight our way back along the long and hard reenactment trail. It is unthinkable that such a black and horrible page could ever again be written in American history, and it certainly could not come so soon after World War II, but legislation that is written now is permanently placed upon the statute books; it is not intended to be temporary. That is why we are concerned for all veterans, and for all of the widows and orphans of our comrades who lie cold in death. Economy is a nasty word when it is applied to veterans and threatens to wipe out all they have.

Legislation for the veteran class should be most carefully studied and be exact in its language. It must be soundly based so it will not encourage the resistance of nonveterans and of the more fortunate veterans who can afford to forget. We wish it understood fully that we are not opposing the bills that we point to as examples of unorthodox requests, yet we suggest as strongly as we can that unusual demands can conceivably wreck the entire structure of benefits unless they are flagged down.

Support the Labor-Union Bill

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1947

Mr. GAMBLE. Mr. Speaker, under permission granted me last week, I present for insertion in the CONGRESSIONAL RECORD an editorial which appeared in the Daily Argus, published in Mount Vernon, N. Y., entitled "Support the Labor-Union Bill":

SUPPORT THE LABOR-UNION BILL

Voters of this city and county should understand that the Hartley labor-union bill, principal features of which are outlawing of the closed shop and of industry-wide bargaining, was presented as a new bill of rights for the American worker.

Already there are strong indications that international labor leaders will endeavor to smear the bill as antilabor, whereas it really contains more protection for the individual workingman than any piece of national legislation conceived in the last decade.

This bill was adopted in the House with 74 percent of the Members in favor. That means about a 3-to-1 approval, and includes not only Republicans but Democrats. Naturally, having taken this bold step, Members of Congress now are awaiting the public reaction. They have the right to know whether their constituents feel they have acted properly.

That is why it is advisable that voters here inform our two Congressmen, RALPH A. GAMBLE, of Larchmont, and RALPH W. GWINN, of Bronxville, of their views and desires. Make no mistake about the organized pressure which will be brought upon them, including threats of reprisals, by the labor leaders. Yet a study of the bill shows clearly the protection given the worker against regimentation and rigid discipline which have handcuffed union members for years.

We recommend to all readers a careful perusal of the bill, and then that they write their Congressmen. Here is a situation wherein it is essential that the public voice be heard if we are to escape from the oppression of arrogant labor leaders.

This Is a Time for Teamwork

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. E. M. Elkin, chairman, committee on taxation and Government expenditures, Pennsylvania State Chamber of Commerce, on Monday night at the Mayflower before the Pennsylvania State Chamber of Commerce:

THIS IS A TIME FOR TEAMWORK

It is ar honor indeed to meet with you tonight and to discuss some of our economic and financial problems in this critical period. If we are to find sane solutions for these important problems, then teamwork by all of our citizens is imperative. If we are to hold the line against the forces of economic instability and financial insolvency, it can only be done by the united efforts of everyone. You, our distinguished guests, are playing a leading role in this serious drama and we, your constituents, must aid you in every way possible. This, gentlemen, is a time for real teamwork.

Ours is one of the few countries remaining, in which the fires of freedom have not been extinguished by dictators and tyrants who have capitalized upon the internal jealousies and dissensions that have split the people into weak minority factions. We owe a responsibility to ourselves and to the world to cooperate with each other in keeping our democracy alive and in preserving individual initiative and free enterprise.

Our common goal, regardless of class or party, should be a strong and prosperous America—blessed with economic stability—jobs for all who are willing and able to work—adequate rewards for the exercise of productive energy by management, labor, investors, and all other groups—and an ever rising level of living for our 140,000,000 consumers. Our foreign problems are baffling indeed, but the fear of various alien ideologies rightfully unites us against our external foes. Our domestic problems, however, are in many ways more numerous and complicated, and here each class and group, if its selfishness is not curbed by a true cooperative spirit, may endanger the equilibrium of our economy.

There is a human tendency to hope for an easy solution—a miracle that will immediately solve all of our harrassing social problems. Much as we would like deliverance from the necessity of hard and straight thinking and from the necessity, by strenuous mental and physical labor—of producing the increased flow of goods and services which are required to win the war against inflation and economic insecurity—we know in our hearts, that we must save ourselves from that predicament. This we can do only by teamwork.

BATTLING THE BUSINESS CYCLE

NOW I should like to refer to a few areas of action in which the cooperation of Government and business, and of all groups, in fact, is especially imperative.

Recently we have been hearing much concerning the specter of inflation—the high cost of living—and the imminence of a severe economic recession. There may be some justification for such thinking if the historical pattern for the adjustment of a nation's economy in a postwar period is considered. But, surely, as we progress with our understanding of the factors involved and if we are to profit by past mistakes, we may at least alleviate the impact of an economic depression if, in fact, it cannot be entirely avoided. The psychology of fear and uncertainty is as influential a factor as any in the generation of economic crises and the consequent industrial stupor and unemployment that may strike a nation low. Since the competitive free-enterprise system is based upon the mutual cooperation of all the economic elements in our society for its successful operation, it is highly sensitive to frictions of every kind—psychological, economic, and political. Obviously, where possible, these frictions should be removed.

Some Government spokesmen have lately attributed to the increased prosperity of business the blame for the present high prices. They have urged business to cut prices and at the same time have referred to the justice of the demands of labor for higher wages.

It has been my observation that businessmen generally have been working vigorously to lower costs and prices. They realize that they can find markets for their products only if the consumers possess adequate purchasing power and are willing to spend it. Businessmen well know that maximum profits over a period of years can be enjoyed only when prices are within the means of the consumers they serve. They also know that more money can be made by selling large quantities of goods at moderate prices than small quantities at high prices. It is, therefore, to the interest of the owners of business and management to keep prices down to the lowest level consistent with a reasonable return on the investment of capital and enterprising skill.

The present economic situation, as we all know, is primarily the byproduct of war financing and its inflationary manufacturing of bank credit, and the multiplication of money in the hands of consumers, at a rate faster than the output of goods and services. It is only by producing more and more goods that inflationary scarcities will be eliminated and prices will be brought down. As Bernard Baruch recently said, "The more we produce the less will be the cost of living; the more things we can buy; the easier will be the building up of our reserves—physical, financial, and spiritual, too, for we shall be free from worry, the absence of which is a sense of security." (New York Times, April 17, 1947, p. 21.)

I believe that it is idle to seek to avoid the consequences of inflation by boosting wages, the money incomes of farmers, and other compensation to our population. These artificial palliatives only temporarily relieve the feverish irritations of inflation. They eventually compel prices to rise still further and cause the purchasing power of money to depreciate to lower levels. We cannot lift ourselves by our boot straps.

Some business enterprises may be obtaining excessive profits, and business profits in the aggregate, after the payment of taxes, have recently been increasing. But investments have also increased tremendously, as have sales, and why should the investor not have increased returns and thereby gain some relief from soaring prices? In boom periods profits customarily rise rapidly, but in periods of recession they tumble swiftly. It is also a noteworthy fact, as economists have frequently observed, that the profits of the smaller concerns soar upward faster than the profits of the larger concerns in times of prosperity and they also decline faster in a depression. Even in the best years a large number of business concerns have no net income, and in years of depression the great majority of all of them have losses. Profits are the return for risk taking, and as such are notoriously uncertain.

The various standards of business earnings do not indicate that such profits are generally excessive, particularly in view of the evanescent nature of profits, the most volatile type of income. While total wage payments have declined since the war, this trend

has not been caused by the growth of business profits but is the natural result of strikes, a shrinkage in the labor force as women and other temporary war workers left the ranks of labor, and a lessening of overtime work. Wage rates, as we all know, have steadily risen since the war, and labor is now in an excellent economic position which can be preserved and even improved if the productivity of labor can be increased. It is entirely possible that there is nothing wrong with our economy which hard work and intelligent cooperation will not correct.

The high prices created by a superabundance of currency can be brought down if the Government and all important economic groups will team together to accomplish that goal. I believe we can all subscribe to the appeal of Secretary of the Treasury John W. Snyder for lower prices expressed in his editorial in the Treasury Bulletin of April. He says, "I trust that all groups—manufacturers, distributors, workers, farmers, and all others—will recognize and carry out their part in this contribution to continued national prosperity." The reference to "all groups" undoubtedly includes the Government.

Inflation knows no politics, Republican or Democrat, and we can minimize its ravages only if we all cooperate constructively in combating this scourge of mankind.

BRINGING DOWN THE BUDGET

Another challenge to our willingness and ability to cooperate in the fight for economic stability and financial solvency, is the huge Federal budget. It must be brought down to a much lower level if the pressure of inflationary spending is to be reduced and if taxes are to be greatly lightened. You are all familiar with the proposal of the President in January for a budget of $37,500,000,000 for the fiscal year 1948 and the preelection promises of many Members of Congress to bring that total down considerably and also to lower taxes and the debt. Some think that Congress never will be able to bring the budget down to $25,000,000,000 or less. Many of us, however, are more hopeful, and the Pennsylvania State Chamber of Commerce, in cooperation with other business organizations, has been urging that the budget be cut to $31,500,000,000 in 1948, subsequently to $25,000,000,000 and eventually to a much lower figure. We are not unmindful that the results may be accomplished only by eliminating extravagance and waste in the operation of our Federal Government and by the people making less demands on our Federal Government. As to this latter, not only the Pennsylvania State Chamber of Commerce, but many other State chambers throughout the country, are urgently pleading with their members and the citizens of the respective States they represent, to refrain from asking for Federal grants in aid and to restrict their demands to only those of vital necessity. We hope that local chambers of commerce can be persuaded to follow this laudable example. It is also urged that both the huge Federal debt and the taxes on individuals and business should be cut concurrently. Is this program an unreasonable one?

It is a choice here between spending at a fast rate and maintaining the present heavy taxes, or spending at a slower rate and reducing taxes while simultaneously reducing the debt.

It has been said by those opposing tax reduction that this is inflationary. Apparently it is assumed that any money saved in taxes would immediately be entirely spent. This is not necessarily true. We do know, however, that the money collected by the Government in taxes really will be put in circulation.

The reduction, or elimination of certain taxes, moreover, would lower business costs and thereby operate to lower prices. This in turn should lessen the pressure for higher wages. Tax reduction for individuals would also increase the rewards to wage earners and risk takers, too, for the successful venturing of their capital in productive opportunities.

Those who have opposed tax reduction because it would be inflationary have, strangely enough, not opposed the high rate of Government spending as an inflationary influence. But Federal spending bids up the demand for labor and materials, prevents the faster retirement of the debt, and speeds the inflationary spiral. Such spending requires the continuance of our present onerous taxes and discourages the exertion of workers, managers, and others to increase output and overcome the scarcity of goods and services. I am convinced that many of those who oppose tax reduction because it is inflationary, are really opposing it because they wish to maintain a high level of spending. I believe that they are not correctly informed as to the preferences of the citizens for tax and debt reduction in preference to a spendthrift budget.

It is an exceedingly difficult task to cut a budget when those responsible are importuned by office holders, department heads, and other persons who find it to their selfish advantage to pour out vast amounts of Federal money, but it can be cut and it should be cut.

Those of us who do not live in Washington are always impressed with the fact that the spending pressures seem to prevail here in the thinking of almost everyone, and the taxpayers are so far away that the burdens placed upon them by a big budget appear to be of little importance. The time has come, in my opinion, for a change of attitude, for an appreciation of the tax consequences of Federal spending.

TEAMWORK WILL REDUCE TAXES AND THE DEBT

My remarks here are not directed simply to those in Congress. They are directed to all of us, because in the final analysis we must all share responsibility for governmental spending. We can have more efficient and economical government if we insist upon it, and I think that we as citizens have been negligent in not telling our Senators and Representatives more frequently what we folks back home are thinking about. We have also been negligent in not praising them when they do a splendid job, sometimes under the most trying circumstances.

One of the crying needs of the times is for our citizens to take a greater interest in their governments at all levels. This lack of interest on the part of most of us, is without question a deep tragedy and, as long as I have a voice, I shall put it to use to shame those who enjoy the benefits of our wonderful system without making the slightest effort for its preservation. I say to you that we cannot expect an efficient and economical government unless a larger number of our citizens come to the aid of government.

It seems to me to be silly to argue whether taxes or the debt should first be reduced. If we fail to lower taxes, we shall have to accept more inflationary Federal spending, and if we fail to lower the debt we shall continue to be haunted by its problems.

The Pennsylvania State Chamber of Commerce is in sympathy with the personal income-tax reduction contemplated by the House of Representatives.

We believe that extensive tax revision will be both highly desirable and feasible in 1948, and that we should plan now the stable structure of an adequate tax system which will be moderate and equitable in its burdens. The advantages of such a tax system can be obtained if we have the wisdom and courage to cut Federal spending to a more rational level.

Tax reduction in 1948 should provide lower taxes on corporations, as well as on individuals. It will then be time to drop the loss carry-back and to extend the loss carry-forward to cover a much longer period, to allow more reasonable deductions for depreciation, obsolescence, and developmental expenses, to establish a more favorable tax climate for small business, and to remove the penalty taxes on intercorporate dividends and consolidated returns.

The double taxation of dividends, first as corporate and later as personal income, should be alleviated by allowing to investors a credit, at a rate equivalent to the initial rate of the income tax, for the taxes previously paid by corporations on the income going into dividends.

The present inequity in the taxation of the income of married couples in community and noncommunity property States should be removed. Proposals are being advanced in Pennsylvania and other States to correct this inequity by State action, but it would be preferable for Congress to eliminate it by a uniform national law.

While selective excises should be retained to raise substantial revenues, certain discriminatory, obnoxious, and inconvenient taxes should be removed and excessive tax rates should be lowered.

Finally, the estate and gift taxes should be reduced substantially.

This, gentlemen, is a brief summary of the Federal tax program recommended by the Pennsylvania State Chamber of Commerce. While tax reforms will not by themselves guarantee a lasting prosperity, they will be of material benefit in creating a tax environment favorable to high-level employment, production, and consumption. State and local government spending and taxation, which were arrested during the war, have begun to mount again. Unless the Federal Government brings its inflated finances back to a level the taxpayers can afford to maintain, the general financial situation will weaken and not improve.

You have been very kind in listening to my discussion of a few serious national problems, and I deeply appreciate your willingness to meet with us and to learn of our objectives and activities. I believe we can overcome the problems of the variations in the business cycle and of Federal spending, taxing, and borrowing by teamwork. I, therefore, invite our two great political parties and all groups and classes to unite in the march toward our common goal of a stronger and more prosperous America. In the language of our popular national pastime, one may now say, "Play ball, America!"

Smith Avenue School, Norwich, Conn.

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. SEELY-BROWN. Mr. Speaker, I am sure all of my colleagues join with me in welcoming to Washington the members of the eighth grade of the Smith Avenue School of Norwich, Conn.

This first visit to Washington for these fine young people was made possible by their own habits of industry and saving. Their desire to work and save so that they might enjoy fully the benefits of their industry is in keeping with the traditional spirit which has made this country a great Nation. These youngsters have set a good example for our entire Nation.

I am pleased to include the names of the pupils making this visit and the name of the faculty advisor. Miss Mary M. Barry, principal; Phyllis Anderson, Jean Danilowicz, Joan Weir, Zeta Shillo, Mary Ann Kirker, Nancy Brantigam, Richard Maynard, and Fred Johnson.

Democratic Gains in Wisconsin

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. BLATNIK. Mr. Speaker, under leave granted, I wish to insert in the RECORD three editorials from the Madison (Wis.) Capital Times of April 23, 1947, and an editorial from the Milwaukee Journal which was reprinted in the Capital Times, all commenting on the recent congressional election in the Second District of Wisconsin:

THE SIGNIFICANCE OF YESTERDAY'S CONGRESSIONAL RACE

The phenomenal run by Carl W. Thompson, Democratic candidate for Congress in the special election of yesterday, is one of the most significant political developments in recent years.

In a district which has elected only one Democrat to Congress since the turn of the century and which was considered safely in the bag for the Republican candidate this time, Thompson came within a thousand votes of being elected. The unofficial complete returns were: Davis, 24,124; Thompson, 23,181.

The race was in doubt up until the last 15 of the district's 317 precincts came in. Davis was saved by a heavy majority cast in his own home county of Waukesha. Thompson was given a thumping majority in Dane County, which he carried almost 2 to 1. He showed surprising strength in Dodge, Jefferson, and Columbia Counties, which normally vote conservative Republican.

The strong race made by Thompson is a stunning blow to Republicans and a surprise to the country. In a normal Republican district a Democratic candidate standing on progressive principles came within a handful of votes of reversing the national Republican trend demonstrated so resoundingly in the elections of 1946. The result will have a shattering effect on the smugness of Republican leaders who believed the trend was still running their way and who confidently assumed that the Second District race was in the bag.

Thompson's amazing race was made in uphill climb all the way. He started late and without organization. He was given little chance even to qualify in the April 1 primary. After he had the primary hurdle out of the way he had three short weeks in which to organize and conduct his campaign in the five counties of the district.

His fight was against the formidable and smoothly functioning Republican machine of Boss Coleman, which has had little trouble in this district in recent years. He faced a hysteria of Red baiting and witch hunting which is running strong against men who are talking the progressivism he talked in the campaign.

Yet, he was able to make the remarkable showing he did. He was able to cut down the margin of Republican vote in this district of last November from a 65 to 35 ratio to a 51 to 49 ratio. He came within a few votes of scoring an upset that would have astounded the Nation. He polled a vote that will be heard as ominous thunder in the high councils of republicanism.

A TRIBUTE TO CARL THOMPSON

The phenomenal showing of Carl W. Thompson in yesterday's election was a stirring tribute to the young Staughton attorney who has just recently returned from service in the Army to resume civilian life.

His campaign was in the best tradition of American democracy. He took to the people a campaign based on the outstanding issues of the day on which he took a firm and unequivocal stand. It was on those issues—the principles of progressivism which Franklin D. Roosevelt took to the people—that he asked for support.

His campaign was a refreshing one in a day when candidates are attempting to sell themselves to the voters without making known their stands on current issues. Thompson's Republican opponent conducted his campaign according to the current standards. He ducked, equivocated and pussyfooted. No one knew where he stood.

Thompson's remarkable race demonstrates again that people will respond to a straightout appeal on issues. It shows that a liberal, progressive movement is still alive in this State and will rally to a man who will stand by principles regardless of what party he chooses as his vehicle. His race is the answer to the Progressive defeatists and bandwagon riders who went back to the Republican Party with the alibi that Progressives would not vote Democratic. He has shown that Progressives, independents and liberals will vote anywhere there is a man who stands on their principles.

In its original editorial endorsing Carl Thompson's candidacy, the Capital Times declared: "We believe that the forward-looking people of this State should now be making plans for the day when the people of Wisconsin will be looking for new leadership. We believe that the people of Wisconsin are still essentially liberal in their thinking and outlook."

The Capital Times declared then that the liberals of this State must look to young, idealistic men in the State for leadership—men who are "endowed with ability, idealism, and determination."

Yesterday one of those young men demonstrated his fitness to take a part in the leadership that is needed. The Capital Times is proud to have played a part in the fine, inspiring job Carl Thompson has done for the Progressives of this district and State.

DANE COUNTY HOLDS FAST

Dane County, as usual, struck its blow for progressivism in yesterday's election. The cradle of the Progressive movement in Wisconsin, Dane County, for years has been the banner county in the Progressive fight for liberal, forward-looking government.

Yesterday was no exception. The voters of Dane County gave Thompson 15,767 votes and Davis 8,907—a margin of almost two to one.

Labor in Madison worked hard for Thompson and turned out a fine vote, for which great credit is due some of the leaders who rolled up their sleeves and went to work. Thompson ran well in rural Dane County, too. It was too bad, however, that a heavier vote did not get out.

In some of the tobacco areas of the county where farmers have been objecting to the low prices for their crops there was an exceedingly low vote, although the vote that was cast was strong for Thompson. A little more effort in this county would have given the district liberal, independent representation in Congress.

LESSONS FROM SECOND DISTRICT
(From the Milwaukee Journal)

The result of Tuesday's second district congressional election should be a stiff eyeopener for the leaders of the Republican Party in Wisconsin.

It should disabuse them of the overconfident assumption that they have this State in the bag, and that the opposition is futile. It should indicate to them that the people are getting tired of machine politics, expenditure of excessive sums of money, a lobby infested legislature, and a general fumbling all along the line.

In a district that traditionally is overwhelmingly Republican, the Republican candidate for Congress, backed by the plentiful funds and influence of the Thomas E. Coleman machine, narrowly nosed out a former Progressive running as a Democrat and making his first try for an important office.

Certainly the vote was small and the Republican campaign suffered a let down after a hard primary battle, but election apathy cuts two ways. There is no proof that a much larger turn-out would have had a different final result. The simple fact remains that the Republican vote dropped off 17,000 from the primary and the Democratic vote increased by 11,000. The Democratic vote in the district was 49 percent of the total on Tuesday, as compared to only 36 percent last fall.

The trend in the second district follows a national trend, as evidenced in the Chicago mayoralty election and other elections. The Democrats have been coming back since November. This indicates that next year's Presidential contest will be a spirited one—one that will awaken the people to the issues and constitute a much needed national referendum.

Mr. Thompson's strong showing against Mr. Davis indicates that Wisconsin is not in too much danger of becoming a one-party State; that the people are alert to the dangers of control by one man, one machine or one party. It shows that liberalism is not dead in the State.

Ambassador Kyle Is Great Aid to Agriculturists

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. TEAGUE. Mr. Speaker, it was indeed gratifying to me to learn recently of the many accomplishments Ambassador Edwin C. Kyle has achieved with agriculturists in Guatemala. I am quite familiar with his many good deeds at the Agriculture and Mechanical College of Texas when he was dean of the school of agriculture. I was one among many Texans who benefited from his great knowledge of agriculture as a student there.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Douglas Meador concerning Ambassador Kyle which appears in the Bryan Daily Eagle, Bryan, Tex., of April 24, 1947:

AMBASSADOR KYLE GOOD NEIGHBOR IN ACTION, SAY GUATEMALANS; IS GREAT AID TO AGRICULTURISTS

(By Douglas Meador)

Edwin C. (Dean) Kyle, former dean of Texas A. & M. College and now United States Ambassador to Guatemala, is a good neighbor in action.

Kyle, tall, genial, and soft-spoken, is using his great knowledge of agriculture to aid this Latin-American country.

When he arrived in Guatemala, he seemed to ignore the social aspects of his office to the extent that some of his wealthy countrymen

visiting in the Republic were alarmed. His heart, experiences, and energies, and the resources of his country, were directed to the rich soil, 60 inches of rainfall, planting seed, farming equipment, erosion, and other factors that affect the two and one-half million Mayan Indians as well as the half-million people of other races who comprise Guatemala's population.

Kyle asked no favors. Perhaps few men in the entire United States were better qualified than this dean of agriculturists to render so great a service. He is still Dean Kyle except to those who want to use the more impressive term of "Ambassador." He is loved by Guatemalans.

NOT OFTEN BALKED

Two questions cause him to use diplomatic answers; all others are quick and easy. It requires time to explain why Texas is not still a republic since it is five times the size of Guatemala It almost requires a change of subject when someone asks him why the United States, richest Nation on earth, owes over $200,000,000,000, while Guatemala, which has no coal or oil, few resources, and limited manufacturing, owes not a single quetzal in national debt.

Until air lines spanned the deep canyons, torrential rivers, jungles, and cloud-piercing mountains of Guatemala, few inhabitants had heard of Texas.

Those who traveled went by boat either to the west coast or to the east coast of the United States. Then the great silver birds began leaving visitors at Guatemala City's modern air depot and Guatemalans began to ride the planes. They landed at Houston, Brownsville, and Corpus Christi, and it was then that they discovered Texas.

RENDERS GREAT AID

Flying in and out of Texas, Guatemalans learned that thousands lived in the great modern cities, on the broad plains, on the farms, ranches, and oil fields, who spoke the same language as Ambassador Kyle and who, although perhaps not being able to speak Guatemalan (Spanish), spoke a language of friendship, sincerity, and good will; men who looked you in the eye and said what was in their hearts and their hearts were in what they said. Guatemalans like those who visit from the United States in general, and those from Texas in particular.

Carlos Dorion, native Guatemalan and one of the wealthiest men in the republic, said, "Dean Kyle is doing more to improve the conditions of Guatemala than all the other ambassadors have done in a hundred years." Enrique Asturias, who recently transported an entire flock of sheep from Texas to Guatemala by plane, said the same thing.

Since Guatemala's chief exports are coffee, bananas, and chicle, Dean Kyle is at a loss to understand why better trade relations cannot be established between the United States and the diminutive republic. Certainly there can be no conflict in the products of the two nations. There is no difference in money exchange. One quetzal is worth one dollar. Guatemala needs many things produced in the United States and this fabulous republic to the north is already buying most of the export products of Guatemala.

CAN PICK TEXANS

Ambassador Kyle can almost always pick a native Texan visiting his office, by the look of interest at a certain picture. It is the Alamo. It hangs above a small table on which are many trophies, including pictures of boys whom their fathers, former A & M students, have named for the dean.

Kyle is proud of the splendor of the embassy—its stained glass windows, great mahogany doors, inlaid and tile floors, the thick white wool rug in the banquet room, the solid silver chandeliers and engraved ebony-black mahogany cabinets containing silver services.

He will show you the sunroom, the fountain and the patio. He will tell you to pick some coffee berries from a coffee tree conveniently close. (He will not tell you, perhaps because he doesn't know, that the California fruit frontier men will take the coffee berries away from you.) With pride he will show you a small copper-bound keg in which one strawberry vine provides him many a bowl of luscious fruit.

PEPPER PLANT AND SADDLE

He will also show you a potted pepper plant that produces far more red pods than even the embassy household can consume. With a trace of shyness, the Ambassador to Guatemala will show you the exquisitely hand-stamped saddle, tooled in black leather and mounted in silver, which an admirer presented him. The saddle tree was ordered from Texas and the saddle made by one of Guatemala's most expert craftsmen.

Esteem of the government for Ambassador Kyle is contained in the following excerpts from a letter to him from Guatemala's President Juan Jose Arevalo: "Your personal impressions are an indication of your friendly, sensitive nature, as well as your deep-rooted democratic convictions and your noble sentiments of affection and understanding for Guatemala * * * and I state a truly national sentiment in expressing to you the gratitude of Guatemala, where the living masses as well as the government which represents them and which I have the honor to preside over, know full well that in you they have a loyal and sincere friend, a great democrat, and genuine spokesman for the heroic American people, whose love of liberty has twice in modern history prevented slavery in the world of men.

HAND ON SHOULDER

The distinguished, greying ambassador will probably place his hand on your shoulder and walk down the embassy steps with you to the waiting taxi. The dozing driver will wake, make a sign to the religious image secured to the left of his wheel, and step on the starter.

His English and your Spanish will fuse in a deadlock over the charge—and then you will remember that the gasoline his coughing motor is trying to consume costs 47 cents per gallon—and you will agree that two quetzal is not too much. You will feel at ease regarding the relationship and the good-neighbor policy between the United States and at least one Central American republic.

In a moment of desperation you may wonder why this Nation has produced only one Dean Kyle.

Visit of the President of Mexico

EXTENSION OF REMARKS

OF

HON. JOHN E. LYLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. LYLE. Mr. Speaker, the United States is honored by the visit of the President of the great Republic of Mexico. I am sure that all of us appreciate the friendliness of our southern neighbor and the cooperation that she has extended to us throughout the years.

I sincerely hope that the President of Mexico and his official party will realize and feel the warm friendliness which we have for him and the people of his country.

We sincerely hope that he will enjoy his visit and that it will further strengthen the ties that bind us.

Another Appraisal of Truman's Scheme for American Unilateral Interference in the Affairs of Other Lands

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1947

Mr. BUFFETT. Mr. Speaker, the following is from the April bulletin Analysis, edited by Frank Chodorov. He points out how Truman's Greek-Turkish intervention scheme will actually promote communism:

A BYZANTINE EMPIRE OF THE WEST?

* * * * *

If we don't help Greece and Turkey, we are told, European culture must give way to this horrible communism. But the fact which that scarehead obscures, and which is sustained by a mounting mass of evidence, is this: Communism is already the religion of Europe.

It is the desperation of hopeless poverty which makes converts to communism, and to this desperation our national policy has made its contribution. By preventing the people from producing, by destroying the tools of production, by condoning wholesale robbery and the rooting up of populations, our politicians and our generals are the unwitting missionaries of communism.

If we would kill that strange cult, we must abandon the policy which creates the conditions on which it thrives. Bayonets, or dollars to pay for bayonets, will only aggravate the conditions. The only antidote to communism is to let the people of Europe produce and exchange.

* * * * *

Above all, we must take our armies off their backs. The way to stop communism, to put it briefly, is to let the people alone.

If it is argued that such a hands-off policy does not take into account the ruthless and malevolent Russian military machine, that our departure from the scene would leave the people its helpless prey, let us admit the possibility of that consequence and consider the outcome.

Suppose Russia imposes on the peoples of Europe the slavery conditions prevailing within her borders. Without arguing the point that these conditions have so reduced her own economy that the robbery of subject peoples has become a policy of necessity, we must admit as a matter of experience that slaves are poor producers, and we can predict the collapse of communism in Europe from lack of production.

There is the added fact that, unlike the Russians, Western Europe did experience a measure of freedom, the memory of which will engender subversive activity, further slowing up the productive machinery. In short, the slave economy will bring about primitive conditions (such as Morgenthau envisioned), and the vulture state will die from lack of sustenance.

It is poor prospect for the next generation of Europeans, to be sure, but is it any worse than another war? Something might survive a spell of communism, while the result of another war, no matter which side wins, will be annihilation.

* * * * *

Thus, even if we accept at face value the worst forebodings our empire builders dish up, reason tells against carrying the fight to the Communist's lair. There is, however, an even more vital argument in favor of minding our home affairs.

If we go along with this poking into the business of Europe, what will happen to the liberty we have left in America? Already there is a Red witchhunt afoot, and experience tells us that when the exigencies of the situation require it the definition of "Red" will include every person who raises his voice against the going order. Mass hysteria will conveniently support such a definition. So that, in the shadow of the impending emergency, the outlines of a crowded concentration camp can already be detected.

If war comes—and when did imperialism not bring it?—the worst of what we call communism will come with it. The essential dogma of this creed is that the individual exists only for the purposes of the State. In that respect it must be identified with all other forms of statism, from pharaoism to nazism.

Now, when the existence of the state is at stake, even the fiction of individual liberty cannot be tolerated. This is particularly true under the totalitarianism necessitated by modern warfare. Therefore, when our imperialism comes to grips with the empire of the commissars, the very thing we are presumably fighting to preserve will go by the board. Automatically, our liberties will vanish into—communism.

This is what your historic periscope should show you. But, since history is what people make it, the smash-up which the lens suggests is not inevitable. What men can do, men can undo. We—you and I—can help to prevent it, if we will but assume the responsibility and accept the consequences. Even a losing fight for liberty is worth while, for there is always the profit of self-respect to be had.

Work of the House of Representatives So Far in the Eightieth Congress Through April 30, 1947

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. WOODRUFF. Mr. Speaker, the people of this country have been misled by the misinformation given to the public by those who would willfully wreck the Republican congressional program. They have termed this Congress the "do-nothing Congress." The facts disclose the opposite is true. Therefore, it seems timely to lay these facts before the country, especially as regards the activities of the House of Representatives.

With this thought in mind, I have secured from the Clerk of the House a detailed statement covering our work during this Congress up to and including this day of our Lord, Wednesday, April 30, 1947. In pondering the following facts, we should not forget the time necessarily spent in the reorganization of the two legislative bodies, made mandatory by the Reorganization Act of 1946. This delayed legislative work for approximately 3 weeks. Taking this into consideration, I believe the records will disclose the fact no House of Representatives during my many years of service in this body has made the progress and disposed of the business of the House as expeditiously as has been done under the able leadership of the Republican Speaker, the Honorable JOSEPH W. MARTIN, JR., and the able leader of the House, the Honorable CHARLES A. HALLECK.

I include as a part of my remarks the data supplied by the Clerk of the House of Representatives, John Andrews:

WORK OF THE HOUSE OF REPRESENTATIVES SO FAR IN THE EIGHTIETH CONGRESS THROUGH APRIL 30, 1947

Despite the handicap of having to reorganize the entire committee structure and much of the legislative procedure because of the Reorganization Act adopted in the last Congress, the House of Representatives has compiled an impressive work record and has built up a tremendous backlog of committee work accomplished which has not yet reached the floor of the House. Months of committee hearings have been and are being held, and the results of that work will pour a large amount of needed legislation onto the floor of the House for consideration of that body.

In the field of major legislation, aside from the appropriation bills for the operation of the Army, Navy and other departments of Government, the House has completed and passed bills providing for:

1. Reduction of individual income-tax payments.
2. Increasing amount of sugar available for homes and providing for termination of controls.
3. Labor-Management Relations Act, 1947.
4. Portal-to portal pay limitation. Conference report filed in the House and full agreement has been reached by the conferees.
5. Amendment to the Constitution to limit the tenure of the President to two terms.
6. Set a top limit on the Federal Budget at a figure considerably below that requested by the President.
7. Readjusted excise taxes.
8. Relief assistance to people of war devastated countries.
9. H. R. 3203: A bill relative to maximum rents on housing accommodations to repeal certain provisions of Public Law 388, Seventy-ninth Congress, and for other purposes (housing and rent controls). House will continue consideration tomorrow, May 1, 1947.
10. Conference report on first deficiency appropriation bill, H. R. 2849, containing, among other items, funds for payments to veterans under the G. I. bill, agreed to in House today, April 30, 1947.

The statistics of work so far accomplished follow:

Public Laws	41
House bills reported and passed the House	124
House bills reported and pending	64
House joint resolutions reported and passed the House	15
House joint resolutions reported	4
Senate bills reported and passed the House	15
Senate bills reported and pending in the House	4
Senate joint resolutions reported and passed the House	7

Of the above categories, 73 bills and joint resolutions were for the relief of individuals and corporations, and are not hereafter listed by title.

Five major appropriation bills for the departments of Government have passed the House, of which two have passed the Senate and one has become a law.

Bills in various stages of progress through the Congress with relation to House action thereon are listed as follows by numbers and titles:

HOUSE BILLS WHICH HAVE BECOME LAWS

H. R. 731: To establish the Theodore Roosevelt National Park; to erect a monument in memory of Theodore Roosevelt in the village of Medora, N. Dak.; and for other purposes. Public Law 38.

H. R. 1030: To continue in effect certain war excise tax rates, and for other purposes. Public Law 17.

H. R. 1040: To authorize the payment of $425.88 by the United States to the Government of Switzerland. Public Law 14.

H. R. 1240: To provide for the suspension of navigation and vessel-inspection laws as applied to vessels operated by the War Department upon the termination of title V, Second War Powers Act, 1942, as amended. Public Law 28.

H. R. 1327: To amend existing law to provide privilege of renewing expiring 5-year level-premium-term policies for another 5-year period. Public Law 34.

H. R. 1353: To amend the National Service Life Insurance Act of 1940, as amended. Public Law 5.

H. R. 1621: Boy Scouts of America world jamboree. Public Law 31.

H. R. 1713: To provide for the promotion of substitute employees in the postal service, and for other purposes. Public Law 35.

H. R. 1778: To amend the Federal Firearms Act. Public Law 15.

H. R. 1968: Making appropriations to supply urgent deficiencies in certain appropriations for the fiscal year ending June 30, 1947, and for other purposes. Public Law 20.

H. R. 1943: To establish a permanent Nurse Corps of the Army and Navy and to establish a Women's Medical Specialist Corps in the Army. Public Law 36.

H. R. 2045: To amend the Federal Food, Drug, and Cosmetic Act of June 25, 1938, as amended, by providing for the certification of batches of drugs composed wholly or partly of any kind of streptomycin, or any derivative thereof, and for other purposes. Public Law 16.

H. R. 2102: To provide for a 6 months' extension and final liquidation of the farm-labor-supply program, and for other purposes.

H. R. 2413: To amend the Federal Reserve Act, and for other purposes.

HOUSE JOINT RESOLUTIONS WHICH HAVE BECOME LAWS

House Joint Resolution 57: Extending for 7 months the period of time during which alcohol plants are permitted to produce sugars or sirups simultaneously with the production of alcohol. Public Law 2.

House Joint Resolution 76: Authorizing the Commandant of the United States Coast Guard to waive compliance with the navigation and vessel-inspection laws administered by the Coast Guard. Public Law 27.

House Joint Resolution 114: To continue the authority of the Maritime Commission to operate vessels until July 1, 1947. Public Law 6.

House Joint Resolution 118: To strengthen the common defense by maintaining an adequate domestic rubber-producing industry. Public Law 24.

House Joint Resolution 121: Granting, in the case of income, estate, and gift taxes, deductions for contributions to the United Nations. Public Law 7.

House Joint Resolution 122: To authorize the United States Maritime Commission to make provision for certain ocean transportation service to and from Alaska until July 1, 1948, and for other purposes. Public Law 12.

House Joint Resolution 146: To extend the powers and authorities under certain statutes with respect to the distribution and pricing of sugar, and for other purposes. Public Law 30.

House Joint Resolution 154: Making an appropriation for expenses incident to the control and eradication of foot-and-mouth disease and rinderpest. Public Law 22.

House Joint Resolution 159: Making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1947, and for other purposes. Public Law 25.

HOUSE BILLS WHICH HAVE PASSED BOTH HOUSES BUT HAVE NOT BECOME A LAW

H. R. 2157: To define and limit the jurisdiction of the courts, to regulate actions arising under certain laws of the United States, and for other purposes.

H. R. 2404: To suspend certain import taxes on copper.

H. R. 2849: Making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1947, and for other purposes.

HOUSE JOINT RESOLUTIONS REPORTED AND PASSED HOUSE

House Joint Resolution 27: Proposing an amendment to the Constitution of the United States relating to the terms of office of the President.

House Joint Resolution 90: To correct an error in the act approved August 10, 1946 (Public Law 720, 79th Cong., 2d sess.), relating to the composition of the Naval Reserve.

House Joint Resolution 92: Authorizing the presentation of the Distinguished Flying Cross to Rear Adm. Charles E. Rosendahl, United States Navy.

House Joint Resolution 116: To correct technical error in the act approved August 12, 1946 (Public Law 723, 79th Cong., 2d sess.).

House Joint Resolution 140: To restore the name of Hoover Dam.

House Joint Resolution 153: Providing for relief assistance to the people of countries devastated by war.

HOUSE BILLS REPORTED AND PASSED HOUSE

H. R. 1: To reduce individual income-tax payments.

H. R. 4: To safeguard the admission of evidence in certain cases.

H. R. 173: To authorize the sale of certain public land in Alaska to Victory Bible Camp Ground, Inc.

H. R. 193: To amend section 35 of the Mineral Leasing Act of February 25, 1920 (41 Stat. 437; 30 U. S. C., sec. 191), as amended.

H. R. 197: To transfer part of block 14 and the school building thereon of Petersburg town site, Alaska, used for school purposes, to the town of Petersburg, Alaska.

H. R. 236: To amend the Nationality Act of 1940 so as to permit naturalization proceedings to be had at places other than in the office of the clerk or in open court in the case of sick or physically disabled individuals.

H. R. 450: Providing for the conveyance to the town of Marblehead, in the State of Massachusetts, of Marblehead Military Reservation for public use.

H. R. 490: Providing for the appointment of a United States commissioner for the Big Bend National Park in the State of Texas, and for other purposes.

H. R. 492: To authorize the juvenile court of the District of Columbia in proper cases to waive jurisdiction in capital offenses and offenses punishable by life imprisonment.

H. R. 493: To amend section 4 of the act entitled "An act to control the possession, sale, transfer, and use of pistols and other dangerous weapons in the District of Columbia," approved July 8, 1932 (sec. 22, 3204 D. C. Code, 1940 edition).

H. R. 495: To amend the Code of Law for the District of Columbia.

H. R. 597: To protect American agriculture, horticulture, livestock, and the public health by prohibiting the unauthorized importation into, or the depositing in the territorial waters of, the United States of garbage derived from products originating outside of the continental United States, and for other purposes.

H. R. 603: To amend an act of September 27, 1944, relating to credit for military or naval service in connection with certain homestead entries.

H. R. 729: To provide that the United States District Court for the Western District of Virginia shall alone appoint the United States commissioner for the Shenandoah National Park.

H. R. 804: Authorizing the reduction of certain accrued interest charges payable by the Farmers' Irrigation District, North Platte project.

H. R. 828: For the relief of the State Compensation Insurance Fund of California.

H. R. 1030: To continue in effect certain war excise tax rates, and for other purposes.

H. R. 1040: To authorize the payment of $425.88 by the United States to the Government of Switzerland.

H. R. 1098: To authorize the segregation and expenditure of trust funds held in joint ownership by the Shoshone and Arapaho Tribes of the Wind River Reservation.

H. R. 1099: To declare that the United States holds certain lands in trust for the Minnesota Chippewa Tribe.

H. R. 1203: To provide compensation to persons performing the duties of postmasters at post offices of the fourth class during annual and sick leave of the postmasters.

H. R. 1240: To provide for the suspension of navigation and vessel-inspection laws, as applied to vessels operated by the War Department, upon the termination of title V, Second War Powers Act, 1942, as amended.

H. R. 1327: To amend existing law to provide privilege of renewing expiring 5-year level-premium-term policies for another 5-year period.

H. R. 1350: To amend the act entitled "An act to establish a National Archives of the United States Government, and for other purposes."

H. R. 1353: To amend the National Service Life Insurance Act of 1940, as amended.

H. R. 1358: To amend the act entitled "An act to provide for the management and operation of naval plantations outside the continental United States," approved June 28, 1944.

H. R. 1359: To amend the act of August 29, 1916 (39 Stat. 556), as amended, so as to increase the total authorized number of commissioned officers of the active list of the Corps of Civil Engineers of the Navy.

H. R. 1363. To amend further the Pay Readjustment Act of 1942, as amended.

H. R. 1365. To establish a Chief of Chaplains in the United States Navy, and for other purposes.

H. R. 1366: To facilitate procurement of supplies and services by the War and Navy Departments, and for other purposes.

H. R. 1367: To authorize the construction of experimental submarines, and for other purposes.

H. R. 1368: To include civilian officers and employees of the United States naval government of Guam among those persons who are entitled to the benefits of Public Law 490 of the Seventy-seventh Congress, approved March 7, 1942 (56 Stat. 143), as amended, and for other purposes.

H. R. 1369: To amend the act entitled "An act providing for the reorganization of the Navy Department, and for other purposes," approved June 20, 1940, to amend the act entitled "An act authorizing the President to appoint an Under Secretary of War during national emergencies, fixing the compensation of the Under Secretary of War, and authorizing the Secretary of War to prescribe duties," approved December 16, 1940, as amended, and for other purposes.

H. R. 1375: To further amend section 10 of the Pay Readjustment Act of 1942, so as to provide for the clothing allowance of enlisted men of the Marine Corps and Marine Corps Reserve.

H. R. 1376: To amend the acts of October 14, 1942 (56 Stat. 786), as amended, and November 28, 1943 (57 Stat. 593), as amended so as to authorize transportation of dependents and household effects of personnel of the Navy, Marine Corps, and Coast Guard to overseas bases.

H. R. 1381: To amend the act of July 20, 1942 (56 Stat. 662), relating to the acceptance of decorations, orders, medals, and emblems by officers and enlisted men of the armed forces of the United States tendered them by governments of cobelligerent nations or other American republics.

H. R. 1448: To amend section 7 of an act making appropriations to provide for the government of the District of Columbia for the fiscal year ending June 30, 1903, and for other purposes, approved July 1, 1902.

H. R. 1514: For the relief of certain disbursing officers of the Army of the United States, and for other purposes.

H. R. 1584: Authorizing the erection and operation of a memorial museum and shop on the Fort Hall Reservation, Idaho.

H. R. 1605: To amend the act approved December 28, 1945 (59 Stat. 663), entitled "An act to provide for the appointment of additional commissioned officers in the Regular Army, and for other purposes," as amended by the act of August 8, 1946 (Public Law 670, 79th Cong.).

H. R. 1621: To authorize the Secretary of War to lend War Department equipment and provide services to the Boy Scouts of America in connection with the World Jamboree of Boy Scouts to be held in France in 1947; and to authorize the Commissioner of Internal Revenue to provide exemption from transportation tax; and further to authorize the Secretary of State to issue passports to bona fide Scouts and Scouters without fee for the application or the issuance of said passports.

H. R. 1636: To amend section 6 of the act entitled "An act to reclassify the salaries of postmasters, officers, and employees of the Postal Service; to establish uniform procedures for computing compensation; and for other purposes," approved July 6, 1945, with respect to the application of such section to rural carriers. (S. 547 passed in lieu.)

H. R. 1713: To provide for the promotion of substitute employees in the postal service, and for other purposes.

H. R. 1777: To amend section 1 of the Federal Power Act, with respect to the term of office of members of the Federal Power Commission.

H. R. 1778: To amend the Federal Firearms Act.

H. R. 1819: To authorize the Secretary of Agriculture to cooperate with other American countries in control and eradication of foot-and-mouth disease.

H. R. 1844: To authorize the Administrator of Veterans' Affairs to grant easements in lands belonging to the United States under his supervision and control, and for other purposes.

H. R. 1888: To incorporate the AMVETS, American Veterans of World War II.

H. R. 1943: To establish a permanent Nurse Corps of the Army and the Navy and to establish a Women's Medical Specialist Corps in the Army.

H. R. 1968: Making appropriations to supply urgent deficiencies in certain appropriations for the fiscal year ending June 30, 1947, and for other purposes.

H. R. 1975: To amend subsection (c) of section 19 of the Immigration Act of 1917 and subsection (a) of section 338 of the Nationality Act of 1940.

H. R. 1997: To provide seniority benefits for certain officers and members of the Metropolitan Police force and of the Fire Department of the District of Columbia who are veterans of World War II and lost opportunity for promotion by reason of their service in the armed forces of the United States.

H. R. 1998: To amend section 48 of the Criminal Code relating to the receiving of stolen public property.

H. R. 2032. To preserve the continuity of residence in the United States for naturalization purposes in the cases of alien residents who departed for service in Allied armed forces during the Second World War.

H. R. 2045: To amend the Federal Food, Drug, and Cosmetic Act of June 25, 1938, as amended, by providing for the certification of batches of drugs composed wholly or partly of any kind of streptomycin, or any derivative thereof, and for other purposes.

H. R. 2102: To provide for a 6 months' extension and final liquidation of the farm labor supply program, and for other purposes.

H. R. 2109: To amend section 1003 (b) of the Civil Aeronautics Act of 1938, as amended.

H. R. 2123: To amend the Locomotive Inspection Act of February 17, 1911, as amended.

H. R. 2183: Providing for the conveyance to the city of Detroit, Mich., of that portion of the Fort Wayne Military Reservation determined to be surplus to the needs of the War Department.

H. R. 2336: To amend section 327 of the Communications Act of 1934 so as to permit, subject to certain conditions, the use of Coast Guard radio stations for the reception and transmission of commercial messages.

H. R. 2339: To amend the act entitled "An act authorizing the designation of Army mail clerks and assistant Army mail clerks," approved August 21, 1941 (55 Stat. 656), and for other purposes.

H. R. 2369: Providing for the suspension of annual assessment work on mining claims held by location in the Territory of Alaska.

H. R. 2436: Making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1948, and for other purposes.

H. R. 2535: To amend the Reclassification Finance Corporation Act.

H. R. 2659: To establish a program for the rehabilitation of alcoholics, promote temperance, and provide for the medical and scientific treatment of persons found to be alcoholics by the courts of the District of Columbia, and for other purposes.

H. R. 2700: Making appropriations for the Department of Labor, the Federal Security Agency, and related independent agencies, for the fiscal year ending June 30, 1948, and for other purposes.

H. R. 2758: To amend the act entitled "An act to provide for the administration of the Washington National Airport, and for other purposes," approved June 29, 1940.

H. R. 3020: To prescribe fair and equitable rules of conduct to be observed by labor and management in their relations with one another which affect commerce, to protect the rights of individual workers in their relations with labor organizations whose activities affect commerce, to recognize the paramount public interest in labor disputes affecting commerce that endanger the public health, safety, or welfare, and for other purposes.

H. R. 3123: Making appropriations for the Department of the Interior for the fiscal year ending June 30, 1948, and for other purposes.

H. R. 3203: Relative to maximum rents on housing accommodations; to repeal certain provisions of Public Law 388, Seventy-ninth Congress, and for other purposes.

SENATE BILLS REPORTED AND PASSED HOUSE

S. 220: To authorize the Secretary of the Navy to convey to American Telephone & Telegraph Co. an easement for communication purposes in certain lands situated in Virginia and Maryland. Public Law 18.

S. 221: To authorize the Secretary of the Navy to grant and convey to the Virginia Electric & Power Co. a perpetual easement in two strips of land comprising portions of the Norfolk Navy Yard, Portsmouth, Va., and for other purposes. Public Law 19.

S. 231: To authorize the Secretary of the Navy to grant to the city of San Diego a right-of-way over land owned by the United States within the limits of Camp Gillespie, San Diego County, Calif. Public Law 32.

S. 234: To authorize the Secretary of the Navy to convey to the Central of Georgia Railway Co. an easement for railway purposes in certain Government-owned lands situated in Bibb County, Ga. Public Law 13.

S. 235: To authorize the Secretary of the Navy to convey to the city of Los Angeles, Calif., an easement for construction and operation of a storm drain in and under certain Government-owned lands situated in that city. Public Law 11.

S. 276: To provide for payment and settlement of mileage and other travel allowance account of military personnel. Public Law 21.

S. 363: To amend section 3 of the act of July 24, 1946 (Public Law 534, 79th Cong.), larceny in interstate commerce. Public Law 37.

S. 516: To authorize the furnishing of steam from the central heating plant to the property of the Daughters of the American Revolution, and for other purposes. Public Law 33.

S. 547: To provide for annual and sick leave for rural letter carriers.

S. 568: To authorize the Secretary of Agriculture to cooperate with other American countries in the control and eradication of foot and mouth disease and rinderpest. Public Law 8.

S. 736: Authorizing the Commissioners of the District of Columbia to establish daylight-saving time in the District of Columbia during 1947.

S. 875: To authorize the President to appoint Maj. Gen. Laurence S. Kuter as representative of the United States to the Interim Council of the Provisional International Civil Aviation Organization or its successor, without affecting his military status and perquisites.

S. 918: To establish an Office of Selective Service Records to liquidate the Selective Service System following the termination of its functions on March 31, 1947, and to preserve and service the Selective Service records and for other purposes. Public Law 26.

S. 931: To extend certain powers of the President under title III of the Second War Powers Act. Public Law 29.

S. 1009: To extend the time within which the municipality of Fort Lauderdale, Broward County, Fla., may consummate the purchase of the Coast Guard site (commonly known as the base 6 property) which is located at Fort Lauderdale.

SENATE JOINT RESOLUTIONS REPORTED AND PASSED HOUSE

Senate Joint Resolution 3: Relating to employees of Senators and Senate standing committees. Public Law 1.

Senate Joint Resolution 4: Relating to the salaries of certain Senate employees. Public Law 3.

Senate Joint Resolution 24: Providing for a more effective staff organization for standing committees of the Senate. Public Law 4.

Senate Joint Resolution 27: Amending the Settlement of Mexican Claims Act of 1942 to provide for the consideration of any claim decided by the General Claims Commission in which the United States filed a petition for rehearing. Public Law 23.

Senate Joint Resolution 33: To amend the act of August 9, 1946 (Public Law 711—79th Cong.), for the purpose of allowing the Philadelphia National Shrines Park Commission additional time in which to prepare and to submit its report to Congress. Public Law 9.

Senate Joint Resolution 60: To authorize the San Carlos Irrigation and Drainage District, Ariz., to drill, equip, and acquire wells for use on the San Carlos irrigation projects. Public Law 10.

Senate Joint Resolution 97: Limiting the application of provisions of Federal law to counsel employed under Senate Resolution 46. Vetoed.

SENATE BILLS REPORTED AND PENDING IN THE HOUSE

S. 26: To make criminally liable persons who negligently allow prisoners in their custody to escape.

S. 64: Granting the consent of Congress for the construction of a dam across Dan River in North Carolina.

S. 321: To amend section 17 of the Pay Readjustment Act of 1942, so as to increase the pay of cadets and midshipmen at the service academies, and for other purposes.

S. 814: To provide support for wool, and for other purposes.

Rent Control

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. LEFEVRE. Mr. Speaker, for a long time I have felt that we in Congress should recognize the justice in granting some relief for the many hard-pressed property owners presently located in areas having rent control. H. R. 3203 may not be a perfect solution but to my way of thinking, the passage of this bill should accomplish much.

I know there are landlords who would take advantage of their tenants should all controls be removed. We have seen that happen in other fields of our economy where controls were released. On the other hand, there are landlords who have tenants who appreciate the fact that it has cost the owners of property considerably more to keep their properties in good, livable condition, willing and ready to make an agreement for a reasonable increase in rents. I have them and I know others have them. An increase up to 15 percent means in many cases a change of showing a profit or loss in the operation. This bill gives the landlord and the tenant the opportunity to get together.

This bill also removes practically all controls on building materials. Now if the building-material manufacturers can voluntarily come down from their high horses, and back to earth with real, sound, favorable prices, we can expect a reasonable flow of materials to the market. Reports show that lumber shipments are very low. Some of our lumbermen can only blame themselves for this condition. I am a retail lumber dealer and I have not been able to recommend to the average GI to start his hoped-for new home. It is the old story: we need production and a leveling off of prices so one will have confidence in the market. I hate to hear these threats that carpenters are about to strike for more wages.

From reports I receive I believe we can soon expect lumber prices to settle down and any approciable demand for higher wages by those skilled in the building trades will very seriously delay further home construction.

Personally, I am for the conventional type of home. That is only natural, I suppose, but if I could see a prefabricated

house worthy of the name, structurally sound and durable, I hope I am open minded enough to accept it and approve of a loan on it equal to that given on a conventional home. I recommend that those granting loans up to 90 percent on this type of house, give worthy appraisals and thought to its durability. It takes years to pay off mortgages, generally speaking, and a house mortgage is the best loan in the world when the value is there. A man's home is his castle and that means his heart is there. We feel that a home built to one's own taste, with architectural designs of his own choosing, something distinctly individual, is by far the better risk for our banks and our Government.

It is hopeful the demand for homes by December 15, 1947, will be such that our President will release rent controls in accordance with the terms of the bill by December 31, 1947. This is a long time and a great deal can be accomplished. And then, too, we must remember that the head of the new department administering the provisions of this law can take rent controls from any area when a housing shortage no longer exists. I hope my friends in the retail lumber business will agree with me that this bill, although far from their expressed desires, is certainly a step in the right direction and here in Washington we have to legislate for what we believe is best for the citizens in every sector of our country. I hope the President will select an agency to administer this law mindful of the many arbitrary decisions made by the OPA authorities and realize the landlord has his troubles, too. We as Americans, look forward to the day when all controls can be lifted and once again we can function as a free America.

Rural Electrification

EXTENSION OF REMARKS
OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. YOUNG. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject of rural electrification, delivered by me at the National Convention of REA Cooperatives held at Spokane, Wash., April 24, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to have this opportunity to address the delegates of the National Rural Electric Cooperative Association and I feel highly honored by your kind invitation to appear here. As representatives of Rural Electric Co-ops, which operate throughout most of the United States and some of its Territories, I believe that you made a happy choice in selecting as your convention site this fine city of Spokane in the great Pacific Northwest where electrification has made its greatest progress in recent years.

You and the people you represent have done more to improve rural life in America today than any other group. You have brought the tremendous benefits of electricity to many areas which could never have enjoyed them except through cooperative action. And, in making thousands of farms more livable, you have also made them more efficient and more productive. The real importance of increased and more efficient production will be most apparent when, in the not too-distant future, we may again be faced with the problem of competing with foreign farm goods produced by cheap labor in other parts of the world. In meeting this type of competition, our improved efficiency will, in my opinion, be our greatest asset.

And while you have increased the efficiency of our farms, you have made them far more attractive places on which to live. This, it seems to me, is the most important benefit of all, because in recent years too many of our young people have been leaving their farm homes to seek employment in the cities. The comforts of modern homes and apartments in the cities have proved to be attractions which could not be offset by other benefits which rural life has to offer. No matter how sympathetic the public may be toward the general farm problem, only those who have lived on farms lighted by kerosene lamps, those who have pumped water by hand, those who have enviously glimpsed the gleaming electrical appliances in store windows only to realize that such things were not for them could fully realize what electric power means to the farm family. You men and women have done a truly remarkable job in making the dreams of millions of rural folks come true.

Yet, in spite of all the clearly apparent benefits which this program has brought to the Nation, REA today faces an array of opponents as powerful as any you have met in the last 10 years or more. Your program is being attacked on a wide front by an abundantly financed group which boasts some of the highest-priced lobbyists in Washington. Of course, they say they are not out to destroy REA, or even to cripple it. No; they just want to "improve" your program here and there. They want to help you. In fact, they would even be willing to take over your co-ops and run them for you at a slight, or perhaps not so slight, profit to themselves. Now that you have demonstrated that you could do what they once said could never be done, they are eager to take over the show.

In Washington we can see this attack moving into full swing on a national scale. Locally, you can see the pattern take form. Whatever high-sounding promises may be uttered by the spokesmen for this lobby, whether in Washington or in your home town, their plan has but one purpose: To cripple REA and destroy your cooperatives. Your very success has brought this mighty attack down upon your heads.

The political upheaval in Congress, brought about at last November's elections, has been interpreted in various ways. And whatever mandate was expressed by the people has come to mean all things to all men. In my own opinion, the people of this country want real economy. But I am also firmly convinced that they do not want false economy. As I read the signs of the last election, there was no mandate to wipe out or even curtail REA and other farm programs, which have largely been responsible for the present favorable position of agriculture. I do not know of any candidates for Congress who urged such action before election. And I am well enough acquainted with the political thinking of the people of my own State, to know that I would not be addressing you today, as a Member of the United States Senate, if I had campaigned on a platform advocating curtailment of REA and junking of our national farm program. In fact, the last national platforms, adopted by both major parties in 1944, pledged continuance, and even expansion, of REA and other programs designed to aid the farmer.

I do not recall that American farmers have ever organized for the purpose of telling Congress what laws it should write, for the regulation of business, but it is certainly true that industrialists, manufacturers, and businessmen, are endeavoring to rewrite our agricultural program. Today, it would appear, just about everyone is trying to set himself up as an agricultural expert.

The chambers of commerce, the grain trade, the wool trade, the cotton trade, and even certain manufacturers' organizations, have set themselves up as experts in the agricultural field. Many of them have gone so far as to send their so-called agricultural authorities on speaking tours over the Nation, men who sadly lack sympathetic understanding, or even factual information, men who themselves would be a failure if actually operating the best farm in America.

Now, I have no quarrel with businessmen. They have their problems just as we have ours. In fact, I think we could learn a most important lesson from them—the lesson of organization. Because they are so well organized through their trade associations, they today exert an influence all out of proportion to their actual numbers on our State and national legislative programs. If the farmers of America were even half so well organized, your REA program would not be in jeopardy now.

I know that there are honest and sincere men in Congress today who have the reputation of being unsympathetic to agriculture. Their views have been molded by the nonagricultural farm experts; they have simply never heard your arguments. I believe that such misunderstandings can be quickly cleared up by an aggressive and intelligent campaign waged by the farm people of this Nation through such organizations as yours. You should urge farmers everywhere to write to their Congressmen and Senators telling them in plain words of the great need for continuance of such programs as REA and what will be necessary in the way of appropriations. Identical letters and telegrams are ineffective. A few penciled words on a sheet of tablet paper will carry far more weight. Congressmen will recognize the true voice of rural America when they hear it, and I would have no fear of REA's future if every farmer took the trouble to let his Representative know his views on this matter.

Recent propaganda released by private-power interests would lead one to believe that they could make rural electrification possible without cost to the Government. Whether or not they could is beside the point. The cold truth is that these interests have had years and years to do the job, but they succeeded in bringing electricity to only a very small percentage of our farms.

In little more than 10 years, you have done what they were either unwilling or unable to do. You have done it without experience, and you have made the remarkable record of repaying more than 99 percent of your Government loans as they fell due. In fact, many of your rural co-ops have been able to meet their payments well in advance of the due dates. All of this was accomplished through your determination, initiative, and ability and, I might add, your sympathetic understanding of farmers' needs and wishes.

The farmers you represent, by any yardstick the Government may care to apply, are the best credit risk in the entire world. Farmers, in recent years, even repaid 78 percent of the old feed and seed loans made for extreme emergency purposes at unreasonable interest rates of 5 percent, and where, oftentimes, the accumulated interest amounted to as much as the principal itself. In the light of past records, it is a sad commentary on American Government that farmers now

have to virtually beg for adequate funds even to carry on a worth-while REA program.

Before you took the rural electrification program and went into action few of our farms had electricity. Of the approximately 6,000,000 farms in this country, only 3 percent had power-line electric service in 1925 and only a little more than 10 percent in 1935. The fact, that, today more than 53 percent of all our farms enjoy electricity, is testimony to the effectiveness of your work, and the program as a whole. As a farmer and a resident of a farm State, I am especially proud of your accomplishments.

While the percentage of farms electrified in North Dakota lags far behind the national average, our situation in all other respects parallels that now existing in your States. You have reached the farms located in the most populous areas, and the more readily accessible farms. The easier half of your job is done. The harder part now remains. To complete area coverage and bring electricity to all those still awaiting it, you must push into the more sparsely settled areas, where consumers average but one or less to the mile.

Finishing the electrification job is not going to be made easier by the forces opposed to it. I think it is time we took stock of what we are up against, so that we may be able to anticipate the attacks and be prepared to do something about them in time to be effective.

As I see it, the current attack against the rural-electrification program has five major prongs. We all know the offensive may shift but these are the points to watch right now.

First of all, the present attempt is to use national economy as a smoke screen for killing the program. Our foes hope to persuade economy-minded Members of Congress that REA is using the taxpayers' money to sponsor electrification which, they claim, private interests could as well provide. They hope that Congress, in its enthusiasm to reduce Federal expenditures, will cut proposed REA loan funds for the coming year so sharply as to cripple REA or sharply curtail future expansion.

While I favor drastic reduction in over-all Federal expenditures, I think it should be pointed out that there is much distinction between spending—as such—and the investment of public money in a self-liquidating enterprise. The REA program is a splendid example of what can be accomplished for the benefit of millions of our citizens without cost to the Government and as a member of the Senate Appropriations Committee and the Agriculture Committee, I shall vigorously oppose any attempt which may be made to curtail appropriations for this agency.

During the war years shortages of critical materials and labor, as we all know too well, brought REA expansion to a virtual standstill. The program is now moving into high gear. During the last fiscal year, REA service was extended to 255,000 new consumers and even under present disappointing shortages of essential construction materials the rate of additions is now about 25,000 a month.

All of us know that loan funds must be authorized and earmarked before construction progress can start.

Despite the record of repayment and the present need and opportunity to push the program rapidly ahead to reach those who have waited so long, many Members of the present Congress are apparently inclined to favor a reduction in the coming REA appropriation. It is imperative that they understand what such a cut will do to the job of bringing electric service to the millions of farm families who do not have it now.

The second prong of the attack on the REA program centers on the authority in the law to finance generating plants where necessary.

I am sure I do not need to emphasize the importance of this provision in the REA law. Without the right to construct power plants, REA would have absolutely no bargaining power whatever with private power and would be completely at their mercy. This is a very important part of the appropriation and one which will be sharply attacked by the private power interests.

I hope that no REA cooperative will abuse the privilege that it has in constructing power plants. Wherever low-cost electricity is available through existing power concerns, REA should, by all means, purchase it through these sources. Not only because it would be unwise to construct additional and unnecessary power plants, but for other reasons, too. There is a real possibility that within a very few years electricity will be generated through atomic energy at far lower cost than now is possible through water power or any other means. In fact, I am told by scientists that even today electricity could be generated through atomic energy as cheaply as through the use of coal. Scientists estimate that only 2 pounds of nuclear fuel would supply the power needs of a city such as Pittsburgh for 1 day. There is another equally important reason for using existing facilities where possible. I am one of those who believes strongly in our free enterprise system. If private power can furnish you current as cheaply as you can generate it yourself, I think you would be doing an injustice to private enterprise, and even to your own cause, by constructing power plants with borrowed Government money.

I think that at this point in my remarks I should point out that private enterprise, as it exists in the ordinary business, is far different from that of the private power industry. Private enterprise, by and large, is highly competitive. Private power on the other hand usually operates under exclusive franchises granted by cities. The fact that they have these long-term franchises free of all competition has too often encouraged the practice of gouging the public through unreasonable rates. For example, there is this incident which occurred in my own State. A power company operating in the city of Fargo, which has only about 35,000 population, lost a rate reduction lawsuit instigated by the public service commission and, as a result, had to refund to its patrons in that small city approximately $1,000,000.

Time and experience have proved that rural electrification can best be accomplished by cooperative effort and there is nothing undemocratic about it.

Long ago our Government decided that the mail service and public roads were fields where even Government ownership and operation were to the best interests of the people. Even the most ardent leaders of the free enterprise system could not call this democracy of ours socialistic simply because our Government went into those fields of business.

The third prong of the great attack now being launched is being directed against the authority to buy up power facilities in small rural towns.

This authority again is most necessary if REA is to meet the problem of rural electrification in very small towns surrounded by sparsely populated farm areas. I see no reason why REA, in the best interests of all who live in such communities, should not have this continued right.

The fourth major prong of attack is right in your own cooperatives. This is different from the kind of fighting you have encountered in the past. Your opponents now are trying to buy out some of your older, well-established, and profitable cooperatives. Having watched you do something that they themselves were unable or unwilling to do, they now hope to take over the projects that you have proved to be sound financial undertakings. They hope to persuade you that since you are well established there is no reason why you should continue bothering to operate your co-op. They are trying to relieve you of your obligation to extend your lines. They tell you they will give you the service at even lower rates than you now pay. Some cooperatives may be disposed to sell out to these interests, but I predict they will see the day when they will regret such action.

The fifth major prong of your opponent's attack consists of proposed legislation which, if you examine it carefully, has no other purpose than to cripple the basic REA law. One such plan proposes that REA, instead of lending money directly for REA projects, should merely underwrite loans which you then would have to obtain from private interests. This proposal many of you may have read about in a recent issue of News Week. Perhaps many arguments could be advanced for this idea that would, at first glance, seem attractive. But again, in my opinion, this would be the beginning of the end of rural electrification expansion.

Personally, I see no need whatever for these proposals when the REA co-ops have operated so successfully, with practically a 100-percent record of repayment of their loans.

Another proposal is for the Government to sell its loan securities to private interests. This means that your REA mortgages would be placed in the hands of private financial institutions. Perhaps in some years a successful program could be carried out by this means of financing, but I need only recall to you who are farmers that in years past credit of any kind, except Government feed and seed loans, was all but impossible to obtain, even for the best of farmers. I myself can remember only a few years ago when private banks would lend nothing at all on farm machinery, and only a few dollars a head on livestock. The banks could not be blamed, as the earning power of the farmer was at such a low ebb that he was no longer considered a good risk, and as a result the Government, through its various lending agencies, had to take over. This again could happen, but God forbid. REA is now on a sound financial basis, under a workable Government program, and why in the name of heaven should any change be made to accommodate interests which have anything but a record of sympathetic understanding of the farmers' problems?

I have talked of the five major attacks now being waged against the REA program. Other proposals equally dangerous to you have appeared already in Congress in the form of more than 20 bills which would, in one way or the other, cripple the REA program. Several of these, through indirect methods, would raise the cost of power to your cooperatives now being supplied by reclamation power dams. Other contemplated proposals would require all REA borrowers to release co-op members upon request if not connected within 1 year after application for service. Then there are various provisions for raising the public power rates to all the traffic would bear; by raising interest rates; by amending the Reclamation Act to place a greater cost burden on irrigation and power. Another proposal would require projects to pay out before new projects could be undertaken. There is a plan to direct RFC to sell all notes and mortgages on the open market. These are only some of the proposals contained in the many bills now before Congress.

Perhaps one of the most dangerous threats to REA has come with the introduction of bills in many State legislatures that would place REA cooperatives on the same tax basis as corporations which operate for a profit. Millions of pieces of propaganda have been placed in the mails all over the United States on this one proposal alone. People who do not understand the objectives of cooperatives such as yours, which is to furnish power at cost to their consumers, might well think that REA should be placed under the same taxing provisions as corporations. It will require a constant battle, in my opinion, on

the part of all farmers under REA to combat this vicious type of legislation. You must constantly be on the alert.

Since the feasibility of electrifying farms of America is so closely tied with future farm prosperity, I wish to discuss briefly other farm legislation.

Some have forgotten the farm poverty of a few years ago: The dust storms, grasshoppers, drought, and, worst of all, low prices. No REA program can pay out if we again allow agricultural prices to slip back to those prevailing only a few years ago. Our present favorable position is somewhat artificial and was brought about by the wartime disruption of agriculture in other parts of the world and by American charity appropriations to feed the people of Europe and Asia.

Foreign production will come back, perhaps by 1948, and their cheap labor will mean the toughest kind of competition for our farmers. The only guarantee we now have against recurring depressions in farm prices is contained in the so-called Steagall amendment. But even now there are many in Congress who want to repeal the Steagall amendment or slash the appropriations needed to make it effective.

It has been a favorite pastime for certain publications and even for some Members of Congress to spread the propaganda that American farmers have been heavily subsidized at the expense of the taxpayer. The inspiration for these attacks comes, I believe, largely from the phoney farm experts retained by industrial organizations and from the middlemen in the grain, cotton, and wool trades who have been so handsomely rewarded for moving the products of our farms to the hands of the eventual consumers.

These same spokesmen have nothing to say on the matter of subsidies to industry. Actually, over-all price support operations of the Department of Agriculture haven't cost the American taxpayer one penny. On the contrary, they brought the Department a net profit of $227,000,000 as of December 31, 1946.

All of the so-called war year subsidies commonly charged to agriculture were instead consumer subsidies designed to keep grocery bills down while encouraging food production under price ceilings.

At the very beginning of the war, Congress realized that in order to secure the production of food and materials necessary to insure victory incentives and guarantees would have to be offered to both agriculture and industry. It was recognized that with the end of the war both agriculture and industry would have to reconvert to peacetime conditions. The Steagall amendment, guaranteeing farm price supports in the reconversion period, was intended to give to agriculture what repeal of the excess-profits tax and approval of contract termination settlements was to industry.

But while the Government was showing an actual profit on its over-all farm price support program, payments to industry mounted into billions. By February 28, 1947, the Army had already made contract termination settlements totaling $4,694,055,000 while the Navy had made similar settlements aggregating $1,326,430,000. At the same time, industry benefited by the certification of $4,000,000,000 worth of privately financed war plants, which meant that about $2,000,000,000 in taxes owed by these corporations which built the plants may be charged off. In addition, it is estimated that wartime tax refunds to business will total $5,000,000,000 or more when the books are closed. And on top of that, the Government spent more than $17,000,000,000 to build war plants which were operated by private corporations for their private profit and which are now being sold to these private corporations at a small fraction of their original cost. At the same time, the RFC was paying out huge subsidies: including $438,000,000 to the oil industry between 1942 and 1946, plus $283,000,000 to producers of lead and zinc. These subsidies or aids to business during the war years and reconversion period total at least $20,000,000,000. And that is why I sometimes get a bit excited when I hear spokesmen for industry condemning the American farmer and accusing him of treasury raiding.

The Steagall price support amendment expires with next year's crop. With prices for most farm commodities at their present high levels, it is highly unlikely that the Government will be called upon to protect support prices this year, except in the case of one or two crops. And in this connection, I should like to point out that thousands of potato growers would have been financially ruined last year had not it been for the Steagall amendment which permitted the Government to step in and save the situation.

Likewise, American wool prices would drop sharply if it were not for Government price supports. Some 80 percent of the American market is now supplied by foreign wool growers and without price support domestically our own wool growers would face even greater liquidation of this industry so vital to the economy of many Western States.

While we still have the time, and while the American farmer is still relatively prosperous, I believe that Congress should draft a long-range program designed to insure the future stability of agriculture and this can be done with small cost to the Government. Certainly no one wants a return to the chaos of the thirties but even that will be possible unless we act now to forestall it. Business and labor have as much of a stake in this program as the farmer himself for history has proven over and over again that without a prosperous agriculture we cannot have a prosperous America.

In conclusion, may I say that farmers who toil more hours than others and make possible most of the new wealth are entitled to a better living. You need REA, not only for cheaper and more efficient farm production but also for real comfort on the farm. You are entitled to the same modern homes, with water systems, good heating plants, and other modern conveniences that city people have so long enjoyed. Only through REA is this possible, and it is not in conflict with our free enterprise economy, or our system of Government. The modernization of American farms will provide a greater market for American industry than can be found any other place in the world.

Let not anyone forget that our free enterprise system, in this great democracy, has already given to our people—labor, farmers, and businessmen—the highest standard of living ever attained in any place in this world through all the history of civilization.

Rural America has long been the most consistent and determined supporter of our American methods and our way of life. We will continue that support, always looking toward making America even stronger and more secure as a Nation. With a happier and more contented people, we can demonstrate to the world that our democracy offers to all the people the greatest opportunity for social advancement.

A. F. of L.'s Red Herring

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1947

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial under the heading of Review and Outlook, appearing in the Wall Street Journal of April 29, 1947:

A. F. OF L.'S RED HERRING

In this and other newspapers of yesterday appeared an advertisement of the American Federation of Labor. It was an appeal against the bills now being considered in Congress. Its general theme is set forth in a caption "A free America cannot exist without free labor."

The inference is that the House and Senate bills do something to make labor less than free. The advertisement contains not one specific support of its main assertion and this newspaper is constrained to think that it does not do so because any such attempt would make the assertion ridiculous.

Both the House and Senate bills provide that labor shall have the right to organize. Employers are bidden to bargain with such organizations. Government machinery is set up to see that these purposes are carried out. To say that such a law intends to enslave labor is to say something absurd.

Labor leaders say that the bill passed by the House is worse than the one under consideration in the Senate and so we will look at some of the provisions of the House bill.

The House bill would prohibit industry-wide bargaining, that is, it would prevent the employees working for the many employers in an industry from joining to control employment in that industry. It would not prevent unions from forming national organizations and getting the benefits of such organization. The aim is to prevent concerted action to close down a whole industry on the part of employees just as the employers are forbidden to take such concerted action. If that is intended to enslave labor the Sherman Antitrust Act is an enslavement of industry.

For taking action designed to fix prices, restrict production, or allocate customers, unions under the House bill would come under the antitrust acts. Is that enslavement? To be free must a union have the power to refuse to work with any but certain materials and to bar competing materials?

Another provision is that unions can be sued for violating their contract. If that is slavery, all of us are slaves.

The bill bans the closed shop, a system whereby an employer hires only men sent to him by the union. In its extreme form this system has resulted in formation of unions where only close relatives of present members are allowed to join. Is such a privilege necessary to freedom?

The bill also contains a list of unfair labor practices such as jurisdictional strikes, boycotting, and mass picketing. Let's see what obstacles to freedom lie there. Since labor leaders themselves no longer defend jurisdictional strikes, we can pass that one. Mass picketing means that a union can throw an army of men about your store or plant—they may or may not be your employees—and prevent you or anyone else entering.

You and your employees may be perfectly satisfied with your arrangements but a union may not, in which case they can refuse to allow your products to come into the plants where it has jurisdiction or it can picket a plant which does use your products. Is that something necessary to freedom?

When Mr. Truman once proposed drafting men to force them to work this newspaper protested. If we could find anything in the labor bills which remotely approached that idea we would protest again. If there were anything in those bills which withheld the right of a man to work or to quit work or to join with others to better himself and to protect himself, there would be grounds for protest.

It is up to the American Federation of Labor to analyze these bills and to point out where the rights of any man have been infringed.

The Increasing Peril

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD I am moved to call the attention of this God-fearing Nation to the threat embodied in the direction taken by that section of the United Nations known as the United Nations Educational, Scientific, and Cultural Organization, which threat is so ably covered by Mr. Wilbur M. Smith in his brochure entitled "The Increasing Peril" and from which the following is extracted:

THE NON-CHRISTIAN PROGRAM OF THE UNITED NATIONS EDUCATIONAL, SCIENTIFIC, AND CULTURAL ORGANIZATION

That the assemblies of the United Nations, and their far-reaching decisions and their increasing mountain of publications should give no attention to the existence of a Divine Being, I suppose in this materialistic age is not too surprising, though we deeply regret it. We would expect that departments and agencies created by the United Nations should likewise partake of this irreligiousness, but when an agency of the United Nations in its assemblies openly declares that God is dead, then it behooves that great body of American citizens, who still believe in a living God, to express their strong disapproval of such public, universally publicized statements.

I am referring now to the recent conference of the United Nations Educational, Scientific, and Cultural Organization, generally referred to as UNESCO, which will probably play a greater and greater part in the thinking of the peoples of our bewildered day on both sides of the world. Months ago when this agency of the United Nations was announced, many began to wonder what they would do when they came face to face with the problems of religion, and asked themselves frequently, "Who will be the head of the United Nations Educational Scientific, and Cultural Organization?"

Well, we did not have to wait long to discover who would be the head of this organization. In their meeting, held in Paris, on December 6, 1946, in a secret session (and why secret I do not know), Dr. Julian Huxley, the British biologist, was elected Director General for a 2-year term, having been before this Secretary General of the Preparatory Commission. Of the 27 voting members present at the primary session, 3 voted against him, while 2 abstained. Lebanon, Syria, and Ecuador did not assent.

There can be no question but that this gifted, brilliant, internationally known British scientist will exercise an enormous influence over this body, and certainly men of the type that were elected to this commission which voted on Dr. Huxley knew something of the man for whom they were voting. They unquestionably know that he is definitely not only an enemy of the Christian faith, and really a bitter opponent of the Bible as any revelation of truth, but he is an outspoken denier of the existence of a living and personal God. I think we ought to give some consideration to this, because in 2 years Dr. Huxley may be the responsible initiator of a number of decisions, and I am sure he is not taking this position just to be a figurehead or for any particular notoriety. He is not the kind of man that delights in remaining silent, nor does he fail to have courage to speak out his convictions.

Nearly a quarter of a century ago, in his Essays of a Biologist, published in 1923, Huxley said, "It is impossible for me, and those who think like me, to believe in God as a person, a ruler, to continue to speak of God as a spiritual being in the ordinary way."

In another work, published in 1941, he says, "The scientific approach renders either futile or illogical all straightforward personification of divinity." Of course, to deny God a personality is to deny God. A God who is just the wind is no God at all, you and I would agree.

In a recent article, Huxley even declares that we ought "to cease tormenting ourselves with questions that ought not to be asked because they cannot be answered, such as questions about the cause of creation or ultimate reality." In fact, this new director of an organization for the education of a new world has actually suggested that we perhaps would do well to go back to the paganism of the Greeks. "One of the obvious attractions of the Greek paganism was the variety of human actions and expressions which it could accommodate within its boundaries. Free from the necessity of propitiating or imitating a unitary being, a modern religion could revert to that rich variety."

Elsewhere it is true he does speak of "the heights to which the religious impulse may bring man," and he admits that "the Christian introduction of the idea of general altruism as opposed to tribal solidarity." But nowhere is God referred to as existing; nowhere is there any dependence upon a divine ruler of the world; nowhere is there, of course, any indication that man has an eternal destiny, nor that the world depends upon God for its origin and maintenance. He does not anywhere recognize the values of Christian faith, but, strange to say, he proposes that there should be a careful examination of "physiological and psychological mechanisms involved in the bodily exercises of Hindu yogis." Is it not strange that Huxley can take deep interest in yogis, but no interest in the faith that has dominated the Western World for 1,700 years?

Mr. Speaker, it goes without saying that such doctrines are wholly at variance with those enunciated by the framers of our Declaration of Independence and our Constitution and certainly are in conflict with the sentiments proclaimed by our Speaker, the Honorable JOSEPH W. MARTIN, in his opening address before the Eightieth Congress. In short, it seems to me that the UNESCO should have the vigilant attention of every Member of this House and I for one am determined to oppose all appropriations for the promotion of any such program which denies the existence of God and tends to further such atheistic misconception.

Congress Should Investigate the Epidemic of Rail Crashes

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. BENNETT of Missouri. Mr. Speaker, there has been an epidemic of automobile, airplane, and railroad-train crashes this year. Congress is investigating safety in air navigation. I have introduced a bill which, if adopted, would cut down the slaughter on the Nation's highways. I now wish to urge that Congress, which has the power and responsibility to do so, conduct an investigation of the causes and remedies for recurrent train wrecks.

Under leave to extend my remarks, I include the following editorial from the May 3 edition of Labor, a national weekly newspaper of the railroad unions. I commend to you a careful reading of the startling information contained in this editorial:

CONGRESS URGED TO SLOW UP RAIL WRECKS; INEXCUSABLE NEGLIGENCE CHARGED IN DEATH TOLL

The increasing number of shocking railroad accidents has at last aroused the country. Committees on Interstate Commerce of the House and the Senate are being urged to draft safeguarding resolutions.

In a vigorous editorial, the St. Louis Post-Dispatch declared that "an inexcusable act of negligence caused the deaths of 24 persons and the injury of 138 in the wreck of the Pennsylvania Railroad's Red Arrow" and that this tragedy has been followed by an epidemic of wrecks.

The editorial wound up: "The painful fact is that the railroads are trying to compete in twentieth-century speed but with nineteenth-century equipment for doing so safely.

"Such railroads as want to continue to operate without speedometers, without two-way radios, without automatic train control and other modern safety safeguards for modern speeds should resign themselves to jogging along at the leisurely pace to which their equipment entitles them.

"If they want to compete with the air lines in speed, they should be required to equip themselves with the devices that will make high speed safe.

"In addition, speed limits should be rigorously enforced, regardless of schedules, for no amount of safety equipment can make recklessness safe."

This was further underscored by a report which the ICC issued a few days ago on the pile-up of a Seaboard Air Line streamliner at Cassatt, S. C., on the night of March 22, and a similar wreck last week on the Illinois Central.

The Seaboard train was being operated at its scheduled speed of 65 miles an hour when it hit an open switch and was shunted to a sidetrack. The Diesel locomotive and seven cars were thrown off the track. Luckily, no one was killed, but the engineer, baggageman, five mail clerks, and nearly a score of passengers were injured.

According to the report, there was no warning to the men in the cab until the train was a few hundred feet from the switch. Then the headlight illuminated a red reflector disc on the switchstand. Of course, every effort was made to stop, but at better than mile-a-minute speed the distance was not sufficient.

More than a year ago the ICC ordered the carrier to install an automatic block-signal system, which would have prevented the crash, but it has not done so in that territory.

At the request of the Interstate Commerce Commission, Congressman CHARLES A. WOLVERTON (Republican, New Jersey), chairman of the House Interstate and Foreign Commerce Committee, introduced a bill which would not only give the ICC authority to order the installation of safety devices, but would enable it to further promote the safety of workers and passengers by establishing rules, regulations, and practices with respect to train operations.

Also, Congressman HARRIS ELLSWORTH (Republican, Oregon) has proposed a measure giving the ICC authority to prescribe rules, standards, and instructions for in-

spection, maintenance, repair, and construction of track. It now has this authority over signal systems under the Signal Inspection Act.

The latest reports from the ICC emphasize the tremendous hazards of the rail industry. The employees are the chief victims.

In the first 2 months of this year, 114 were killed in the line of duty and 6,374 were injured. For all of 1946, the toll was 670 killed and 38,324 maimed.

A Concurrent Resolution of the Minnesota Legislature

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. DEVITT. Mr. Speaker, under leave to extend my remarks, I wish to include the following copy of a concurrent resolution adopted by the Legislature of the State of Minnesota on April 24, 1947, having to do with income taxes in non-community-property States:

Concurrent resolution memorializing the Congress of the United States of America that H. R. 1759, introduced by Representative REEVES, of Missouri, or any other suitable and appropriate legislation, be now enacted permitting equal division of income between husband and wife for income-tax purposes by the citizens and residents of all of the States of the United States

Whereas an inequity exists between the citizens and residents of the several States of the United States in that residents of 9 States having community-property laws are privileged to divide incomes between husband and wife for income-tax purposes, thereby reducing the income taxes required to be paid by said residents, which privilege is being denied to the residents of the 39 States not having community-property laws; and

Whereas by reason of the premises legal privileges are enjoyed by a minority of the citizens of the United States of America, solely determined by residence, which are not permitted to all the citizens of the United States, which fact gives rise to a discrimination in respect of income taxes which should be removed; and

Whereas it is within the power of the Congress of the United States of America to correct such inequity by adopting suitable and appropriate legislation therefor: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Congress of the United States of America be and it is hereby respectfully memorialized now to enact into law as a part of the Internal Revenue Code, H. R. 1759, introduced by Representative REEVES, of Missouri, or any other suitable and appropriate legislation permitting equal division of income between husband and wife for income tax purposes by the citizens and residents of all of the States of the United States; and be it

Resolved, That the attention of the Congress of the United States be invited to other bills now pending in the United States Senate and in the United States House of Representatives embodying the principle of the aforesaid Reeves bill (H. R. 1759), among which bills are the following: Amendment to H. R. 1 (Knutson bill), introduced by Mr. BUTLER; S. 626, introduced by Mr. CORDON; S. 649, introduced by Mr. TYDINGS; S. 550, introduced by Mr. LANGER; H. R. 2219, introduced by Mr. ANGELL; H. R. 2002, introduced by Mr. ROBERTSON; which principle is hereby approved and recommended for enactment by the Congress; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the President pro tempore of the Senate, the Speaker of the House of Representatives, the chairman of the Finance Committee of the Senate; the chairman of the Ways and Means Committee of the House of Representatives, and to each Senator and Congressman from the State of Minnesota.

What Is Ahead in Aviation?

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "What Is Ahead in Aviation?" delivered by me before the Advertising Club of Washington on April 29, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The topic assigned me today is, What is ahead in aviation? I wish it were possible to speak in terms of limitless horizons, to describe proudly a continuing American leadership in the field of aviation which we so largely pioneered. Unfortunately, I am unable to do that. The facts as they stand would not support it.

The United States is no longer the world's leading air-power nation. Many of you may be shocked to know that we are running a poor third. In practically every branch of air power, Britain and Russia surpass us.

A few weeks ago I made a similar statement, based on information then at hand, before the American Legion Aeronautics Conference. Since then, important new evidence has come to light.

The first new and startling evidence was an article by William Courtney in Collier's of Friday before last, April 25. Courtney states that Russia, far from demobilizing her air power since VJ-day, has expanded it in all its branches, including her manufacturing industry and air lines. Courtney reports that Soviet aircraft factories will produce 100,000 planes, military and civilian, in 1947. This is approximately four times our probable production in 1947.

Courtney declares that Russia, turning out 200 transport planes a month in 1944, is now producing 360 transport planes a month. The American aircraft industry produced only 467 transport planes in all of 1946. The total will not be much larger in 1947. Russia had only a few hundred miles of scheduled airways several years ago, Courtney says, but now she operates 50,000 miles and plans 150,000 airway miles during the next few years.

The article is packed with amazing data on Russian air power. It tells about expansion of aviation in the satellite countries. It asserts that the Soviet Air Force is now twice as strong as in early 1945, and that the ratio of fighters to long-range bombers has been changed to provide a great many more long-range bombers.

Courtney's figures are his own, and he does not reveal his sources. However, Courtney's analysis of expanding Russian civil and military aviation is borne out by evidence from other sources.

We know that Russia has established weather bases in the Arctic. We have heard Radio Moscow announce their policy of becoming the world's strongest air power.

That is a policy firmly established at the top and forced, nationally, from the Politburo down to the most ignorant peasant.

Britain is the other great air power.

Although England is withdrawing from India and is turning the role of policeman in Greece and Turkey over to us, she is maintaining a powerful air arm. The RAF budget for 1947–48 provides for 370,000 officers and men. This is an air force larger than our own Army Air Forces, under the President's budget submitted in January.

Another bit of testimony can be given you by a quotation from a recent issue of the authoritative British magazine, Flight, March 13. I quote:

"That the Royal Air Force had become our front line of defense in the recent war is no longer denied. Consequently the nation must be prepared to pay the premium exacted for the insurance which the RAF represents. In the White Paper on Defense issued recently, the net estimates for the three fighting services were: Army, 388,000,000 pounds; Air Force, 214,000,000 pounds; and Navy, 196,700,000 pounds. That the RAF should be so far above the Navy in its allocation is an indication of how the defense picture has changed during the last few years. One doubts that the general public fully realizes the fact. The amount by which this year's air estimates exceed the Navy estimates is as great as the total of the air estimates some 10 or 12 years ago."

The New York Times reported on April 22 that Britain's first jet air liners has had a successful flight test. Britain also has at least two jet fighters in large production—and they are superior to ours—for immediate operational duty.

We have thus seen some impressive evidence that Britain and Russia are determined to stay ahead in the air. Let's quickly look over the situation in this country

First, the air lines. They experienced a substantial increase in traffic last year. But because of a great many problems of conversion and reconversion, the domestic air lines operated at a loss in 1946 of more than $7,000,000. Of the air lines that have reported so far for 1946 operations, 11 ran at a loss, while 9 earned a small profit.

The air lines' more pressing difficulties have been temporarily eased by the seasonal upsurge in traffic. Serious long-term problems, such as adequate traffic control for a greatly increased number of high-speed planes, the research and development of facilities for all-weather flying necessary to insure maintenance of schedules, these and other problems are as challenging as ever.

General Eisenhower, General MacArthur, all authorities, have warned us that armies of the future will move almost entirely by air. Provision should be made for maintaining as large a part of the needed reservoir of civil air transports as is economical and efficient. Our policy with regard to commercial aviation should be firm and clear-cut and should be established by law.

AIRCRAFT MANUFACTURING

The situation with regard to the aircraft-manufacturing industry is even more alarming.

Eight of the twelve largest aircraft-manufacturing companies operated at a loss in 1946. Their profit of more than $60,000,000 in 1945 was changed to a loss of more than $8,000,000 for last year. That aggregate loss for the 12 companies was after taking full advantage of all tax carry-backs available

to those companies. Contrast this record with that of industry in general. The National City Bank of New York recently reported that net income of all manufacturing corporations in the country increased by 36 percent from 1945 to 1946. The same report showed that net income of aircraft companies decreased by 95 percent from 1945 to 1946.

And what about the future? In 1947 and in early 1948 the industry will deliver a substantial number of new high-speed transports equipped with the latest and most improved devices making for maximum in safety and passenger comfort. These new planes will be more than 50 percent faster than planes now in service. When this greater speed is added to the 50-percent increase in available seats contained in the new planes, it can be seen readily that the air lines by early next year will be completely reequipped. There will be only limited reordering by the air lines until the problem of all-weather flying is solved, and until present planes wear out, processes that will take some years to come about.

In the field of military production, the official Air Coordinating Committee has stated that in the interests of national safety we should maintain a manufacturing industry producing at least 3,000 military planes every year after maintenance of world peace was well assured. This production, according to the committee, should be in addition to a reasonable output of commercial and personal aircraft. Actual production last year was 1,330 military planes and 467 transport planes, figures which contrast most strikingly with those reported for Russia by William Courtney. Clearly our industry is not being maintained at the levels recommended by official administrative agencies; and just as obviously our failure to do so is a risky and hazardous business. After the last war we also neglected to maintain an aircraft industry, and the 17 firms established in the business during World War I dropped down to 7 by 1922 and to 3 by 1926.

It was about that time that Gen. Billy Mitchell charged the armed services with being guilty of treasonable neglect of air power. President Coolidge moved promptly in response to that charge and established the Morrow Board, which was organized in September 1925 and which completed an exhaustive survey and filed its report by the year end. Its recommendations were embodied in the following year in the Air Corps Act, the Naval Air Corps Act, and the Civil Air Commerce Act, all of which were signed by President Coolidge in 1926. This legislation, which constituted the magna carta of air power, kept American aviation alive during the following years, indeed gave us ascendency in most branches of aviation for almost a decade.

Then, once again we began to neglect aviation and air power, ignoring the warnings of the Morrow Board. That neglect hit a nadir in 1934 and 1935, when appropriations for the Air Corps and the Bureau of Aeronautics reached a 10-year low. That neglect at a time when Hitler and Mussolini were on the march was of course a major reason why those aggressors started on their march.

A spot check of other branches of aviation reveals the existence of serious problems in those fields, too. Production of personal aircraft has fallen from last summer's 4,600 a month to the current level of around 1,700 a month. Numerous reasons are given for this abrupt contraction, including lack of landing facilities, cost of the aircraft and the expense of operation, and others. We lack the time here to examine reasons or analyze the situation, but the existence of serious problems is clearly indicated.

Even in the radically new field of helicopters problems of regulatory policy have appeared. We hear that helicopters cannot operate inside the city limits of a great many metropolises. Since the ability to do so is their chief advantage, we can perceive that this is a truly acute problem.

Thus, it is that no matter which branch of air power we examine; air transport, air manufacturing, the size of the air forces, research, personal aircraft, and helicopters, challenging problems involving national and local government policy bar the path of progress. Does all this mean that the brilliant promise of aviation and air power is not to be fulfilled? Are we to be denied the thousands of new jobs, the new enterprises springing up around the airports, the convenience, comforts and luxuries that aviation seemed likely to bring us?

I do not believe it. We simply must take a careful reading and formulate a policy that will allow aviation to grow and assume its rightful place.

I submit here today that we as a Nation cannot afford again to drop behind in air power. We must remain strong to discourage aggressors.

What is needed is a comprehensive review of American air power and its components: the air forces, air transportation, and the aircraft industry, to formulate consistent national programs for each branch. Only the Congress can establish these programs, but to do so it must be equipped with authoritative facts and studies.

I feel therefore that we should at the earliest possible moment establish a board or council at the highest level to recommend action that would strengthen American air policies and prevent loss of aeronautical leadership to foreign rivals. Several other leading nations—Britain among them—considered the establishment of national air policy as one of the first steps to be taken in postwar reconstruction. We can do no less if we wish to remain a leading air power. We should not repeat the mistake that we did in the maritime field—of twice surrendering a hard-won leadership.

Program of the Republican Party

EXTENSION OF REMARKS
OF
HON. EDWARD V. ROBERTSON
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. ROBERTSON of Wyoming. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Denunciation of GOP and Program Comes Too Heavily and Too Early," by Frank R. Kent, from the Washington Star of Wednesday, April 30. 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT GAME OF POLITICS—DENUNCIATION OF GOP AND PROGRAM COMES TOO HEAVILY AND TOO EARLY

(By Frank R. Kent)

As this session of Congress goes into its fifth month many detached observers agree that the current unrestrained denunciation of the Republicans, imperfect though they undoubtedly are, has been much overdone. At the moment there seems every prospect that before adjournment in July a program will have been enacted that not only will be widely approved but will make the violent hysteria with which it is now assailed seem pretty silly.

That fact is beginning to trickle into the minds of the more astute critics on the Democratic side and there is a present tendency toward some restraint. It is natural, of course, that opposition should come from the left-wingers, including the Communists, who have permeated the CIO to the point of at least partial control.

Their quite open goal is wreckage of our governmental system. But the political wisdom of wholehearted opposition from the Truman administration certainly is open to doubt, for, after all, what is it the Republicans propose? First, to slice governmental expenses and reduce the size of the Federal pay roll; second, to cut taxes; third, to curb the power of the labor-union bosses, which concededly has been greatly abused.

It is true that for 13 years the Democratic administration went in the exact reverse direction of these proposals. While the billions were pouring out in doles and subsidies, while the war was on and clear thinking impossible, waste was made to seem right, a degrading political alliance appeared a noble concern for the common man, and the basic iniquity of these policies was obscured. But something like sanity has returned and no one can doubt today that the public desire is for curtailment of governmental size and cost, reduced taxes, and restraining laws against labor-union abuses.

CUTS EVOKE HOWLS

Administration Democrats from Mr. Truman down have declared themselves in favor of these things. Nevertheless, along with the radical groups, they strongly oppose the Republican effort to do them now.

The contention is that the Republicans cannot cut expenses without crippling the Government, reduce taxes without endangering stability, or correct labor abuses without depriving labor of its basic rights. All of which is nonsense.

Take the question of cutting expenses. Every cut that has been voted in the House committee has produced a terrific chorus of squeals, bleats, and threats. Yet in not one case has the opposition presented facts that stand up under scrutiny.

The latest instance is in the reduction in the Interior Department. This evoked a most enormous howl. The Department would be ruined. The natural resources of the country would be lost. So would every State in the West to the Republicans in 1948.

MORE FOR RECLAMATION

None of this is true. House leaders prove that the bill as passed will provide more funds for reclamation next year than ever has been spent in any one year; that actually more funds for reclamation are provided for next year than the Department is empowered to spend this year under President Truman's freeze order limiting expenditures to $130,000,000.

On this, as on other budget cuts, the Republican position is measurably approved by Senator BYRD, the acknowledged authority in this field; Senator GEORGE and other Democrats who feel that unless drastic cuts are made now they never will be made and eventually our system will collapse under the sheer weight of its size and cost.

It is the same way on taxes. The President and Secretary Snyder are on sound ground in opposing any tax reduction not justified by budget balance, debt reduction, economies and income. Yet their position is weakened, first, by the fact that they put through the repeal of the excess-profits tax last year; second, by their own huge mistakes in surplus and revenue estimates; third, by the powerful arguments, among others, of John

W. Hanes, former Under Secretary of the Treasury, and quite the ablest man in that Department during the last 14 years.

In the matter of labor legislation it already has been pointed out that a majority of the House Democrats voted for the Republican House bill, which undoubtedly will be the basis of the eventual law, if Mr. Truman does not veto it.

TRUMAN COULD JOIN MOVE

So what is the situation? The situation is that before the end of July, if the Republicans do not weaken, they will have greatly cut down the size and cost of Government, made a real start on reducing the debt, lowered tax rates, and, unless prevented by Mr. Truman, given the public protection against the power-drunk labor bosses.

If the enactment of this program is not followed by the dreadful disasters forecast by the raucous voices of the left, the administration will be in a painful position. If the reductions in the Truman budget fail to paralyze vital Government functions; if the tax cut stimulates business and does not perilously reduce revenues; if the labor law is found not to have crucified labor but merely to have protected the public—in other words, if calamity does not quickly ensue, then all the radical prophets will be discredited and Mr. Truman, by measurably taking their view, will suffer.

As things stand now, he is on the wrong side of a program desired by the people and to which he himself is pledged. Instead of helping, he stands in the way. It would have been intelligent had he joined—or even now should join—in getting these things done quickly and well. He would have had at least half the credit—perhaps more.

Trying To Do Too Much

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Trying To Do Too Much," from the New York World-Telegram of last night. It bears on the measure now pending before the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRYING TO DO TOO MUCH

If corrective labor legislation is to become Federal law—

Each branch of Congress must pass a bill (the House has passed one; the Senate is debating another). A conference committee then must take the two bills, reconcile their differences, and write them into a single measure. Both branches must approve the committee's work. Finally, President Truman must sign the measure; or, if he refuses, 2 to 1 votes must be mustered in both branches to pass it over a veto.

There probably are enough votes in the House to override any veto. But there are not enough in the Senate to override a convincing veto.

Mr. Truman could write a convincing veto of a measure as extreme as the House-passed bill. It includes, according to the National Association of Manufacturers, virtually all of what management believes essential in the public interest. To us, this means that it goes too far. We distrust the NAM's opinion as to all that is essential, just as we challenge the CIO and AFL inflexible opposition to any legislation whatsoever.

The Senate has before it a milder bill, a product of study and compromise in its Labor Committee. It is not namby-pamby. It provides for many urgently needed reforms. There is no assurance that Mr. Truman would sign it, but it would give him no such reason for a convincing veto. And more Senators would vote to override a veto of it than of the tougher House bill.

Senators TAFT and BALL and others are fighting for amendments to strengthen the Senate bill. If they win their fight, the probable result will be that no corrective labor legislation will become law in this session of Congress. House Republicans will be encouraged to resist any toning down of their extreme measure in the conference committee. And the bill finally sent to Mr. Truman will invite a veto which cannot be overridden in the Senate.

We don't agree with those who argue that this would put the President in a political hole. The country won't like it if he vetoes a labor bill that is manifestly sound and fair. But the country won't blame him for vetoing a bill that goes too far. It will blame the Republicans for sending him such a bill.

No single piece of legislation is going to correct all the abuses, excesses, and bad practices of the labor movement. Here, for the first time in years, Congress has a real opportunity to correct many of them.

Mr. Wallace Explains

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Wallace Explains," which appeared in the Washington Post of yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. WALLACE EXPLAINS

One of these days it may be plain to Mr. Wallace that he can never be a peacemaker by adopting the role of apologist for Soviet Russia. At his press conference he sought to recoup any reputation he may have as a constructive force in our society by disavowing the more glaring of his recent boners. He denied, for instance, saying that the Truman doctrine is "ruthless imperialism." Yet he could not refrain from the most arrant propaganda in behalf of Moscow. One of the choicer bits was his opinion that Russian noncooperation derived from fear of an American depression.

What danger could there be of a link with our economy or of contamination with our society in the cooperation that the Russians have rejected? In not one constructive project will they participate. United Nations Educational, Scientific, and Cultural Organization, World Bank and Monetary Fund, Food and Agricultural Organization, International Civil Aeronautical Organization, International Labor Organization, International Refugee Organization, World Health Organization—to all of these bodies the Russians have turned a cold shoulder. Nine months ago they even refused to attend the London Conference of the United Nations Subcommittee on Devastated Areas which was called merely to survey reconstruction needs in Europe. Surely Mr. Wallace in his right mind would not contend that fear of an American depression had anything to do with this long line of refusals. The common denominator of all these bodies is eleemosynary. They are intended to aid the unfortunate, fulfill a common responsibility, make visible the unity of mankind. As Lief say that a private person might be ruined by helping the Red Cross as say that Russia would be hurt by joining in these good works for the common benefit.

We may grant that there is a factor of fear in the make-up of the Kremlin's hierarchs. It is the fear of people who are sure neither of themselves nor of their power. That is the reason they are averse to freedom of communication. Their fear has lately been expressed in a refusal to allow Russian brides to join their British husbands in England. But it is their own weakness, not ours, that they are afraid of. They fear that with intercommunication our system will undermine the confidence of the Russian people in theirs. This accounts (in part) for their noncooperation in peace-making and in the establishment of a world society. As for the Wallace argument, he knows as well as anybody that Russia's economy is shielded from the effects of any American depression by her system of state control and state trading, as was shown in the 1929-1932 depression.

How are we to get cooperation with Russia? Mr. Wallace, who swears that his only purpose is to promote precisely that, implies that such cooperation is impossible as long as we retain our system of free enterprise. He has only himself to blame if the impression is that he thinks his (and our) object can be attained only by our copying the Russian system. That solution will be rejected by the American people. We are so unafraid of our institutions that we are members of all the world organizations that the Russians reject. The better way of promoting Russian cooperation is the Marshall way. That is to say, by working at nonexclusive cooperation with other nations and by refusing to appease Russia by negotiating a peace with a worm in it.

The Tariff Problem

FXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the RECORD a very cogent discussion of the tariff problem by two very able citizens of Idaho, speaking on behalf of the Senior Citizens Pension League of Boise, Idaho. I am in complete agreement with the sentiments expressed in this very intelligent and helpful communication.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Be it resolved, That we express our views to Congress on the tariff question, as follows:

We believe that as our country has as great natural resources as any country on earth, that it has by far a greater use of labor-saving machinery than any nation; that we have equal intelligence and industry of any people, and that trade is the easiest way of production; we can therefore compete with the world and need no tariff.

That if we seem to not be able to compete that there must be some other cause, and that Congress should seek out such cause; that Congress should move gradually in the direction of free trade with the world; that this Nation and the whole world will benefit from every removal or lowering of tariff barriers whether they be domestic or foreign.

There may be need to have tariffs to offset the subsidies of foreign nations not for our direct benefit, but for the benefit to the world in which we find ourselves very much interested.

Tariffs are as reactionary as it would be to compel our people to abandon the use of labor-saving machinery. It compels us to produce the hard way.

Those who believe they need a tariff do not believe in their most touted individual enterprise and their vested interests in their advantages should be ignored in the interest of an improved democracy and world peace.

Resolved, That we send copies of this resolution to the Senate, the House, and to the President, and that we seek Senator GLEN TAYLOR to get this printed in the CONGRESSIONAL RECORD.

Passed by the Senior Citizens Pension League of Boise, Idaho, this 9th day of February 1947, at Boise, Idaho.

M. E. COPE,
President of Senior Citizens Pension League of Boise.

ETHEL BROWNING,
Secretary of Senior Citizens Pension League of Boise.

The Need for Housing Legislation

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To Ease the Housing Shortage: Pass These Bills," published in the Philadelphia Inquirer of April 25, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO EASE THE HOUSING SHORTAGE: PASS THESE BILLS

With Washington admitting that the housing situation is not improving but is, if anything, getting worse; with many builders in the Philadelphia area preparing price rises on new homes; with continued scarcity of dwellings going hand in hand with increased construction costs, any encouraging development in the housing field is reason for loud cheers.

Two such developments appeared on Wednesday: Approval by a House committee at Harrisburg of the bill to permit insurance-financed housing projects in Pennsylvania, and release to the Senate floor in Washington by the Banking Committee of the long-stalled Wagner-Ellender-Taft long-range housing legislation.

Passage of these two acts would stimulate dwelling construction of many kinds. Other large cities have benefited from the vast housing developments built with insurance-company funds, and the shortage of homes in Philadelphia would be relieved, especially in the rental field, by similar projects here.

The Wagner-Ellender-Taft bill, national in scope, calls for an integrated housing program with its objective the building of 15,000,000 homes by 1958. It would push the construction of 500,000 public low-cost dwellings as soon as possible, stimulate private construction of moderate-priced homes, foster farm and rural housing, and facilitate slum clearance.

Unfortunately, neither measure is yet in the clear. The insurance bill has hurdled a number of obstacles, has been passed by the Senate, and needs only approval by the House. But strong lobby pressure is being brought against it—pressure that was able 2 years ago to restrict insurance housing so drastically as to defeat the purposes of the bill.

The Wagner-Ellender-Taft bill has even a tougher road ahead. It is opposed by the same groups, centering their fight upon its public-housing provisions, that helped kill it off in the House last year. It was reported out of committee by the slim margin of 1 vote, and an arduous struggle for survival is inevitable in the Senate.

The one thing that may confound the pressure groups opposing both these bills is the continued gravity of the housing shortage. In the face of pressing necessity for large-scale action to promote home building, opposition to legislation that would insure such action is impossible to justify.

Appropriations for Foreign Relief

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Letting Marshall Down," published in the May 1 edition of the Philadelphia Bulletin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LETTING MARSHALL DOWN

The $100,000,000 slash made by the House in the fund proposed by the administration for the relief of distressed populations overseas was unwise as well as ungenerous. Also it was in effect a denial of the cooperation to which Secretary Marshall is entitled from Congress. His program has wide bipartisan support, and there has been no dissent expressed to it by the House leadership or by any but minority elements in the House.

This fund takes the place of the former American contribution to UNRRA; so we as a Nation are pledged to furnishing it in adequate amount. Secretary Marshall placed the legislation carrying out the administration's relief program on the Department's must list of legislation. It is important to our all-around international policy that the United States, as the richest of the belligerent nations, and the one whose territory suffered the least material damage, back up championship of democracy for the European nations with a fairly liberal measure of practical relief. Decidedly the House has let Marshall down.

The restrictions imposed on distribution seems to stem from a desire if not entirely to deny aid to the populations of Soviet-dominated countries, at least to attach conditions which may be resented and in effect curtail relief. On this matter surely the advice of the Department is worth following.

In the case of Poland, for instance, if we hold that the desire of the majority of the people for democratic freedoms is being thwarted by a Soviet-controlled minority, why add to the masses' sufferings and deprivations?

The Senate is looked for to back the administration fully. Public opinion will support such a stand.

United Nations Committee on Future Government of Palestine

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Thursday, May 1 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a copy of a memorandum which has been sent to the Secretary General of the United Nations for submission to the General Assembly jointly by the Nation Associates, the CIO, the Farmers Educational and Cooperative Union, the Council for Democracy, the Church Peace Union, and the Progressive Citizens of America.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE NATION ASSOCIATES,
New York, N. Y., April 23, 1947.

PRESIDENT OF THE GENERAL ASSEMBLY,
The United Nations,
Lake Success, N. Y.

SIR: In view of the fact that an extraordinary session of the General Assembly of the United Nations has been called in order to establish a committee of inquiry whose function it will be to prepare proposals for the future government of Palestine, we, the undersigned, beg leave to make the following suggestions with respect to the composition and procedure of this committee.

We propose that the membership of the committee be limited to representatives of such states as are not directly concerned with the Palestine question.

Since the terms of reference of the committee require that it should propose the character of the future government of Palestine, it must of necessity review both the history of the mandate and the record of the mandatory in discharging its obligations, as well as such aspects of the world situation as relate to the terms of the Balfour Declaration and the mandate.

If a decision is to be rendered which will be acceptable to the Jews of Palestine, the Jews of the world, and the Arabs, as well as to world public opinion, it is necessary that no color of prejudice or special interest be attached to the committee.

For this reason we oppose the participation, as parties in interest, of the Government of Great Britain, now the mandatory,

and the governments of the Arab states in and out of the United Nations.

That Great Britain is a party in interest is self evident. A further reason for its exclusion from the committee of inquiry is to be found in its record as mandatory power. Since May 1939, it has governed Palestine under the terms of the white paper restricting immigration and land sales, despite the fact that the Permanent Mandates Commission of the League of Nations ruled that the white paper contravened the purposes of the mandate, which required the mandatory to facilitate Jewish immigration into Palestine and to support close settlement of the Jews on the land.

Since 1939 there has been no official review of British policy under the mandate. While the war, with the subsequent disruption of services and communications and the disappearance of the League of Nations, may provide some excuse for this lack of review until 1945, no such argument applies to the unilateral action which Great Britain has taken with respect to Palestine since that date. The Charter of the United Nations drawn up in April 1945, provided, under article 80, that "with respect to mandated territories nothing shall be done to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which members of the United Nations may respectively be parties." The action of Great Britain in protracting the illegal policy of the white paper of 1939 may be regarded as an infraction of this provision, and was so regarded when the Anglo-American Committee unanimously recommended on April 20, 1946, that the provisions of the white paper be immediately abrogated, the doors of Palestine be opened to Jewish immigration, and the land-restriction laws be repealed.

Notwithstanding these facts and recommendations, the British Government has continued its policy unchanged, and even issued a statement from the Foreign Office asserting that it regarded the terms of the mandate as having been "fulfilled."

This claim was contested by the President of the United States who, in a communication to King Ibn Saud of Saudi Arabia on October 28, 1946, stated that in the judgment of the United States, "the Jewish National Home has not as yet been fully developed."

The Government of the United States, although not a member of the League of Nations at the time of the issuance of the mandate, under a special convention between itself and Great Britain, ratified in 1924, was accorded all the rights belonging to the League with respect to Palestine; by the terms of this convention Great Britain was obligated to make no changes in the mandate without prior consent of the United States. The white paper of 1939 was a direct violation of this convention and has not at any time been accepted by the Government of the United States.

In further abrogation of its international commitments, the British Government, in January 1946, proceeded, without sanction by the United Nations, or the United States, to accord independence to Trans-Jordan, which had been administered under the same mandate as Palestine.

The British Government has made the Arab states parties in interest in the Palestine question, although nothing in the mandate, or any other international agreement, grants special rights to any of the Arab states. This was accomplished by drawing the Arab states into consultation with the mandatory on various aspects of the Palestine problem. As a result, the Arab states have, individually and collectively, demanded the establishment in Palestine of an independent Arab state, and, to achieve this purpose, have embarked on a policy of intimidation, both against the Jews of Palestine and their fellow members of the United Nations. The Government of the United States on repeated occasions has been threatened with economic reprisals if it continued to manifest a friendly attitude toward the Zionist claims. Over the world at large the Arab states have held the threat of a general uprising in the event of a decision favoring the Jews in Palestine.

A token of this promised revolt is the action of the King of Egypt in granting asylum in his palace, to the former Grand Mufti of Jerusalem, convicted by evidence now in the hands of the Allied War Crimes Tribunal of complicity with Nazi Germany, Italy, and Japan in organizing Arab sabotage of the Allied war effort and of stimulating the program of extermination of the Jews.

The Mufti, from his headquarters in the King's palace in Alexandria, is today directing the organization of an underground Arab army, in Palestine and outside, and openly reviewed in Egypt elements of these forces. Moreover, the member states of the Arab League, including those represented in the United Nations, have organized a boycott of the goods and products of the Jews of Palestine.

Some Arab countries, and particularly the Government of Syria, now represented in the Security Council of the United Nations, are conducting a campaign of intimidation against the Jewish populations of their own countries in an effort to produce a disavowal of support of the Zionist cause. The Government of Syria has imposed the death penalty on Syrian Jews helping refugees to escape into Palestine.

From the foregoing it must be apparent that the presence of either the mandatory government or any of the Arab states on the committee of inquiry would be a priori regarded as prejudicial to its conclusions. It would, moreover, constitute an act of discrimination against the Jewish people. The interest of the Jewish people with respect to Palestine was established first by the Balfour declaration and subsequently by the terms of the mandate. Under article 4 of the mandate, the Jewish Agency for Palestine is recognized as a public body for the purpose of advising and cooperating with the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish National Home and the interests of the Jewish population in Palestine, and, subject always to the control of the administration, to assist and take part in the development of the country.

The same article also provides that the agency shall take steps in consultation with His Britannic Majesty's Government in securing the cooperation of all the Jews who are willing to assist in the establishment of the Jewish National Home.

If any parties in interest were to be members of the committee of inquiry, it would be essential that the rights of the Jewish people be safeguarded through the presence in the committee of the Jewish Agency for Palestine.

The exclusion of parties in interest from membership in the committee of inquiry should not, however, preclude the granting of full opportunity to all parties to present their case to the United Nations, whether in the extraordinary session beginning on April 28, 1947, or to the committee of inquiry, or in the regular session of the General Assembly of the United Nations in September. Great Britain and the Arab states are already represented in the Assembly and their rights of participation are thus assured and protected. The Jewish people alone are not. In view of the recognition of the Jewish Agency for Palestine under the mandate as the representatives of the interests of the Jewish people on this question, we ask that in all discussions and decisions with respect to Palestine, the right of full participation be accorded to the Jewish agency. There is nothing in the Charter of the United Nations or the rules governing the procedures of the General Assembly to preclude such participation. Fairness and decency, moreover, demand that this be accorded.

Respectfully yours,

FREDA KIRCHWEY,
President The Nation Associates.
PHILIP MURRAY,
President Congress of Industrial Organizations.
JAMES G. PATTON,
President, Farmers Educational and Cooperative Union.
HENRY A. ATKINSON,
Secretary The Church Peace Union.
JAMES E. GREER,
Executive Secretary Council for Democracy.
JO DAVIDSON,
FRANK KINGDOM,
Cochairmen, Progressive Citizens of America.

Foreign Relief

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that I am convinced this bill will pass, and after it has been passed by both Houses in some form and been signed by the President, it will be my duty to back this foreign relief and use what influence I have to see that it is properly administered and that it alleviates the suffering for which it is intended. I wish to commend the sincerity of those who have been working for the passage of this bill. They are fine men and I respect their motives and their purpose in diligently listening to the hearings and reporting it out and fighting for final passage of the bill. I have the utmost respect for Mr. Hoover and the members of the Foreign Affairs Committee of this House. However, I must add that some of us who served in the various European countries during the late war, and who associated with those people in the various countries who will need relief, are not going to take Mr. Hoover's advice in full or that of the Foreign Affairs Committee, because we feel that we are qualified to speak on the problem and are comparably acquainted with this problem to anyone else.

There has been a great deal of argument and debate here the last few days about something having to be done to relieve the suffering and to fight communism, and to build up the prestige of America in these foreign countries. If the money we send overseas will accomplish the desired end, I would be the first man to vote for the passage of this relief bill but let us look at the record of American money spent on foreign soil in the past.

I would like for you to think a moment about England. As I recall, $40,000,000,000 was sent to England during the recent war in the form of lend-lease. This money was used by England in the prosecution of our joint war and in feeding

her people, but did it prevent England from voting, before the war was over, a form of semisocialistic government, which is a step towards communism? Did it prevent the British people from repudiating Churchill, and indirectly the United States, before the war was even over? Of course, the answer to this question is obvious. Then let us look at the approximately $4,000,000,000 loan by this country to England last year to help bolster its economy and prevent the country from going communistic, and all the other things outlined by the proponents of that loan, but what are the facts? England today is in worse condition economically than ever before in her modern history, and I am told that even Churchill in a recent statement charged the labor government with squandering a large part of this $4,000,000,000 loan. The records seem to show that when American money is spent overseas, it tends to have the adverse effect for which it was sent.

Let us look at China. China was supposed to have been greatly aided by American relief through UNNRA and otherwise, but China today is in worse condition than before this money was spent, and we are told that about $1 out of every 60 which is sent for Chinese relief in the interior actually reaches those for whom it was intended, and even UNNRA is going to discontinue sending any more supplies to China because the people who need it do not get it.

Let us look at Russia. What did we get from Russia after sending her about $11,000,000,000 in lend-lease? We made an avowed enemy, or at least she is today, after reaping the benefits of this fine loan or gift.

Let us look at the record of Japan. After the great earthquake in 1923, Americans contributed millions of dollars in supplies and money for the relief of the people of Japan. Did they pay us back in kindness? Rather they started immediately to embark on a program of war and eventually a conflict with the United States.

What about Germany after the last war? After Britain and America had tried to lighten her reparations burden and loans had been made by American industry, Germany went to war against those that helped her. The same might be said of Italy and other examples too numerous for me to mention here.

Under the provisions of this bill, and the very nature of relief and delivery abroad, it will be impractical and somewhat doubtful that this money will be used to advantage. We say in this bill that the administration will be entirely in the hands of Americans but when Communists in the various countries learn that relief is coming, or can be obtained, what will prevent them from becoming social democrats or followers of some other political creed temporarily to secure these supplies, and after they have grown fat at the hands of American relief, revert back to the Communist Party or some other outfit which is inimical to the interests of America and the whole world. What will prevent a large part of this relief going into the black market, or being hijacked at night along the roads or in the warehouse, as has been the case in the past? Even after someone who obtains relief who is eligible for it, and has carried the goods to his home, what will prevent him from being robbed or selling his portion to the black market? These are things that I found in the late war to be the rule rather than the exception, and there is no sure way of seeing that this relief is properly administered and delivered to the people who need it.

It is difficult for those here in America who have never been abroad to comprehend the almost insurmountable difficulties involved in administering relief properly in countries where there is practically no law and where communications are still in need of repair. Those of us who were in Europe during World War II remember well the difficulty the United States Army had with supplies and the distribution of relief, and so forth. There were instances of whole trains on the way from the channel ports into the interior being pilfered and diverted from their original destination into the black market; there were vast auctions going on in the streets of Paris of American goods and supplies; there were refugees wearing combat boots and Eisenhower jackets before even our soldiers could obtain these materials; there were hijacking of American trucks—and all of this with armed American soldiers on every corner. Black-market rings were exposed in the armed forces that amounted to millions. I know personally of instances where American soldiers on British ships were eating British rations of two meals a day of partially rotten food and at the same time buying from the British crews at enormous prices American lend-lease foods. There were places we could obtain American steak on the black market in the occupied countries when it could not be obtained through the United States Army ration.

The great civilizations of Rome, Spain, Carthage, France, and even England today, are only memories because of their depleted soil, iron, coal, timber, and other resources. We wish to prevent this same thing from happening to America, and we must conserve our resources and guard against the future needs of our people. It is evident that scattering the already diminishing resources of America to the far corners of the world would only weaken this Nation to the extent where it eventually would have to take second place among the powers of the world.

In my opinion, this whole problem of foreign relief is just a temporary expedient, even if properly administered; the basic, underlying cause for this need will remain. We need to do something permanent. This situation abroad is based on overpopulated areas and under-production. This problem, unless it is rectified, will always remain so regardless of its accentuation by post-war chaos. We need to follow a policy more far-reaching, and I would vote for an appropriation by this Government to assist those areas of Europe that are overpopulated and need assistance in this way: I would vote for a loan to resettle these people in areas such as South America, Africa, Australia, or any of the other great frontiers of the world today, where they can work and build their own and a new civilization but my observation is that they are not willing to pay that price for a new civilization. They want to reap the benefits of the high standard of living such as we have here in America without working for it. These payments overseas tend to make the people less thrifty and to disregard the necessity of work and one's own individual efforts. I doubt if Abraham Lincoln would have risen to the Presidency of the United States if because of his poverty when he grew up, and he was at times a little hungry, had he been pampered and fed by the Government or some humane neighbor or kinsman. The fact that he did live hard, and fought against adversities, molded his character and made a man of Lincoln. The same might be true of our own people in America who sometimes clamor for relief, and I believe the same might be true of those around the world. Then, too, sometimes, as you gentlemen of the House know, it is human nature to visit one's benefactor with ingratitude. A lot of the time, those in your district for whom you do the most, will eventually turn against you. The great conservative elements that shift for themselves very seldom request any aid from a Congressman or any other public official.

Human nature being such as it is, and for the above-mentioned instances where relief was sent to great countries abroad, I am opposed to the continuance of extensive relief abroad by the Government of this country. By welfare organizations, yes, but I believe when the Government, through ill-trained administrators, sends large amounts of relief abroad, it only plays into the hands of our enemies and has an adverse effect upon the situation we attempt to alleviate. I am reminded of a verse from some of Shakespeare's writings:

Blow, blow, thou winter wind but thou art not so cold as man's ingratitude;
Freeze, freeze thou bitter sky but thou dost not bite as nigh as benefits forgot.

This is very true and most often the case concerning foreign relief.

Trained To Raise Hell in America

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I hereby call attention to the following article from the April issue of Nation's Business. It contains a startling revelation of how American Communists and others are trained in Moscow to sabotage freedom and to destroy our concepts of Christian civilization. It is an article which every American should read:

TRAINED TO RAISE HELL IN AMERICA
(By Junius B Wood)

Attention, ambitious young men and women. A well-established and liberally endowed university offers you free courses in factory sabotage, bomb making, kidnaping,

train wrecking, bank robbery, fomenting armed mutiny—and other techniques of violence and treason.

Scholarships cover all expenses, including recreation and annual vacations at summer resorts.

This university is the West Point of world revolution.

That it exists is surprising. That it is sanctioned and supported, according to its graduates, by a recognized government, is more amazing.

Other State-supported schools educate their youth to become better citizens. This university teaches youth of other lands to go back home and wreck their countries.

Over the years it has trained and returned to the United States an estimated 800 disloyal Americans. They are the leaven of some 50,000 Communists and 100,000 pinkos in our land; they are the high officers of a secret army now being drilled to overthrow our Government and social order.

Most startling of all, from an American point of view, is the diplomatic amiability which bolsters and bows to a government that is diligently working to wreck our institutions.

This university is the International Lenin School in Moscow. Conspiracy and secrecy are the essence of all it teaches. Outside of top levels in the Communist party and in the Soviet government, few even in Moscow know of its existence.

It is behind a stucco-covered brick wall, high enough to baffle prying eyes. It is on the left side of Vorovskaya Ulitza (street), a few blocks beyond Arbat Ploschad (square of the telegas). Old-timers, before adopting names of Communist heroes became the vogue, knew the thoroughfare as Povarskaya Ulitza (Cook street). Even earlier, in 1613, Arbat Ploschad was where a Russian volunteer army under Prince Pozharsky and a Nishni Novogorod (now Gorki) tradesman broke through the defenses of the White city and drove the Polish invaders from the Kremlin.

In olden days this was the genteel neighborhood of court attendants. Later, the aristocracy found it convenient for extramarital ventures. Now it is dotted with diplomatic offices and homes. Students can look across the street from dormitory windows at the former British mission building, now a consulate, at the one-time German embassy and the official abodes of other capitalist countries.

The present site of higher education in bank robbery—rechristened "revolutionary self-help"—and kindred arts was once the quiet love nest of a Russian prince. His lady friend's little palace in the spacious grounds has been remodeled into the students' auditorium, classrooms and dormitories. It faces a plain, unnumbered gate in the wall, guarded 24 hours a day by a Red sentry so none may enter without a Communist identification card.

More buildings were needed for the growing school. Overlooking the wall is a structure in modern Soviet architecture with classrooms on the lower floors and sleeping quarters on the others. Back of the modest palace is a building for political police and secret paraphernalia, to which even students do not have free entrance. In the rear of the school building is a larger one with halls for demonstrations in street fighting and other activities. A smaller administration building is near the center of the campus, still leaving ample space for outdoor exercises away from inquisitive eyes.

SIBERIA AWAITS THE CURIOUS

Native Russians have learned that the reward for curiosity may be an extended visit to Siberia or an appearance before a firing squad. Patrons of the school admit that the Japanese did photograph the establishment and from within the compound. This was considered an act of treachery (the two countries being friends at the time) which was not discovered until a Soviet spy fraternally stole a copy from Japan's secret files.

When a stranger asks any Muscovite in the know about the Lenin School, the prearranged reply always is:

"It's up Tverskaya Ulitza, off the square with the Moscow Soviet Building," meaning the city hall. This college with so similar a name is the Lenin Institute. Its field is scholarly and theoretical, shouldering the big task of compiling biographies of Marx and Lenin which will account for their acts during every day and hour of their lives.

The International Lenin School started with Nikolai Bucharin, party doctrinarian, as its first director. Lenin passed into posthumous fame, and Bucharin did not survive the Stalin purges, but the school grew. War temporarily interrupted plans for expansion as well as the flow of students from other countries.

The school has a permanent faculty, mostly from the Academy of Red Professors, and a director, at one time a woman. Highlights of the Soviet hierarchy, past and present—Stalin, Trotzky, Kuusinen, Molotov, Manuilsky, Yaroslavsky, Lazovsky, Budenny, and others—serve as guest lecturers.

Students are immediately inducted into the air of conspiracy in which these veterans have lived. With matriculation, each student takes a revolutionary or party name by which he will be known in Communist circles and outside activities. Mark Aldanov in The Fifth Seal tells of a party worker who had so many aliases that he forgot his baptismal name.

Even party workers not in the top holy of holies speculate over the identity of Josef Broz Tito, belligerant dictator of Yugoslavia. They explain that Tito is a party label from "Third International Terrorist Organization," the initials being the same in Slavic and English. They surmise from his photographs that Tito may be Rudolph Baker, a promising American student of Slav ancestry who was detailed to district organizing after his return to the United States and then mysteriously disappeared.

Dual names as party labels are not limited to students. The old-timers needed them as revolutionists, and aliases are now a stylish party custom. Among the emissaries sent by Moscow to run party affairs in the United States, the Hungarian Pogany was "John Pepper" and "Schwartz"; the late Gussev was "P. Green"; Alpi was "Fred Brown," and the Finn Sirola was plain "Miller."

With his rebirth under a new name, the student gets more instructions in life behavior. He must blindly obey every order. He may associate outside with the unfaithful, but not disclose that he is a Communist, must not dress or act conspicuously, be photographed, answer questions, or become talkative from drinking. If positively identified as a Communist, he shall frankly admit it but under no circumstances, even if it means imprisonment or death, disclose anything about the party.

WARNED AGAINST UNITED STATES CONTACTS

The first business of any meeting, even casually on the street, is to agree on a fictitious story of what is being discussed to avoid disclosing the truth if interrupted later. Students should not recognize each other off the campus or cultivate fellow countrymen, Americans being warned particularly against American engineers, newspapermen, tourists, and Government employees in Moscow.

The freshman student is already familiar with some tricks of deception. In the United States he got a passport on the pretext of sightseeing in Europe. If he used a false name, the American party which paid his expenses to Moscow corroborated his "legend," or fake biography. In the school, the political police can supply a forged identification for any country.

Unless unusually naive, the student senses that permission to be off the campus until 11 p. m. is to enable the police to check on his actions and acquaintances. He learns that they watch his political "progress" or "deterioration" and control him as they do every Russian. He is now dependent on the Russian Party and Soviet Government for existence.

He is instructed to be peaceful and disingenuous with authorities pending the day of revolution. Instead of avoiding military, police, or other law-enforcement service in his own country, the graduate must welcome it. These are not only choice fields for spreading Communist doctrine among associates, but the military will supplement the school's instruction in tactics and weapons. A surprising story is told of the recent war:

"Today, I'll start your lessons on dismantling and assembling a machine gun," an American captain told a likely appearing enlisted man. The officer started to take the gun apart.

"Let me try," the soldier suggested. In a few minutes he had the gun apart and before long the complicated mechanism was back in place and working.

"Where did you ever learn that?" the captain asked, amazed at such dexterity by a raw recruit.

"In the Lenin School in Moscow," the man explained. Instruction in weapons of other countries is one of its courses.

This man was one who had belatedly realized that his first loyalty was to his own country and not to Moscow and world revolution. Nurserymen figure that 20 percent of seeds will not germinate and the Lenin School figures the same percentage of its alumni may lapse from communism.

PARTY IDEOLOGY FIRST

To keep the percentage down, the first studies in the school's 3-year course are intensive indoctrination in the theories of Marx, Engels, and Lenin. Once well grounded in party ideology, a party member will realize that winning a wage increase or election or disrupting his own country's economy for the benefit of the Soviet Union are only steps toward the final goal.

"Strikes are skirmishes that force the class solidarity of the proletariat, that oppose class against class and train the masses for the final struggle—the destruction of the state apparatus in a capitalist state," is quoted from a lecture by Abraham Branovich, better known as A. D. Lozovosky, lately Secretary of War in the U. S. S. R. and tops in Profintern and Comintern.

"The most glaring weakness of our members is inability to connect particular tasks with party outlook," Beatrice Siskin, alias Shields, a Lenin School alumna, warns in Party Organizer, the monthly magazine circulated only to trusted American party members. It also fell to name changing and is now Contact.

The Lenin School student who survives volume I of Marx's involved and obtuse Capitalism, can go on to volumes II and III, to the clearer philosophy of Lenin, the mistakes of Malthus, Ricardo, Smith, and other bourgeois economists and to increasing instruction in practical communism. As volumes II and III were written by Engels from notes left by Marx, faculty members doubt whether Marx himself would understand them.

In addition to its 3-year course, the school has short courses in labor activities, party organization, propaganda, and such, according to graduates of the school.

The labor movement is next traced from ancient times to the Red Revolution in 1917. In Marxist dogma, the struggle between employers and workers is irreconcilable. Christianity, according to Marx, came from a slave rebellion against the masters. In modern society the struggle is between capital and labor, farmers and distributors. It will be

solved only when civilization returns to the collectivism of tribal days and the masses take over the factories and farms. This is the version to be expounded to the masses, but it is made clear to the students that actually a government, as in the Soviet Union, will take over with the Communist Party in control and today's students as the actual rulers.

"Saying there can be unity of interests between employers and employees is treason to the working class," says a textbook by Olgin, followed by instruction that a collective agreement should be broken at the first opportunity.

Stalin, always direct, clarifies this with, "The mightiest ally of Russia is strife, conflicts, and wars in every capitalist nation."

Comrades who recant communism are to be ostracized, slandered, and accused of stealing and swindling, according to the school's instructions. The easiest way to answer charges by outsiders is to denounce them long and loudly as lies until they are doubted.

When the student reaches the courses on Communist Party organization, the haze of theory clears and action starts. He is taught what methods to use, based on party structure and ideology, in any foreseeable circumstance.

In a country where the party is outlawed, it must work entirely underground. In the United States, where it is legal but suspect, it should work under cover of other organizations, but the strategy of conspiracy to create internal disorder and to undermine the Government is the same.

TAUGHT BORING FROM WITHIN

The Lenin school student must join trade-unions or liberal societies when he returns to his own country—attend all meetings, pay dues promptly, be eager for work, unite others by party discipline until the organization is blindly following the party line in which he is so well grounded.

"Never in our wildest dreams did we imagine a simple-minded government would permit trade-unions and strikes by its employees," a professor in the school commented on the United States. "We have unions but here all workers are government employees and a strike is the same as mutiny in the armed forces, punishable by death. Nor did we foresee that a government would facilitate Communist infiltration into independent unions."

Students who can stand it, get the powerful dose from A to Z. They have now reached Z which is insurrection or revolution—how to put propaganda and organization among the masses to a practical test. Red Army officers and technicians, shadowy shapes from the MVD (Ministry of Political Police) and veterans in revolution take over. The course is based on actual experiences, a few successful and many bitter, each teaching something. When the time comes to apply these lessons there will be no turning back, and the penalties for failure are death.

"Too great humanity is a danger as it is interpreted as a sign of weakness," says the textbook of Hans Kippenberger, who, under the name of Alfred Langer, writes as a former revolutionary leader in Germany. "That is the great lesson from all revolutionary conflicts. Humanity should be extended only to those who may be won over to the cause. The revolutionary procedure—that is, the terror—should be applied most strictly to all adversaries."

PREPARATIONS FOR REVOLUTION

Though Moscow does not consider revolution imminent in the United States, American pupils get the course so they will be ready if the occasion arrives. Russia is the shining example of a small well-organized group taking over a country, and the lessons have succeeded in China and the Balkans.

Four "conceptions," using the school's phraseology, for an insurrection are: preparation, timing, knowledge of tactics, and complete surprise. Though loyal to the Communist world capital and well-instructed, the local leaders still will be amateurs—and Moscow prefers to send experienced revolutionaries to take charge and avoid disastrous bungling and overleniency.

Like the party policies and the life of a party member, nothing is left to chance or to personal vagaries but is planned in advance on party principles and experience.

High points of the plan for the capture of Chicago—when the time comes—sound like an army operation with everything provided for from psychological warfare to dropping paratroopers.

The peaceful preparations are to go on for years through capable party members burrowed into trade-unions, public offices, police force, liberal clubs, and other sources of information. Vital spots such as power plants, radio stations, and airports must be mapped.

All the working masses and unorganized proletariat may not be aroused to join in the fracas but the needed knowledge of where to attack to paralyze the city will be at hand. Even recording such a small detail as whether a watchman has a dog is called for in the instructions.

A headquarters, known only to a selected few, will be set up, a courier system organized; telephone talks will be in code, party papers or names memorized and destroyed. Until the zero hour, nonparty friends should be used as blinds and communications written on borrowed typewriters.

Police forces are notoriously unreliable for insurrections. Consequently, the city's riot squad—sure to put up a fight—is studied. If it is on three shifts, the weakest one is picked for attack. Once it is subdued, other police can be mopped up. If there is a suspicion that police officers are alert to what is brewing, the advice is to telephone them on a phony pretext to learn whether they are home or on duty.

The habits and daily routine of the chief of police, also the mayor and leading citizens, must be learned. A blacklist is to be prepared of politically undesirable citizens for summary liquidation or temporary use while their families are held as hostages.

Squads are assigned to capture each objective. Getting arms for them is easy in the United States. The hour and minute when the groups will strike simultaneously will be the final instructions.

To prevent calls for outside help, communications will be interrupted immediately. Railroads are to be wrecked several miles outside the city, either by sending out maverick locomotives or by blowing up incoming trains. Armed men will hold the airports.

Captured radio stations will order a general strike which will be easy if the power plants are seized. The mayor, chief of police, and other officers and leaders are to be captured early. If the mayor refuses to read the proclamation which must be prepared for him, he can be disposed of on the spot and somebody with a similar voice, already selected, can read it.

According to the time schedule, a city like Chicago should be captured in less than 48 hours. By that time the insurrectionists will have all the weapons and can arm more supporters. They are to proceed to setting up the government from officials picked in advance.

POSTGRADUATE TRAINING

After completing this practical phase of his studies, the graduate of the Lenin school leaves Moscow to begin his career. He may be sent to a colony for a year or more of postgraduate training or to his own country where Communism may be outlawed. He has mastered the technique of working undercover. Even in the United States and other countries where the party is permitted, it is actually two parties—one in the open and the other in the shadows.

A party worker or returned student is ostensibly assigned to duty by the proclaimed head of the Communist Party of the United States. Actually, his job is picked by the party's American politburo which acts under Moscow's direction. He may be detailed as a state secretary or to other organizational work, for propaganda or writing artcles, for special work among Negroes or foreign language groups or to get a job and build up party influence in a particular union.

The International Lenin School, of special interest because of American students, is only one of several which the Soviet Union operates for this purpose. The Eastern University, formerly the Sun Yat-sen Institute which Chiang Kai-shek's son attended, has graduated nearly 10,000. Its efficient work shows in China and Korea, making trouble for young Chiang's father and for us.

Graduates of Western University are active in Balkan and Baltic countries and scattered foreign language groups from the United States. Tiflis, scene of Stalin's youthful exploits, has a school for Communists from the Near East. Another in Vladivostok is chiefly for Koreans.

The Academy of Red Professors with a 7-year course is scholarly and philosophical. It is for heavy thinkers and high-browed evangels of communism with little appeal for less sedentary Americans.

SCHOOL FOR SECRET POLICE

On an equally high pedestal above the other schools for world revolution is the supersecret Kirov Academy in Leningrad. It is under the MVD or secret political police. Only candidates who have proved their do-or-die stamina enter its classes. It teaches higher level underground work and how to organize a police force which can control a nation, even its army, and keep the Communist Party in power. Its alumni are active in both Hungary and Greece.

By fostering so-called liberal schools in American cities, some formerly under party names, selected students can be instructed in revolutionary tactics. Summer camps with intensive courses are even safer from intruders. A goodly portion of some 20,000 graduates of these schools become converts to communism or sympathizers.

With the American schools, the International Lenin School in Moscow has become less essential for the program in the United States. It does, however, continue as a goal or finishing school for the hopeful young party member or graduate of the American classes.

The Soviet schools for foreigners are not too alarming when they are stripped of mystery. It would be well to know their 800-odd American alumni, also their instructors and what secret plotting is behind the formal handshakes over a conference table or the clink of cocktail glasses at a banquet board. It also will help when they know that we know—an interesting long-range job for our State Department and FBI.

Defects in Our Present Social-Security System

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. CLASON. Mr. Speaker, as the Members of the House debated and passed the measure which would provide hundreds of millions of dollars for the relief of victims of World War II in foreign countries, I wished that we could,

and would, give adequate attention to the thousands of aged persons in the United States who also are deserving of our consideration.

There is something basically wrong with our Federal social-security system, and as the average age of our people is steadily becoming higher a solution of the existing problem cannot be delayed much longer. The New Deal has given our older persons a raw deal, if the article entitled "Our Present Dishonest Federal Old-Age Pension Plan," by John T. Flynn, in the May 1947 issue of the Reader's Digest, is worthy of publication in that fine magazine. This sentence arrested my attention:

Now, after 10 years of the experiment, we find that families of the retired workers got an average pension last year of $6.40 a week.

The New Deal has collected $9,000,000,000 in taxes for old-age pensions and survivors' insurance and paid only one and a half billion for those purposes. This Government has spent the other $7,500,000,000 on other purposes entirely. Our aged people remain in need and in fear. Mr. Flynn points out that each year the workers employed in the United States must pay the pensions of those who are retired. In that way no worker need ever fear for his security in his old age. I believe this program can be broadened to include all Americans. The pensions may have to vary from year to year, depending upon the national prosperity.

If a proper plan was established by our Federal Government, I would not receive a letter like the following from a highly respected, well-educated gentleman in my district:

The old-age-retirement insurance is in need of a change. It is manifestly unfair to many groups of people. My own case may be typical of our group.

I was employed by a corporation until October 1940 and paid in the maximum up to that time when the corporation was sold and I was out of a job. I then became a partner in this firm and offered to pay social security, but it was refused by the local office. I am now told that the money paid in is lost, and that I will receive nothing.

It seems to me that it should be open to anyone who is willing to pay; and that we who have lost out should have the privilege of making up the lost time when we were ineligible just because we were not a corporation.

It is because of that letter which I received just before reading Mr. Flynn's article that I ask each Member to read the following reprint of the article from the Reader's Digest:

OUR PRESENT DISHONEST FEDERAL OLD-AGE PENSION PLAN

(By John T. Flynn)

(EDITORIAL NOTE.—In 1939 the old-age pension tax was due to be increased from 2 percent on workers and employers to 3 percent and then an additional 1 percent every 3 years. At this point, John T. Flynn, author of the following article, presented in Harper's Magazine for February 1939 an extensive argument to freeze the tax at 2 percent. The article attracted the attention of the Ways and Means Committee of the House then considering the subject. Mr. Flynn was invited to appear and present his case. After he had spent a full day before that committee, opposed by the Treasury, the committee decided immediately after the session to freeze the tax, but served notice on the President that it would give him an opportunity to approve the plan. The tax has remained frozen at 2 percent ever since at a saving in social-security taxes of $7,000,000,000 to the workers and employers of America. In this article, Mr. Flynn describes the flagrant misappropriation of most of the money that has thus far been collected for old-age pensions.)

For years I have been an ardent advocate of public old-age pensions. I was a member of the national organization that worked for social security. My purpose is not to oppose public pensions but to expose the indefensible methods by which the plan is being rendered ridiculous.

We have heard much of the great friendly State that would produce security for all. One form of this is the old-age pension plan. Now, after 10 years of the experiment, we find that families of the retired workers got an average pension last year of $6.40 a week.

The Government has collected $9,000,000,000 in taxes for old-age pensions and survivors' insurance. It has paid a billion and a half in pensions. It has borrowed and spent the other seven and a half billion on other things.

Not only is it dishonest, it is poor administration besides, to collect taxes under one guise and spend them for another purpose.

Workers and their unions sense this inadequacy and are again appealing to private business concerns for pensions. As a result over 10,000 plans for retirement benefits have been established by private corporations under carefully guarded trusteeships that guarantee that all benefits go to the worker.

Let us have a look at the dishonesty in the Federal old-age pension plan. The original plan proposed to lay a tax of 2 percent of the wage a year on employer and employee (1 percent each) beginning 1937; 3 percent in 1940; 4 percent in 1943; 5 percent in 1946 and 6 percent in 1949, at which point it would remain. However, in 1939 Congress, convinced that the rates were excessive, froze the tax at 2 percent and has repeated this action each year since. But unless action is taken, extortionate high rates will go into effect next year.

Had Congress not stepped in, the Government would have collected $16,500,000,000 since 1937 out of which it would have paid only $1,500,000,000 in pensions. The Government would have collected last year in old-age taxes $3,000,000,000 out of which it would have paid only $320,000,000 in benefits. Thus Congress saved the workers and employers over $7,000,000,000 in social-security taxes by resisting the demand of the Executive for higher rates. Even at the 2 percent rate at which Congress has held the tax since 1939 the Government has collected nearly $9,000,000,000, of which it has borrowed $7,500,000,000 to pay running expenses of the Government. Instead of social security for the workers this looks like political security for the politicians.

How does the Government get away with this? It is done by means of a very plausible and tricky fiction. Here is the theory. Employed workers who are protected by the plan will collect pensions after reaching 65. The number will be small at first, but will grow and in time will be so numerous that the highest tax of 6 percent will not pay all the pensions. The Government, therefore, should collect more than it pays out while the pensions are few and save the surplus. This cash is exchanged for United States bonds, and the bonds constitute the old-age reserve fund. In time this fund may reach forty, fifty, or, it is estimated, even as much as ninety billion. The interest on the bonds when added to the taxes will pay all pensions. To the untrained mind this may seem plausible. It was thought up by untrained minds and opposed by all the experts. A moment's reflection will show why.

At present the old-age fund holds nearly $8,000,000,000 in United States bonds. That means the Government has collected $8,000,000,000 more than it paid out in pensions. If in 30 years the old-age fund should hold $40,000,000,000 in bonds, that would mean it had collected $40,000,000,000 more than it paid out. The $8,000,000,000 surplus has been appropriated by the Government in exchange for United States bonds and the money is gone—spent on all sorts of things except pensions. No matter how big the fund gets, the money will be gone, having been spent by the Government on current expenses.

But you ask, are these United States bonds not gilt-edged securities? Are not the savings of the workers and employers thus safely invested? The answer is yes, if the Government ever plans to borrow more money in order to redeem these bonds. But it has no intention of ever paying these bonds. That would be contrary to the plan. The plan is for the old-age fund to hold the bonds forever in order to collect interest on them from the Government. Now, you say, is not the interest on their savings a legitimate method of producing pension income for the workers? That seems plausible. But consider it a moment and you will see it is a pure fiction.

If I own a United States bond, then all the taxpayers owe me the interest. But when the old-age fund owns a United States bond the situation is different. The fund is set up for the benefit of the workers. It is created by payments from workers and employers. Now if the bond belongs to this fund, before the Government can pay interest on it the money must be collected in taxes from the taxpayers. And the taxpayers are the workers and their employers. The Government will again have to collect taxes from workers and employers in order to pay the interest on the bonds in the old-age reserve fund. All this is done because, we are told, the number of persons drawing pensions after a number of years will be so great and the amount of money required so large that the highest tax of 6 percent will not produce it. In theory the workers and employers will pay a 6-percent tax, leaving a large sum still to be raised to meet the pension rolls. The Government is supposed to supply this in the form of interest on the bonds. But actually the interest money must be collected largely from the same people who pay the old-age taxes.

To put it differently, let us suppose that in 1970 the old-age taxes will fall a billion short of paying the pension rolls. The difference will be made up by the interest paid on the Government bonds owned by the fund. Therefore the pensions will all be paid (1) by the old-age security taxes and (2) by the interest on the bonds. The old-age security taxes will be paid by the employers and employees. But the interest taxes will also be paid very largely by the employers and employees.

At present the reserve fund is nearing eight billion. That means the workers and employers have been charged nearly eight billion more for old-age pensions than they cost. No matter what year in the future you select where there is a reserve fund of twenty or forty or fifty billion, it will be because the workers and employers have been charged twenty or forty or fifty billion more for pensions than they cost.

But, you will say, what about insurance companies? They have reserves. But an insurance company does not pay policy benefits out of reserves. The reserves are required by law because an insurance company is a voluntary association which the policyholders may quit or which may get into trouble for some reason. And they spread the cost of a bad year, such as the influenza epidemic of 1918.

A man has a life-insurance policy for $10,000. He pays a premium every year. The company uses that premium and all

other premiums each year to pay the death benefits which fall due that year. Insurance is reduced to a scientific basis. Experience informs its operators that so many people will die in a given year and so much insurance will fall due. Insurance rates are arranged so that the premiums collected in any year will cover all the death benefits that will normally be paid in that year. The benefits are not paid out of reserves. In the worst depression years premiums always covered death and other insurance claims. And so in 20 years from now—in 1967—should that man with the $10,000 policy die, his widow will collect his insurance benefit—$10,000—but the company will that same year collect in premiums from the surviving policyholders the money to pay it. It must be so.

Our politically minded social-security operators refuse to face the one great central fact in this problem. The Government old-age security plan is merely a Government insurance agency. Therefore, old-age benefits, like life insurance and other contingent benefits must be paid out of the income of the people concerned, earned by them in the very year when the benefits fall due. If there are 50,000,000 workers employed and 5,000,000 retired, the fifty million must each year, by their contributions, pay enough to support the five million on pension. There is no other way. The payments may be masked or disguised in whatever form a timid politician wishes to hide them. But that stern fact must be faced. And any honest system of old-age pension must be built on it. The Government does not provide the money. Its only role, like that of the insurance company, is to act as the agent which collects from the employees and employers and pays the benefits to those who are retired.

In the case of old-age pensions the great role which the Government can play is in bringing all workers into it, giving it the permanence essential to the plan and protecting it from disintegration by making it compulsory on all.

The benefits paid now are small. They will increase as the plan grows older and pensioners accumulate higher wage averages as the basis of pensions. Whether the pensions are increased or not it must always be kept in mind that they must be paid for by the workers and employers. There is no other way. Any slick scheme to fool the worker into believing the Government is paying any part of it should be swept aside.

The Government's course is clear:

1. The plan must be on a pay-as-you-go basis. The taxes collected should be sufficient to cover the pensions of that year and no more.

2. The idea of a reserve fund greater than that already raised should be abandoned. When the present plan of the reserve fund was adopted the three distinguished actuaries called in as advisers protested against it. In addition to the arguments against it already mentioned there are two others of grave import: (a) It is a plan to add a billion or two every year to the national debt which we are supposed to reduce. (b) It entangles the whole social-security system with the fiscal difficulties of the Government which are bound to increase. The old-age plan should be kept clear of that.

3. The present arbitrary system of increasing rates should be by law abolished without delay and rates for from 2 to 3 years should be fixed on a rigid actuarial basis.

4. The system should be enlarged to include all workers, save civil-service workers of Federal, State and city governments already protected by public retirement plans.

5. Benefits should be kept as they are for the time being until the country arrives at a state of reasonable postwar stabilization.

Finally every effort should be made to protect the whole system from politics—the politics of the politicians and the politics of the dreamers. We must close our ears to the politician in either party who uses social security as a vote-getting racket and who beguiles the workingman with his tales about all the wonderful things the great benevolent State can give him.

The State can give him nothing. It has nothing to give. It has no way of getting money save by taxing someone, including himself. If it hands him anything it must first take it from him or someone else. The idea that it may take it from him and give it to someone else does not seem to have occurred to him. Yet this is precisely what the old-age pension plan is doing.

The Evils of Communism

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Hon. William C. Bullitt before the Committee on Un-American Activities, House of Representatives, on H. R. 1884 and H. R. 2122, bills to curb or outlaw the Communist Party of the United States:

THE EVILS OF COMMUNISM

(Testimony of Hon. W. C. Bullitt, former Ambassador to Russia, at investigation of un-American propaganda activities in the United States)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON
UN-AMERICAN ACTIVITIES,
Washington, D. C.,
Monday, March 24, 1947.

The committee met at 3:30 p. m., Hon. J. PARNELL THOMAS (chairman) presiding.

The following members were present: Hon. KARL E. MUNDT, Hon. JOHN MCDOWELL, Hon. RICHARD M. NIXON, Hon. RICHARD B. VAIL, Hon. JOHN E. RANKIN, and Hon. HERBERT C. BONNER.

Staff members present: Robert E. Stripling, chief investigator; Louis J. Russell and Donald T. Appell, investigators.

The CHAIRMAN. The meeting will come to order. This afternoon the committee will hear the testimony of the Honorable William C. Bullitt on the bills H. R. 1884 and H. R. 2122, which seek to curb or outlaw the Communist Party of the United States.

Mr. Bullitt, if you will please stand and be sworn.

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Mr. Bullitt, we have certain bills before us, H. R. 1884, introduced by Mr. RANKIN, and H. R. 2122, introduced by Mr. SHEPPARD, both aimed to outlaw the Communist Party in the United States. We have invited you and some other prominent people in this country to come here and express your views in relation to this legislation. We appreciate very much your acceptance.

For the record, I would like for you to give your full name and your address and then a statement of some of the very important posts that you have held, and then, if you will, just continue with any statement that you would like to make showing the connection between the Communist Party here in the United States and a foreign power, and make any other observations as you think would help us in the consideration of this legislation and in the consideration of this very important subject.

Mr. BULLITT. Thank you.

The CHAIRMAN. Will you please give your full name and your address.

Mr. BULLITT. William Christian Bullitt, 1811 Walnut Street, Philadelphia.

You would like me to name some of the posts I have held under the American Government?

The CHAIRMAN. Yes.

Mr. BULLITT. Well, in recent years: I was special assistant to the Secretary of State in 1933; I was a member of the American delegation to the International Economic and Monetary Conference in London in 1938; I was Ambassador to the Soviet Union from 1933 to 1936; I was Ambassador to France from 1936 to 1940; I was personal representative of the President with the rank of Ambassador for all countries in 1941 and 1942; I was special assistant to the Secretary of the Navy thereafter for approximately a year and a half.

Is that sufficient?

The CHAIRMAN. Well, anything else that you think of at the moment?

Mr. BULLITT. Well, I think that covers it. I could go into a lot of other things.

Mr. MUNDT. Mr. Chairman, if I may interpolate, he is also the author of a very important and factual book on modern Russia entitled "The Great Globe Itself," published by Harper's, I believe——

Mr. BULLITT. Scribner's.

Mr. MUNDT. Published by Scribner's, and which I think ranks right along with "I Chose Freedom," by Victor Krishenko, as the most readable and understandable and factual books from the American press today on modern Russia. "I Chose Freedom" was also published by Scribner's.

The CHAIRMAN. Mr. Bullitt, if you will just make whatever observations you care to make, keeping in mind that we are particularly interested in communism in the world as you have seen it. And I would like to suggest this to the members of the committee: That we permit Mr. Bullitt to go ahead and make his statement and afterward we will ask him questions, so that we will not interfere with his statement.

Mr. BULLITT. Mr. Chairman, I have no prepared statement, but I shall try to follow the line that you have indicated.

The basis of Communist action in the world, whether in the United States or any other country, is the Communist creed, which is a belief that there will be no peace on earth until all the nations of the world are Communist. This is a very genuine belief which is held by a large number of people, and in the furtherance of that belief they have developed a doctrine that the end justifies the means, and that any means, even the most foul, are justifiable in order to achieve this domination of the world by communism.

I don't know whether you would care to have some citations on that, but I can find you some which perhaps might be of some interest. Here are four short statements by Lenin and Stalin which cover the fundamental thesis on which Soviet policy is based.

First, a statement from Lenin, from his collected works, volume 24, page 122, Russian edition. The statement of Lenin:

"We are living not merely in a state but in a system of states; and it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

The second is from Lenin's Twenty-one Theses of January 20, 1918:

"From the time a Socialist government is established in any one country questions must be determined * * * solely from the point of view of what is best for the development and the consolidation of the Socialist revolution which has already begun.

The question whether it is possible to undertake at once a revolutionary war must be answered solely from the point of view of actual conditions and the interest of the Socialist revolution which has already begun."

The third is from Lenin's book, The Infantile Sickness of Leftism in Communism:

"It is necessary to use any ruse, cunning, unlawful method, evasion, concealment of truth."

And the fourth is from Stalin's speech on the American Communist Party on May 6, 1929:

"The Comintern is the holy of holies of the working class."

The Comintern, as you know, is the international organization of the different national Communist parties.

The doctrine that war is inevitable between the Soviet Union and the states which the Communists call bourgeois or imperialist, which includes the United States of America—indeed, all states which are not Communist—grows from the fact that what the Communists intend is the conquest of the earth for communism. It is entirely clear and one may find it in writing after writing, and there is not much point in my quoting further excerpts.

The present situation in the world is the following: The Soviet Government, in the furtherance of its intention to control the earth for communism, has annexed Estonia, Latvia, Lithuania, and a large portion of Poland, a portion of Finland, a portion of Rumania, and has established absolute control, through puppet governments, over the whole of Poland, the whole of Bulgaria, the whole of Rumania, Yugoslavia, and Albania, and it is closing its iron fist steadily on Finland, on Hungary, on Czechoslovakia. It also controls fully the Red Army zones in Germany and Austria. Thus, the Soviet Government has brought under its control more than 100,000,000 persons in eastern Europe.

In addition, through its fifth columns—and its fifth columns are like the Nazi fifth columns since the truth is that communism is Red fascism and uses fifth columns just the way Hitler used them only much more effectively. Hitler was never able to build up in the countries which he intended to conquer parties or fifth columns having anything like the strength of the Communist Parties which have been built up by the Soviet Union. Using these Communist Parties as fifth columns Stalin is threatening the independence of the remainder of Europe.

The Communist Party in France, for example, is extremely important. It is, in fact, the largest party today in French Parliament. But there are so many other parties in the French Parliament that, although the Communist Party is the largest party, it only has 28 percent of the seats in the French Chamber of Deputies. Nevertheless, it has acquired control of the French CGT, which is the one big trade-union of the whole country, and it can pull a general strike in France whenever it may choose. Since France has not yet recovered from the war and has a very difficult economic situation to deal with, the threat of a general strike is an appalling one.

Moreover, the Communists have infiltrated the air force to such an extent that they fully control the ground crews of the air force, and there are many officers in the French Air Force who are also Communists. Furthermore, they have got such a grip on economic life in France that today any manufacturer who wants to get raw materials for his business is obliged to pay regular monthly sums in blackmail to the Communist Party treasury, or gets no raw materials.

The result is that in spite of the fact that 72 percent of a democratically elected Parliament in France is anti-Communist, there is a very good chance that the Communists, through a general strike and revolutionary activity, may be able to take over France.

What does that mean for us? If France falls into Communist hands it will produce a cataclysm in Europe. Without question Italy, where the Communist Party is also very strong, would go Communist. Spain and Portugal and all the smaller European countries would follow suit. A Communist France would, therefore, mean not merely a Communist continent of Europe, but also a Communist Mediterranean, because France, as you know, has as colonies Morocco and Tunisia, and as one of her Departments, Algeria. The result is, if by action of the French Communist Party, France begins to take Stalin's orders, we shall have to expect that Casablanca and Dakar, which lies in the French colony of Senegal opposite the bulge of Brazil, will be in Stalin's hands, and his planes will be stationed there. Furthermore, the French colonies on this side of the Atlantic will be open to so-called French planes, which will be Russian planes with French markings, and we shall have them off the Panama Canal, at Martinique and Guadeloupe, and shall have them at the entrance to the St. Lawrence River, at St. Pierre and Miquelon.

Those are some of the consequences to the United States which would ensue from a triumph of the French Communist Party in France. And if it may seem strange that Communist penetration of France has gone this far, let me add this fact: That the vice president of the French Government today, Thorez, is actually a deserter from the French Army in the year 1939. He deserted the French Army in full fight against the Germans and left for Moscow, but the Communists have been able to impose him on the French Government.

I merely call your attention to this situation. I don't propose to try to go into all the situations in the world, but the French situation is so extraordinarily serious that I think it is worth while calling it to your attention, because if France goes we will be closed out of Europe by Stalin's iron curtain. It is as simple as that.

At the other end of the world, in China, the situation is very much worse than it was when General Marshall was sent there to try to reconcile the Communists and the National Government and stop the fighting, more than a year ago. It is always, in the long run, impossible to have a national government working with Communists, for the simple reason that to take Communists into your government, or into close association with it, is to take an assassin into your bed, since the objective of the Communist is, invariably, to overthrow democratic government in the interest of the domination of the democratic country by the Soviet Union and the world Communist movement.

That may suffice as an example of the world situation. Perhaps I might go on to the domestic problem of the American Communist Party.

Here our Communist Party, like all other Communist Parties, is subject to orders from Moscow. It follows the party line laid down in Moscow with extreme care. We are all familiar with the manner in which the American Communist Party has followed faithfully the line laid down in Moscow and has shifted its position in accordance with every shift of Soviet foreign policy. The party is, in the first place, an agency of the Soviet Government for the purpose of weakening the United States for the ultimate assault that the Soviet Government intends to make on the United States. It is, furthermore, if you will look to the experience of other countries, a conspiracy to commit murder, since in whatever country the Communists dominate they establish a so-called dictatorship of the proletariat, which is defined by Stalin in the following words—this quotation, I may say, is from his book Problems of Leninism:

"The dictatorship of the proletariat is the domination of the proletariat over the bourgeoisie unobstructed by law and based upon violence, enjoying the sympathy and support of the working and exploited masses."

Now, "unobstructed by law and based upon violence" means that what is done is what is called liquidating the opponents of the government, and "liquidate" is simply a happy euphemism for murder. Murder is carried on on the very large scale. Individual assassinations are not very often used by the Communist Party, but murder on an extremely large scale is very frequently used and is a regular piece of the mechanism of establishing their authority.

Therefore, I should consider the Communist Party of the United States composed, in the first place, of potential traitors, since certainly if the United States were in war with the Soviet Union the members of the American Communist Party would do all they could to help the Soviet Union and to injure their own country. In the second place, I should consider it a conspiracy to commit murder on a mass scale.

That, I think, confronts us with a very practical question of what to do under the present circumstances. The United States, without question, today is in danger, as President Truman very clearly brought out in his statement asking for support for Greece and Turkey. He said "that the national security of the United States was involved." I believe those were his exact words. Perhaps I have not quoted him correctly, but that was the sense of some of his words. The safety of the United States is involved because the gradual taking over of countries, the gradual taking over of areas, while possible future victims are lulled into a false sense of security, is the essence of the Soviet tactics, just as it was the essence of Hitler's tactics.

And I make this observation, realizing that it is one that it will be difficult, perhaps, to believe: The situation of the United States today very greatly resembles the situation of the French Republic in the year 1936. At that time France had the largest air force in the world, by far the most powerful army in the world, and a navy which was vastly superior to the German navy. Nevertheless, at that moment Hitler dared start on his career of conquest by marching his troops into the Rhineland on the 7th day of March 1936. The French could have crushed him with extreme ease. They had every right to, as it was a flagrant violation of the Treaty of Versailles, and they had a right to march to Berlin, if they chose, and take over Germany and impose whatever terms they pleased.

But France wanted to balance its budget. Mobilization of the army was extremely unpopular, as it always is, because it tears men away from their homes and their affairs, and, furthermore, Hitler constantly was saying that he bore no ill will toward France, and that he had no intention of ever attacking France. In consequence, there were a lot of perfectly good Frenchmen of good intention and weak heads who believed that Hitler would never attack France—like certain stargazers in the United States, who believe that the Soviet Union will never attack the United States. So what did the French do? They did nothing. Hitler consolidated his position in the Rhineland, built the Siegfried Line, and by it locked France out of central and eastern Europe entirely, successfully seized the countries who were France's allies in eastern Europe, made his deal with Stalin, divided Poland with Stalir, and finally attacked France. The only thing that France had gained by not marching and smashing Hitler, as she could have very easily in 1936—in fact, we even have the document in which Hitler ordered his troops to leave the Rhineland if the French should mobilize—the only thing they acquired by their quiescence was to be crushed completely 4 years later.

At the present time the United States is far stronger than the Soviet Union. We are

as much stronger than the Soviet Union today as France was stronger than Germany in 1936—and Stalin knows it.

When we took a strong stand on Turkey last year, when we took a strong stand on Iran this year, the Soviet Union did not dare to move. But time is running against us, exactly as it ran against France after 1936. The Russian Army and Air Force are growing stronger every day. They are still turning their major energies into the production for war and not into consumer goods. They are consolidating their hold on the hundred million people they have taken over in eastern Europe and could use them all today, or almost all of them, for war purposes. Their aggression in China is progressing, although at the moment Chiang Kai-shek's armies are advancing, for behind his lines there is such economic difficulty that the whole Chinese Government position is threatened. Communists trained in Moscow have achieved leadership of the Indochinese independence movement, an entirely genuine movement at bottom, but now in the hands of the Communists.

In South America the Communists are increasingly infiltrating the trade-unions and have control of the trade-unions in many countries. There are three Communist member today in the Government of Chile. The Communists have grown so strong in both Cuba and Venezuela that democratic government is threatened in both countries, and in Brazil recently, after an election, the country woke up to discover that the Communists had become the largest party in the city council of its capital, Rio de Janeiro.

Now, under these circumstances the existence in the United States of an enormous fifth column of the national Communist dictator is an even greater threat to the United States than was ever the fifth column of the National Socialist dictatorship of Hitler, and, therefore, I think that you have brought up this question at an extremely appropriate moment.

Nevertheless, I should like to say that I am not at all sure that it is wise, in the public interest of the people of the United States, to declare it a crime, at the present time, to belong to the American Communist Party, for the following reasons:

We know that the Communist Party in this country is organized as follows: There are the dues-paying members, who have party books, and so on. Those are the more or less public members of the party. There is then the underground organization of the party. That is a series of small groups, of three or five persons, organized secretly in a secret organization, which, even if the party should be suppressed by law, could continue to function. In the third place, there is that extraordinary group, usually very able men, men who are so important to the Soviet Union and to the Communist Party that they are not allowed to admit that they are members, because it may get them into trouble. That is a very important group, although not large.

If we should make it a crime to belong to the Communist Party, I do not believe that today we have sufficient information with regard to all these groups to put our hands on them effectively, nor do I believe that if we did put our hands on them effectively we would actually go through with any punishment of them.

For example, when I was Ambassador to Moscow, one of the minor tasks I had was to ask the Soviet Government to accept again into the Soviet Union a number of its subjects who were illegally in the United States. We tried to deport these persons to their country of origin and the Soviet Government refused to receive them, just wouldn't take them back. Well, what are you going to do with them? You get out a deportation order against a man who is obviously an undesirable citizen of any country, and his country of origin refuses to receive him? Well, you may keep him under arrest pending deportation for a given period, but you can't keep him very long, and you just have to turn him loose again. We do not shoot people whom we dislike, as they do in the Soviet Union.

Now, in the Communist Party in the United States, according to such information as I have, approximately 60 percent of the members are of alien origin. Sixty percent of the members, I believe, are men and women who have come to the United States, and after being here a given length of time have sworn to uphold the Constitution of the United States. It seems to me that one of the things that we should look into is perhaps this: That we should make, perhaps, membership in the Communist Party on the part of a naturalized citizen prima facie evidence that his citizenship was fraudently acquired and that the immigrant in taking the oath of allegiance to support the Constitution of the United States committed perjury. That, I think, might hit 60 percent of the party.

There is a good precedent for that. We did exactly that with the German Bund, as you know, and deported from the United States—I have forgotten how many thousands of German Bundists—and I fail to see why we might not try to do that with Communists of alien origin. But when we consider doing that, let's also consider the fact that the Soviet Government will refuse to have these people sent back, and let us then try to think, before we pass any such law, what we are going to do with them.

These are some practical considerations that I am just bringing up as suggestions.

Another point which I should like to suggest to you is this: We have a requirement of the election laws that all campaign contributions made to the Democratic and Republican Parties—to all political parties—should be reported. The major parties all make returns of the names of their contributors. The Communist Party, I believe, under that law should be required to list all its contributors and duespaying members—because the payment of dues is just as much a contribution to a political party as the making of a campaign contribution once every 4 years, or whatever the period may be.

That is another suggestion which I should like to make, which probably will be ineffectual, but nevertheless it seems to me to point in a direction that might be useful.

And third, I should like to say this. I am perfectly certain that a time will come, and it may be close at hand, when it will be essential to our national safety to break up this criminal conspiracy, which is worldwide, break it up as far as we can in the United States.

In other words, that we shall have to take extremely severe action against the Communists, both those who are openly members of the party and those who are secretly organized in the undeground, and those who are the, so to speak, unparty members, because they are too important to be jeopardized.

We will have to take action against them. The only basis upon which we can take action is the basis of knowledge, and I believe that at this moment the first thing we ought to do toward insuring the safety of the United States at a moment which may not be very far off, is greatly to increase the appropriation of the FBI for handling precisely this problem of the Communists in the United States.

I know that the FBI has done excellent work on this line. They have proved what they could do in the case of the German Bund, but in the case of the Communist Party you have many, many more, thousands and thousands more dangerous persons than you had in the German Bund; and I believe that the FBI should be given sufficient funds so that when the crisis comes it can seize all the members of the Communist Party who have any importance, just as effectively as it seized the members of the Bund.

I do think, therefore, that at the present time we are not equipped to face this issue by passing legislation making it a crime to be a member of the Communist Party. I do not believe that the people of this country are quite sufficiently aware of the danger to them involved in the existence of the party and the determination of the Soviet Union to conquer the United States, to face up to the penalties involved. The last thing we want to do is to make martyrs of anybody. The last thing we want to do is to throw away one iota of our Bill of Rights contained in the first 10 amendments to the Constitution. Our glory in the world and, indeed, our great strength, is in the fact that we stand for freedom. The Soviet Government today, in the world where it is really known, stands for just one thing, which is slavery.

It is a very old fight, an extremely old fight, which has gone on for 2,500 years at least, between the idea of freedom, exemplified at that time by the Athenian democracy, and the idea of tyranny, exemplified at that time by the great kings of Persia. This fight is on today, and the great explosive idea which we have to offer to the peoples of eastern Europe who are under the heal of the Soviet Government, to all the peoples in the world, even the peoples of the Soviet Union who are under the heel of the Soviet Government, is the idea of freedom; and in my belief while we have to devise with the utmost care a method of handling this criminal conspiracy, I think it has to be done so as to avoid, meticulously, touching one iota of our Bill of Rights and our personal freedoms.

That is all.

The CHAIRMAN. Mr. Bullitt, the committee certainly appreciates the very fine statement that you have made to us.

The committee now has some questions to ask, if you don't mind.

One thing that I would like to know from you is this: Do you consider that communism is the greatest threat to the world today?

Mr. BULLITT. Well, there is very little left of fascism, and therefore the brown fascism is out of the world, and you have left the Red fascism, which is communism; and, in my opinion, it is the greatest threat there is to any form of decent life on this globe.

The CHAIRMAN. Mr. Bullitt, I have been serving on this committee now for 8 years. I was with the Dies committee when it was originally established. That committee, and later committees, built up a tremendous record against the Communist Party, but many times we wondered if our efforts weren't futile. It is all right to talk about appropriating $25,000,000 now to investigate un-American individual in the Government, but we can look back and see that for just a few hundred thousand dollars a committee of Congress did exactly the same thing, and yet how futile it was at times because of the lack of cooperation that we got.

Mr. BULLITT. Yes.

The CHAIRMAN. Now, I would like to ask you this question in regard to that: Do you think now, and in the future, we are going to get real cooperation, or do you think it will be as it was over the past 8 years—the kind of thing that weakened this country just as France was weakened back in 1936?

Mr. BULLITT. Mr. Chairman, I think that at the present time we are beginning to have a realization in this country of the facts with regard to the threat of the Soviet Union to the United States. It is perfectly true that from the autumn of 1941 until, certainly, the spring of 1945, all the agencies of the American Government which had anything to do with the problem were employed in trying to make the Soviet Government popular in the United States. That we have to recog-

nize—from what came out over the radio, what was gotten out by the OWI, the statements made at the State Department—in which the Soviet Government was constantly referred to as a peace-loving democracy.

The CHAIRMAN. Did we know, though, that that was absolutely wrong, that it was just as much of a falsehood as anything that we might say?

Mr. BULLITT. Mr. Chairman, that is a very difficult question to answer unless I were to talk for 15 minutes on it. I will say this, briefly: Mr. Roosevelt was perfectly aware in 1940 of what the Soviet Union was. In his speech of February 10, 1940, to the American Youth Congress, he said:

"The Soviet Union, as everybody who has the courage to face the facts knows, is run by a dictatorship as absolute as any other dictatorship in the world."

On November 7, 1941, in decreeing the extension of the Lend-Lease Act to the Soviet Union, the President declared:

"I have found that the defense of the Union of the Soviet Socialist Republics is vital to the defense of the United States."

Now, in my opinion, both of those statements were true. The fact is that in the last war we associated ourselves with one totalitarian imperialism, the Soviet Union, and two or three democracies in order to defeat another totalitarian imperialism Germany, which was associated with another totalitarian imperialism—Japan, in the Pacific—and in order to make the Soviet Union more popular in this country the Government deliberately engaged in propaganda on its behalf. Of that there is no question.

The hope of President Roosevelt was that in the end, if we gave Stalin everything he asked for, if we treated him with the greatest possible generosity, if we treated him as if he were a great gentleman, that in the end Stalin would turn out to be a peace-loving democrat and all the problems of the world would be solved. In that he was wrong.

The CHAIRMAN. I have just one more question. You mentioned France.

Mr. BULLITT. Yes.

The CHAIRMAN. Is it your opinion that France will be able to stand up against the Communist influence, or that France will fall and become a Communist state?

Mr. BULLITT. My opinion is that the 72 percent of the French Parliament which is anti-Communist can form a government of national unions, leaving the 28 percent of Communists in a minority and maintain legal democratic government in France—and I trust that they will do so, and I think that we should give them every encouragement to do so.

The CHAIRMAN. Mr. MUNDT.

Mr. MUNDT. Mr. Bullitt, I believe that in calling the roll of the countries which had fallen under the complete domination of the Soviet you omitted mentioning the country of Albania.

Mr. BULLITT. Albania and Yugoslavia I perhaps didn't mention. When you are mentioning a list, when you are just speaking, it is difficult to remember them all—because there is a very large number.

Mr. MUNDT. That is right. I wish you would tell the committee for the record your interpretation, from your vast knowledge of the international machinations of communism, what is entailed in this phrase which is so glibly referred to frequently by ill-advised college professors, political preachers, and other people occasionally who apologize for communism, when they say, "There is nothing to worry about any more; the Comintern has been dissolved."

Mr. BULLITT. That is pure nonsense. The Comintern is—you may recall the American Communist Party was also dissolved and it became the Communist Political Association—I believe that is what it was called—because it suited the political book of the Soviet Government at that time to try to make it appear that the Soviet Government was no longer directing the Communist Party in the United States, but just as soon as it was no longer politically useful the Communist Party was revived in full form.

The Comintern being officially abolished means almost nothing. The Soviet Government now has such mechanisms throughout the world that it doesn't need the old mechanism of the Comintern. It has the Profintern; it has its own diplomatic service; and it has also the diplomatic services of all of its satellite states. There is a Polish Embassy today in Washington. I have no hesitation in saying that the Polish Embassy in Washington is certainly directed by the puppet government of Poland, which, in turn, is directed by Moscow, and therefore the Polish Embassy in Washington is merely another adjunct of the Soviet Government.

Now that they have so many mechanisms, now that they have spread so widely, they no longer need the Comintern as a mechanism, but I quoted you before Stalin's statement that the Comintern was the "holy of holies of the working class," and if anyone thinks that in reality that holy of holies has been abolished he is very naive.

Mr. MUNDT. As a matter of fact, some of the former members of the Comintern, such as Georgi Dimitrov in Bulgaria, have been transferred from one "holy of holies" to an operative post, as a dictator of a satellite country; is that not right?

Mr. BULLITT. Yes, sir.

Mr. MUNDT. You mentioned the Vice President of France, I believe who was a deserter. Who was that?

Mr. BULLITT. Maurice Thorez. He is vice president, not of France, but of the French Government. We talk about the French Prime Minister; they call him President of the Council, and then there is the Vice President of the Council, who takes the place of the President of the Council if the President of the Council is ill, or away.

Mr. MUNDT. Thank you.

I am frank to say that I share your concern and skepticism as to the efficacy of outlawing the Communist Party, but I am highly desirous of taking every constitutional step that we can to restrict and restrain and repeal their activity in this country; so I was highly gratified to have the list of three or four suggestions which you made by which we could curtail, to a certain extent, these operations without making them actually an outlawed party. On the other hand, I presume that we cannot give too much credence to the theory that by outlawing them we drive them underground, because, as you have correctly pointed out, some of their most important operators are underground anyhow.

Mr. BULLITT. Yes.

Mr. MUNDT. Because they do not openly admit membership in the party.

Mr. BULLITT. Yes.

Mr. MUNDT. I wonder if you can give the committee any suggestions as to what can be done constitutionally, under our American Bill of Rights, to curtail the supporters of communism, who have that unfortunate habit of joining a lot of front organizations, and thus give them an atmosphere of respectability, because they are decent Americans, but are careless, and carelessly join these organizations and contribute, by their prestige and money, to the promotion.

A definite case came out in the papers this morning. A fellow by the name of Dr. Condon, head of the Bureau of Standards, whom I presume is a good American, was lending his name to a Communist movement, and then said, "I didn't know it was a Communist organization. Somebody called up and said will you join, and I said 'Yes.'"

Now, something should be done, it seems to me, to alert Americans against giving aid and comfort to the enemy, as it were, simply through carelessness. Such gullibles as Dr. Condon present a tragic case.

Mr. BULLITT. Well, I think that that might be handled very easily by, in the first place, an investigation of such Communist-front organizations so that we are perfectly certain they are Communist-front organizations, and then information being given directly—and I should not object to having it given by the American Government—to respectable persons who may have been hooked into their lists, that they were acting as screens for a Communist-front organization.

I think it might be, perhaps, worth while to go back and ask the State Department for the records of the Comintern Congress of 1935, which took place in Moscow, where American Communists were very prominent, despite all the promises made by the Soviet Government to the contrary, the promises made by Litvinov, written promises that the Comintern would cease to direct the American Communist Party.

Mr. MUNDT. Given as a condition precedent——

Mr. BULLITT. Given as a condition precedent to recognition; yes, sir.

At that time they developed the entire Trojan-horse policy and the statements are really extraordinary, the statements of the leaders of the Comintern, saying if any man thinks that it is beneath his honor to go into church organizations, into welfare organizations of every kind, in order to better undermine them, and the state in which they function, then he doesn't know what it is to be a real Communist.

Now, I think you might, perhaps, get some excerpts from that record and send them to these people who get drawn into these Communist-front organizations. That record exists, I know, because I was the Ambassador in Moscow at the time of the occurrence.

Mr. MUNDT. The record is in the State Department?

Mr. BULLITT. Certainly.

Mr. MUNDT. I have no other questions. I simply want to join with the chairman in expressing appreciation to you for your very helpful and informative and thought-provoking statement on a difficult problem. Thank you very much, sir.

Mr. BULLITT. Thank you.

The CHAIRMAN. Mr. McDowell.

Mr. MCDOWELL. Mr. Ambassador, for the first time, I think, in the Nation's history, America is becoming, rapidly becoming, acutely conscious of the Communist situation here and around the world.

Mr. BULLITT. Yes.

Mr. MCDOWELL. I feel that all of the eyes of America are on this hearing today. Most certainly those things that you have said today are going to have a profound effect upon the people of America. I have attended many Communist meetings—not as a member. One of the frequent occurrences at the meetings was a comparison between living here in America and in Russia. The comparison, of course, was bad, so far as America was concerned. Would you care to make any observations on the things that occur in Russia?

Mr. BULLITT. Well, of course, statements of that kind are so fantastically distorted that it is very difficult to answer them.

In the first place, life in Russia is lived under the constant fear of the knock of the secret police on the door in the middle of the night. No man when he goes to bed—and no woman—knows that in the middle of the night the secret police aren't going to arrive—and then comes disappearance. Then comes either death in a cellar with a shot in the neck or deportation to one of the forced labor camps. We do not know exactly how many men and women are in those forced labor camps today, but there is extremely reliable testimony that there are more than 10,000,000 human slaves today in those forced labor camps working under the NKVD in the Soviet Union at this time.

It is worse than at the worst moment of Negro slavery. There were never so many slaves as there are today in the Soviet Union actually working in slavery.

That being the basis for life, whether you have more or less makes very little difference, because you can't call your soul your own; you are scared every minute. The actual scale of living of the ordinary people of the Soviet Union is fantastically low. It was certainly at the beginning of the war, in 1939, lower than that of any country in Europe, and, of course, infinitely lower than that of the United States. That is not to say that the commissars and the big leaders of one kind and another do not have everything. They do. They have their town houses, they have their country places, their automobiles, they have special shops where they get clothing, and their wives and children are clothed. They have enormous privileges. But when you get down to the great mass of the Russian people and the great mass of the other peoples in the Soviet Union—because the Soviet Union is, as you know, not populated exclusively by Russians; it contains 167 different peoples and tribes; they issue their primary schoolbooks, or did in the year 1936, if my memory is correct, in 165 different languages and dialects—the standard of life of these peoples for the most part is unbelievably low.

You can't describe it to an American because he has never seen anything like it and cannot imagine what it is.

The statement that the standard of living is higher in the Soviet Union than in the United States is, of course, the most outrageous lie possible. I don't know that it is worth while going on talking about it.

Mr. McDOWELL. I have no other questions, Mr. Chairman. I would like to join with the rest of the committee in extending the thanks of the United States Congress to this great patriotic American for coming here.

Mr. BULLITT. Thank you.

The CHAIRMAN. Mr. Nixon.

Mr. NIXON. Mr. Bullitt, I particularly noticed in your comment that this Congress must be careful not to place the Communists in the United States in a position of martyrs.

Mr. BULLITT. Yes.

Mr. NIXON. Would you even go so far as to say that although Communists will appear before this committee in opposition to this proposed legislation, that it might well be part of their program to welcome the passage of such legislation so that they could be placed in a position of martyrs?

Mr. BULLITT. No; I don't think so. I think they are very well satisfied with their present set-up and don't want it disturbed. I think that they will oppose it and they will oppose it on different grounds—but that seems to me one step too subtle. I don't believe they will go that far.

Mr. NIXON. You mean, then, that you think their opposition to this type of legislation is honest in this case?

Mr. BULLITT. I think that if they could get an outrageous bill passed, which the Supreme Court would unanimously throw out, they would be perfectly delighted, obviously, but I don't think that they would——

Mr. NIXON. They wouldn't oppose a reasonable bill which was held constitutional?

Mr. BULLITT. I don't think they would like that.

Mr. NIXON. That is all.

The CHAIRMAN. Mr. Vail

Mr. VAIL. Mr. Bullitt, you have indicated that communism was a very definite threat to America today. I wonder whether, based on your experience, you could indicate to us the period in which that movement has gained the greatest impetus.

Mr. BULLITT. In the United States?

Mr. VAIL. In the United States.

Mr. BULLITT. Without question, during the war. During the war.

Mr. VAIL. You don't think that that movement has been progressive since the war?

Mr. BULLITT. I should doubt it very much. It may have been—and I don't pretend to be a specialist on the activities of the Communist Party in the United States in the different trade-unions and in the different fields of life—but I think that there has been a very general awakening to the fact that the Soviet Union is not a peace-loving democracy and that the Communists representing it are not good American citizens, that they are serving a foreign power, and not the United States of America. I think that the Communist Party has less influence than it had during the period when it changed its name to "Communist Political Association" and was garnering a great many people of decency and good will, who were unaware of the facts.

So that I don't think it is so powerful. Nevertheless, that is not really the question. The question is, Does it occupy sufficient strategic points of importance so that it can, for example, paralyze our electrical industry by sabotage in case of an attack on the United States by the Soviet Union? That is one example. Can it operate in different fields equally effectively? For example, I understand that a very large number of all the radio operators on the merchant marine are in Communist unions. What would be the consequences of that? The question is extremely specific. Where they are; what they are doing.

Mr. VAIL. There isn't any question but what ours is a tolerant nation. I am wondering whether you believe the framers of our Constitution and Bill of Rights had in mind the situation that has arisen today, a definite threat, an intent on the part of certain people living in our country to destroy our Government.

Mr. BULLITT. No; I certainly think they had no such thing in mind; and furthermore, when a Communist talks about free speech it is almost comic, for this reason: he has no speech that comes out of his mouth that isn't dictated to him by his rulers in Moscow. Now, the essence of free speech is that you honestly consider a subject and you develop your own opinion. You then have a right to express it. But the Communist simply follows the party line, which is laid down for him in Moscow. There is an interesting distinction there, which perhaps is not worth anything from a practical point of view, but nevertheless is a fact—that they do not think for themselves; they change their opinions en masse whenever they get an order to change them from the Soviet Union. In a book which I published last year there is an appendix in which I have recorded the different changes of line expressed in the Daily Worker in exact accordance with the changes in Soviet foreign policy.

Now, I think it is impossible to read that and believe that any American Communist thinks for himself. He gets his orders from Moscow what to think—which is something, certainly, that was not envisaged by the framers of the Constitution of the United States.

Mr. VAIL. That is all.

The CHAIRMAN. Mr. Rankin.

Mr. RANKIN. Mr. Bullitt, the advocates of communism in this country keep harping on democracy. Is there any democracy in a Communist country?

Mr. BULLITT. There isn't the slightest trace of democracy.

Mr. RANKIN. A statement was made before this committee that there was no more democracy in a Communist country than there was in the penitentiary of the State of New Jersey or Mississippi or Texas. Is that statement correct?

Mr. BULLITT. Well, I would not put it in that form. The fact is that there is no democracy of any kind without political democracy.

Mr. RANKIN. In other words, the masses are the slaves of the state or the commissars?

Mr. BULLITT. That is correct. Completely the slaves of the state; and furthermore, the doctrine which is taught is the doctrine of the omnipotence of the state—that a man is good insofar as he serves the state; a man is bad insofar as he doesn't serve the state.

Mr. RANKIN. Now, were you in Moscow in the late thirties?

Mr. BULLITT. I was in Moscow, Ambassador in Moscow, from the autumn of 1933 until the autumn of 1936.

Mr. RANKIN. Did you see a large streamer across the gates of Moscow with the inscription on it: "Religion is the Opiate of the People"?

Mr. BULLITT. That streamer I saw in Moscow in 1919, and in 1932, when I was there, but it is my impression that it had been removed in 1933. I am not certain of that, but that is my impression.

Mr. RANKIN. I give you my impression. My recollection is that former President Hoover went to Moscow in 1936; is that about right?

Mr. BULLITT. I don't know. He wasn't there when I was there.

Mr. RANKIN. He made a radio speech when he returned to America, and told about seeing that streamer.

Mr. BULLITT. That is a statement which you may find all through Moscow and Leningrad, and the country, "Religion is the Opiate of the People."

Mr. RANKIN. In other words, communism is atheistic?

Mr. BULLITT. Completely.

Mr. RANKIN. Completely?

Mr. BULLITT. Yes, sir.

Mr. RANKIN. They believe in outlawing all religion?

Mr. BULLITT. You have to qualify that now to this extent; they have an ideal, which is the state. It is a form of state worship. They did their utmost to destroy Christianity in Russia; they conducted campaign after campaign against Christianity in Russia. When the last war, the war of 1939, came on, they found that they needed the support of a lot of religious people. Therefore, they stopped the persecution of the church in violent form; they permitted more churches to open, and they took the other course, which was of getting the leaders of the Orthodox church under their thumb, so that today they control the Orthodox church as one of the apparatuses by which they control the peoples of the Soviet Union. But they do permit it to function.

Mr. RANKIN. Also they propose to take over all property, all land, all factories, all methods of production and distribution; that is correct, is it not?

Mr. BULLITT. Well, when the revolution came there they took everything over.

Mr. RANKIN. In other words, a man cannot own his own home or land in Russia?

Mr. BULLITT. That is true, basically; but now they allow, for example, the peasants on the collective farm, they allow a peasant to get the product of an acre or a half acre that he has back of his place where he lives.

Mr. RANKIN. In other words, they permit him to have what we call a garden in the South?

Mr. BULLITT. That is right.

Mr. RANKIN. But the land that he tills, to make his living, is owned by the Russian Government.

Mr. BULLITT. Owned by the state.

Mr. RANKIN. And it is dominated by commissars?

Mr. BULLITT. Completely.

Mr. RANKIN. And instead of imposing the usual amount of rental, as we impose, a certain percentage of the crop, they demand that they deliver a certain amount of production, do they not?

Mr. BULLITT. That is right.

Mr. RANKIN. In 1933, I think it was, they had a crop failure in the Ukraine. Do you remember that?

Mr. BULLITT. I do; very well.

Mr. RANKIN. And the people of the Ukraine are among the best people in Russia?

Mr. BULLITT. Yes.

Mr. RANKIN. And they went down and took everything away from them and starved five or six million of the best people in Russia to death, in their own homes; that is correct, isn't it?

Mr. BULLITT. Mr. Congressman, it was, in one way, even worse than that. They set the grain quotas higher than the total grain crop. They then took the entire grain crop, but because there wasn't more, to come up to quota, the man was a criminal, and, therefore, he was treated as a criminal, in addition to being starved, and his wife and children as well.

Mr. RANKIN. Yes.

Mr. BULLITT. They managed to dispose, by systemically organized starvation, they managed to dispose of some three to five million Ukrainians.

Mr. RANKIN. Now, the people in the Ukraine are the white people of Russia, the Nordics; are they not?

Mr. BULLITT. No; that you can't say. The Ukrainians are an extremely fine people. Russians are a very fine people. Both the Russians and the Ukrainians are extremely Nordic.

Mr. RANKIN. Well, what I mean by that is that these people were Nordic people; they were not orientals?

Mr. BULLITT. Certainly not.

Mr. RANKIN. The people in the Ukraine are among the best people in Europe.

Mr. BULLITT. That is right.

Mr. RANKIN. Yet they went in there and took everything they made and starved, you say, five or six million of them to death?

Mr. BULLITT. Three to five million.

Mr. RANKIN. Men, women, and children starved to death, eating, in their frantic misery, the bodies of their own children, of their own families; that is correct, isn't it?

Mr. BULLITT. I am extremely sorry to say that I actually have two photographs of a father and mother and the skeleton of the child they had eaten, which were taken down there in the Ukraine.

Mr. RANKIN. Yes; that is what I am trying to bring out.

Mr. BULLITT. I still have two photographs of that. There is nothing more horrible.

Mr. RANKIN. You spoke a while ago of there being 10,000,000 people in concentration camps.

Mr. BULLITT. I should say, at least.

Mr. RANKIN. You said that they were infinitely worse off that the slaves were in the Southern States.

Mr. BULLITT. What I said was this, sir, that there were more slaves today in the Soviet Union than there ever were at the height of slavery, not merely in the Southern States but in the world.

Mr. RANKIN. Yes. Well, in the Southern States I don't think it ever got higher than 4,000,000, and never were the slaves in the Southern States treated as brutally as the people are now treated in those concentration camps in Russia.

Mr. BULLITT. I think——

Mr. RANKIN. According to the information we get.

Now, you spoke awhile ago about outlawing the Communist Party. The bill before us simply proposes to prevent men from being elected to office on the Communist ticket, to put a stop to the sending of Communist literature through the mail, and to put a stop to certain professors teaching communism in the schools and colleges of this country. Is there anything wrong in preventing those encroachments?

Mr. BULLITT. Personally, I think the more people in the United States know about communism the better.

Mr. RANKIN. Yes; but——

Mr. BULLITT. And I would hate to see any bill passed which forbade people to tell the people of this country what communism was, right down to the last detail and very accurately.

Mr. RANKIN. You are aware of the fact that communism is much better financed than fascism was in this country. I am talking about the fifth columnists, as we call them.

Mr. BULLITT. Yes.

Mr. RANKIN. Through certain foundations, alleged foundations, they are financing professors in the various colleges throughout the country, who are continuously lecturing those students and misleading them as to what communism means.

Now, don't you think that ought to be stopped?

Mr. BULLITT. Well, I think if that is being done—and I have no personal knowledge of it—it is an extremely grave thing, which the Government ought to look into immediately.

Mr. RANKIN. There have been two professors in the University of Chicago—one of them is named Adler and the other one I believe is named Miller—who spouted off recently, making speeches advocating the abolition of the United States and saying boldly we must get rid of the United States. You know what that means, don't you?

Mr. BULLITT. Well—

Mr. RANKIN. Would you outlaw that kind of procedure?

Mr. BULLITT. I think anybody who chooses to advocate the abolition of the United States is taking quite a burden on his shoulders.

I may say there was a moment when most of the members of my family, and probably most of the members of yours, were engaged in trying to abolish the United States, by the Civil War.

Mr. RANKIN. I am glad you brought that question up, because if you will get the constitution of the Confederacy and read it——

Mr. BULLITT. Yes.

Mr. RANKIN. You will find that it was almost a duplicate of the Federal Constitution.

Mr. BULLITT. Yes; it was, surely. That is right.

Mr. RANKIN. There was a secession over two questions——

Mr. BULLITT. That is right.

Mr. RANKIN. The spread of slavery and the right of a section of the country to secede.

Mr. BULLITT. That is right.

Mr. RANKIN. But we never undertook to undermine and destroy all forms of government.

Mr. BULLITT. Oh, no.

Mr. RANKIN. Including the right to own property.

Mr. BULLITT. No; Congressman. Excuse me, I misunderstood your question in that case.

Mr. RANKIN. Now, you spoke about prosecuting these fellows. You know that no Communist will tell the truth, if it suits him to prevaricate; do you not?

Mr. BULLITT. Yes; that is quite true.

Mr. RANKIN. No oath will bind a Communist; will it?

Mr. BULLITT No.

Mr. RANKIN. None whatever.

Mr. BULLITT. No.

Mr. RANKIN. Nothing they will sign will bind them; will it?

Mr. BULLITT. No.

Mr. RANKIN. Then why do we spend so much time in trying to find out whether or not we can enter into some agreement, when we know that our side will be the only one that will feel bound by it?

Mr. BULLITT. Well, Mr. Congressman, for very practical reasons. For example, if we had come to an agreement in the year 1941, when the Soviet Union was dependent for its life on supplies from the United States—if at that time we had come to an agreement with Stalin that at the end of the war there should be set up a United States of Europe and that he would not extend his boundaries beyond the boundaries with which he started in 1939—if we had done that we could immediately, and should have, started an immense movement for the consolidation of a western European federation or United States of Europe, in whatever terms you want to put it.

Mr. RANKIN. Speaking——

Mr. BULLITT. May I finish what I am saying, sir?

Mr. RANKIN. Yes, sir.

Mr. BULLITT. If we had had a formal written agreement from Stalin, he could not have objected to our starting practical measures to set that afoot, and we might have established a very great element for democracy and peace in the world if we had done that.

Now, the advantage of coming to agreements with the Soviet Union is merely that their agreement estops them from immediately making efforts, and public efforts, to prevent you from carrying out your side of the agreement. That is the practical value of any agreement with the Soviet Government.

Mr. RANKIN. When I think of the meeting of the United Nations, I am reminded that the towers of Babel have been collapsing in a confusion of tongues ever since the days of Genesis, and it is a sound warning to me that the United States had better be very careful. These professors that go out and say that we ought to abolish the United States, to become a subsidiary of a world government, in my opinion are spreading treason.

Now you spoke awhile ago of the FBI. The FBI hasn't a better friend in Congress than I am. But don't you think that we ought to make the FBI an independent agency and extend its powers and furnish it all the funds it needs to make any investigation necessary anywhere at any time?

Mr. BULLITT. Mr. Congressman, that is a question which I have never thought about—the question of making it an independent agency.

With the latter part of your statement I agree heartily, and that is the FBI should have very greatly increased funds and that it should be encouraged by the Government to go into all the many ramifications of Communist activity in this country.

Mr. RANKIN. Now, you said awhile ago that 60 percent of the people coming over here from Russia were Communists?

Mr. BULLITT. No, sir. My statement was, if I remember correctly, that 60 percent of the members of the Communist Party had come to the United States as aliens. They were immigrants. Many of them have come from other countries than Russia.

Mr. RANKIN. Now, you are aware of the fact that there is a wide breach between the Communists and the anti-Communists in the Jewish race, are you?

The CHAIRMAN. I don't think we ought to get into that question.

Mr. RANKIN. You wait. I am doing the questioning now. I am a Member of Congress. I want to ask you what percentage of those Communists, that 60 percent that you spoke of, are Jews?

Mr. BULLITT. I don't know.

Mr. RANKIN. You don't know?

Mr. BULLITT. I have no knowledge of it.

Mr. RANKIN. The information we have is that 75 percent of the members of the Communist Party in this country are Jews.

Mr. BULLITT. I have no knowledge of that, if that is so.

The CHAIRMAN. You say, Mr. Rankin, the information we have or you have?

Mr. RANKIN. I say we have. I don't know whether you have it or not, but we have.

The CHAIRMAN. I don't think the committee has.

Mr. RANKIN. I do.

Now, they have gone down through the Southern States and all over the country and tried to line up the Negroes. They don't care anything about the Negroes, you understand, but they are using them to try to carry on their program. They have taken these Negroes to Moscow to teach them how to carry

on revolutions in this country. Are you aware of that?

Mr. BULLITT. I have no personal knowledge of that. That may be entirely true, but I have no personal knowledge of it.

Mr. RANKIN. We had one before the committee the other day——

Mr. BULLITT. Yes.

Mr. RANKIN. And he said that they took him there, and had other Negroes from the South—which we already knew—and taught them how to carry on revolutions. They taught them, as you say, how to begin, by destroying the waterworks and the light system, blowing up bridges, and doing whatever is necessary to paralyze a city or a community.

Now, were you aware of the fact that they were teaching that in that Communist school over there?

Mr. BULLITT. I know that they have a school of revolution, in which they have representatives from very nearly every country in the world. I have no specific knowledge, as I just said, of the presence of American Negroes there, but, obviously, it wouldn't surprise me because they have had Chinese, Indochinese, Moroccans, Algerians, Frenchmen, Italians, Germans—everybody. It is a world school of revolution.

Mr. RANKIN. Now, you may read the Communist Daily Worker. It is constantly maligning the anti-Communists in this country on the race question, and constantly maligning the Southern States, attempting to stir up race trouble all over the South, just as they are in other sections of the country.

Now, this Negro from the North, who was here the other day, testified that they stirred up the race riot in Detroit last year.

Of course, we finally got through the press that there were about 30 or 40 Negroes killed, and then we got the report which showed, I think, there were about 600 of them. They have been using that kind of method to stir up race trouble over this country.

Mr. BULLITT. They will try to put race against race.

Mr. RANKIN. That is it.

Mr. BULLITT. And creed against creed——

Mr. RANKIN. Yes.

Mr. BULLITT. And I object very much, in this fight, to singling out any race or creed for special criticism.

Mr. RANKIN. All right.

Mr. BULLITT. I think that this fight is one which is essentially American. After all, we have our strength in the fact that we are people who came to this country from all over the earth, to try to find freedom, and we learned how to work together—people of all nationalities and all races—for the common good of all. I personally don't feel that there is any racial issue whatsoever in this fight against communism.

Mr. MCDOWELL. That is a very fine statement.

Mr. RANKIN. When you get along further, and if you will talk to these high-class American Jews, you will find just what I am telling you.

The CHAIRMAN. I think this part of the discussion is out of order, and I would suggest that the gentleman from Mississippi confine his questions to the statement that Mr. Bullitt made, and also to pertinent matters.

Mr. RANKIN. Now, Mr. Bullitt, I want to ask you about this drive against the British Empire. You realize, of course, there is a terrific drive being made now in Great Britain——

Mr. BULLITT. Yes, sir.

Mr. RANKIN (continuing). By what they call the Zionists. Isn't that a Communist front?

Mr. BULLITT. No.

Mr. RANKIN. What is the difference?

Mr. BULLITT. No, no.

Mr. RANKIN. What is the difference?

Mr. BULLITT. No. Mr. Congressman, to call the Zionists a Communist front is, I think, to disregard the history of the past 40 years. I personally knew, and knew very well, the great Zionist leader of Palestine, whose name was Aaron Aaronson, who, unfortunately, was killed at the time of the Peace Conference at the end of World War I in an airplane accident. That man, who was one of the most eminent scientists in the world, being a great agronomist, the discoverer of wild wheat, was the leader of the Zionist movement in Palestine. No one could have been further from communism. No one could have been further from any Communist ideas. He was one of the finest human beings I have ever known. He started that.

I have also known Dr. Weizman, who was the leader of the Zionist movement until the most recent congress, and Dr. Weizman is also among the most eminent men in the world, and certainly is no Communist. I do not think it is fair to say that the Zionist movement is a Communist front; emphatically no.

Mr. RANKIN. One of the outstanding Zionists in this country, and the one who has criticized me most, boasted that some of his children were Communists, and I am just wondering how much of it is interwoven with the Communist movement throughout the world.

Now, then, they are opposing the British Empire, are they not? And if we go into Greece—I am asking this question because I want to know. I have had the white people of the South alarmed by these Reds sufficiently. I can take it and I can give it. They are asking us to go into Greece and Turkey, to stop the spread of communism, because Great Britain is no longer able to protect herself there; that is, protect the Greeks and the Turks, because she has to exhaust her efforts protecting her own Government, you might say, in Palestine; is that correct?

Mr. BULLITT. No, sir; I don't think that that is correct. I have never heard that statement made, and I don't think it is correct. The British problem is a very much more serious one than that.

At the time of Napoleon there were 10,000,000 in what is now Great Britain. They achieved a population, and were able to support them, of 45,000,000 before this last war because they had coal at seaboard, quantities of the very best steam coal at seaboard. They sent that coal out in their merchant ships all over the world. They brought back, when they discharged the coal, the raw materials they needed for their factories. Following those merchant ships and that coal went British banking, British insurance, and British investments.

During this last war they had to liquidate their investments abroad, to pay for the war. At the same time their coal seams in Great Britain have become so small that they are worked down to seams of 2 and 3 feet. You know what coal mining is, and how hard it is to get coal out of a seam 2 or 3 feet wide. Our seams for the most part may be 8 or 10 feet, which makes comparatively easy mining. They no longer have sufficient coal for their own needs in Great Britain. They, therefore, cannot export coal throughout the world. They, therefore, have great difficulty maintaining their merchant marine and getting cargoes for their outgoing ships, when they have to bring large quantities of raw materials for their manufacturing industries.

The consequences of that plus their consumption of their overseas investments, are that they have a very big fundamental problem of how to keep alive this enormous population, which has increased from 10,000,000 to 45,000,000 in the past century.

Mr. RANKIN. I understand they have——

Mr. BULLITT. But that is a much larger question and a much more profoundly difficult question than the question of maintaining troops in Palestine.

Mr. RANKIN. Now I am going to say to you, while I am on that subject——

Mr. BULLITT. Yes, sir.

Mr. RANKIN. That one of the men who gave us the information as to the number of Jews, percentage-wise, in the Communist Party, was a Jew himself and was an anti-Communist Jew. There are plenty of them in this country that are anti-Communists and they know what these Communists are doing to them, as well as to the rest of the country.

The CHAIRMAN. Mr. RANKIN, may I say something? Mr. Bullitt was very kind to come here today.

Mr. RANKIN. I know.

The CHAIRMAN. He has been sick for 4 months.

Mr. BULLITT. It is all right.

The CHAIRMAN. And if we could just bring the questions to a close soon, I think it will be helpful to Mr. Bullitt.

Mr. RANKIN. Let me ask you about the British Government as it now stands——

The CHAIRMAN. Doesn't that get into the field of foreign affairs a little bit, and isn't that a matter for the Foreign Affairs Committee?

Mr. RANKIN. I was just going to ask him if he was familiar with the Strachey philosophy in Great Britain, and if he could distinguish between it and the Communist philosophy in Russia.

Mr. BULLITT. That is all right. I have no objection to answering that.

Mr. RANKIN. How is that?

Mr. BULLITT. I would be very glad to answer that question.

Mr. RANKIN. I would be very glad to hear you.

Mr. BULLITT. The distinction is the following: The philosophy of the present British Government is Socialist. It is not Communist. The distinction between the Socialist and the Communist is the following: The Socialist in the first place believes in a gradual approach to the establishment of socialism, by legal and democratic means. They stand for democracy. The Communist stands for dictatorship.

Mr. RANKIN. Have you ever read Strachey's bock?

Mr. BULLITT. Which one? I have read several.

Mr. RANKIN. He is a member of the cabinet.

Mr. BULLITT. Yes; I know him. I have known him personally for 30 years.
